Those responsible for the refusal to give the Philippines the privileges which already have been conceded to Hawaii and Porto Rico are the representatives of the beet-sugar and domestic tobacco interests who, during the last session of Congress, opposed a reciprocity agreement with Cuba. If the anti-imperialists would stop demanding political independence for the Philippines, and would insist upon their obtaining free access for their products to the markets of the United States, they would render a substantial service to the people whose welfare they profess to have at heart. The opposition offered by Senator Teller of Colorado to the adoption of the Philippine tariff bill as it came from the House is based on the assertion that, before our war with Spain, the Philippines produced four hundred thousand tons of sugar, and could easily produce enough of that comestible to supply the whole of the United States. All this should have been thought of before the Treaty of Paris was confirmed. Having once been acquired by the United States, those islands are unquestionably entitled to be dealt with as liberally as is Hawaii or Porto Rico. As Senator Foraker said, the sugar industry of the Philippines since the islands became American territory has as much right to be fostered as has the beet-sugar industry. All it asks is liberty of access to the home market, and that, soon or late, it will get from the sense of justice which governs the American people. We did not annex the Philippines in order to subject their inhabitants to glaring economical as well as political disabilities.

As we pointed out last week, Chief-Judge Alton B. Parker, of the New York Court of Appeals, has received a great many invitations to public banquets since his eligibility as the Democratic nominee for the Presidency in 1904 has been the subject of widespread discussion. Up to the present date he has accepted only one of these invitations. On the evening of Saturday, February 14, he was present as the guest of honor at a dinner given by the Colonial Club in the city of New York. In the speech which he delivered on the occasion he made not the slightest reference to politics, but confined himself to a discussion of the courts of New York State. Mr. William J. Bryan, who was in the city at the time, was not a guest at the dinner, and, apparently, was not invited. It is hard to say whether the occasion was intended to have any political significance. On the one hand, Mayor Low,

who is a Republican, responded to the toast, "The city of New York," while, on the other hand, such representatives of the Cleveland Democracy as Mr. Wheeler H. Peckham found themselves in the company of Tammany-leader Charles F. Murphy, the Hon. J. A. Gorman, Grand Sachem of Tammany Hall, and Mr. John Fox, president of the Democratic Club. It is pretty evident that all of the factions in the Democracy of the metropolis would like to run Judge Parker for the Presidency in 1904, but it remains to be seen what view of the matter will be taken by ex-Senator Hill and his followers in the rural districts. There is no doubt that Mr. Hill will be strong enough in the next State Convention of New York to prevent Judge Parker from receiving the unanimous endorsement of that body, but why should he want to exert his influence to that end? He must know that his own nomination for the Presidency is out of the question, and that the utmost he can look for is the post of Secretary of State in a Democratic administration. He can play the part of William L. Marcy, but the White House he will never reach.

The polar-exploration habit is strongly fixed upon Commander Peary. It was understood that his long effort to reach the pole, which ended last spring, was to be his last appearance as an explorer. He had promised his wife not to go again, the papers said. But such meagre tastes of frost as we have had this winter seem to have sapped his resolution, for it is now reported that he is ready to make another farewell tour of the arctic regions, provided that the Peary Arctic Club can raise $150,000 to send him. The verdict of his last trip was that he was an exceedingly well-qualified explorer. Unless he is thought to be past the polar-expedition age, there is probably no American who is so likely as he to conduct a successful expedition.

A service in memory of Bishop Brooks was held in Trinity Church in Boston on January 23. Dr. Edward Everett Hale was present, and joined his trinitarian brethren in the communion service. To him with the rest the two bishops who administered the sacrament gave the bread and the wine. Whereat the *Living Church*, the High Church Episcopal organ, makes grieved protest. Dr. Hale, it says, is a good man, but a Unitarian, and to give him the sacrament was sacrilege and inexpressibly deplorable. Remarkable people are the Ritualistic Episcopalians. Nothing that any one knows about Jesus Christ makes it seem probable that if the Master sat at the head of His own table, Dr. Hale would be excluded. That seems significant, but, after all, nothing that any one knows about the High Church Episcopalians makes it seem probable that the Master's toleration of Dr. Hale in such a case would seem to them a governing precedent.

Mr. Parke Benjamin, writing in the *Independent* about Constructor Hobson's resignation, discusses that episode somewhat more suggestively than most of the other commentators. He says that Hobson, being promoted for gallantry, should have been promoted as a fighting-man and not as a naval constructor; that his lift of ten places in the short list of naval constructors was a "gold brick," which merely brought him duties which he had not the requisite experience to perform, but no increase of pay. He talked too much. Being young, he lost his head to some extent, and he worked hard and damaged his eyes. If he had been a line officer, he could have been assigned to duties which would not have strained his eyesight, but being a constructor, there was no help for him. Mr. Benjamin ridicules the Retiring Board, which could not see its way to retire Hobson until his eyes gave out entirely, and urges Congress to empower the President to put him on the retired list at once. This conclusion seems sound. Our dealings with Captain Hobson seem to be a good deal of a fizzle. The country made a hero of him, somewhat to his detriment, and now appears in the light of grudging him his reasonable dues. Whatever Hobson's defects of discretion may have been, he was unquestionably a deserving officer, who had earned generous treatment.

It was interesting to have ex-Mayor Ames of Minneapolis run down, and to know what had become of him, but his further punishment seems hardly worth much effort or expenditure to accomplish. From being the profligate robber-Mayor of a large city—the man who laughed at prosecution and defied punishment—he has come in two years to be a broken-down refugee, prematurely aged, hiding in a New Hampshire village, in the house of his wife's ministerial brother-in-law. He has had his punishment, whether he goes to prison or not. A more brutal and disgusting scamp than Tweed, he has come to an end not unlike Tweed's. His case, his present deplorable situation, and his prospects are commended to the consideration of Mr. Addicks of Boston and Delaware. Addicks is still bold and confident. Justice has not got him on the run yet. He still presses his attacks. His money still rolls out on Delaware, and debauched voters in that little State record his will. He has not yet been proved to be a criminal, but bribery is a crime, and it is only a few months since Ames of Minneapolis, with money in hand and years of successful turpitude behind him, was as insolently confident as Addicks is still. The ice is pretty thin under Addicks. As one thinks of him there comes to mind the story of Ames after his indictment; the story of a man who had jumped his bail, riding all night in a smoking-car, his face gray, his head sunk on his chest, and an unsmoked cigar in his mouth, riding through the night with staring eyes, without stirring in his seat. There is an old dame that Addicks ought to know about. Her name is Nemesis, and she arrives when least expected.

A contemporary suggests that Smoot, the Mormon apostle, is as unsuitable a person to represent Utah in the Senate as Cardinal Gibbons would be to represent Maryland. It would not be convenient for Cardinal Gibbons to be a Senator, and he would doubtless decline an election. But if he were elected and proposed to serve, the Senate would not dream of excluding him. There must be better reasons for excluding Smoot than could be produced against Cardinal Gibbons, or Smoot will take his seat.

Discussing the negro problem at the Press Club dinner in New York, February 14, Senator Tillman said, "The only solution of this problem, my friends, is for you people of the North to take your share of these niggers if you love them well enough." At present fifteen States harbor (in round numbers) seven million negroes, and thirty-seven States and Territories give homes to two million. If the negroes were redistributed, giving to every State its share, New York would get about 600,000 new colored citizens, Pennsylvania about 450,000, Illinois about 400,000, Massachusetts about 250,000. Georgia would lose about 900,000 negroes (nearly half its population), Louisiana 575,000, Mississippi 840,000 (more than half), and South Carolina 720,000 (more than half). Missouri, with 3,000,000 whites and 165,000 negroes, comes nearer than any other populous State to having the two races in the right proportions, but Missouri is still 150,000 negroes short. The idea that the negroes, if more equally distributed throughout the country, could be more readily assimilated is sound enough, but there is no sign that the Northern and Western States want their quota of negroes badly enough to send after them, and no sign as yet that considerable bodies of Southern negroes want to move. Southern negroes, individually or in small groups, will doubtless settle in the North and West, as heretofore, whenever they are able and disposed to move and think they can improve their condition by doing so. A good many have moved. There were few negroes in the North before the civil war; now there are two million. If the negroes don't like the South, they can get out, provided they can learn of a better place to go to, and can save the money to go with. That may not seem a great boon, but it constitutes one of the important differences between liberty and slavery. The conditions of residence which the South seems to offer to negroes nowadays include restricted suffrage, social separation, and ineligibility to hold office. In the North they will find the social-separation idea less clamorous but almost equally effective, and though they may vote and hold any offices that they can get, they will find a more restricted labor field than in the South. Negroes who could make their way in the North are probably welcome to stay in the South. Negroes who cannot do well in the South would probably starve to death in the North. The bulk of the negroes will stay in the South because they

are there now, because the climate is advantageous to them, and (possibly) because social disabilities press less heavily when they are widely shared.

Cotton manufacturers and cotton operatives in New England have in the past few months entertained several notable groups of foreign visitors, but among their guests none have been more interesting than Thomas Ashton, the president of the English Amalgamated Union of Cotton Spinners, and William H. Wilkinson, secretary of the English Northern Counties Union of Weavers, who have been spending some days in each of the Massachusetts cotton-manufacturing cities. Those who have conceived of the typical labor-union leader from what they have read of the doings of some of the offensively radical strike promoters would hardly be convinced that these studious, thoughtful men, highly versed in the technicalities of their trades, and with broad outlook upon social problems, could be representative trade-union officials. They are not very young men, as labor leaders in America are apt to be. Both are apparently well past fifty, and both are manifestly men who appreciate their responsibility to the full. That such men should be at the head of two great trade-unions is not so surprising when it is discovered that they are the products of rigid selection. No doubt they are both pushing, ambitious men; but it is more certain that they are both capable men. The executive officials of the English cotton operatives' unions must demonstrate their fitness for office not alone by their faculty for leadership, but also by their proven mastery of their trade. Thus a condition of their candidacy is subjection to a rigid examination, answering to the civil-service examination for governmental place.

The unions in England have discovered, what some unions in America have not, the value of brains as exceeding that of bluster. So while these men are intense unionists, they are unionists classified by superior intelligence. Something may, of course, be conceded to their desire to please their hosts in this country; but the compliments of these two experts for the methods and the mills of Fall River and New Bedford are evidently by no means mere idle phrases. Both of them have made careful studies of the best factories in those cities, and both agree that England can show nothing that is better. A delegation of employers who came to this country not long ago, and who visited some of these mills, was reticent of comment, but these practical workers have not hesitated to say that American cotton-mills had disclosed to them surprising superiority. Mr. Ashton does not believe that England is losing, or is going to lose, her commercial prestige, but he thinks she must be alive to what America teaches in the line with which he is most familiar. Like all labor leaders of the best type, both these men are strongly averse to strikes, and hope to see them abandoned, though each represents a union which maintains a large defence-fund. The spinners have $2,000,000 in reserve, drawing interest; and the weavers, in their amalgamated association and their locals, a million—both sums large enough, when associated with experience, to have a balancing effect. Mr. Ashton told an audience in New Bedford that if an operator was worth only $1 he should not be paid $2, and that if he was not capable of running a machine he should give place to one who was; but, he added, "God knows that the average operative gets all out of a piece of machinery there is in it"—a remark which is very mild compared with much current labor-union talk. The visit of a man like this to America may be valuable to him and to his association; there is no reason why it should not be equally valuable to Americans.

The Civil Service Commissioners are wrestling with two problems in connection with the classified service. One is that of promotion, and the other the prevention of superannuation. It is now found that the so-called "efficiency ratings" are inadequate and misleading; that individual fitness cannot be accurately expressed in mathematics; and that the marking has no value beyond the personal view or prejudice of the marker, who is sometimes anxious to give his force of clerks as high an average as those of other officials. The commissioners believe that the present system of promotion means nothing, since increase of salary does not change the character of work, and the clerk who gets $1600 or $1800 to-day may be doing no more than, and perhaps the same work, he did when he got $750. It is maintained that there should be a reclassification of clerical work so as to make possible promotions from one grade to another and the proper compensation of clerks who are thus transferred from one rating to another. In the same way, examination for promotion is not regarded as of special significance, since the examination, competitive or otherwise, outside of technical places, means very little.

A kindred question is the disposition of the clerk who has grown too old in the public service. The percentage of government employees in Washington over 70 years of age is 1.97, or 312 out of 15,866. The old clerk may be a better one on account of his service, but sooner or later the best veteran furnishes a problem of the "evil of superannuation." The remedy which the commissioners proposed fixed terms of office, forced retirement at a certain age, and removals made at intervals, together with a civil pension list and a retirement fund made up by deductions from salaries. The clerks have been for some time seeking legislation which shall give Congressional sanction to retirement for age and service, at a fractional salary for the retired to be obtained from the pay of those in active service. It would take only about two per cent. of the average salary of those in the departments at Washington to pay full salaries of those over 70 years of age.

An important duty of the army and navy, of which most people have little knowledge, is the exchange of official courtesies. Some idea of its magnitude is imparted by the issue, recently, of a 13-page pamphlet from the War Department addressed to the coast artillery, as instructions to those at seaboard or other forts in the matter of salutes and ceremonies. A board has recently revised the system, which anticipates every conceivable situation calling for the manifestation of official cordiality and respect. In the first place, there are some twelve personal salutes, from 9 guns for consul-generals to 21 guns for a sovereign, and running the scale of personages between. The national salute and the salute to a flag are 21 guns. No salutes are fired before sunrise or after sunset, and not on Sunday, as a rule. The salute to the flag is the only salute that is returned. There are numerous rules to govern the exchange of courtesies, and the infraction of any of them is sometimes a serious matter. When a foreign ship visits a port, the post commander must send a suitable officer to offer civilities and assistance. This is known as a "boarding visit," and must be returned. Then within twenty-four hours the visiting commander must make his call on shore, and this must be returned within twenty-four hours. There are numerous rules applying to these visits, regulating their duration, who shall call first, and other details, and there are equally voluminous and specific requirements of funeral honors.

Mr. Finley Peter Dunne is a typical American of To-morrow. He began his work in Chicago as a reporter on a daily paper, and had the sense to look beneath the surface of the assignments that came to him as to others in the course of the day's work. He found the human quality in what fell to his consideration; he saw the humor and the sense and the pathos of every-day life, whether in "Archie Road" or on the Lake Shore Drive, and he had the rare wit to realize their universal significance. All this became a concrete result in his conception of Mr. Dooley, whose consideration of questions of the day embodies all that is really American—the wit that seems to belong alone to this strange mixture of nationalities called the American people, the keen sense of justice and the quality of being able to grasp the essential point in any matter that have long since been identified with Abraham Lincoln, and the ability to hit hard without being mean or unkind that has been confined until now to Mark Twain. The result is that Mr. Dooley is a national character. We all know him; we all respect him; we all wish we had his clear brain. As Uncle Sam is himself typical of the Yankee, as David Harum is the type of the American countryman, so is Mr. Dooley as thoroughly an American of another sort—the Yankee shrewdly mixed with the Irish immigrant. And thus Mr. Dunne, at the age of thirty-five, takes his place as the creator of a distinctive American personage, and promises to extend his sphere of usefulness.

The President and Congress

THE attitude of the Republican Senators and Representatives toward the President is a subject of ever-recurring remark by visitors to Washington. Never since the days when Mr. Cleveland was endeavoring to secure the repeal of the purchasing clause of the Sherman Silver Act has there been so much hostility expressed by party leaders against a party's President as is now to be heard from Republican Congressmen against the President. If Washington spoke for the country, and it seldom does, Mr. Roosevelt's political extinction would be near. As it is, however, he is holding his place because, as we recently pointed out, he is in reality following the policy of Mr. McKinley. Wherein he has failed to preserve the friendship of his party friends and leaders, it has been due to certain wanderings, temporary or momentary, from that policy, wanderings natural to a man of strong feeling and of impulsiveness.

Whatever may be the outcome of any impulsive effort of the President, his way to his end is pretty generally to be marked by slaughtered friendships. While he apparently retains his popularity among the people, he has been facile in making enemies among the politicians. He came into the Presidency with the outward seeming friendship of nearly all the politicians, although some of the harder-headed among them were, to say the least, not certain of him. The sad ending of the halcyon days of the amiable McKinley softened men's minds, and the promise of maintaining the policy of the murdered President expanded and deepened the friendly feeling for the new and untried successor.

The breach between Mr. Roosevelt and the politicians was, however, inevitable. His rigid insistence upon the maintenance and the extension of the merit system alone assured the discontent which precedes dislike. The era of patronage-mongering in the petty offices ceased suddenly, and spoilsmen had the right to say that, in this respect, the policy of Mr. McKinley had not been followed. Spoils-mongering, however, continued, and still continues, in the higher grades of the service, and the right of the organization to the plunder is recognized at the White House. But the President does not give the Senators a free hand in choosing his nominees; he insists on character and capacity, and, in many of the State organizations, the necessary qualities and accomplishments are difficult to find. The consequence is that while the President has compelled the criticism of the sincere friends of good government, he has not gained the affection of the thorough spoilsmen. These are angered because the complete control of patronage is denied them. To the needy and hungry, half a loaf is doubtless better than no bread, but the glutton insists on all the plum-pudding that he asks for, and stinting him enrages him quite as much as denying him. So the President has become an object of dislike to every spoilsman in Congress, except a few personal friends.

Another trait of character understood by Mr. Roosevelt's friends has resulted in bringing down upon him a storm of wrath. The President is exceedingly, perhaps extravagantly, sympathetic, both toward individuals and toward ideas. His mind is receptive, and he listens with the intent of appreciating what his visitor is saying to him. If he has fully determined upon a course of action, or has reached a conclusion, he is likely to state his own view. In this event, there is no chance of a subsequent misunderstanding. Sometimes, however, the President speaks impulsively, and subsequently his acts do not agree with his promise or his assertion. Then those who have depended on him are disappointed; but much the larger class of those who are astonished by acts which seem to belie the President's words is composed of men who have mistaken sympathetic audience, occasionally accompanied by expressions of assent, for complete agreement. These men are convinced that the President has deliberately deceived them; that he has led them into action and then deserted them; that he has given them substantial reason to expect his support, and that he has then gone over to the enemy. Mr. Littlefield, for example is convinced that the bill which he prepared, and which was passed by the House of Representatives, was endorsed by the President; consequently, he is quite as fully convinced that his overthrow is due to disloyalty on the part of Mr. Roosevelt.

Besides the personal antagonisms due often to Mr. Roosevelt's insistence upon good government, and often to misunderstanding of his manner and nature, we have intense and hurtful antagonisms arising from the fact that the President, from the very first, has tried to force unwelcome policies upon the party. He has in the end yielded to the forces with which Mr. McKinley was always in agreement, but he has been apt to go astray at the outset. It has been said more than once in these columns that Mr. Roosevelt is popular for reasons that have led to the unpopularity of his party organization.

He was facing the future, for example, and the party leaders were for marking time. The popularity which he has gained has been both of advantage and of disadvantage to him. It has enabled him to force Congress to take action which Congressional leaders did not wish to take, and this has not increased their liking for him. What he gains for Cuba, for instance, will be against the will of the party leaders. He began his career as President with the hearty liking of the Western Congressmen, and especially of those who favored radical trust legislation. These were his natural friends; but now they are confident that he has turned away from them, and that he has surrendered to the high-protection leaders of the East, who, a year ago, were doing everything in their power to thwart his policy, who have stifled the general reciprocity treaties negotiated by Mr. McKinley, have yielded sullenly to the popular demand for Cuban reciprocity, have given half measures of Philippine tariff concession and of army reform, and who have adroitly and, at the same time imperiously, emasculated the anti-trust programme.

At the end of his second session of Congress Mr. Roosevelt has hardly any sincere friends in Congress. The party machine is the most perfect that we have ever seen. It governs absolutely, and its decrees are embodied in legislation. For the moment the country is governed by the edicts of an oligarchy, and not by laws which are the result of discussion and deliberation. The oligarchy gratifies the President with some legislation, denying him much, and deceiving him in some respects. What it grants is for the sake of harmony. The independent, thinking Republicans, who are averse to this rule, who had hoped for help from the White House against the tyranny of the oligarchy, are hurt and angry. The President may retain the affection of their constituents, but he has lost the friendship and the confidence of the representatives. The President is now the ally of the ruling oligarchy, whose leaders do not agree with a single principle which he announces. They are satisfied, however, with his ultimate surrender, but they would throw him over if they dared. This is the precise truth as to the President's relations with the Republican politicians at Washington.

The History of the Anti-Trust Legislation

MR. ROOSEVELT began an agitation looking to the curbing of great combinations when he was Governor of New York. From that time until the present he has insisted that the Executive authority should be empowered by the law to prevent over-capitalization, discriminations in freight charges and prices, and to restrain and punish all corporations violating such statutes as Congress might enact for the attainment of his object. The chief remedy which he proposed for the evils, as is well known, was publicity; that is, the authority of the government was to be exercised for the purpose of gathering information for the public which, being published, would protect intending investors from putting their money into what are said to be over-capitalized enterprises. The movement was directed against private corporations as well as against public-service corporations, and, finally, the Attorney-General suggested that the Federal government might reach and restrain private corporations through its inter-State commerce powers. Mr. Knox thus took the position that, while the general government had no power to enact legislation affecting producing private corporations, the creations and the citizens of States, it might circumvent this condition by indirection. Before the announcement of this doctrine, the President had approved of the adoption of a constitutional amendment bestowing upon the United States the power of direct control, but in the end he accepted Mr. Knox's device, and urged its adoption in his message.

The President's and Mr. Knox's speeches greatly excited the country. They aroused passions that seemed to threaten the very existence of corporations. The country believed, as it had the right to believe from the President's utterances, that he would insist upon the enactment of laws which would give the government control of practically all its business interests, which would make what is called over-capitalization impossible, and would compel private corporations to cease underselling, as it would compel railroads to cease discriminations in favor of one shipper against others. The country, as a whole, believed that, if the President had his way, the government would take charge of corporations, and put an end to what economic rhetoricians and poets have declared to be their evils. The capitalists and practical managers of the corporations themselves believed the same, and they trembled for their very existence. Conservative men of all classes realized that we were facing an industrial and political crisis; that if the interpretation generally put upon the President's words was just, the country was facing dire industrial and commercial calamity. A further step toward state socialism was inevitable if the programme which the President seemed to favor was carried out.

The meeting of the Fifty-seventh Congress for its second session was a moment fraught with danger. The most radical Republican opponent of trusts in the House of Representatives was Mr. Littlefield, of Maine. It was with him that the President had consulted during the campaign of the fall, and it was he who was made chairman of the committee to draft anti-trust legislation for the House of Representatives. The session opened in a flurry of radicalism. Bills were introduced, by Mr. Hepburn in the House, and by Mr. Proctor in the Senate, which, if enacted into law, would have compelled the reorganization of all business, would have dislocated capital, and would have brought

upon the country a panic comparable to none in our history except that of 1873. Senator Hoar, thinking that he spoke the views of the Administration, introduced a bill so extravagant in its purposes, so unconstitutional in its provisions, that it was laughed out of court. At once there appeared on the scene the conservative Republican leader, who is incarnated in Senator Aldrich more than in any other public man of the time. The Administration grew alarmed at the frenzy of those who thought they were carrying out the President's wishes, and who had excellent reasons for thinking so. The Knox bills were prepared, and were introduced by Representative Jenkins. It is unnecessary, at this time, to consider these measures, for they are as dead as the bills of Mr. Littlefield and Mr. Hoar. Confessedly Administration measures, they found a lodgement in Mr. Littlefield's bill, and they all went to death together. The Jenkins bill, pure and simple, could no more pass the Senate than can Mr. Littlefield's.

Time went on, and the popular agitation which the President had aroused would not down. The spirit was out of the bottle, and could not be forced back. The Senate took the question up. The Elkins bill, making more difficult discriminations and rebates by railroad companies, was prepared. It passed the Senate and went to the House of Representatives. In the mean time the bill creating the new Department of Commerce had passed both Houses, and was in conference. The Nelson amendment was inserted in it, providing for a certain amount of publicity. The President learned from the conservative leaders of his party that the adoption of even these measures was doubtful. While all this was going on, Mr. Littlefield was keenly realizing that his own measure, much more radical than any proposition that had originated in the Senate, was doomed. He made a vigorous and ugly effort, and compelled the House to vote upon it. The vote in its favor was unanimous. The opponents of any trust legislation at this short session felt that this vote was sufficient, for there was never the slightest intention of permitting the bill to pass the Senate. When the President realized that it was likely that nothing would result but a record vote on the Littlefield bill, he made a supreme effort. The Standard Oil Company, or some of its officers, undertook to secure a modification of the Nelson amendment, simply for the purpose of protecting its trade secrets from the knowledge of its Russian competitors. The effort was conceded to be perfectly proper, but as the story was told in the daily press it was transformed into a scandalous attempt to threaten and command Congress. The exposition, unjust as it was to the corporation and to the Senators who received its communications, had the desired effect. The President was enabled to secure a programme. It consisted, besides the bill advancing causes against combinations on the court calendars, of the Elkins bill and the Nelson amendment. These measures have been passed, and represent the sum of the session's achievement as to trusts.

The President has not gained the object at which he set himself. He has obtained from Congress precisely what the Senate was forced by public excitement to concede, and legislation passed at the behest of public excitement is likely to be deceptive. Nothing that will harm industrial and commercial interests is to be feared from Mr. Roosevelt so long as he follows the advice of the men who have controlled the situation this winter. For the moment the country has escaped a peril, while not the first effective step has been taken to remedy the real evil of the partnership which exists between corporations and the government.

The Future of Latin America

It would be hard to exaggerate the seriousness of the questions raised by the Anglo-German-Italian demonstration against Venezuela as regards their bearing on the future of Latin America. Here is the greatest prize left upon the earth, a prize which the Spanish and Portuguese possessors had failed to turn to adequate account. Here is a vast continental region, many times larger than Europe, almost the whole of which is a white man's country because much, even of the tropical and sub-tropical sections, is situated at altitudes favorable to the duration and activity of Caucasian life. With the exception of comparatively small areas in Africa, south of the Zambesi, or in mountainous districts of the interior, Latin America is the sole remaining part of the surface of the planet wherein the surplus millions of overcrowded Europe might find a fitting habitation. How thinly peopled the Latin-American republics at present are is imperfectly recognized. It is absolutely certain that, as the pressure upon the means of subsistence becomes insupportable in Europe, the inhabitants of that Continent will not consent to be barred out of the New World by the *brutum fulmen* of the Monroe Doctrine. They can only be excluded by the exhibition of superior naval force on the part of the United States. It is conceivable, moreover, that the force may be applied too late. It is possible to acquire practical control of a country, and to make of it a suitable field for European colonization without any ostensible violation of Mr. Roosevelt's fiat against the dismemberment of territory. The Anglo-German-Italian demonstration against Venezuela was undoubtedly devised for the far-sighted purpose of learning whether the Monroe Doctrine might not be evaded by the reduction of a Latin-American country to the condition of Egypt. Nor can it be denied that, if the dangerous agitation of American public opinion should be overlooked, and attention should be concentrated on the outcome of the diplomatic negotiations at Washington, it might be mistakenly assumed in European Foreign Offices that the demonstration has been successful. For, what are the facts? No less than thirty per cent. of the revenue of the two principal custom-houses of Venezuela, during an indefinite period, to be confiscated for the benefit of foreign creditors. Moreover, should any default occur in the payment of the covenanted thirty per cent., the revenues of those custom-houses are to be collected by officials appointed by the Kingdom of Belgium, and upheld in authority, should there be any cause or pretext for such interposition, by European war-ships. Now, when we remember that the Caracas government is almost entirely dependent on customs duties for its support, we must recognize that the condition of Venezuela for many years to come will differ from that of Egypt only in degree. In Venezuela only thirty per cent. of the customs revenue will be withheld from the control of its own government, whereas in Egypt the whole revenue is withheld from the direct control of the Khedive. The principle admitted in both cases is identical; the only difference regards the extent of the application. Having got the principle accepted, however, in the case of Venezuela, where her interests were small in comparison with those of Germany and Italy, what is to prevent Great Britain hereafter from demanding the co-operation of her late allies for the purpose of applying the same principle on a tremendous scale to Argentina? The amount of money invested by British subjects in the Argentine Confederation considerably exceeds a billion dollars, to provide for which it may one day be needful to follow the precedent established in the Nile country, and to sequestrate the whole of the Argentine customs duties for the benefit of British creditors. We know, indeed, of no Latin-American country, with the exception of Chile, Mexico, and Brazil, which, even at the present hour, would not be threatened with the fate of Egypt, if the American people held themselves committed to the principle accepted in the case of Venezuela, the principle, namely, that the revenues of a Latin-American republic may be set aside, not only for the redress of grievances, but for the payment of ordinary debts due, or alleged to be due, to the subjects of European powers. The only question to be referred to the international court of arbitration at The Hague is that of the preferential or separate treatment of the claims of blockading powers as against those of non-blockading powers. All other questions, including claims, not only for a redress of grievances, but also for ordinary debts alleged to have arisen out of contract and to be due to European creditors from the government or citizens of Venezuela, are to be referred to three mixed commissions on each of which the debtor country and the creditor country are to be equally represented. The principle thus accepted, without any apparent regard to the dangerous consequences thereof, seems to have been sanctioned in advance by Mr. Roosevelt in his second annual message, when he said that, so far as the Monroe Doctrine is concerned, a European power may go to any lengths, short of the permanent occupation of territory, for the purpose of enforcing "just obligations" on an American commonwealth. Whether the phrase quoted was intended to cover ordinary debts, and thus to open the way to the eventual confiscation under easily conceivable circumstances of the whole customs revenue of a deeply indebted republic like Argentina, is the very question upon which the Anglo-German demonstration against Venezuela was intended to cast light. From that point of view the joint blockade of Venezuelan seaports must be regarded as a temporary success. The desired precedent has been established, without a word of protest on the part of President Roosevelt or of the State Department. We call the success only temporary, however, because Mr. Roosevelt himself—much less his subordinate in the State Department—has no power to bind the American people to the recognition of the precedent. If it be true, as Mr. Balfour has publicly asserted, that our State Department, in reply to an inquiry from the British Foreign Office, sanctioned the joint expedition against Venezuela many months before the blockade was instituted, it must by this time be evident to Mr. Hay that the position said to have been taken by him is not approved by his fellow-countrymen. It is the American people by whom in the last resort the Monroe Doctrine will be interpreted. The excitement provoked in the United States by the Anglo-German proceedings in Venezuelan waters has convinced every careful observer on both sides of the Atlantic that American citizens are not disposed to ratify the definition of the Monroe Doctrine propounded in Mr. Roosevelt's second annual message. On the contrary, they are now convinced that the permanent occupation of territory is not by any means the only mode of "oppressing" a Latin-American republic and of "controlling its destiny." They will not allow any American commonwealth to pass into the hands of European receivers for an indefinite period. They regard, in a word, the Venezuela precedent as one fraught with the gravest peril to the independence of the New World.

The Dearth of Children

THERE is great complaint about the scarcity of babies in the families of native-born Americans. There is no need to quote statistics. Every one knows the conclusion that the statistics lead to, which is that the native Americans seem less and less inclined every year to replenish the earth with new individuals of their own species. As concerns them, the birth-rate is constantly falling. Writers in foreign reviews—British reviews especially—comment on it as the sign of an awful defect in us and our civilization. Married Americans who ought to raise eight children, raise four; those who ought to raise four, raise two; those who ought to raise two, raise none, or content themselves with a single lonely sample of offspring. Also, a great many Americans who ought to marry, don't. The consequence is that the statisticians take gloomy views of the future of our race, and that thoughtful observers discuss the reason for American sterility, and possible methods of alleviating it.

President Roosevelt has recorded his views on the subject. Americans, he says, who are so cold-hearted and so selfish as to dislike having children, "are in effect criminals against the race, and should be objects of contemptuous abhorrence to all healthy people." President Eliot of Harvard has been thinking about it too. In his annual report he tells of looking up the records of the six Harvard classes which have been graduated from twenty-five to thirty-one years, and finding that the married members had no more than two surviving children each, and that twenty-eight per cent. of the members had not married. He thinks college graduates should marry earlier in life, and to that end is trying to get his young men out of college and through the professional schools sooner, so that they can earn money to marry on.

But men who don't marry until they are thirty have time enough to raise families as large as the country expects of them, if only they and their wives have the will and the good luck. The trouble is that both men and women who defer marriage until late form habits which they cannot reconcile to full nurseries and limited incomes. Youth is rash and imperfectly provident. Maturity has more prudence, and in the matter of children is apt to have too much. There need be no regret that people who cannot provide decently for large families do not have them. Such persons may have too many children as it is. The trouble is with people who can well afford to raise families of a decent size, and who neglect that privilege for fear that they will come to want, or because they want to spend their time and their money on other things.

The great thing that keeps the size of American families down is social and pecuniary ambition. There are a few thrifty parents in the land—farmers, miners, mill-workers, and the like—who look upon children as a potential source of income, and raise a good many because their keep costs little, and their labor is valuable. We don't approve of persons of that way of thinking. Our American feeling is that the parents should work for the children, but not the children for the parents, except in cases of special necessity. Almost all of us want our children to be better off than we are ourselves. We would rather have two children and give them what we consider special advantages of nurture and education, than have five and be unable to do for all of them what we want done. We are impatient of the common lot. Unless our children can rise above it, we think it a doubtful advantage to have secured them an entry in this world.

Now that is not altogether a bad characteristic. It makes for progress to a certain extent, but we carry it too far. We are too prudent, too selfish, for both ourselves and our offspring. It is by no means the children who have the most "advantages" that do best in the world, but those, rather, who are born with the best brains and bodies, and are hardest prodded by the spur of necessity. For the sake of pampering two children we forfeit the chance of drawing a great prize among the three others that we might have and don't.

It is too bad about us Americans. The hope of our amendment lies in the possibility that we may come to a better appreciation of the pleasure there is in raising good children as compared with any other rival interest that attracts us. We never will raise large families for the good of the country; never. The race may go hang, for all of us. But if more of us can come to feel, what is true, that the right kind of children pay enormously in love, in entertainment, in all things that make life desirable, we may come to raise more of them.

Our National Genius and Our National Art

THE question of the great practical enterprise and success of our American life and its relation to our national literature is one that is always coming up for discussion. We are told that this practical life is in itself bound to produce an art, because it is producing a national character with its own distinct spiritual traits, and we are reminded that the robust, practical life of Elizabethan England was one source of the vitality of Elizabethan literature. Certainly a nation with plenty of active and healthy interests is bound to nourish a different kind of genius—of imaginative genius—from that of a nation which has socially exhausted itself. And yet any inference from Elizabethan England to contemporary America and its artistic possibilities is likely to be misleading. Elizabethan England was not only a society with active economic interests; it was a society still very deeply under the spell of spiritual influences, with all the subtle reflective inheritance of mediæval Europe at its heart. Imaginative interests were as intense as the practical interests at just that happy time, when the warriors and the adventurers and the statesmen were numbered among the literary men of the nation—not among the historians and sociologists necessarily, but among the poets—men with the quick instinct for beauty, and the speculative passion that counts for so much more in art than the merely practical aim. One might say that, in Elizabethan literature, the spiritual genius, while it certainly drew strength from the active, practical life of the nation, dominated it imaginatively. The intellectual passions of the Renaissance and of the Reformation were potent forms of national self-consciousness.

In contemporary America, on the other hand, the practical interests are altogether in the ascendant, and the fact is not without its influence upon the writer. In no European country is literature so thoroughly journalized as it is in America. We have capable writers by the score; but, in our latest school of novel-writers, while we have clever reporters and plenty of sociological adventurers, we have perhaps produced no genuine novelist of American life, such as the Mr. Howells of *Silas Lapham* proved himself to be. As a nation of novel-writers what we lack is psychological depth. We do not live the inner life intensely enough for that. Certain plain types of character we are able to distinguish; but the wonderful, accurate history of inner motive—such, for instance, as Tolstoy lays bare to the reader, and which is the real interest of the novel—this is not within the power of our present art. Our realistic novels reproduce what one might call the body of our civilization. But its heart, in its deepest sense, still eludes them. How crude, too, is the criticism of life in the contemporary American novel. It is boyish, in fact. One would say that it had been borrowed from the last book the author had read, not that it was the ripened fruit of personal life. Is not personal life of the intenser sort exactly what one misses from our contemporary art? When we try to touch the depths of our experience we betray our weakness. We become self-conscious and artificial. Our spiritual life seems to have grown in a thin soil. This is especially true of the novels by new writers that have been written within the last five or ten years. It may be partly the result of the journalistic pressure upon authorship, which has certainly increased. It may be partly the effect of the romantic vogue. But both the journalistic pressure and the romantic vogue, as at present cultivated, are symptoms of the fast and unreflective life.

Yet that underneath the surface of American life is a spiritual consciousness truly national, but hardly aware of itself, is what the American who knows the history of his country is bound to believe. We have the blood of old and mature civilizations in our national genius. The question of our art is whether the spiritual experience of such civilization is in any wise to leaven the crudity of our material life, and its idealism in turn to be shaped by the more hopeful social conditions of the new country. There is a very interesting article in a recent number of a magazine which describes the psychological effect of his new environment upon the emigrant Jew. It appears that his environment strengthens all his practical faculties. On the other hand, his national idealism is depressed by it. Whether that depression of the more idealistic faculties is the price to be paid for our successful commercial civilization is, of course, the crucial question of our literature.

Meanwhile the approaching centenary of Emerson's birth is a very fitting time to remember that not only is America solving the feeding problem of the world by her practical enterprise, but that during the last century she made her typical spiritual contribution to literature. The peculiarly ripe and modern character of Emerson's genius was never clearer than it is to-day; and perhaps Ibsen and Hauptmann and Tolstoy and Maeterlinck, who confess their debt to him, understand better its character than the England of half a century ago understood it. Yet into this mature and intensely speculative genius there also entered the blood of a strong, young, physical civilization, with its reaction of hope and courage upon the mind. There is a sanity, a realism, in Emerson's philosophy which we miss from the European mystics, and which is distinctly the contribution of the New World to Old World thought. Emerson is thoroughly native, not only to New England, but to the country at large. Yet though his optimism is partly the instinctive American optimism bred of hopeful conditions, there is something deeper in it, something of the spiritual faith, which also, at crucial moments, proves itself alive as the soul of our national life. That faith has been the inspiration of all that we have so far produced of genuine art. For a nation merely absorbed in money-making, merely interested in practical results, cannot grow a literature.

Dwindling France

By Sydney Brooks

LONDON, *February 4, 1903.*

THERE has been sent to me—why, whence, and by whom I cannot guess—a pamphlet on "The Depopulation and Repopulation of France." Its author is a M. Arthur Le Creps, of whom I know only this, that he is a delightfully French crank. One always imagines somehow that in France cranks flourish with a less than English or American exuberance, that there is something in the atmosphere of that laughing, prudent land that effectually heads them off. However that may be, here in M. Le Creps we have a crank of the first water, but a French crank, a crank who can write, a crank with humor. The result is anything but Bostonian or Exeter Hall-ish. M. Le Creps is painfully moved by the spectacle of a dwindling France, and his pamphlet is addressed to the Senate and Chamber of Deputies in the hope that they may be stirred thereby to action. But he is not so moved, his emotions are not so merciless, that he cannot give up a few pages to gossiping in the most limpid French, about his school-days, about his neighbors in Perpignan, and about his troubles with his wife. What those troubles precisely were we do not learn. Perhaps his views on the population question had something to do with them. M. Le Creps puts the decline in the French birth-rate down to four main causes—the Civil Code with its principle of forced testamentary division of property, the "deplorable condition" of French morals, the "Anti-Christian Malthusianism" practised by the people, and finally to "the gnawing cancer that corrupts, devours, and destroys the French nation"—*le fonctionnarisme!* All this he would counteract by allowing the head of a family to bequeath his property as he chooses, by permitting girls to marry without the consent of their parents at eighteen instead of twenty-one, and men at twenty-one instead of twenty-five, by giving the father of three children two votes, of six three votes, of ten or more four votes, by restricting the numbers and increasing the taxation of cafés-concerts, bars, and saloons, by forcing *la fille de joie*, after the old Roman fashion, to wear a dress as conspicuous as her life, by doubling the taxes on all bachelors above the age of twenty-five, and on all couples who after three years of married life have no children, by exempting the father of ten children from all imposts whatsoever, and lastly, by employing none but married men and women in the service of the State. He has a few more suggestions to make, but they are of rather too domestic a character to be discussed freely by any one who lives outside the spacious air of France. Besides, I have said enough. Boston will at once recognize in M. Le Creps a man and a brother.

And yet there is a good deal in what he says. The French census of 1901 showed that in the preceding five years the population had increased by only 330,000; and even this increase, small as it was, had to be largely discounted—Paris and its environs being responsible for 292,000, of whom a considerable proportion were foreign immigrants. All the rest of France put together had thus only added some 38,000 to its numbers since the census of 1896. Taking the figures for the last thirty years one finds that while the average increase of the United States, of the United Kingdom, of Germany, Italy, Austria and Hungary worked out at twelve millions apiece, that of France was less than 2,500,000. Norway, it has been computed, doubles her population in 51 years, Austria in 62, England in 63, Denmark in 73, Sweden in 89, Germany in 98, and France in 334. The birth-rate in France, which stood as high as 38 per 1000 between 1770-1780, and at 32 during the first decade of the nineteenth century, has steadily fallen since to 22, its present figure. Between 1811 and 1820 the average annual surplus of births over deaths was 57 per 10,000; between 1891-1896 it was 45, and the census of 1901 showed it to have decreased again. To whatever column of statistics one refers, the result is the same. Not only has the birth-rate fallen, but marriages are fewer and less productive than they were. Twenty years ago the average of births per marriage was three; to-day it is not more than two. In spite of a moderate death-rate, France is dwindling.

This is an old problem and an old anxiety with the French. All sorts of causes have been brought forward to explain it, and all sorts of remedies proposed for its solution. It is a difficult matter to generalize on, as the phenomenon is unevenly distributed. Out of the eighty-seven departments into which the country is divided, the population is increasing in twenty-four, diminishing in sixty-three. Where the Church is strongest and her teachings most faithfully obeyed—in Brittany, for instance—there the birth-rate is highest. But practically it is only the poorest and most backward districts that are prepared to accept the clerical mandates on all points. The prosperous farmers of Normandy and Picardy restrict themselves to at most two children, while in less well-to-do regions, such as Brittany, Lozère, and the Haute-Loire, the increase in population is continuous. One might deduce from this that prosperity and small families go hand in hand in France, and as a rough generalization it would stand. In the industrial districts and among the working classes it is the poor who are the most prolific, in France as everywhere. So that, on the whole, one might say that the devout poor in the country and the heedless and improvident poor in the towns are the real mainstays of the French birth-rate. How matters have come to such a pass there has been a variety of conjectures to show. Conscription, the growth of intemperance, the increasing burden of taxation, the "modern aversion to marriage," the spread of luxury, and the new zest thrown into the pursuit of personal comfort and pleasure, even "a natural lack of fecundity in the French race"—a surprising assumption which Canada, Louisiana, Mauritius, Brittany itself, join in disproving—have all been accused of being agencies of depopulation. But these phenomena are to be found in other lands; some of them are of universal application, operative over the whole area of civilization; and yet nowhere do they produce the effects ascribed to them in France. Obviously some higher and more general cause, and one peculiar to France alone, must be looked for.

All political roads in modern France lead back sooner or later to Napoleon, whose most enduring work was the recreation of his country. To the Napoleonic settlement of the Revolution all that is sound and stable in the France of to-day may be traced, as well as much that is unhealthy and blighting. Among other things the depopulation of France is largely his work.

The principle of forced testamentary division of property among the children was not, of course, original to him. He took it, as he took much else, from Montesquieu, and established it in France as part of the framework of the land. As such it remains to this day, with results both good and bad. No single enactment has ever perhaps cut more deeply into the social life of the French people. It has caused an immense diffusion of private wealth.

It has turned France into a nation of small landowners. It has thus made for stability and content, checked the possibility of a "submerged tenth," and prevented the growth of latifundia with their accompanying menace of agrarian socialism. On the other hand, by making most Frenchmen capitalists or property-owners to some extent, it has also made them unambitious. They need but a little more to provide themselves with a competency, and they get it by entering the service of the State, where they can be sure of a settled salary and secure advancement with the minimum of personal effort. A Frenchman's ambitions turn as naturally towards the dignity of *un fonctionnaire* as an American's towards trade. Consequently, wholesale creations of unnecessary posts and offices at the expense of the taxpayers.

Moreover, the Napoleonic enactment has given birth to a peculiarly territorial form of patriotism, an intense passion for the actual soil of France. This is a feeling inevitably engendered when a large proportion of the people are able to measure their stake in the country in acres, roods, and perches. The result is, however, that France is made so comfortable and pleasant a place to live in, there are so many ties binding the citizen down to his share in the national heritage, that the ordinary Frenchman, robbed of much of his initiative in the schools which turn out excellent functionaries but inadequate men, and finding himself in happy possession of an income from his property or whatever it may be his father has left him, has no ambition to better himself by emigration. If the French do not colonize, it is because there is too much ready money in France.

But the most direct effect of this law is to be seen in the necessity it entails of limiting the population. After several generations of constant dividing and parcelling out of estates, whatever their dimensions, peasant proprietors, if they would hand down more than a square yard of land, are forced to renounce all hope of large families. There comes a time when even the largest estate may be so subdivided as to afford adequate support to no one. The thrifty, prudent farmer, as M. Le Creps sees, has therefore no option but to limit the number of his offspring. This has now become a habit, and has encouraged the idea that the land is incapable of supporting even those who already dwell on it.

Thus a new impulse is given to the migration of rustics to the towns, and as life in the streets is soon discovered to be no easier than life in the fields, the refugee peasants, according to Mr. Bodley, carry out and spread abroad the Malthusian doctrines which they know to be the salvation of the countryside, and hope to see adopted as the remedy of all social ills. Then, again, there is the dowry system. A French father cannot get his daughters married except by giving each a portion, and the amount of the *dot* has risen considerably since the charity of American women took to gilding anew the battered dukedoms of France. Over every French cradle hovers the disenchanting ghost of a dowry. In all countries an extra child means extra expense; in France it means an extra fortune, and that is a very powerful reason why the French have few children. "The social conventions," as M. Demolins says, "make their task an impossibility; and then, not being able to destroy the conventions, they destroy the race."

The Book of Months

By E. F. Benson

SEPTEMBER

THE barren, sterile emotions which art gives us, though they have this advantage of harmlessness over the emotions of life itself, that tree of sweet and bitter fruits, bear within them the inherent defects of their unreality; and whereas there is hardly an emotion of life which does not leave us stronger and more vivified, there is hardly an emotion of art, where one's senses are stirred not by actual events of joy or sorrow, but the imagined scenes thereof, which does not leave us flat and unbraced in proportion as the emotion excited was keen.

Love and death, the two great motifs on which the drama of life is based, whether they are whispered on the shivering strings, or piped on remote flutes, or thundered with the blast of trumpets and the clink of cymbals, leave us, when such actual experience has touched us, the richer for it, and stronger and more vivified. But such is not the case in the reflection of experience which art gives us. Vivid it may be—so vivid, indeed, that reality after it seems shadow-like and unreal,—but its life is temporary; we thrill with ecstasies that are not really ours, our soul in its secret place sickens with sin or withers with renunciations which are not its own, and when the mimic spectacle is over and we awake again from the storms or sunshine of a colored dream to a gray morning, and have to take up again the dispiriting thread of uneventful hours, it is with an intolerable sense of flatness that we at first look out over the undistinguished landscape of life. For a week, perhaps, or a fortnight, we have agonized with the throes of Titans; monstrous joys and sorrows have been our portion, and for the monstrous we take up again the minute. We have been burning with alien fires and passions not our own; the temptations of Kundry have shaken us; the sorrow of Wotan, as wide as the world and as bitter as the sea, has for the time been ours. We have been laid to sleep on a mountain-top like Brünnhilde, and like Siegfried have dreamed in the green shade of woods until the voice of nature has become intelligible, and the twittering of birds articulate through the murmur of the forest. The quintessence of human emotion in all its terror and beauty has shaken and enthralled us. Then — then the curtain comes down, and we go out again into the real world, which for the time art has rendered shadowlike, where a hundred petty duties await us, in no way refreshed or strung-up for their accomplishment, but impatient, irritated, and bored.

Such, at least, were my own feelings when on a morning I awoke and remembered (what at first seemed incredible) that there was to be no opera that day, and that the curtain was down on the stage at Baireuth for two years. The little backwater of a town which on arrival had seemed so instinct with such sweet repose and tranquillity was insupportable; its tranquillity was stagnation and decay, its repose a creeping death-trance, with gray nightmare to ride its rest. Instead of finding that the fiery dream of the last fortnight had gilded its streets and woven themselves into its gardens and trellises, it appeared to me merely the most dismal little sunbaked suburb I had ever seen. A glorious lamp had burned then, but the lamp was quenched, and instead of a reflection of its light lingering there, there was only a smell of oil. But the immediate and vital question was what to do and where to go.

I could not imagine myself finding existence tolerable anywhere, and least of all, perhaps, could I imagine myself back in England in my own quiet little house in the country town, since for the time being, at any rate, all the minute pleasures which had built up that delightful life and made it so full of happiness were incomprehensible. Not long ago a quiet morning of work with glances into the garden to see what new plant had flowered, a game of golf over the breezy down, the face of a friend, the hundred details of my life which I have tried to describe in these pages, were overflowingly sufficient to make me more than content. But now there was exasperation in the very multitude of them. And all the time there were, so to speak, images of glorious brightness shut away in some dark place in my breast. The Valkyries were there and Parsifal: Hans Sachs, mellow and unembittered, looked on the love of others and smiled, and Walther sang of spring-time, and everywhere was melody.

Here, if you please, is egotism in excelsis, for I solemnly told myself that instead of going back home, like a sober and average person, I was bound—no less—to go somewhere and to do something by which I could the more fully apprehend and crystallize these images; and the ground on which I put this to myself—this is my only excuse—was genuine. For I believe that one of the main duties of man to God and to himself is to realize beauty and understand it, and that one of his main duties to his neighbor is to produce beauty in some shape or form, moral, mental, or artistic, if, indeed, there is any real difference between them. The last fortnight had given me new material: that part of me which is capable in its small way of feeling beauty had been shown wonderful things. If I went back to the ordinary routine of daily life, I felt that I should do my part in it exceedingly ill, and also that the monotony and triviality of it would tarnish and dull the brightness of my new possessions. In other words, I began, a solemn prig, to think about my artistic temperament and make plans for its well-being, and, that confession made, in the hopes that *qui s'accuse s'excuse* in some small degree—the mind-narrative can go on its way. My body—after an effusion of telegrams — sped south to the house of a friend in Capri, where it arrived two days later.

Here in this remote island, separated by a few leagues of sea from that vividly modern and restless place called Naples, can be recaptured without effort something of the early days of the world, and from the steamer one steps off out of all the responsibilities and codes which the stupidity and wickedness of mankind have built up, into paganism and fairyland. The gray walls compounded of priggishness and Puritanism (yet united together with the mortar of good intentions and morality) with which this civilized country has fortressed itself, fall as walls of Jericho fell at the blast of the trumpet, and there are left sunlight and sea, and the beauty of the seven days of creation, which was pronounced by God to be good. The red wax-like flowers of the pomegranate are in full bloom, and as evening falls they glow like hot coals over the rough street walls that bound the path up in Capri, where the green lizards slip in and out. The smell of the vines is in the air heavy and warm, and once or twice as I walked through the dusky trellises my heart hammered in me, for I knew that but a little more and I should see Dionysus himself with the vine leaves in his hair, and delicate hand holding the cup that brimmed with purple, and at noonday often have I all but seen in the brier-decked clefts of rock the great god Pan himself, to the music of whose fluting the whole world dances. Up and down these steep paths, with head erect beneath the wine-jars, walk the maidens of Capri, and something of Aphrodite lives in their wind-painted faces and moulded bosoms; and young Apollo, barefooted and splashed to the knee in the trodden vats, strips the nut-husks off with his gleaming teeth and looks at the passer-by with brown, soft eye. He has perched a pomegranate flower behind his ear, and his shirt is open so that the smooth brown breast is seen.

What thoughts fill day by day that gay, lazy Italian brain? He is not religious, although he goes to mass most regularly, for from mass he passes back again to paganism. He only goes there because he is a child, and is vaguely afraid—or would be if he did not go to mass—of what the priests have told him about a remote bogey (for so God seems to him) who can make him burn in unquenchable fire if he does not. Nor does he weary his mind with any question of morality or code of ethics: the sun is warm to him; or if the sun be hot, the shadow is cool and the almond fruit is sweet, and the fumes of the fermenting-vats mysteriously exciting, and the maiden with whom he is in treaty to wed very fair and loving, and her dowry is good. And for passers-by he has his bright smiles and the expression of his hope that I have enjoyed my bath. No, he has not bathed to-day, for the work of the vintage is heavy, and he is paid well by the hour. Ah, a cigarette! The signor is too kind. Will not the signor take his pomegranate flower? Indeed the signor will.

Day by day this sunny and innocent paganism gets more possession of me, and day by day the beauty of that which I saw at Baireuth glows more brightly. Yesterday about evening a sudden summer squall came storming over from Posilippo, gleaming with lightning and warm large rain and riotous with thunder, and to me it was Wotan who steered from the north. On Monte Solaro the Valkyries awaited his coming, and when the whistling winds had passed over our heads, while the house shuddered, and the moon again rose in a velvet sky with stars swarming thick round her, I knew that on the mountain-top Brünnhilde slept within a ring of fire, waiting for the man who should claim her with his kiss. But the morning again to-day was very drear and hot, and instead of going up Monte Solaro as I had intended, I went as usual down to the Bagno, a white pebbly beach with pockets of sand to lie on.

I took with me a basket of figs, and a flask of wine stoppered with vine leaves, and my friend took a book which we often read and a straw case of cigarettes, and together we swam through the chrysoprase of sunlit sea far out to some seaweed-covered rock. The water was very deep round it, and fathoms down something shone very brightly with waving subaqueous gleam; and half laughing at myself, I dived and dived, for I knew it was the Rhinegold that shone there, until I could dive no more, yet still I could not get deep enough. Then having rested, we swam back and lay on pockets of hot sand and drank from the leaf-stoppered bottle and ate the purple of the figs, and I read in the book which he had brought, beginning at the seventh chapter, to this effect:

"Did I seriously believe that that contemplation of God which is the prime duty laid on us by religion must or even could legitimately give us any touch of sadness of whatever kind, I would throw religion

away as heedlessly as I throw away the end of a smoked-out cigarette, for I have no use for it. Yet, although on every side, and most of all in every pulpit, I see the lamentable Puritan jowl and hear the lamentable Puritan whine which bids me look with horror on the sin of the world and with sorrow at its sufferings, yet I do not for a moment believe that this impious gabble is the result of religion, but rather of the grossest irreligion on the part of its exponents. For I know that the contemplation of God is my duty, and if I make it my whole and absorbing duty I cannot go very far astray. For about all things is God love, and above all things is the beauty, and the love which engirdles Him joins without break to the human love, which it is our duty always to give and take, giving with both hands and taking by the armful. So, too, His beauty joins without break to the beauty of all He has made, and in the golden hair of women and in the rose petal, in the smooth, swift limbs of youth and in the faceted diamond, in the curves of a girl's lips and in the rose-flushed clouds in the blue chalice of the sky of morning, equally and everywhere must we look for and absorb the beauty which is implanted there. It is here that Christianity with its mournful man-invented morality has gone so far astray from its Founder that many Christians turn from beauty as if beauty was evil, instead of ever seeking it and worshipping it, find it where they will, until the dross of their gross minds is burned up in that fine fire.

"Hence, too, sprang—by hence I mean from impious Puritanism—such phrases as the 'temptations and dangers of physical beauty,' whereas to the man whose mind is set on God it is by and through beauty that the uttermost death-stroke is dealt to the writhing earthworm of carnalism. For the truth is that no beauty of soul and no completeness was ever framed on the mutilation or starvation of self, and at the last day the gray and pallid ascetic will find that what he thought was virtue and what he taught as self-control were mere darkness of soul and purblind vision. It is this that must be cast away: we are people that sit in darkness, content that our religion should make us sad, and as such we have a lesson hourly to learn from paganism, and in particular from the paganism of the Greeks, whose hierarchy of gods were enthroned in brightness, and the name whereof was Beauty. And that beauty, the search of which to them was worship and prayer and praise, they found everywhere,—in the sunlight and the blue dome of heaven, in the crisp curling acanthus leaf which they set to twine in the capitals of their marble-hewn columns and in the necks of the vases of the dead, in the radiance of jewels and in the tragedies of heroes, and above all in the beauty of the human form. Disfigured and astray their worship often went, and it wore strange garbs, but through all its sin and its misconceptions, its thousand errors and distortions, we can see gleaming deep below the bright shining of its truth. And this, to my mind, gleams less brightly in the sadder worship of to-day. For I doubt very much whether anybody is in the least benefited by the actual sorrow or repentance of any one, though no doubt such—especially to sour and brooding natures—is necessary.

"But the best repentance, if one has sufficient vitality, will be momentary, a fiery sword-thrust which will leave no ache or throb behind. It is better, I dare say, that a man should suffer the fire of remorse for years, rather than that he should not suffer them at all, but I think that the man who is capable of throwing his remorse off and starting fresh and unwounded is the more godlike creature, for the reason that it is infinitely better to be happy and smiling than to go frowning through the world. For sin is seldom born of a happy impulse, stare as you may, unless from a happy impulse which has been, so to speak, shut up in the dark and has gone putrid.

"And here in this divine place" (the book I am quoting from was written at Athens) "where beauty is thrown broadcast over all one sees, and happiness is so easy, it seems to me to follow as a corollary that things which a northern and gloomy people consider wrong are less wrong. For supposing in foggy London every shopkeeper tried to cheat one, one would say that the middle class was going to the dogs. Quite so—it would be. But the middle class is not in the least going to the dogs here. Why not? For a variety of reasons: partly because there is more sun here and no fog, and because the Parthenon is near at hand. Ah, yes, indeed it is so, gayety covers a multitude of sins, and while they are covered beauty blots them out.

"O beautiful God of this beautiful world, let me make somebody laugh to-day. Amen."

At that point I laughed.

"So his prayer is heard," said my friend.

"Have you eaten all the figs while I have been reading?"

"Yes, but don't be unhappy. Remember it is your duty to be happy. You may have the last cigarette."

"No, we'll toss for it."

"I'll be shot if we do," said he.

"Well, I'll cut it in half."

"So that neither of us gets any," said he. "Give it me!" and he very rudely snatched at it. Hence ensued a scuffle, and the bowels of the cigarette were scattered about the beach, and neither of us got any. The occasion gave rise to moral reflections. Also immoral ones. Then peace and plenty descended again in the shape of a friend, also coming down to bathe, with a supply of fresh ones, and the sun was warm again, and the sea blue. Then my friend, whom I must call Jack, because he objects to his real name being known, saying that I am certain to keep all the beautiful remarks for myself and give him all the idiocy, held forth.

"The man is shallow," he said; "it is only a gospel of surfaces he preaches, and you think it profound merely because he loads it with grave words. I've done for years exactly what he preaches. I have succeeded in being always happy and unusually gay, and I spend my whole life looking for what I consider beautiful. Yet what did you call me last night? A second-hand sensualist, I think."

"Very likely. That is because you are not strenuous, and the pursuit of beauty must be passionate. The pursuit of beauty must be an act of worship, but yours is not; it is more like sucking sweets."

Jack laughed loudly and idiotically.

"Or eating all the figs," said he, and the discussion ended.

It is close on noon and only the faintest breeze is stirring.

The sea is silent and waveless, except that at intervals a ripple falls like the happy sigh of some beautiful basking creature on to the hot white pebbles of the beach. There like a living sapphire lies the dear sea, the thing in this world I love best and understand best, though I don't understand it at all. Never have I seen it so luminous as it is to-day; you would say that the sunlight of centuries had been lit in its depths. Gray rocks run out from the precipitous land, fringed with seaweed. Under the water the seaweed shows purple.

A brown-sailed fishing-boat lies becalmed a mile out, and under the bay Naples sparkles white and remote, and only the thin line of smoke streaming upward from Vesuvius speaks of the fierce and everlasting stir of forces which underlie the world. In the thickets which come down to the water's edge of this tideless sea there is now no sound of life, though an hour ago they were resonant with the whispering of the cicalas. The lizards have crept out in the stillness and bask on the white stones, as still as if once more Orpheus charmed them, and high above us a hawk with wings motionless floats slowly, in seeming sleep, down some breeze of the upper air.

And what if the nameless author is right? What if—this is the upshot—happiness is our first duty? It is certainly not true that if you are good you are happy, but may it not be true that by being happy you are in some degree good? The Puritan idea of Christianity has had a fair trial, and indeed it seems to have made but a poor job out of it, for what is the result of all their sadness and renunciations?—nothing but starved lives and unrealized ideals. Such self-denial is touching, beautiful in theory, and based, of course, on Christ's teaching. But it is based awry if it brings sadness with it, if it sees in beauty only a snare to lead the soul astray, rather than the sign-post which leads by no winding road, but by a royal highway straight to God. And that road resounds with praise, and the birds of St. Francis sit in the pleasant boughs of the trees that grow beside it, and the dear saint smiles at them and says, "Sing, my sisters, and praise the Lord." And at his bidding they fill their throats with bubbling song and thank God for their warm feathers, and the green habitation he has built for them. Then St. Francis, so the legend tells us, sits down at table with St. Blaise and Oswald, the friends of St. Francis, and feeds them so that they become very strong. Those saints are more to my mind than that foolish fellow Stylites or the dour St. Bernard, who, being plagued with the flies on a hot day, excommunicated them, and they all dropped down dead. For love, joy, and peace are the gifts of the Spirit, but we are too much given to let the joy take care of itself, to check it, even, as if salvation was clothed in sackcloth.

Happiness is a home product; we cannot impart it into ourselves, nor by multiplying our pleasures can we come one whit nearer to it. But by being dull, by being slow to perceive, or, having perceived, to receive, we can and we often do succeed in closing the doors of our souls to it. Yet, though it comes not from without, nor is it the sum or product of any pleasures, yet our soul must sit with doors and windows open to catch if it be but one-millionth of the myriad sweet and beautiful things that stir and shine about us, or else, as in the darkness and stagnation of some closed house, dust and airlessness overlay us. For there is nothing in the world, except only that which the sin or folly of man has wrought, which is not wholesome and innocent. It is our grossness which makes things gross, our rebellion which makes us say that in beauty there lurk any seeds or germs that can ripen into or go to form anything that is not beautiful.

O world as God has made it, all is beauty.
And knowing this is love and love is duty.
What further can be sought for or declared?

To be Continued.

Canada's Naval Project

CANADA has decided to have a navy of her own. Whether or not this is her first move towards "cutting the painter" that holds her to England, the fact is very significant, following as it does upon her refusal recently to contribute to the up-keep of the imperial navy. When the Colonial Premiers were in London last summer for the Coronation, they held a conference with Mr. Chamberlain, and the maintenance of the navy, for colonial as well as home defence, was among the subjects considered. All the colonies except Canada agreed to subscribe annually fixed sums towards the Naval Fund, Australia's contribution being placed at $250,000, and Newfoundland's at $15,000. Canada, however, absolutely refused to give a cent, much to the chagrin of the British government and press, who are pointing out that the hardest task the navy would have in war-time would be to defend and protect Canada's commerce, towards which protection Canada pays nothing.

The Ottawa administration has now determined on a Canadian navy. This is to be, at sea, the counterpart of her militia. Sir Frederick Borden, her Minister of Defence, recently announced the formation of the naval force in the near future, and he has just despatched an expert to Newfoundland to study the organization and working of the British naval reserves in that colony. This expert is Captain Spain, Commodore of the Canadian fleet of fishery-protection cruisers, which ships have so unenviable a reputation for seizing American fishing-vessels for alleged encroachments within the three-mile limit along the Nova-Scotian coast. These cruisers are to form the nucleus of the Canadian navy, and the men are to be recruited chiefly from the fishermen of the Maritime Provinces who trawl on the Grand Banks.

With the Alaskan boundary dispute now submitted to arbitration, the next issue which will call for settlement is that of the Atlantic fisheries. This is a most awkward complication, because Great Britain and the United States and Canada and Newfoundland are all concerned, and each has her own interests which clash with those of the others. Canada has always been for shutting out the Americans from her waters and cancelling the *modus vivendi* under which they now obtain an entry, and her object in forming this naval force is probably that she may be able to make her patrol of her seaboard so perfect that no daring Yankee fisherman can break through. She will also require to use her navy to guard the St. Lawrence route if war breaks out, though of what service such ships as hers could be is not very clear, as they would be unable to meet the attack of the gunboats which constitute the navy of some South-American republic.

It is not to be supposed that Canada entertains any idea of using her new toy—for such it must prove—against the United States. At the same time, the disposition to do so is there, if the time and the material sufficed. Canadian dissatisfaction at the arrangement arrived at for the settlement of the Alaskan difficulty is profound, and there is much caustic criticism over England's "backdown," but the unanswerable argument is embodied in the query: Why should England risk a rupture with the United States for the sake of a country which will not help her with a dollar or a man to fight their joint battles on the ocean? For this reason, England has suited herself in the Alaskan tribunal, and Canada is to have the naming of but one of the three jurists who will represent Great Britain. In the case of the Joint High Commission, on the other hand, England had only one out of six members on that side of the tribunal. But that has all been changed now.

At the session of the Canadian Parliament opening on March 12, the necessary legislation will be introduced to create this naval force. Little, if any, opposition is looked for. The government is strong, and Premier Laurier is a potent force, especially in the province of Quebec, where this proposal will be most welcome, because it will be accepted as the beginning of an independent nation, which is the earnest wish of every Quebecker. The details of the plan have not yet been worked out, but it is understood that the organization will be modelled, as far as possible, on the Newfoundland Naval Reserve, which Captain Spain is now studying.

This force has been a most complete success. Although urged for some years to extend to the colonies the Naval Reserve organized in the British Isles, the Admiralty always refused, until in 1900 its need of more men compelled it to make the experiment in its oldest, as well as nearest, colony, Newfoundland. The large fishing population of that island, and their well-known daring and indifference to hardships and tempests, formed the main inducements for the selection of Newfoundland. Almost the whole 220,000 inhabitants are descended from English and Irish stock, so blended as to make a class of fisherfolk whom nothing can daunt. The Admiralty enlisted fifty young men in the fall of 1900, and sent them to cruise in the Caribbean Sea for the winter in H.M.S. *Charybdis*, a modern warship well adapted for the purpose. The men did so well that forty-four out of the fifty were given first-class certificates at the close of their training. Another fifty were taken last winter, of whom forty-seven passed out in the first grade; and eighty comprise this year's contingent, who are now serving in the *Charybdis* in Venezuelan waters, having participated in the active operations there in concert with Germany and Italy. The volunteering is so general that the Admiralty has stationed permanently at St. John's the corvette *Calypso*, for the training of the young fishermen. The regulations provide for five years' service—six months' sea-drill in a cruiser in one year, and a month's shore-drill in a training-ship each year of the remaining four. Hundreds are taking the monthly training this winter so as to qualify for the cruise next fall, and it is expected that 300 men will join the ships of the North-American squadron then for the winter's work. The Admiralty has agreed to have at least 600 men enrolled in the Newfoundland branch, but it is probable that number will be doubled.

The home training of the Newfoundlanders is most valuable to them in this connection, making them altogether superior to the British recruits. In the handling of boats, smacks, and schooners, every Newfoundland boy is an expert; he can row, steer, sail, and con these craft; he can manage canvas, ropes, and compass, and in every sailorly art he is proficient. Nor is he unfamiliar with steamers, because the sealing fleet of twenty stout steamboats takes out 5000 men every spring to ice-fields, and while there is a great difference between a sealer and a cruiser, the elementary features are the same. The Newfoundland Reservists have proved their efficiency and fitness beyond all cavil, and their officers have reported most favorably of them. There are 70,000 men and boys engaged in the fisheries on the island, and out of that number it is calculated that fully ten per cent. should be available for the purposes of the Naval Reserve. The Admiralty expects to have 2000 in training by the end of the five years, and, if necessary, a second drill-ship will be sent out. In physical strength and nautical expertness the men are exceptional, and the intention is ultimately to fortify St. John's and convert it into a naval base, thereby rendering it possible for British war-ships to refit there in war-time and augment their crews from among the Reservists.

Consequently, it seems a sensible step on Canada's part to take the Newfoundland force as a model. The fishermen of the Maritime Provinces are of the same type, but less hardy, because they have not to face the same storms at sea or risk their lives on the ice-floes after seals. If the Canadian scheme is acceptable to the people there, it should result in a large enrolment, but it is doubtful if they will take it seriously. In Newfoundland the whole organization is an imperial one, the colonial government having divested itself of all authority, and the result is that the movement, controlled only by the Admiralty and the naval officers, is accepted as a serious and important mission by all. But the intention in Canada is to have her force under her own control, and distinct altogether from the royal navy. This will mean that it will be regarded much as a pastime, an opportunity to secure a cheap pleasure trip in a government yacht instead of the sobering fact of a cruise and active duty in a real war-ship.

The Operatic Situation

THE much-vexed question of the future directorship of the Opera seems finally to have achieved the happiest of possible solutions—the selection of Mr. Heinrich Conried, of the Irving Place Theatre, as Mr. Grau's successor. For those who have at heart the best interests of the lyric drama in New York, few things could be more gratifying than the event of Mr. Conried's succession to the place vacated by Mr. Grau. There can be no reasonable doubt that Mr. Conried is very nearly the ideal man for the position. His long and brilliant record as manager of the one playhouse in New York in which the artistic rather than the commercial principle prevails, inspires the conviction that he will provide the most justly balanced and intelligently organized performances that the Metropolitan Opera House has ever seen. What direct experience of operatic management he lacks he can readily acquire; and he has abundant energy, tact, and executive talent; above all, he has an admirable quality of artistic intelligence. Mr. Conried has announced that he will aim, in planning his productions, at securing excellence of *ensemble* rather than brilliancy of individual performance. Whether he can make that system acceptable to a public habituated to the bewildering splendor of such "all-star" casts as have become a commonplace under Mr. Grau's magnificently lavish régime is somewhat questionable; but since Mr. Conried owns to so laudable an ambition, the least we can do is to hold up his hands. Excellence of *ensemble*, however,—particularly in the case of the Wagner music-dramas,—necessitates the co-operation of a conductor of the first rank—a point which we are not at all sure that Mr. Conried realizes. We have had no assurance as yet that he plans to secure the services of Mr. Alfred Hertz—a conductor whom it would be in the last degree deplorable to lose, now that we have fortunately discovered him. To ignore the opportunity of engaging the one conductor who has proved himself a worthy successor to Mr. Seidl—a musician of superb temperament, skill, and authority—would be a lamentable and inexcusable blunder.

Books and Bookmen

MR. CLEMENT SHORTER, in his latest Literary Letter to hand in the *Sphere*, notices the publication, by the firm of Routledge, of a work by John Boyle O'Reilly called *Moondyne*, and complains, with good reason, because it contains absolutely no indication as to whether the book is a new one or a reprint of an old one. *Moondyne* is a stirring tale of convict days in Western Australia, its hero being an escaped convict who rides triumphant among the rich and the great, continually exercising a beneficent power. Traces of the influence of Henry Kingsley's *Geoffrey Hamlyn* and of Victor Hugo's *Les Misérables* are evident, but much of the vivid and picturesque power of the story was due to O'Reilly's own experiences as a convict. Born near Drogheda in 1844, he enlisted in the Tenth Hussars, and became an enthusiastic rebel at this time when the Fenian movement was arousing the national sympathies of Young Ireland. In 1866 he was arrested, charged with treasonable practices, and sentenced to be shot. The sentence was commuted to twenty years penal servitude, and the next year O'Reilly was sent, at the age of twenty-three, to a convict settlement in Western Australia. Two years later he made his escape and reached this country on an American whaler. It was these incidents in the career of a romantic youth which inspired the fascinating story of *Moondyne*, published in 1883 by Messrs. Roberts Brothers, when the author had risen to a place of honored and distinguished citizenship in Boston, and had become the editor of the Boston *Pilot*. O'Reilly was a man of quick sympathies and generous temperament, and he did not forget the men who had been with him in the convict settlement. In 1876 he fitted up a whaling vessel which carried off from the coast of Western Australia all the military political prisoners. It gives one a thrill to remember that this act of piracy and romance took place at so recent a date in our own times. O'Reilly died from an overdose of chloral in 1890 at the premature age of forty-six. His generosity showed itself frequently in the encouragement and help he gave to young writers. He had a poet's nature and romantic temperament, and published not less than four volumes of verse, though, by some strange oversight surely, neither Mr. W. B. Yeats's *Book of Irish Verse* nor Mr. Stopford Brooke's *Treasury of Irish Poetry* contains a single line of his poetry. He himself edited an anthology entitled *The Poetry and Songs of Ireland*. O'Reilly, indeed, is much better known in America than in England. One of his closest friends in Boston was Mr. F. J. Stimson, whose debonair hero Miles Courtenay in *King Noanett* was drawn on the lines of his lamented friend's character, and the lines quoted on the title-page of the novel were from one of his poems:

For when God gives to us the clearest sight,
He does not touch our eyes with Love, but Sorrow.

In the adventurous quest of Miles Courtenay, his Irish wit and humor, his true and knightly fashion, his love for Carew, passing the love of women, we get as near perhaps to a spiritual portrait of John Boyle O'Reilly as we are ever likely to possess.

The last work done by the late Julian Ralph was for HARPER'S MAGAZINE. It consists of a number of articles on American subjects, undertaken for that Magazine and to be printed during the present year. The first of these posthumous papers appears in the March HARPER'S, and under the attractive title, "Our Tyrol and its Types," there is cleverly characterized the Green Mountain region, and some of its original *outré* types, from the old spiritualist who lived alone and performed his own housework to the head waiter of the hotel, who was a Yale man of gentle birth and breeding. Another paper, to appear later, describes a trip made by the author through parts of New England in company with a tin-peddler. Mr. Ralph had but recently returned from a trip to Kentucky, made in the interests of HARPER'S for the preparation of an animated description of those lonely, remote "cabin" Kentuckians who seem to live quite apart from civilization. This will be illustrated by Lester Ralph, a son of the author.

Dr. W. Robertson Nicoll is not only one of the keenest and most up-to-date editors and journalists in London, but more than any other English editor he has always evinced a lively and hospitable interest in American writers. What he has to say of the late Julian Ralph, whom he knew personally, is therefore worth listening to, especially as it touches the reasons for Mr. Ralph's success in one way, and his failure in another. "Through circumstances I am late in the day"—Dr. Nicoll has just returned from the Riviera,—"but I hope not too late, in paying a tribute to the memory of the late Julian Ralph. I did not know him intimately, as I knew Harold Frederic, a man of whom he reminded me in some respects. But I have had long and confidential conversations with him, and cherished a sincere regard for his many excellent qualities. Mr. Ralph was one of the many Americans who cherished a cordial friendship for this country, and his influential position in journalism, both in the Old World and in the New, gave him many opportunities for showing this, opportunities which he never failed to use. In a way Mr. Ralph was very successful. He was acknowledged by journalists to be one of the ablest of their number. He was completely up to date. He never spared himself. He knew what was required, and he shrank from no effort and no sacrifice in order that he might supply it. Both in London and in New York editors were eager to avail themselves of his services, and he made a sufficient income. Yet he felt himself that he had not been really successful. Julian Ralph ought to have been at the head of some great paper, and he knew it. But there was something in him—I do not know what—which made it easier to obey than to command. And eminent as he was in his own line of things, I have known many men of abilities far inferior who were much more successful, if money is the test of success. Again, while he liked his work, and was proud of it in a way, he had great ambitions to be known as an author of books. These were never fulfilled. He had great hopes of the success of his South-African correspondence when issued in volume form. I ventured to suggest to him that he should rewrite everything and fill up blanks. Mr. Ralph found that this was impossible. In a very unusual way it was true of him that what he had written he had written. Some of the South-African correspondents had many things to say about the war in talk which they did not put into print. Mr. Ralph had very little. He had done his duty to the full, and given away all that he possessed, and though here and there he might emphasize a judgment, he had no more to tell. The comparative failure of his books to secure a large popular audience was a matter of some disappointment to him, though his buoyant temper soon shook it off. Like most Americans, Mr. Ralph was an admirable speaker. He was indeed a man much to be honored in every phase of life, and his early death has been deeply regretted by many friends."

One of Dr. Nicoll's prime pleasures during his holiday on the Riviera was in frequenting the old circulating library in Nice. In such a library there is almost always something to tempt the collector or book-buyer. The remains of scarce first editions are often found lingering on the shelves. In the Nice library, Dr. Nicoll found a first edition of *Under the Greenwood Tree*. Long ago, in Exeter, he came upon a very rare first edition of *Far from the Madding Crowd*, in a wretched state unfortunately, but his recent find had evidently been little read, and was in good condition. Dr. Nicoll recalls how Mr. Frederick Greenwood told him years ago of his picking up a copy of *Under the Greenwood Tree* at a railway station, attracted whimsically by its name. Mr. Greenwood read it and liked it, with the result that he gave Mr. Hardy a commission to write *Far from the Madding Crowd* for the *Cornhill*, which was then a flourishing magazine. With the serial publication of this novel began Mr. Hardy's popularity.

Who is there nowadays that has read that quaintly curious book of Harriet Martineau's—*Society in America*? Yet it is full of good stories and bons mots. Here, for instance, is a dialogue between two Western settlers which she reports:

"Whose land was that you bought?"
"Mogg's."
"What is the soil?"
"Bogs."
"What is the climate?"
"Fogs."
"What do you get to eat?"
"Hogs."
"What do you build your house of?"
"Logs."
"Have you any neighbors?"
"Frogs."

On one occasion Miss Martineau met a dressmaker who was anxious that she should write something about Mount Auburn Cemetery. On being interrogated as to what kind of article she had in her mind she said that she would have Mount Auburn considered in three points of view: as it was in the day of creation, as it is now, and as it will be in the day of resurrection. Miss Martineau liked the idea so well that she got the dressmaker to write the essay herself.

When Mark Twain was a young man and a struggling newspaper writer in San Francisco, a lady of his acquaintance saw him one day with a cigar-box under his arm, looking in at a shop window. "Mr. Clemens," she said, "I always see you with a cigar-box under your arm. I am afraid you are smoking too much." "It isn't that," said Mark: "I'm moving again."

Among the autographs and manuscripts collected at the recent Whittier sale were the following lines evidently intended for an album:

As one who writes upon sand or frost,
I write, and the letters will soon be lost,
And the Spider, Forgetfulness, weave and wind
His web over all I leave behind.

Yet I faintly hope for a lease of fame
From the thousand albums that bear my name;
And, that snugly lodged in some spinster's chamber,
Or grandame's trunk, like a fly in amber,
May always be found somewhere in the City or
Country, the name of John G. Whittier.

Finance

THE promise of improvement in the security-market remains a promise and nothing more. Moments of strength have been followed by periods of hesitation and decline, but in no instance decisive or important. In other words, the stock-market has relapsed into the dulness and monotony of "professional" trading. That the advocates of lower prices have not made much headway is only half comfort to those whose profit lies in rising values. On the whole, the situation at large is satisfactory, and it would seem as though the next important price-movement would be upward rather than the reverse. But while this opinion may be held by the majority, it is also true that such a movement is not expected to start for some weeks yet; and that is a very long time for your professional speculator to spend in idleness. The believers in the anxiously-expected bull-market are great and small. The great—the financial giants—are not willing to inaugurate an aggressive campaign just now, preferring to reduce to a minimum the chances of failure, by waiting for certain favorable features of the situation to become more pronounced. The small are men who follow, but do not lead, and therefore have not the courage of their convictions. For that reason such advances as have taken place lately were usually in special stocks, in which special forces were at work. On the other hand, the bears have lacked solid ammunition. Indeed, for many days the argument most frequently heard in support of the bear position has been the dulness which obviously results from the absence of manipulation for the rise by the strong interests of the Street and from the continued apathy of the outside public. Only the professionals are bearish just now, and they concern themselves with conditions to-day and to-morrow, technical rather than general. At this writing a depressing influence is the imminence of gold exports. It is not questioned that there is nothing serious in the shipment of gold to Europe, but the gold-exporting operation has a sentimental effect always, and, moreover, as the Treasury has been absorbing money from the banks, the additional loss in cash which the exportation of gold would entail certainly would not facilitate stock speculation, which must be carried on with borrowed money. This country has greatly reduced its obligations to Europe, but that a great deal is still owed is obvious from the strength of foreign exchange rates. Gold would have gone abroad months ago had it not been for the efforts of our bankers to avoid it. The necessity for preventing such exports to-day is not vital. Indeed, it seems altogether the wisest thing to pay off the remaining indebtedness to Europe now, when the money-market here is in position to stand it, rather than to wait until the domestic demands upon bank credits will be greater and when the settlement of the balance might be awkward. In other words, the outgo of gold will not be of serious proportions, and this country can lose some gold to-day without harm. The real importance of such a movement, from the stock-market point of view, lies, as has been said, in the fact that the bank reserves would shrink, as they normally do, in March, owing to the demands for money from various quarters, and that the return movement to this centre does not take place until April. It is for this reason that the "bull-market" is not looked for by dispassionate observers of the situation until six or eight weeks hence. Meanwhile, it would seem as though stock prices would fluctuate within a narrow range,—see-sawing, in the Wall Street phrase, in response to professional operations.

It is a fact of some significance that a depressing influence was found in the proposed issue of bonds by the Erie Railroad. The wisdom of the company's action was not questioned—save by a few reckless speculators who had had "bull tips" on the stock—but what caused comment and uneasiness was the fact that so many railroads were borrowing huge sums of money at the very time when they are declared to be enjoying unexampled prosperity. Mr. James J. Hill, a great phrase-maker as well as a master of railroading, is credited with the designation of the Erie as "a financial derelict." Whether Mr. Hill be responsible or not for the epigram, it is well known that the Erie needs money, and a great deal of it, for improvements. Such betterments are not in the nature of luxuries, but of vital necessity to the Erie. Moreover, the credit of the road is by no means on a par with that of the Lake Shore. But if the Erie needed money, what of the enormous borrowings of roads popularly believed to be in first-class physical condition, whose credit is of the highest and whose earnings are truly stupendous? The Street asked when this practice would end, and spoke of extravagance. There is food for reflection in this "tendency," beyond doubt. But, in point of fact, even such railroads as the Pennsylvania, despite enormous expenditures for betterments, motive power and rolling stock during the past five years, are unable to handle the volume of business thrust upon them to-day. More properly, they are unable to handle such business economically. None foresaw the extent of our prosperity. Much business is good and profitable. So much business that there is serious congestion of traffic is bad and unprofitable. That condition of affairs has been commented upon in this column. It is something to think about when the president of one of the greatest railroads in the country devoutly prays not for more business but for less, so that his road may show bigger profits to his stockholders. It is difficult to see that "conservatism" has been thrown to the winds, when roads raise money for indispensable improvements, and issue bonds to increase permanently the efficiency of their operating department.

Harpers for March

ALGERNON CHARLES SWINBURNE'S brilliant critical article on Shakespeare's "Richard II.," accompanying Mr. Abbey's pictures in color, is the opening feature of the March number of HARPER'S MAGAZINE. Professor Culin contributes an interesting paper giving new proofs that America was the earliest home of man, and Professor Boni tells of some important discoveries recently made under his direction among the ruins of the Roman Forum. Robert W. Chambers writes of the unexpected doings of animals. There is both humor and pathos in Julian Ralph's article on New England types, and E. S. Martin writes with all his usual charm on the child's view of life. Maurice Hewlett's two-part Italian romance is concluded in the March MAGAZINE, and there are eight complete short stories in the number. Among the illustrations there are fourteen pictures in color, by Mr. Abbey, Miss Green, and Miss Cory. The number is an uncommonly interesting and important one throughout.

HARPER'S WEEKLY for next week will have, among other features, the two latest paintings of the President and of Grover Cleveland, with a drawing by Nast, the cartoonist, of one of their first meetings when Cleveland was Governor of New York and Roosevelt was a member of the New York Assembly; a character sketch by Peter Newell of the German Emperor; an article, with pictures, on Diaz, the President of Mexico, and his successor; the present situation and outlook in Russia; the opening of the Canadian Parliament, with a forecast of the questions to be considered and their bearing on our own interests; the first woman composer to have an opera produced in America—full-page painting by John S. Sargent; results of the investigations of the President's coal commission, with new portraits.

Official Legal Notice

THE CITY OF NEW YORK
DEPARTMENT OF TAXES AND ASSESSMENTS MAIN OFFICE BOROUGH OF MANHATTAN
NO. 280 BROADWAY, STEWART BUILDING

January 12 1903

NOTICE IS HEREBY GIVEN, AS REQUIRED BY THE Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903.

During the time that the books are open to public inspection application may be made by any person or corporation who may to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan at the main office of the Department of Taxes and Assessments No. 280 Broadway.

In the Borough of The Bronx at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in the City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturdays, when all applications must be made between 10 A. M. and 12 noon.

Submit to your own nature: if it means you to be mediocre, be mediocre. Yield to those wiser than you, adopt their opinions, and do not trouble the world, since you cannot govern it.—*Joubert.*

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE MOTHER'S FRIEND

when nature's supply fails, is BORDEN'S EAGLE BRAND CONDENSED MILK. It is a cow's milk adapted to infants, according to the highest scientific methods. An infant fed on Eagle Brand will show a steady gain in weight.—[*Adv.*]

TELEPHONE Service saves time. Time is the stuff of life. Have telephone service at your home as well as at your office and save time at both ends of the line. Rates in Manhattan from $48 a year. N. Y. Telephone Co.—[*Adv.*]

A HOUSEHOLD word to-day, COOK'S IMPERIAL EXTRA DRY CHAMPAGNE, in which the highest quality possible is maintained.—[*Adv.*]

IN need of a tonic? Take ABBOTT'S, the Original Angostura, the king of tonics. At grocers and druggists.—[*Adv.*]

FOR coughs and colds PISO'S CURE is still the best and most pleasant remedy. 25 cents.—[*Adv.*]

A PROGRESSIVE COMPANY.

PROGRESS marks every statement of the Equitable Life Assurance Society, and the Forty-third Annual Statement for the business of 1902 is no exception to the rule. Growth in assets, surplus, amount in force, and new business; large increases in premium and total income, and in profits paid to policy-holders; reduction in volume of claims by death, together with an expense rate maintained at a minimum as in former years. These are the features which show that the Society moves forward with every year, and that it has reached a position of remarkable magnitude and stability.

In every respect the statement just presented contains evidence of wonderful growth and security. The assets have increased to $359,395,537.72, the liabilities, including the reserve, calculated by the company, of $279,450,753 to $284,268,040.95, and the difference, which constitutes the surplus, is now $75,127,496.77. This is an increase during 1902 of $3,998,454.71. Besides adding to the surplus fund this large amount, the Society paid during the year $4,477,924.15 in profits on maturing policies. The total earnings for policy-holders, therefore, during the year were $8,476,378.86.

During the year just ended, the premium income amounted to $53,932,423.44, and income from interest, rents, etc., to $15,074,588.81, making the total receipts for the year $69,007,012.25. From these receipts $15,281,961.73 was paid for death claims, and the total payments to policy-holders aggregated $29,191,250.79. After providing for the total expenditures of $42,248,101.45, the Society was able to increase its invested assets by $26,758,910.80. This saving of the income is 39 per cent. of the total income.

The amount of new business written was the largest ever issued in a single year by the company. It amounted to $281,249,944. As a result of this enormous new business, the outstanding assurance amounts to $1,292,446,595, showing the greatest increase in the Society's history.

Altogether, this latest statement of the Equitable shows that the Society lives up to its motto, "Not for a day, but for all time."—[*Adv.*]

ADVERTISEMENTS.

THE CLUB

are the original bottled Cocktails. Years of experience have made them THE PERFECT COCKTAILS that they are. Do not be lured into buying some imitation. The ORIGINAL of anything is good enough. When others are offered it is for the purpose of larger profits. Insist upon having the CLUB COCKTAILS, and take no other.

Our Costly Brewing

The water used in SCHLITZ Beer comes from six wells, driven down to rock.

The barley is the finest grown, selected personally by a partner in our concern.

The hops come mostly from Bohemia, and cost twice what common hops cost.

Every process of the brewing is in personal charge of two of the brothers who own the business.

All the air that touches SCHLITZ Beer is filtered. Every drop of SCHLITZ Beer is filtered through masses of white wood pulp.

Every bottle is cleaned by machinery *four times* before using.

After the bottle is filled and sealed, it is sterilized for 1½ hours by the process of M. Pasteur.

Common beer can be brewed for half the cost of SCHLITZ; but our extra cost is all spent to insure absolute purity. Yet common beer and SCHLITZ Beer cost you the same. Why not get the best for your money?

Ask for the Brewery Bottling.

THE MENAGERIE OF MARCH

THE LION, THE LAMB, AND THE MAD MARCH HARE

BY ALBERT LEVERING

Kaiser. "O great King, list to the music of the heaven-born-to-rule. I would a word."
King. "You make me tired."

Kaiser. "Then I will a heaven-made-by-me epic to you read. Have I your ears and eye?"
King. "That's clevah, by Jove! You may proceed."

Kaiser. "There is a sunny lamb which we will peacefully assault—for his sauce."
King. "You have won me. I assent."

Kaiser. "Ha! sirrah lamb. How dare you withhold from us that small dish there?"
King.
Castro. "Tum-ta-ra-ra-tum!"

Kaiser. "A defi! Away with your sauce! I'll have the cabbage now!"
King. "Gadzooks! The thing is mad!"

The Bird. "Back to the Baltic, or I'll make Wienerwurst out of you."
The King. "A failure. I must fly."

Moving Sidewalks for New York

See page 333

A NEW transit problem is now confronting the city authorities. It is how to connect the Manhattan terminals of three great bridges over the East River with one another, and with the Subway and Elevated railroads, as well as the leading surface lines running north and south. In this problem lies the solution of most important transit methods from Brooklyn to Manhattan Borough. It must be solved in order to relieve the great congestion of the present Brooklyn Bridge, and to make the Williamsburg Bridge, now approaching completion, and the Manhattan Bridge, which is well under way, do their share of the work.

There have been suggestions of special Subway and Elevated Railroad loops and the like, with an enormous expenditure for new street openings and plazas, but exactly how to make these bridges of the greatest use in transit work and at the least cost has not yet been settled.

The newest proposition to solve this problem is now before the Board of Estimate, which has referred it to the Rapid Transit Commission. It is popularly known by the misnomer, "Moving Sidewalks." It is really a system of moving platforms or continuous trains. Men like Cornelius Vanderbilt, Stuyvesant Fish, E. P. Ripley, and others are interested in the new plan, and the engineers not only pronounce it feasible, but extremely economical. The moving platform is simply the improvement of the continuous trains that were in operation at the Chicago and Paris Expositions, and that carried millions of people along at a good rate of speed and in absolute comfort without accident.

In a general way the plan is to start at Bowling Green, at the lower end of New York, and run this continuous train in a subway under certain streets up to the Williamsburg Bridge, which is crossed, the moving platforms returning to Bowling Green along the same route. This is a distance of six miles all told, and there are now no satisfactory transit accommodations for the vast population of this great region on the East Side of Manhattan Borough, as well as the crowded Williamsburg region. At Bowling Green the platform trains would connect with the tunnel to Brooklyn. Running up Pearl and William streets to Centre Street, they would connect with the present Brooklyn Bridge and Third Avenue Elevated Railroad. Passing through Canal Street to the Bowery, they would tap the outlet of the new Manhattan Bridge. Then going through Delancey Street, they would reach and cross the Williamsburg Bridge. They would connect with all the leading surface car lines on the East Side as well.

The plan is to dig a subway under these streets from twenty-five to thirty feet wide. Stations will be opened every two blocks. The continuous trains are simply flat platforms with seats on one side and a space on the other, so that one may accelerate his speed by walking if he wishes. There will be no more congestion than on the sidewalk of an ordinary street, for the reason that there will be no waiting for trains. There are no heavy locomotives or motors to be hauled and no housing for the cars. The tunnel will be lighted and will also be heated moderately in winter. The plan is to charge one cent in rush hours and two cents at other hours for transit. It will require something like 10,600 cars or platforms all looped together to make up the great train.

The method of operating these platforms is well known. There are two so-called "stepping platforms" running alongside the train platform. The passenger steps on one platform moving at the rate of three miles an hour. He then steps on one moving at the rate of six miles an hour. From that he steps on the train going at the rate of nine miles an hour, where he finds a seat. These seats are to hold, say, four persons, and are to be three feet apart. To alight from the train the passenger simply steps from one platform to another of diminishing speed, and finally gets off at his station. There is great elasticity of carrying capacity, and the cost of operation is declared

(Continued on page 363.)

NEW AUTO-TRUCKS

THE racing type of motor-car has been thrust into great prominence, on account of its remarkable speed records, unusual appearance, and rather exaggerated sanguinary habits when in unskilled hands, and little attention has been paid to the very rapid development of its plebeian relation, the commercial motor. Powerful traction-engines have for some years been satisfactory for use in the vast farm lands of the West, and in countries where railroads have not as yet spread a network of communication. Perhaps the most radical development of the traction-engine is found in the peculiar motor which is here presented. The subdivision of the driving-wheels into sections not unlike the feet of an elephant is claimed to give a more powerful grip on rough surfaces than anything that has yet been devised. It climbs over logs and boulders with as much ease as when on a well-made road, and it is not affected to any extent by mud two or three feet deep. This freak-like engine, curiously enough, reverts back in its appearance to some of the earliest attempts to use steam as a practical propulsive force, when the endeavor was made to construct motors whose tractive mechanism should imitate the exertions of men or animals. It also bears a resemblance to the various attempts which have been made by which the machine should carry its own rails, these being in some degree flexible, or in sufficiently small jointed sections to allow for their passage around the engine, thus presenting a smooth surface for the wheels irrespective of the character of the ground.

New Style of Traction-Engine for crossing Obstructions

The most recent development in the heavy motor vehicle has been unmistakably to produce the future successor of the trolley-car. The lower illustration on this page shows a car capable of ascending a forty-per-cent. grade with its maximum load. The essential benefit of this species of vehicle lies in the possibility of its use in districts where the scarcity of inhabitants makes a trolley road impracticable; in such cases a line of motor vehicles, which could be reduced or increased in number when traffic warranted, would obviate the need of a heavy outlay for the construction and maintenance of roadbed and power-house. It will undoubtedly be a long while, however, before motor-cars can be profitably adapted for use on, or in competition with, steam railroads, in spite of the experiments in this direction, which are being made in France and England.

The greatest stimulus towards the use of auto-trucks will be an electric battery which will be strong enough, and of such construction as to reduce the tremendous depreciation which at present cuts down the life of the battery and limits the radius of travel for the motor to an ever-shortening distance. With batteries now in use an enormous weight is required in order to produce sufficient power for heavy work; the effect of use is constantly to increase the weight which will give out the same amount of horse-power: *i. e.*, a battery, when new, may weigh (say) sixty pounds per horse-power hour, but the effect of charging and discharging is to increase the ratio, so that, after some time, one hundred pounds of battery may be required to give the same horse-power per hour. It is said that the much-talked-of Edison battery will be ready for general use this spring, and, if it is as efficient as it has been described to be, it will be of great service. It is claimed that there is practically no depreciation in this battery, even after the most severe test; it is made of corrugated steel plates held in a steel case. It has been well tested at the factory, and is considered fool-proof, but, in order that the most complete working knowledge of it may be had, batteries are to be distributed among the firms which use motor-wagons, and the drivers will be urged to give the batteries the most severe handling. It is therefore expected that when it is put on the market the battery will be as nearly reliable as human ability can make it.

Very fortunately the noisy automobile seems to have had its day, and the prevalence of electric vehicles for city use has hastened the passing of this unnecessary public nuisance. It has been found, moreover, that quietness is quite compatible with motors of high power, and the gasolene touring-cars of most recent construction have an almost inaudible exhaust; it is also possible to run the engine with greater economy of power and of oil consumption. This result has been obtained chiefly by means of improvements in the carburetor.

Trial of new Automobile-car on Heavy Grade

Shredded Whole Wheat Biscuit

is the Natural Food for Invalids because it is the most porous and light of all foods and presents *greater surface for the action of digestive fluids.* These fluids are drawn by absorption into every part of the wheat shreds, making the food immediately assimilable.

Shredded Whole Wheat Biscuit contains a food property to upbuild each and every element of the depleted body. Foods made of part of the wheat, such as white-flour bread, cannot do this, and the ferment contained in them results in a sour mass in the stomach. There is no lard, yeast or health-disturbing ingredient of any nature in *Shredded Whole Wheat Biscuit* and its use insures a sweet, clean stomach.

Shredded Whole Wheat Biscuit purifies the digestive tract, and constipation is unknown to those who eat it regularly. It can be prepared in so many tempting ways that the fickle appetite is always attracted by its goodness and the ailing body quickly responds to its all-nourishing force.

For sale by all grocers. Send for "The Vital Question" (cook book, illustrated in colors) **FREE.** Address

to be much lower than in the ordinary kind of municipal transit.

It is estimated that on the system as planned, and now before the city authorities, no less than 50,000 seated passengers could be carried at a speed of nine miles an hour.

Cataloguing the Heavens

See page 336

SCARCELY twenty years have elapsed since an entirely new idea took shape, an idea destined to be of far-reaching importance to astronomical science. This is the idea of scientific co-operation. Why should not astronomers combine forces under the general supervision of a single governing body, and thus organize a more perfect plan of attack upon the problems of celestial science? Commercial undertakings are not the only ones that yield increased results from a proper organization upon a large scale.

In the year 1882 a very bright comet appeared in the southern heavens. It was, of course, most conspicuous to observers in the southern hemisphere, and was watched almost continuously by the astronomers of the Cape of Good Hope observatory. One day, Gill, chief of that famous institution, conceived the idea that it might perhaps be possible to photograph the comet. His observatory was not provided with photographic apparatus at that time, so he enlisted the services of an enthusiastic local photographer named Allis. The latter brought to the observatory a large portrait camera of the usual type, and this was fastened temporarily to the tube of one of the telescopes. It thus became possible to aim the camera easily at any point of the sky by simply turning the telescope tube with the camera attached about the pivots or axes always supplied to telescopic mountings for that purpose. The very first trial resulted in thoroughly successful photographs of the comet; but it is a curious illustration of the manner in which new discoveries and inventions are sometimes made, that something entirely different from the comet photograph became the principal result of these remarkable experiments.

Gill noticed that his photographs showed something in addition to the comet with its great tail. The entire surface of the picture was everywhere thickly studded with little bright star-dots; for the photographic plate had picked up and recorded faithfully every tiny star situated on the dark background of the sky behind the comet and around it. This opened up a vastly suggestive possibility. Why should we not be able to chart the entire starry heavens in this way? Why not substitute for the fallible human eye and fallible human senses the unvarying truthful powers possessed by the photographic plate? These obvious ideas suggested themselves to Gill at once, and he acted upon them. It seems almost as if great advances in scientific method are not made,—they make themselves. The time becomes ripe, and it required but the attention of some man having the necessary influence among his professional brethren, and disposing of suitable large means to bring the new method into use. Gill is but one of several men who have made preliminary experiments in astronomical photography—epoch-marking experiments they all are—but to Gill belongs the credit of first lifting photography to its proper place among astronomical observational methods. Gill at once entered into correspondence with prominent astronomers the world over. His proposition to thus chart the entire heavens met with instant favor; a congress of representative astronomers was called to meet at Paris in 1887; and it was resolved there and then that the work should be completed at once, to be left as a rich heritage to science of the future from science at the end of the nineteenth century.

But the work was far too vast to be undertaken by any single institution. No less

than eighteen important observatories agreed to co-operate. The entire sky was divided into eighteen sections, and these were assigned to the eighteen observatories to be photographed. The work has now progressed so far that we may say the actual photography is about finished, and it remains only to digest and publish the results obtained.

We propose here to state very briefly some of the purposes for which the new chart will be most useful, and also to describe in a few words the machinery by which it has been constructed. Ever since the time of old Hipparchus, who made the very first catalogue of stars, men have recognized the importance of an accurate "directory of the heavens." Hipparchus was himself led to make his stellar catalogue by the sudden appearance of a new and brilliant star in a part of the heavens where nothing had been visible before. It was evident at once that such phenomena as this are of vital importance, if men desire to acquire accurate knowledge as to the beginnings and endings of the stars. And he saw that the only way to make sure of deciding whether supposed new stars are really new was to make at once a complete list of all existing stars, together with their exact positions on the heavenly vault. Even down to the present day this principle is still in force: it is safe to say that material advances in sidereal science are accomplished only by a search for change. The slightest alteration on the face of the sky is what the astronomer is eternally seeking: this is the cause of vigil by night, and laborious computations during the day. For this, elaborate records of observations are preserved from generation to generation, so that the infinitely slow development of celestial phenomena may be noticed by our remote descendants, even if they shall escape our own ardent scrutiny.

The great photographic chart is simply a part of these records of the skies. Only, unlike Hipparchus's old catalogue, it is made on a much more magnificent scale, and possesses a degree of precision surpassing anything he could even have imagined. Nor is the discovery of new stars the only object of the new work. Modern science has shown the existence of many other forms of change no less important to the serious student. Our theories of the universe are based on a statistical study of stellar catalogues; terrestrial maps and charts depend upon them for their ultimate precision; finally, navigation of the sea, and even the regulation of our ordinary clocks, also depend in great measure on astronomical observations, for whose proper interpretation star catalogues are imperatively needed. But it is not necessary to say much at the present day as to the importance of any great scientific undertaking: these have at last come to be recognized by every one at their proper value.

The new photographic work is to combine the advantages of a chart proper into those of a written catalogue such as Hipparchus made. The entire sky has been photographed twice, once with a series of pictures intended for accurate reproduction as a printed map or chart of the stars, and once for purposes of accurate measurement under the microscope, so as to furnish a printed catalogue. Into this it is estimated that no less than two million stars will enter. The illustration No. 7, on page 336, shows the telescope with which these celestial photographs have been made. The tube is built double, not unlike an ordinary opera-glass; one part is provided with a lens suitable for pho-

tography, and the other is really nothing but a modification of an ordinary visual astronomical telescope. The two tubes being exactly parallel, it becomes possible to examine through the visual one that part of the sky which is being photographed through the photographic tube. This visual examination can continue even during the photographic exposure, so that the astronomer can "see what he is taking." Such an arrangement is necessary, because the stars are always moving up in the sky or going down, and it is essential to have the telescope "follow" them, even during the comparatively short period of exposure. By means of the visual instrument, astronomers can make sure that the following is correct, and if not, they can adjust it.

This following is accomplished by means of a large clockwork situated inside the telescope's supporting pier. The illustration of this clockwork, No. 6, is from a photograph made by the writer at the Cape of Good Hope, where one of the participating photo-telescopes is being operated under Gill's direction. No. 8 is from an actual photograph of the "eye-end" of the same instrument. It indicates plainly the square hole where the photographic plate is attached to the tube, and next to it the eye-piece of the visual tube. The small third telescope is a "finder." Nos. 1 and 3 give an idea of a part of the finished chart, and, for comparison simply, a fanciful figure of the constellation Cetus as drawn by old Hevelius in his *Prodromus Astronomiæ* (1690). The illustrations 4 and 5 show what photography can do with a close star-cluster and with the moon. Such results cannot be attained at all by mere visual methods; they show most clearly the possibilities and actualities of photography as applied to the skies, and justify the hope that by this new method of observation will be revealed some of those secrets that have baffled the eye of man throughout so many generations.

The Lover's Almanac

Oh, hearts that wear the willow,
To you I tell my woe,
Why thus uncared, ungartered,
And all so pale I go.

Come, you wan lovers sighing,
Who too have felt the thorn,
But let none heart-whole linger
To laugh my grief to scorn.

Demure in church on Sunday
My love I chanced to see,
Amidst her gentle praying
I vow she looked on me.

On Monday in the meadow
I lingered by the stile,
She did but touch my fingers,
And passed me with a smile.

On Tuesday, mute and rosy,
I stood upon her way,
My heart it nigh betrayed me,
"Good-morrow," did she say.

With blushing cheek on Wednesday
Her path she went all slow,
How feared I such a fair maid—
I could not move to go.

On Thursday, brave and daring,
I vowed I'd speak her fair,
She turned her glances from me,
And passed me, head in air.

All pale on Friday morning
I waited by her path,
She flashed her eyes upon me,
And pierced me with their wrath.

On Saturday, if that day
Should ever dawn for me,
I'll die for cruel Chloris
Beneath the hemlock-tree.

Dora Sigerson Shorter.

TOURS TO LOS ANGELES

ON ACCOUNT OF THE

PRESBYTERIAN GENERAL ASSEMBLY.

Under the Personally-Conducted System of the Pennsylvania Railroad.

For the Presbyterian General Assembly at Los Angeles, Cal., May 21 to June 1, the Pennsylvania Railroad Company has arranged three transcontinental tours at extraordinarily low rates. Special trains of high-grade Pullman equipment will be run on desirable schedules. A Tourist Agent, Chaperon, Official Stenographer, and Special Baggage Master will accompany each train to promote the comfort and pleasure of the tourists. All Sunday travel will be avoided.

The Pennsylvania Railroad is the only railroad that will run tours to Los Angeles on this occasion under its own Personally-Conducted System.

No. 1. Assembly Tour.

Special train of baggage, Pullman dining and drawing-room sleeping cars will leave New York May 13, going via Chicago, Denver, and the Royal Gorge, stopping at Colorado Springs, Salt Lake City, and San Francisco, arriving Los Angeles May 20; leaving Los Angeles, returning, June 1, via the Santa Fe Route and Chicago; arriving New York June 5. Round-trip rate, including transportation, Pullman accommodations, and meals on special train, **$134.50** from New York, **$132.75** from Philadelphia, **$128.75** from Baltimore and Washington, **$120.00** from Pittsburg, and proportionate rates from other points.

Tickets for this tour, covering all features until arrival at Los Angeles, with transportation only returning independently on regular trains via going route, New Orleans, or Ogden and St. Louis, and good to stop off at authorized Western points, will be sold at rate of **$109.50** from New York, **$107.75** from Philadelphia, **$104.75** from Baltimore and Washington, **$98.00** from Pittsburg; returning via Portland, **$11.00** more.

No. 2. Yellowstone Park Tour.

Special train of baggage, Pullman dining, drawing-room sleeping, and observation cars will leave New York May 12, going via Chicago, Denver, Colorado Springs, and Salt Lake City, with stops *en route*, arriving Los Angeles May 20; returning, leave Los Angeles June 1, via Santa Barbara, San Jose, San Francisco, Seattle, and St. Paul, with stops *en route* and a complete tour of Yellowstone Park; arriving New York June 23. Rate, including all necessary expenses except hotel accommodations in Los Angeles and San Francisco, **$253.00** from New York, **$251.25** from Philadelphia, **$249.25** from Baltimore and Washington, **$244.00** from Pittsburg, and proportionate rates from other points.

No. 3. Home Mission Tour.

Special train of baggage, Pullman dining and drawing-room sleeping cars will leave New York May 13, going via Chicago and Santa Fe Route, Grand Canon of Arizona, and Riverside, arriving Los Angeles May 20, leaving Los Angeles, returning, June 1 via Santa Barbara, San Francisco, Salt Lake City, Royal Gorge, and Denver; arriving New York June 11. Rate, including all necessary expenses except hotel accommodations in Los Angeles and San Francisco, **$159.00** from New York, **$156.75** from Philadelphia, **$152.75** from Baltimore and Washington, **$144.50** from Pittsburg, and proportionate rates from other points.

Tickets for this tour, covering all features until arrival at Los Angeles and transportation only returning independently via direct routes with authorized stop-overs, will be sold at rate **$121.00** from New York, **$118.50** from Philadelphia, **$116.00** from Baltimore and Washington, **$110.00** from Pittsburg; returning via Portland, **$11.00** more.

The tours outlined above have the indorsement of the officers of the Presbyterian General Assembly, and are designed to meet the requirements of those attending the General Assembly as well as those desiring to visit the Pacific coast at a minimum expense.

Detailed itinerary is now in course of preparation. Apply to Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.

HARPERS BOOK NEWS

IN THE GARDEN OF CHARITY

Basil King, the author of "Let Not Man Put Asunder," has written a new novel, published recently under the title of "In the Garden of Charity." It is a study of one phase of marriage, but is totally unlike the author's previous success, dealing not with worldly men and women, but with the simple folk of the Nova Scotian coast. The heroic figure in the story is Charity, who works out her destiny under what are, perhaps, the most trying circumstances in which a woman could be placed, the story advancing through a series of strong, dramatic situations. It is all very human and very sincere.

SIX TREES

Mrs. Mary E. Wilkins (Freeman) has given us another example of that deft art by which she presents her inimitable pictures of New England life and character, in "Six Trees," another recent publication. In these etching-like stories of New England life she makes use of a novel theme, telling of the influence of environment on her people as typified by their relations to the six trees that form the central figures in the six stories.

The book is especially pleasing in appearance, and is illustrated with twenty-two wash drawings in tint.

THE INTRUSIONS OF PEGGY

Mr. Anthony Hope's presence here at this time has directed public attention to his most recent publication — "The Intrusions of Peggy." Peggy is certainly one of the sprightliest of Mr. Hope's characters and one of the most mischievous. Not even the far-famed Dolly, of the "Dialogues," had quite such a penchant for harmless social intrigue. Peggy really seeks trouble—and finds it! But she has ready wit and a never-failing resourcefulness with which to get out of her many embarrassing positions, and all ends well.

HARPER & BROTHERS
FRANKLIN SQUARE, N. Y.

SOME have only themselves to keep clean, but the housekeeper has many and varied tasks of cleanliness. It is not, however, now necessary that she should have for these, several kinds of soap each fitted to clean only one thing. Ivory Soap is pure, and because of its purity it is at all times the soap to select when soap is needed. It drives away dirt with all its unpleasant consequences, and your confidence is increased every time you put it to a hard test.

IT FLOATS.

F. P. C. Wax

A specially imported wax, chemically treated, so that when it is once rubbed over the iron the latter is cleaned as if by magic. It prevents all odor, giving the work that beautiful, silky polish sought for by the laundress.

Not Only the Best, but The Most Economical

Why? Because each fine cut stick of F. P. C. Wax is in an automatic wooden holder, which keeps it from dripping. It never loses shape, and is good until the last particle of wax is used. The handle saves your fingers from burns.

If your grocer tries to substitute the old wax that spoils your ironing and your temper, send 10 cents for two sticks to the

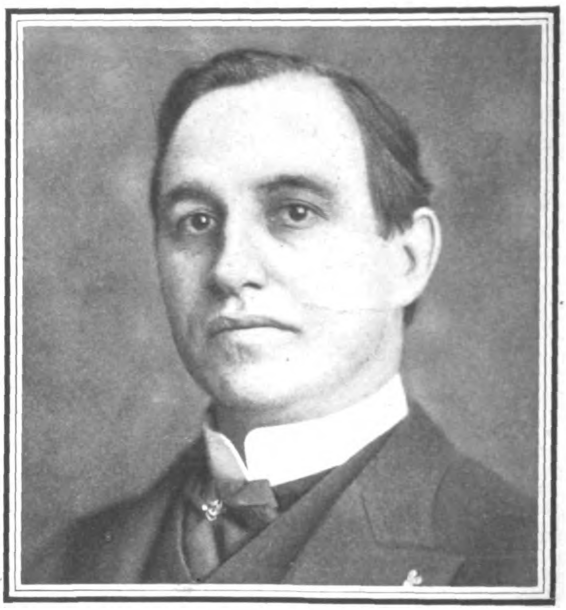
THE OUTLOOK FOR COAL

Clarence S. Darrow

Attorney for mine-workers in coal-strike hearing



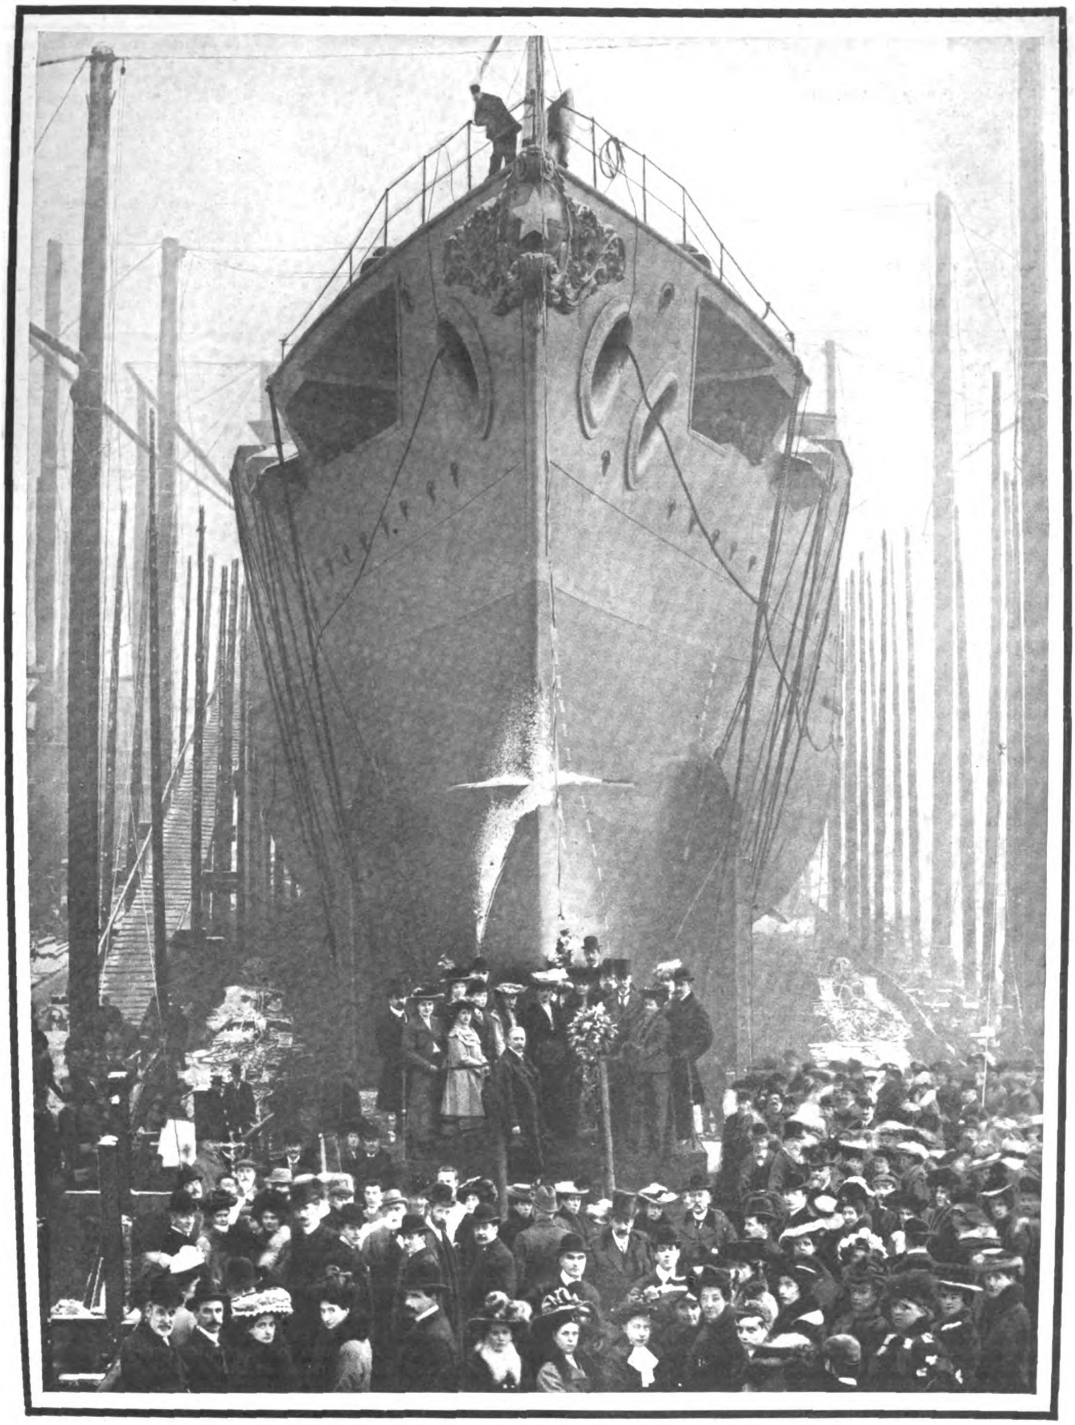
Jimmie Gallagher

A miners' witness, and the wit of the hearing

THE investigations of the commissioners appointed by President Roosevelt for the purpose of investigating the conditions that produced the anthracite coal strike, and of reporting a remedy for those conditions, are ended. It now remains for the commissioners to formulate and publish their conclusions.

The union mine-workers demand more pay and less work; they also deny that they are responsible for the savage persecution, often carried to the height of homicide, of which the non-union workers were the victims. Let us say at once that, as regards the demand for an increase of wages, the miners carried their point. This is evident from the fact that Mr. Baer, speaking for the Philadelphia and Reading Company, himself proposed a slight augmentation of the existing wages on a sliding-scale basis. We may, therefore, take for granted that an increase of wages will be recommended by the Strike Commission. On the other hand, it is doubtful whether the demand for a reduction of the hours of labor in anthracite mines will be approved. The community at large, which has come to regard the combustible as a necessary of life, is, at times, vitally interested in securing the largest practicable output. Obviously, this desideratum would be best attained under an elastic system, whereby a miner's earnings would be proportioned to the amount of work performed. Until very recently the production of anthracite exceeded the consumption, and, consequently, miners' wages were limited by the opportunities to work. For the last two years, however, an opposite state of things has existed, and, if the mines could have been operated continuously, the earnings of the workers would have mounted to the highest level that the industry could afford. Here we should dispel a current misconception touching the facilities for accumulating in summer a stock against the winter's demand. The impossibility of storing coal at a reasonable cost prevents that regularity of labor at the mines throughout the year which would be desirable. It was proved, moreover, that even in winter, although the demand may greatly exceed the supply, the union will not permit miners to work to their utmost capacity, however much they may wish to do so. This systematic restriction of output on the part of the union men was denounced by Mr. Baer as a wrong done to the individual, a violation of sound economic principle and an injury to society. He contended that the ultimate effect of restricting production so as to distribute employment must be to go on dividing the wage-fund as often as new men seek to be employed. The process must inevitably lead either to a refusal on the part of capital to prosecute the industry or to a reduction of the wages of the individual worker to a sum barely sufficient to sustain life. Mr. Baer maintained that wages can only increase when each individual is left free to exert himself to his fullest capacity, thereby creating wealth, which, in turn, gives new employment, creates a demand for commodities, and a corresponding demand for workmen to produce them.

The question of wages is manifestly complicated with the question of methods by which a miner's work shall be measured. Shall it be measured by the ton, by the car, by the yard, or by time? The union mine-workers insist that payment shall be made in every instance by weight. The operators answer that no single method of measurement is applicable to all collieries; that one system would suit one colliery; another, another; and that the difficulty of applying the rule of measurement by weight would in some collieries be insurmountable, while, in others, it would prove unsatisfactory to the workers themselves. This matter of measurement is one of the most knotty problems which the commission has to solve, and we doubt whether they will attempt to solve it by propounding a single principle rigorously applicable to all collieries. They are more likely to suggest that in each colliery or group of similar collieries the question of measurement shall be left to arbitration.



John Mitchell

President of the United Mine Workers of America

As the operators insisted from the outset that the question of their recognition of the Miners' Union did not come before the commission, all testimony relating to the acts of violence from which the non-union workers suffered should, by the strict rules of evidence, have been excluded. As a matter of fact, a very large part of the time occupied in the hearings was devoted to such testimony. The advocates of the strikers virtually undertook to justify the violence of which the non-union workers complained, by setting up the principle that a man has no moral right to work, if, by his work, he quenches the hopes and levels a death-blow at the interests of his fellow-man. In other words, the liberty to work begins when it can be exercised without impairing what a fellow-worker believes to be his right to labor or abstain from labor. This, obviously, is a new principle which cannot be reconciled with legal right as this has hitherto been formulated. This principle would give strikers the right to employ the coercion which the law prohibits. It would make them the sole arbiters of right and wrong in their own case. It should be obvious that the principle would justify organized capital in employing force to compel strikers to return to work.

Mr. C. S. Darrow, the counsel for the mine-workers, took the ground that the boycott was a natural and permissible weapon of partisan warfare. As testimony on the question of the union was admitted, it is probable that the report of the commission will embody a decision upon it. At the present writing the price of coal is about what it was before the trouble in the mining districts. It is most probable that the commission will grant sufficient concessions both to the miners and to the operators to make their decisions accepted without question even by the labor leaders, and so insure to those of us who have to buy, a reasonable price, and a plentiful supply of coal during the coming year.

The Launching of the new Chilean Battle-ship "Constitucion" at Newcastle-on-Tyne

A Chance to Increase our Navy

TWO battle-ships, the *Libertad* and *Constitucion*, which are being built for Chile in England, and two armored cruisers, the *Garibaldi* and *Pueyrredon*, which are being built for the Argentine Republic in Italy, are on the market. They are for sale by reason of the treaty of peace signed by these countries last July, whereby each nation agreed not only to sell these vessels, but to take off some of the small arms on their present war-vessels. Chile also agreed to sell its well-known armored cruiser *Captain Prat*.

Both the *Constitucion* and *Libertad* have been launched—the *Constitucion* having only recently been sent into the water from the yards of a British ship-building company, at Newcastle-on-Tyne. She is rated as a first-class battle-ship, but is really of the second class, being slightly larger than the *Illinois* of the United States navy. Chile has offered her two ships to Germany, and the offer has been rejected for two reasons. One is that the vessels were not made in Germany, and the other is that special ammunition would have to be made for them. Great Britain has not yet put in a bid for them, and probably will not do so. In spite of the many difficulties in the way, it has already been proposed that we take advantage of these conditions, and add to our navy at least two of the four new war-ships.

Possible Russo-Turkish War

ST. PETERSBURG, *February 14, 1903.*

IN the last few days there has been a sudden change in the tone of our newspapers towards the Balkan troubles and Macedonia. And, to those who understand the meaning of the change, it is ominous of war, while outwardly promising peace. Until the last few days all our Russian papers, beginning with Prince Ukhtomski's official St. Petersburg *Gazette* and *Novoe Vremya*, and ending with *Grajdanin* and *Svet*, were full of the most outspoken attacks on the Turkish government for its part in tolerating, if not inciting, the Macedonian horrors. In this crusade of the pen, Prince Ukhtomski took the lead, and we all know that, since their trip round the world together twelve years ago, Prince Ukhtomski has been deep in the counsels of the Tsar. So that we may justly infer that the Tsar himself feels as much indignation and horror at the Balkan atrocities as does the most outspoken editor in the land.

For weeks the columns of the papers, beginning with the official St. Petersburg *Gazette*, were full of reports of Macedonian outrages. A few days ago all hostile criticisms of the Sultan and his policy, and all reports of the outrages and torturings in the Christian provinces of Turkey suddenly ceased, and were succeeded by articles of a much milder tone, containing promises and hopes of a pacific settlement for the Macedonian difficulty. The cause of that sudden change is this: the Tsar and the Russian government, with the whole nation behind them, have made up their minds that the Turkish horror must be ended; and therefore they have had to face the prospect of a most terrible war. For the Turks are most formidable soldiers, powerful, courageous, determined; they are admirably trained and splendidly armed, with Mausers of the latest make; and they will fight on the defensive, on their own soil, if this war breaks out. This means, for Russia, the most tremendous sacrifices, with the certainty that she cannot indemnify herself at all for her losses, and that her one reward will be a duty done. Therefore, before taking the step which must bring upon her so many evils, Russia is determined to make the greatest possible effort to attain to some *modus vivendi*, some compromise, some peaceable settlement, if that be at all possible. And in order to give this plan of peace every possible chance of success, it has been decided that every effort must be made to conciliate the Turks; that hostile criticism must cease, that gentle means must be tried, and sincerely tried, before sterner measures, which must bring immeasurable suffering to all parties, are finally and irrevocably undertaken.

If war must finally be resorted to, the refusal of Rumania to allow the passage of Russian troops through her territory puts the matter strategically in a new light. In the Russian invasion of 1877, the lines of force ran from Kisheneff in Russia through Rumania to the Danube, and then across the Danube and further south through Turkish territory, since become the principality of Bulgaria. Plevna was the first strong centre of Turkish resistance, for there were gathered the Turkish troops that had been operating in Servia to the west; and these threatened the Russian line of communication. Therefore it was necessary to dispose of Plevna before the Russian line could be continued towards the south. The thrice-repeated storming of Plevna has passed into history, adding the splendid figure of Skobeleff to the heroic roll of immortals. But the storming had to be changed to a blockade before Plevna fell, late in the year, when the Balkan passes to the south were already choked with snow. Through those snow-clad passes the Russians then fought their way, carrying the line of force over the Shipka, through Adrianople, and on to Stamboul. There was signed the San Stefano Treaty, which set not only Servia and Bulgaria, but also Macedonia, free.

These were the lines of force in 1877-8. But the refusal of Rumania to allow Russian troops once more to pass through her territories will divert the next invasion to another path. This will run from Odessa and Sevastopol, the great ports of Southerr Russia, to Varna and Bourgas on the Turkish coast, where the Russian armies will have to land. The gate of the Bosporus will meanwhile be held by the splendid battle-ships and cruisers of Russia's Black Sea fleet, which will advance as far south as the formidable Turkish fortresses of the Bosporus permit.

Opening of the Canadian Parliament

THE Congress of the United States adjourned at midnight of March 4. The Dominion Parliament begins its yearly session next week. The relationship of the two events is obvious. It suggests the intimacy existing between the interests which no artificial boundaries separating the two countries do or can, after all, divide. By any disturbance of the industrial equilibrium on this side, the conditions on the other are bound to be more or less affected. Readjustment is often necessary, and an immediate or early session is for this reason expedient.

This session of the Canadian Parliament is to be of more than usual interest. What will give the Canadians themselves most concern in its deliberations is the promised redistribution bill. This does not immediately affect their material interests, but threatens to disturb present internal political values. The maritime provinces, which have already serious grievances, will suffer in this reapportionment, while Manitoba, British Columbia, and the Northwest Territories, which have grown relatively in population, will gain. But the protest which comes from the old provinces will probably be but faint echo of the fierce racial cry of the former struggles.

What will more deeply concern those who look on from this side the border is the Parliament's legislation with respect to the tariff and railroads. It is authoritatively announced that no increase in the tariff need be expected or feared. A strong Conservative opposition, reflecting the growing manufacturing interests of Canada, will make strenuous fight to counteract the effect of the tariffs which we have kept standing against them. With the Conservatives in this effort to promote a "national policy" are associated many Liberals, prominent among whom is Mr. Tarte, who last year resigned from the Laurier cabinet because his advocacy of increased protection for Canadian industries did not harmonize with the views of Premier Laurier and his cabinet. It is confidently predicted, however, that if any change is made it will be in the direction of lowering the schedules, and not of raising them. It is more probable that Sir Wilfrid, himself ill, will not undertake the task of making any readjustments this year, but leave it to his successor, who, it is reported, may be the Hon. W. S. Fielding, present Finance Minister. The Conservatives are at present without an efficient leader, but it is likely that Mr. Foster, ex-Finance Minister, now candidate in a by-election in Ontario, will be returned, in which event a material strengthening of the party is anticipated.

Sir Wilfrid Laurier, Premier of Canada

Another matter of our neighborly concern is the Canadian government's railroad policy. The projects of transcontinental proportions and of international importance which will receive the attention of this Parliament must affect our own economic interests, and eventually determine our future "moves." And whatever the immediate action of the Dominion's Congress may be, it is certain that the projects indicate that there is believed to exist a basis for great growth and prosperity. These enterprises, as reported from Ottawa, include not only a new transcontinental line, for which the government's assistance will be asked, but numerous minor roads, including one which is to reach Hudson Bay, and open the way, perhaps, for that once visionary route to Europe through this great inland ocean. There are indications of Canada's increasing attractiveness to manufacturer and agriculturist, which the government itself is doing much to enhance.

The Canadian question most conspicuously in the mind of the people of the United States is that which relates to the settlement of the Alaskan boundary. It is to be hoped that the Parliament will make possible the constitution of the commission by the appointment of its representatives at this session.

Roosevelt and Cleveland

THE historic cartoon by Thomas Nast reproduced here is significant as indicating the early political relations between the President and Mr. Cleveland, who is now our only living ex-President. Mr. Nast called his cartoon "Reform without Bloodshed." The meeting took place in Albany when Cleveland was Governor of New York and Roosevelt was a member of the Assembly. The topic of discussion was the reform in State and county politics where corruption had been found which equalled in many ways the corruption of the famous "Tweed" ring. It was largely through Mr. Roosevelt's investigations and Mr. Cleveland's co-operation that the details of the frauds were made public, that the "citizens were aroused to active support of measures of reform, that offenders were brought to trial, and that laws, correcting the abuses, were passed by the Legislature." It is also a significant fact that Mr. Roosevelt was first invited to the White House during Cleveland's administration.

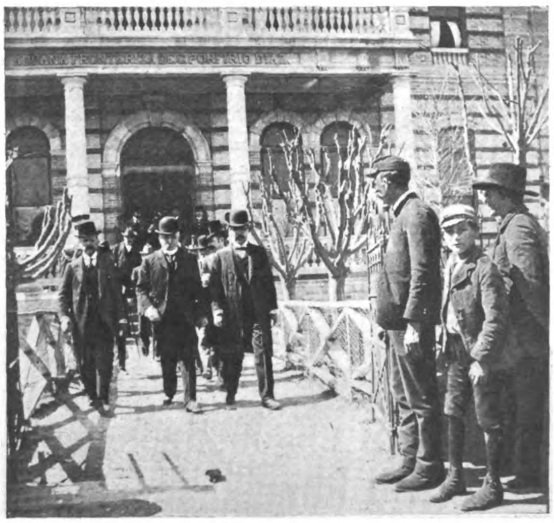
Jose Ives Limantour

President Porfirio Diaz, of Mexico

General Bernardo Reyes

PRESIDENT DIAZ AND HIS SUCCESSOR



THE rumor that President Diaz is about to resign has attracted wide attention. He assumed the reins of government when Mexico was in worse state than is Colombia to-day. Revolutions had occurred annually. There were never less than two presidents at one time, each with an armed following, and issuing *pronunciamentos*. In a short time he thoroughly suppressed organized civil strife. But the great country he governed was pillaged and wasted. Outlying towns were strongholds of constitutional revolutionists who wanted no era of peace. Armed bands of men, remnants of the armies of forgotten pretenders, roamed the country, making banditry and blackmail the law of the land. "Lots of administration," said Diaz. And one of his first acts was to issue a pardon to all bandits who surrendered themselves within a certain time, with a uniform and a horse and a salary greater than any sum of money they could make dishonestly. Hundreds came in, and thus arose the "Rural Guard" of Mexico—wonderful riders and wonderful shots. Set a thief to catch a thief. He sent these out, "assuming," as he has since said, "all kinds of responsibilities," and they cleared the country of bandits, shooting on sight, with the result that to-day the unsettled country of Mexico is the safest unsettled country in the world.

With security obtained, prosperity was to be sought, and President Diaz definitely set about the encouragement of foreign capital. He offered, first of all, heavy subsidies to railroads; he then gave away public lands; established liberal mining laws; remitted taxes when desirable; and chose for members of his official family the most liberal statesmen and most skilled financiers in the land.

The President has some enemies and many opponents—and they may readily be classified. First, are the friends and relatives of agitators who have "disappeared," and the many who must needs feel that a personal injustice has been done them in one way or another. These latter are not lacking in a real republic. Second, are stiff-necked members of the old "Church party," who demand the restoration to mother church of her buildings and lands confiscated under Juarez, and of her lost prestige. Yet this group is not large enough to be dignified with the name of party. Third, are men of certain highly developed communities — Monterey, Guadalajara—who insist that Mexico is ready for more liberty, and who are fretted by the periodic farce of a popular election. Not a vast group of opponents—certainly not a party of the opposition—and nearly all warm in their enthusiasm for the man whom they oppose on principle.

One criticism of President Diaz, however, is hard to answer—unless within the mind of the man himself there are plans that prove it groundless—namely, that he is training up no successor. The accusation of petty jealousy, brought by many against the General, seems hardly justifiable, though based on this and on lesser acts. Whatever the underlying cause, thoughtful friends of Mexico within and without her borders believe that it will be more than unfortunate for the country, stable as she now is, if a successor should enter into office without the power and wisdom of Diaz at his side to start him on his course. Until recently two men were considered to be the logical and rival candidates for the succession. These are Lic. Don José Ives Limantour and General Bernardo Reyes.

Limantour, Secretary of the Treasury in Diaz's cabinet, first gave his services to the administration in 1893, as Assistant Secretary under Matias Romero. He received the best education that wealth could procure,—both in Mexico and in France. He was at one time professor of political economy in the School of Jurisprudence, and later undertook for the government a special mission to Europe in connection with certain delicate financial matters. On the departure of Señor Romero to the United States he was appointed to the Secretaryship. Next to Diaz, the Mexico of to-day owes her prosperity to Limantour, a broad-minded specialist, a practical theorist, and a far-sighted statesman. "Preserve us from Limantour as President," is the remark of many of our countrymen in Mexico, "he is anti-American." Whatever may be Limantour's personal prejudices, he is, officially, above all, pro-capital, and would have no desire to dam the richest stream that flows into his country. As a man handicapped by wealth, the Secretary has not always that Latin urbanity which hides the feelings of his chief. And if he has at any time given expression to a personal dislike for Americans, it is in no way indicative of policy.

President Diaz leaving the Custom-House of the City of Diaz, named in his Honor

General Bernardo Reyes, the popular Governor of the wealthy state of Nueva Leon, General of Division in the Mexican Army, and Secretary of State for War, was recently widely held to be the probable successor of Diaz. He had that important key to popularity—brass buttons and a war record. He had, superficially at least, a more engaging personality than his rival; and he had control of the army. His mistake was to show his desire too plainly as an aspirant to the Presidency.

Though it is improbable that Diaz will soon resign, it is a safe prediction that two years from now will find José Ives Limantour occupying his place. He will find the wild spirit of modern Mexico not broken, but subdued to the will of one man.

The Tin Woodman (D. C. Montgomery) Dorothy Gale (Anna Laughlin) The Scarecrow (Fred. A. Stone) Imogene (Edwin J. Stone)

"The Wizard of Oz"

A MUSICAL extravaganza which is both tuneful and comic in the best sense is "The Wizard of Oz," now playing at the Majestic Theatre. It is frankly burlesque of the broadest sort, but it has the great merit of being free from vulgarity, and tingles with life and spirit from first to last. Apart from its elaborate scenic effects and wonderland pictures, which carry the mind of the old theatre-goer back several decades to the days of the so-called "transformation scenes" that so delighted the youthful eye of other times, the extravaganza is notable for the opportunity it gives two excellent vaudeville artists, Messrs. Montgomery and Stone, to display their talents in rich measure. New York has not for many years seen anything quite so exquisitely droll as the antics of these two individuals in the rôles of the *Scarecrow* and the *Tin Woodman*. To be sure, it is horse-play, but it is horse-play of the finest type, and he would be indeed a dull-pated, morose creature who could not be moved to laughter by it. The *Amiable Calf* and the *Cowardly Lion* also add materially to the swift-running current of fun which never for an instant flags or palls upon the audience. It has been the lament of certain observers of stage conditions that the race of clowns of the artistic sort has passed into history, but "The Wizard of Oz," with its uproarious quintet of fun-makers, proves the happy falsity of such a contention. The "Wizard" is certainly an entertainment amply able to chase away the most persistent of blue devils, and as a purveyor of delight for the children should be heartily welcomed in every home that is blessed with a nursery.

COMMENT

THE commemoration of Washington's birthday this year was distinguished by the remarkable address which Dr. S. Weir Mitchell delivered before the University of Pennsylvania in the Philadelphia Academy of Music. Dr. Mitchell did not profess to have acquired any new information concerning Washington; what he undertook to do was to place the old facts in a new light, and to draw sound and just deductions from data already known. In the case of the men who have played illustrious parts in American history, it is needful from time to time to recur to broad generalizations. The microscope must be laid aside, lest, by fixing our eyes too intently on minute details, we fail to appreciate character in the round and achievement as a whole. Dr. Mitchell gave us the right perspective. It is refreshing to turn to his judicial summing up after a perusal of such books as *The True George Washington*, *The True Benjamin Franklin*, and *The True Thomas Jefferson*, which purport to give us more correct conceptions of the men by revealing to us their minor shortcomings. We are told, for instance, that Washington could not spell. Neither could the Duke of Marlborough. Accurate spelling was not characteristic of British generals in the eighteenth century. The best speller was Burgoyne, but perfection in orthography was not the accomplishment most needed at Saratoga in 1777. It is also true that Washington received only a common-school education, and that what tuition he had, ceased when he was fifteen. As Dr. Mitchell reminds us, he was self-taught, and his self-teaching went on, as it did in the case of Lincoln, all his life. He never stopped growing. He was continually assimilating knowledge and, what was of infinitely more moment to him and to others, wisdom, from books, from men, and from events.

Of the many questions discussed by Washington's innumerable biographers, there are few which Dr. Mitchell did not illuminate, and two of them he is the first to answer in a satisfactory way. Was Washington a reserved, cold, self-contained, unsympathetic man? Reticent he unquestionably was. Like the great Prince of Orange, to whom he presents other points of likeness, he was a silent man. Not easily did his thoughts or feelings find oral expression. On the other hand, no soldier ever lived who was so communicative with the pen. Of all American writers, George Washington was the most productive. He has left about 10,000 letters, not one of which is a mere note; this although the letters which would have been most interesting because most confidential, those to his wife, were destroyed. That among a myriad letters penned under the most various conditions many should show signs of haste was to be expected. What is less seldom noticed is a fact upon which Dr. Mitchell lays due stress, namely, that some of the letters are examples of virile English not surpassed in quality and force by any of the writer's contemporaries, although these included Johnson, Burke, and "Junius." Dr. Mitchell directs special attention to the page or two of satire on General Conway contained in a letter to General Gates. As for his alleged incapacity for friendship, we are reminded that Hamilton called him a kind and unchanging friend. His letters bear witness that he was not only kindly, but affectionate. Benedict Arnold was one of the generals for whom he seems to have felt a warm affection, the remembrance of which stung him when he learned of Arnold's treason. Another question that has puzzled biographers is, How did it happen that a man who, in his youth, had been exceptionally robust and vigorous, succumbed at the age of sixty-eight to a disorder which, even in the absence of proper medical treatment, ought not to have been fatal. Dr. Mitchell considers this question from the view-point of a physician, and he arrives at the conclusion that not even the massive frame of Washington could be subjected with impunity to exposure and privation through the long years of the Revolutionary contest. It is his belief that, when the war ended, Washington was a breaking man, and older than his years.

President Roosevelt in his latest utterance, the address delivered by him on February 21 at the laying of the corner-stone of the Army War College, reaffirmed the truth which events are driving home to the American mind, the truth, namely, that readiness for war is the only guarantee of peace. By war, of course, Mr. Roosevelt means, not aggressive, but defensive war. The war against Mexico was the only one ever undertaken by this country for spoliative purposes. The resolutions which, in April, 1898, committed us to the contest with Spain, would never have been passed by Congress—as every one present at the time in Washington is well aware—but for the self-denying ordinance with regard to Cuba which they embodied. If we need to make our navy at least as large as Germany's, if not as large as that of France, and if we need to place our military resources and preparations on such a footing that a sudden augmentation of our regular army and a skilled direction of it would be practicable, it is obviously because those weapons may be at any hour required for the protection of our sister American commonwealths, which would be unable to defend themselves against any first-rate European power. The creation of a great navy or of an efficient military system is the work of many years, during which there must be no interval of relaxation or indifference. It is fortunate for the country that Mr. Roosevelt's personal experience has made him keenly alive to our naval and military shortcomings. When he was Assistant Secretary of the Navy, adequate measures were taken to improve the gunnery practice on our ships, with results that were memorably attested at Manila and at Santiago. He has been quick to observe that at present our naval gunnery is not what it was in 1898, and he has taken the requisite steps to restore its efficiency. It is well known that the whole influence of the Administration was employed to secure the passage of the bill creating a General Staff, and laying at least the basis for a better organization of the National Guard, from which the regular army must be recruited in the hour of danger. It will have been noticed that

Mr. Roosevelt in his speech on February 21 frankly admitted it to be undesirable that the standing military force of the United States should be other than small in proportion to the country's population. On the other hand, it is indispensable that the force, while relatively small, should attain to the very highest point of efficiency reached by an army in the civilized world.

It is to be hoped that the Fifty-eighth, if not the Fifty-seventh, Congress will adopt the naval-construction programme recommended by the General Board of the navy headed by Admiral Dewey. The programme is warmly advocated, not only by Secretary Moody, but by President Roosevelt. Before marking the proposed additions to our naval strength, we should recall the fact that we now have in commission, or under construction, nineteen battle-ships and eleven armored cruisers. One of these vessels, however, the *Texas*, was originally a second-class battle-ship, and is now out-of-date, while three others, the *Indiana*, *Massachusetts*, and *Oregon*, will soon need to be modernized. Although we have more seacoast to defend than any other country except Great Britain, we are behind Great Britain, France, Russia, Germany, and Italy as regards the number of our war-vessels. Moreover, the German navy is increasing at such a rate that in 1906 it will comprise thirty-eight battle-ships and twenty-six armored cruisers. What the General Board of the navy advises is that naval construction shall be forthwith authorized, and begun on such a scale as to give us by 1909 forty-eight effective battle-ships and twenty-four armored cruisers, besides forty-eight protected or unprotected cruisers, and forty-eight torpedo-boat destroyers, together with torpedo-boats, submarines, colliers, and supply ships. The completion of such a programme would make us the second naval power in the world, and would enable us, in conjunction with Great Britain, to enforce peace upon the ocean. There is no doubt that the programme could easily be carried out, so far as the resources of our Federal exchequer are concerned, for it is computed that the cost would not exceed $40,000,000 a year for eight years. When we consider the enormous amount of money lavished yearly upon pensions, we cannot reasonably object to devoting about a fourth as much to the increase of our navy, without which the maintenance of the Monroe Doctrine against a European coalition would be plainly impossible.

The negro problem having been forced into the foreground of discussion by Secretary Root's admission, in his speech at the Union League Club of New York city, that the blacks had failed to profit by the ballot to the extent expected, we naturally hear very different opinions expressed in the Northern press regarding the practical disfranchisement of the negro in Louisiana, Mississippi, Alabama, North and South Carolina, and Virginia. As to the constitutional consequences of the disfranchising measures, there is a great deal of misconception current. Since not one of those measures disfranchises negroes as such, the result being reached indirectly, it is for the Supreme Court of the United States to decide whether the Fifteenth Amendment of the Constitution is violated or evaded. That Amendment undoubtedly declares that the right of citizens of the United States to vote shall not be denied or abridged by the United States or by *any State* on account of race, color, or previous condition of servitude. It is obvious that this Amendment does not prohibit a State from enacting a property qualification for the franchise such as recently existed in Rhode Island, or an educational qualification such as exists in Massachusetts to-day. There is, on the other hand, no doubt that even an educational or a property qualification for the franchise is prohibited by the first section of the Fourteenth Amendment, which declares that all persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside; and, moreover, that no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States. What penalty is provided for the violation of the Fourteenth Amendment? It is a mistake to suppose that the penalty attaches only to the withholding of the right to vote for President and Vice-President and for representatives in Congress. On the contrary, the second section of the Fourteenth Amendment expressly states that, when the right to vote at any election for the choice of electors for President and Vice-President of the United States, representatives in Congress, *the executive and judicial officers of a State or the members of a Legislature thereof*, is denied to the male inhabitants of such State, being twenty-one years of age and citizens of the United States, or in any way abridged, except for participation in rebellion or other crimes, the basis of representation therein shall be reduced in the proportion which the number of male citizens thus excluded shall bear to the whole number of male citizens twenty-one years of age in such State. How is the proportion to be determined?

It does not follow, because in the six Southern States that we have named very few negroes go to the ballot-box, that all of the abstainers are disfranchised by the State laws. It is probable that the proportion could be ascertained with a close approach to accuracy by a census taken for the purpose, and the fifth section of the Amendment authorizes Congress to enforce by appropriate legislation the provisions of the second section just recalled. But there will be no such legislation on the part of Congress until public opinion in the Northern States demands it, and, up to the present time, Northern opinion has not been favorable to the infliction of penalties on the Southern States enumerated by reducing their representation in the House of Representatives proportionally to the number of negroes practically disfranchised. It is evident, from the reception given to Secretary Root's speech, that the infliction of the penalty prescribed in the second section of the Fourteenth Amendment would not now be favored by a majority of white citizens at the North. So long as this state of feeling lasts, the Fourteenth Amendment will be practically a dead letter.

Since we last referred to the disgraceful state of things in Delaware, the so-called Regular Republicans have tried to give their State its just representation in the Senate, by proposing to vote for any one of the Union Republicans (except Addicks), providing the latter would in their turn vote for the candidate of the Regulars. The offer was refused, the Union Republicans adhering to their original declaration that, if the Regulars would agree to be bound by the outcome of a Republican caucus, Mr. Addicks would not be a candidate. As the whole number of Republicans in the Legislature is thirty-one, to which the Regulars contribute but ten, it is obvious that the result of a caucus would be the nomination of two friends of Addicks. As we go to press, the signs are that the Regulars will combine with the Democrats for the purpose of sending one Democrat and one Regular to the United States Senate. To such a course there can be no reasonable objection, though there are Republican partisans who would rather see the State of Delaware unrepresented in the Federal Senate than represented, even partially, by a Democrat. It is believed that the strength of Mr. Addicks at the ballot-box will be materially lessened if his opponents in the Legislature succeed in repealing the law which has permitted an illiterate voter to have an attendant at the voting-place. The purpose of the existing law is said to have been to give assurance that a bribed voter would stay bribed. Colonel William J. Bryan is perfectly right in saying that the discreditable political methods imputed to Mr. Addicks cannot be condemned with a good grace by those Republicans who have nothing to say about the means whereby certain Republican Senators are believed to have obtained their seats. We have heard no outcry on the part of the Regular Republicans of Delaware against Senator Quay or Senator Hanna.

Whether the Panama Canal treaty will be ratified by the Senate before the expiration of the Fifty-seventh Congress is still, at the hour when we write, uncertain. Nobody disputes the purity of the motives which have impelled Senator Morgan of Alabama to oppose the treaty. He honestly believes that the Nicaragua route is preferable to the Panama route; and, also, that terms more favorable to the United States can be procured from Nicaragua and Costa Rica than from Colombia. It is questionable, as he says, whether the hundred-year lease given by the treaty, even when coupled with the option of renewal, is technically equivalent to the "perpetual control" which the Spooner act appropriating the money needed for the purchase of the property of the French Canal Company required the President to secure. There is no doubt, however, that a lease renewable at the lessee's option for an

indefinite number of centuries is substantially tantamount to perpetual control. Some of the amendments proposed by Senator Morgan are, as we formerly said, unobjectionable, and even desirable, in themselves; but, if the treaty be amended in the slightest particular, the whole subject might be reopened at Bogota, and nobody can predict with confidence what the Marroquin government would do. There are two parties to a bargain, and concessions on both sides are unavoidable. Nobody pretends that the Panama Canal treaty is ideally perfect from our point of view. It is simply the best that our State Department could obtain at the time. Moreover, time presses. The option given to our government by the French Canal Company is about to expire, and at the hour when we write we have no reason to assume that the company will extend it. As for Senator Quay's opposition to the canal treaty, it has been attributed to the influence of the transcontinental railways, but for the present we prefer to think that he is desirous of coercing his Republican colleagues into the support of his Statehood bill in some form.

According to the latest reports from Washington, the advocates and the opponents of the Statehood bill have agreed upon a compromise. It is said that almost all the Republican Senators, including Mr. Quay, are willing that New Mexico and Arizona shall be admitted as a single State under the name of Montezuma, with a proviso that, when that part of the new commonwealth contributed by the present Territory of Arizona shall have 300,000 inhabitants, and when a majority of the voters in that population shall have expressed a wish to be set off from Montezuma, the President shall, by proclamation, declare Arizona a separate State. If the Democrats, some of whom are unfavorable to this proposal, see fit to filibuster against it, the passage of a Statehood bill in any form will be impracticable in this Congress. One of the Democratic objections, however, that, namely, that Arizona would have to wait until after 1910 before a test of the number and wishes of her inhabitants could be made, might be met by a provision for a special census of the area interested, to be taken at an earlier date. To the admission of Oklahoma there has never been any serious opposition, but some weighty objections have been urged to the inclusion of Indian Territory in the new State. In the first place, we have contracted treaty obligations toward the Indians, and, in the second place, there are in Indian Territory no school lands from the sale of which a school fund might be created. It is suggested that both of these objections may be parried by a proviso that Indian Territory shall not be added to Oklahoma until 1906, when our treaty obligations will be no longer binding, and by a stipulation in the bill that a trust fund applicable to public schools in Indian Territory shall be created by the Federal government. From a party point of view the Statehood bill as reconstructed is, of course, a disappointment to the Democrats, who had hoped eventually to gain four United States Senators, if Arizona and New Mexico were admitted as separate States.

There is no backward movement toward bimetallism in the amendment to the Philippines Coinage bill which was accepted by the Senate, and which authorizes the President to propose to Great Britain, France, and Germany some arrangement by which a fixed rate of exchange between gold and silver might be established for the benefit of Mexico, China, and other silver-standard countries. The proposal will not be received favorably in England, if we may judge from the opinions expressed in newspapers which are regarded as authorities on economical and monetary questions. The *Economist* points out the failure of previous attempts to create by law a stable ratio between the yellow and white metals, and insists that silver must be left to find its market level, disastrous as the results of the process may be to the few countries which still have a silver currency. The *Statist* thinks that Mexico, should she undertake to redeem her old silver coinage, even at the invariable rate of 32 to 1, would risk ruin; and the paper is quite convinced that England should not attempt to force any given ratio between the two precious metals upon the Strait Settlements and other British possessions in the East which have not yet adopted the gold standard. So far as the Philippines are concerned, it is to be hoped that the Senate Coinage bill will become a law. The present chaotic state of the currency in the archipelago presents an insuperable obstacle to that inflow of capital which is indispensable for the development of the islands.

As we have indicated more than once, the labor question in the Philippines is scarcely second in importance to the coinage question. The Filipino will not work steadily at any kind of labor indoors, and he cannot even be trusted to work continuously in the open air. He tills the soil as little as possible; only a small fraction of the land is under cultivation in even the most densely peopled islands. Significant is the fact that in the rural districts the houses of the peasants seldom have garden plots attached to them. What market gardening is done is done by the Chinese. They alone can be relied upon for hard, persistent labor. For example, they are stevedores in the seaports; they are the lumbermen, woodsawyers, ship-builders, and carriage-makers. They are the merchants, tailors, and domestic servants. If the insular government hesitates to recommend the wholesale admission of Chinese, it is for the same reason which has led the Dutch government to exclude them from Java, the knowledge, namely, that natives of Malayan stock could not stand the competition. The Javanese, however, are less averse to manual labor than the Filipinos. It looks as if a certain amount of Chinese labor would prove indispensable, and it has been suggested that the dangers apprehended from immigration on a large scale might be lessened if no individual Chinese were permitted to remain in the islands for more than a definite term of years.

We are reluctant to believe that the Dominion of Canada intends to protest to the Imperial government against the appointment of Senator Lodge and Senator Turner on the Alaska Boundary Commission. The pretext for such a protest, if any is made, will be, we presume, that the two Senators named have formed, and have repeatedly expressed, definite opinions regarding the boundary. It would be difficult, we imagine, to find any eminent American citizen interested in public questions to whom a like objection may not be made. Nor would it be easy, on the other hand, to pick out for the Canadian members of the commission men who are known to have a perfectly open mind upon the subject. We have no reason to doubt, however, that both the American and Canadian commissioners will attach due weight to new and conclusive testimony, if any such can be produced. The fact that at least one of the British commissioners is expected to be a native of Great Britain constitutes, of course, the basis for the hope that, even on the old and familiar evidence, a majority of the commissioners will be able to arrive at a decision. It is a significant fact that Chart No. 787 of the British Admiralty—a chart drawn in 1901, three years after the Quebec conference on the subject—marks the Alaskan frontier so as to concede the whole of the claim of the United States. Nor have we ever seen it asserted on the part of Canada that previous to 1884, when the Canadian claim was first put forward, there were any maps or charts in existence which did not give the United States a continuous strip of territory along the mainland above fifty-four degrees, forty minutes.

Will Canada have a navy of her own? It will be remembered that Canada, alone of all the colonies represented at the London Conference of Colonial Premiers, declined to make any contribution to Imperial naval defence. The ground for the refusal was that the Dominion did not desire to be entangled in the mother-country's naval wars; a position which would have been reasonable enough but for the aid given to England in her contest against the Boer republics. It was also announced by Sir Wilfrid Laurier in London that Canada did not purpose to rely for the defence of her own shores exclusively upon the British navy, but intended to create a naval organization of her own. As a first step in that direction the Ottawa government has sent the British Naval Commander in charge of her fisheries-protection squadron to St. John's, Newfoundland, with a view of modelling the proposed Canadian naval battalion on the Newfoundland Naval Reserve. The Newfoundland force, it should be noted, is not a provincial, but an Imperial, body, and is intended to augment the number of thoroughly trained seamen at the disposal of the British Admiralty in certain exigencies. There is in Newfoundland a seafaring population of about 75,000, and the intention of

the British Admiralty is to train 600 men a year, which, at the end of ten years, will produce a thoroughly drilled body of 6000 men, from which the British navy may at any hour secure recruits. The Dominion of Canada also has a good many men that might be recruited for the navy in time of need; more, probably, than New England, though not so many as Newfoundland. That is to say, there are about 20,000 deep-sea fishermen in the maritime provinces, and some 20,000 other men employed in the coast fisheries. The Naval Battalion, however, which the Ottawa government thinks of recruiting from this source will not be an Imperial, but a domestic, organization, like Canada's militia. As a matter of fact, Canada already possesses the nucleus of a navy in a flotilla of sixteen fishery cruisers, twelve of which are stationed on the Atlantic, two on the lakes, and two on the Pacific. They are all steamers, and collectively carry not far from 800 officers and men. The plan is to increase this number to about ten thousand, who will constitute a naval reserve. The existence of such a force of well-trained seamen would be useful to Great Britain, because, although Canada declined to make any stated contribution to the Imperial defence fund, there is no doubt that the mother-country would, in case of need, easily procure recruits from the Canadian Naval Reserve.

Mr. Joseph Chamberlain has not accomplished the impossible in South Africa, but he has done quite enough to justify his visit, and to commend his example to successors in the Colonial Office. When Canada had a grave problem to solve after the suppression of the Papineau rebellion, the Ministry of the day sent an agent, Lord Durham, who, however open-minded and far-sighted he might be, did not possess the influence at home that belongs to a member of the cabinet. Mr. Chamberlain, on the other hand, being next to the Premier, Mr. A. J. Balfour, the strongest man in the Union government, went to South Africa clothed with more than the authority of a Roman proconsul. He was absolutely certain that whatever solutions of South-African problems might seem to his mind desirable would meet with the approval of his colleague. The knowledge of that fact placed upon him a tremendous responsibility. Even his enemies must admit that his self-imposed task has been performed up to the farthest limit of practicability. He has declined to remove Lord Milner from the posts of Governor-General of Cape Colony and Lord High Commissioner. He has declined to make to the Boers of the Transvaal and the Orange River Colony any material concessions in the way of amnesty or self-government beyond those which were agreed upon when the Boer generals surrendered. Consequently, he has not won over the more implacable burghers of the conquered republics, and it is probable that no concession, however dangerous, would have sufficed to do so. Neither has he made much impression on the Afrikander element in the Cape Colony, for the obvious reason that the Afrikanders are already politically preponderant there, and have nothing to gain from the Colonial Secretary, except the dismissal of Lord Milner. It must also be admitted that Mr. Chamberlain has not yet found a solution for the labor problem. He will not, and dare not, sanction the reduction of the Kaffirs to a state of peonage; he does not know how to attract white laborers, and he hesitates to authorize the importation of Chinese labor on a large scale. On the other hand, he has induced the mine-owners of Johannesburg to pay $150,000,000 towards the cost of the war, and also to pay their share of the interest and sinking-fund needed for a second loan of $150,000,000, the proceeds of which are to be applied for the benefit of the conquered republics. That was by no means an easy thing to do.

Since the reassembling of the British Parliament the spokesmen of the Foreign Office have evinced a disposition to return quibbling answers to two interesting questions, namely, Was it England or Germany that proposed the joint blockade of Venezuelan seaports, and, secondly, was our State Department informed beforehand that such a demonstration was intended? As to the former question, it is now asserted in the House of Commons by the political Under-Secretary for Foreign Affairs that the first *formal* proposal of a joint blockade came from Germany in the last week of July, 1902. The word which we have italicized betrays an attempt to disguise the truth, for, as we have formerly pointed out, the recently published Blue Book shows that early in July Lord Lansdowne made known to the German ambassador in London England's purpose to blockade Venezuelan seaports, and invited the co-operation of the German Empire. It is useless to palter with the words *formal* and *informal*, for the dates prove that the communication received from Berlin late in July was a reply to the overture made by Lord Lansdowne early in the month. As to the second question, the British Premier, Mr. A. J. Balfour, declared in a public speech delivered just before Parliament met that our State Department was consulted by Great Britain at every stage of the Venezuela affair. To the American people it is entirely immaterial whether the consultation was technically formal or informal. What we want to know is whether our State Department, having been consulted, signified approval of the blockade which was to have deplorable results, and which wrought American citizens to a pitch of excitement scarcely less intense than that produced by the destruction of the battle-ship *Maine* in the harbor of Havana. After the Venezuela gunboats had been sunk and Fort San Carlos had been bombarded, there were but few men in the United States who would not have rejoiced to see the fleet under Admiral Dewey ordered to La Guayra. It is well known that only with the utmost difficulty was Congress restrained from giving expression to the public feeling, and it is certain that the development of cordial relations between the United States and England has experienced a decided check. In Washington there are many indications of a desire to suppress the truth with regard to the position taken by our State Department when it was informed in advance of the Anglo-German intention to browbeat Venezuela. If it be true that Secretary Hay told the representatives of Great Britain and Germany, or either of them, to go ahead and do what they liked with a Latin-American republic, so long as they stopped short of the permanent occupation of territory, he should have the courage of his convictions, and boldly avow the fact.

One great piece of luck has fallen to the Balfour cabinet, in the probable solution of the Irish land question. For the first time in centuries, all parties in Ireland, and, what is more important, both the great English parties, are of one mind on this central question of Irish politics. As we shall hear much of this during the coming weeks, it may be well to get the first principles clear in our minds, as a clue to much that will otherwise be obscure. The beginning of the difficulty arose under the Stuarts, for whom many Irishmen most foolishly fought in later years. These worthies confiscated nearly all the estates in Ireland, and bestowed them on all sorts of persons who had no wish to settle down as a resident nobility, but were determined to get the most out of their property, and to give the least in return. Hence came the worst land-laws in the world, under which leases were renewed from year to year, so that whenever the tenant improved his holding even a little, he was compelled either to pay a higher rent or to get out at the year's end; the most perfect expedient for destroying initiative and progress ever devised. The result was that it ceased to be the interest of any Irish tenant to improve his land, so that he naturally sank to the margin of starvation, and ended by cultivating only a single crop. With a temporary failure of the crop, he was confronted by the historic famine which started the great tide of Irish immigrants towards this country, and gave us the nucleus of one of the brightest and most gifted elements of our heterogeneous population. The twenty or more millions of Irish birth and race in this country are one side of the Irish land question. Then came the Land League agitation under Parnell, who used to say that when they made the landlords as eager to go as the tenants were to get rid of them his goal would be reached. It is reached now, though Parnell has not lived to see it. For the great confiscation of the Stuarts, which began while Shakespeare was finishing "The Tempest," is being reversed, and the Irish cultivators are once more being put into possession of their native soil. As that same poet said, "'Tis thus the whirligig of Time brings in his revenges."

It seems to be now pretty well understood that Mr. Wyndham, the chief secretary to the Lord-Lieutenant of Ireland, will adhere to the main lines of the scheme which has been agreed upon in advance by the representatives of the Irish landlords, as well as by those of the tenants. We say representatives of the landlords because, although at first the

association of land-owners, headed by the Duke of Abercorn, would not accept the plan sanctioned by Lord Mayo and Lord Dunraven, they have since given it their hearty approval. The new Land Purchase bill will not be compulsory, nor does it need to be, because it is framed upon the principle that the landlords shall receive considerably more, and the tenants pay considerably less, than the market price of landed property. That is to say, if a given estate is worth in the open market sixteen times the rental last fixed by the Land Commission Court, the land-owner shall receive twenty times the rental, whereas less than sixteen times the rental will be paid by the tenant converted into a peasant proprietor. Who pays the difference? The Imperial Exchequer. Mr. John E. Redmond has calculated, however, that the annual interest on the sum needed for the purpose will not exceed $1,500,000, and the Duke of Abercorn does not put it above $3,000,000. Part of this outlay would be counterbalanced by the saving that could be effected in the cost of the Irish constabulary if the country were tranquil. It should further be borne in mind that, according to the almost unanimous report of a royal commission, Ireland has for many years been paying much more than her due proportion of the taxes levied for Imperial purposes. Even if there were no offsets to the disbursements required for permanent land settlement, it would be well worth England's while to spend two or three million dollars a year for the purpose of putting an end to the troubles that have made Ireland the scourge of the United Kingdom.

While his Imperial Majesty the Kaiser is still seated on the cathedra of ecclesiastical authority, or perhaps we should say remains astride the Delphic tripod, there are a great many questions we should like to have settled. Having established the point that not only the three great Hebrews Abraham, Moses, and David were inspired, but that the same inspiration extended to the three great Germans Luther, Goethe, and Kant, and even to two men who were neither Hebrew nor German, to wit, Homer and Shakespeare, we should dearly like to know whether all the works of these latter are strictly canonical, or whether we should, for each, draw up a list of apocrypha, and even of controverted and perhaps spurious works. For instance, in the case of Luther, the inspiration of the celebrated Declarations is undoubted; but are we to include under the same canon the famous saying: Wer nicht liebt Wein, Weib, und Gesang, Der bleibt ein Narr sein Leben lang? And, if "Faust" is wholly inspired, how comes it that there is so little coherence and general savvy in the second part; and what are we to say about "The Sorrows of Werther"? Personally, we admire the latter work immensely, as the most eloquent expression of a certain mood; but our view is caviare to the general; which brings us to the other recipient of inspiration, the bard of Avon. How about "The Merry Wives of Windsor," and a certain line of jokes in the Falstaff plays; and how does the dogmato-theological position of the Kaiser as to the great English poet agree with the researches of the Shakespeare Society, on the doubtful plays? Furnivale used to tell a good story in this connection: one day he was telling Tennyson about the new instrument of research into Shakespearean authorship afforded by the weak and light endings, the end-stopped lines, and so on; Tennyson declared that by ear alone he could tell the genuine passages in the collaborated plays. They turned to "Pericles," and Tennyson declared that only the Marina passages were Shakespeare's, exactly the conclusion Furnivale had already reached by his algebraic formula. Can the Kaiser see that and raise it? The worst of it is that, before we can submit these queries, his Majesty will be off at a tangent, designing a new automatic sight for big guns, or solving the problem of trisecting any angle, or something else, —Heaven only knows what.

We are tempted at times to think that Mr. James Bryce, the author of the *American Commonwealth,* and Professor Goldwin Smith, the author of an admirable political history of the United States, are the only Englishmen alive who have ever read understandingly our Federal Constitution, and who have remembered what they read. On February 21 the Right Hon. Leonard Henry Courtney, who has been Chairman or Deputy-Speaker of the House of Commons, declared in a public speech that the difficulty of arranging permanent arbitration with the United States lies in the extremely democratic character of our Constitution. There is nobody in our country, the speaker said, who can bind anybody to anything. The history of the relations between the United States and Great Britain should have taught Mr. Courtney better. It is just as easy to bind the United States as it is to bind Great Britain. In the first half of the sixth decade of the nineteenth century we entered into a treaty with Great Britain whereby we made large tariff concessions to Canada. That treaty was obligatory on both parties for ten years, after which either party was at liberty to denounce it. Odious as the treaty became to us, after England's desire to witness the disruption of our Union became evident we never dreamed of violating the compact, but adhered to it for the prescribed term. The Clayton-Bulwer treaty contained no denunciation clause, and, therefore, seemed upon its face to be perpetually binding. Although England took advantage of our civil war to violate the treaty by erecting the Woodcutter's Settlement in the Belize into a crown colony, on our part we never repudiated the agreement, but submitted to it for half a century, and we resorted to diplomatic negotiations in order to procure the supersession of that most objectionable convention. Mr. Courtney should look nearer home for countries that cannot be bound by treaties. Within fifteen years after the conclusion of the Treaty of Paris, which, ostensibly, was to be perpetual, for it contained no denunciation clause, Russia announced that she would repudiate one of its most important provisions, that, namely, which forbade her to maintain a war fleet in the Black Sea. As for England's fidelity to treaties, how many years elapsed before she carried out the promise contained in the treaty of 1783 to evacuate the forts on the American side of her Canadian frontier?

Mrs. George Cornwallis-West, who was Miss Jennie Jerome, and who first married Lord Randolph Churchill, directs attention in the last *Pall Mall* magazine to the number of American women who have married in England during the last thirty years. For more than half of the nineteenth century the record of the three Caton girls, granddaughters of Charles Carroll of Carrollton, remained unapproached. It will be remembered that those young ladies married, respectively, the Duke of Leeds, the Marquis Wellesley, and Lord Stafford. Since then two Dukes of Marlborough, two Dukes of Manchester, and the present Marquis of Dufferin and Ava have married American women, to say nothing of earls, viscounts, and barons. Nor is it by riches alone that coronets have been acquired. The present Duchess of Manchester had by no means a great fortune. Lady Dufferin's dowry was not large, and Lady Essex had scarcely any money. It is largely, though, of course, not wholly, by wit, attractiveness, and charm, that American women have challenged and acquired the influence which they now undoubtedly possess in English smart society. At least two American girls have married French dukes, namely, the Duc de la Rochefoucauld and the Duc Decazes. From the view-point of the *Almanach de Gotha,* however, none has made quite so brilliant a match as Miss Lee, the daughter of a New York grocer, who married, first the Duke of Augustenburg, and, secondly, the General Count von Waldersee, who was the Generalissimo of the allied forces in China during the Boxer rebellion. We may mention, also, that a high place in the Golden Book of the Roman and Neapolitan aristocracies belongs to the Prince Colonna, who married an adopted daughter of Mr. John W. Mackay. Whether, as Mrs. Cornwallis-West opines, such marriages have a tendency to promote international friendship may be doubted, for American women married to foreign nobles are apt to adopt in manners, sentiment, and sympathy the country of their husbands.

The post of private secretary to a prime minister, or even to one of the latter's colleagues, is looked upon in England as a guarantee of political advancement. The private secretaries of both Mr. Gladstone and Lord Beaconsfield attained high positions. Mr. John Hay, who began his public career as an assistant private secretary to President Lincoln, subsequently held minor positions in the diplomatic service, and, finally, on Mr. McKinley's accession to the Presidency, he became ambassador to the Court of St. James, and Secretary of State. Mr. George B. Cortelyou, also, has moved con-

tinuously upward since 1889, when he was a stenographer out of work. At the date named, however, he became private secretary to the inspector in charge at the New York Post-office, and was afterwards transferred to the White House as stenographer to President Cleveland. Three months later he became executive clerk, and discharged the functions of that office until he succeeded John Addison Porter as secretary to President McKinley. Meanwhile, he found leisure for studying law, and has been admitted to the bar of the District of Columbia. He is now the first Secretary of Commerce and Labor. His experience shows what may be done in less than fourteen years by an intelligent, faithful, and efficient man starting in a modest capacity.

They passed a law in Iowa last year permitting the confinement of confirmed drunkards in lunatic asylums. It made little stir, but within eight months three hundred alcoholic patients were under restraint and treatment. An Iowa despatch says that inebriates continue to flow into the State asylums at the rate of about fifty a month, and that an Iowa court has just ruled that their constitutional rights are not violated by their detention. Some of the inebriates don't like to be shut up, but the treatment they get seems to be humane and salutary. Their liquor is stopped, and they have to work on farms, and are encouraged to improve their habits. When they seem to be cured they are discharged, and report says that, so far, about seventy-five per cent. of the cases have so resulted. This seems like excellent management of drunkards. Men who cannot, or will not, control their thirst ought not to be left at large to get themselves and others into mischief. Neither should they be sent to jail. If they are irresponsible because of their propensities, they should be shut up and looked after until they are cured, and while under restraint they should be made to work for their living. The Iowa method seems a good deal more enlightened than the New York plan of keeping up an endless chain of dipsomaniacs between Manhattan and "the Island." An easy, legal method of securing timely periods of seclusion for unmanageable drunkards ought to make for the peace of families and the diminution of drunkenness. Men have no moral right to be drunken. If they have demonstrated a dangerous and continuous lack of self-restraint, some other sort of restraint should be substituted for it. The Iowa idea seems pretty sound.

A gentleman's gardener came to him one day last month and desired audience. Said he: "You use me well, sir; I have nothing to complain of; but the under-gardener bought a house two years ago, expecting to be able to make payments on it. He did make some payments, but subsistence—coal, meat, rent, and the like—has come to be so dear, that he has fallen behind and is like to lose his house and all that he has paid on it. I think perhaps, sir, you would think it well to give him some help." The gentleman assented, and agreed to increase the under-gardener's pay by a sum which the gardener thought would be sufficient. Then said he: "How does it go with yourself, James? Do you get along well?" "Oh, I get along, sir; I have been able until lately to put aside part of my wages. I cannot do that just now, but I am hoping for better times." The obvious moral of this true tale from real life is that the times are not equally good for all persons, and that those whose incomes have long been fixed are not embarrassed by the riches which are advertised to be inundating the country. The better times which the gardener hopes for are likely to come by the automatic working of processes now operative. The general rise in the cost of labor and all products of labor must work in time the restriction of all constructive enterprise, until prices, declining to meet a lessening demand, makes it feasible again for a thrifty gardener who has a good job to save something out of his pay.

When Colonel Bingham told Congress that there was more entertaining than usual in the White House this year, he spoke what was true, though it did not explain the increase of $35,000 in the appropriation asked for. That increase, for maintenance of the White House, seems to have been chiefly a consequence of alterations and refurnishing. Presidents from New York have usually set a pace in hospitality. Mr. Van Buren entertained generously and handsomely; so did Mr. Arthur; and President Roosevelt has lived up to, and somewhat beyond, their traditions. There is every reason why a President should keep a hospitable house if it accords with his taste. More people that are worth seeing come to the White House in a given season than come to any other house in the country. They make a society that is varied, distinguished, and prodigiously interesting. The temptation to seat a constant stream of guests at the White House table is quite comprehensible, and Mr. Roosevelt, having a liking for company, has yielded to it. But it is an expensive pleasure. Taken by itself the President's salary looks large: taken in connection with such hospitalities as the White House has seen this winter and last winter, it looks small. The government by no means pays for the President's hospitalities. It defrays some expenses of maintenance and service, but the wages of nearly all of his household servants, and the checks for the butcher, the baker, the grocer (wet and dry), the caterer, the confectioner, and the other purveyors of entertainment, come out of the President's own bank account. If a President is going to save money he must restrict his household expenses. That should not be so. The way Mr. Roosevelt lives in the White House is a very good way for a President to live if he likes it. The President of the United States should not have to economize. He should be able to live generously and without undue thought about the cost of it, and at the same time to lay aside a good part of his income. When the present salary of the President has been doubled, it will not be a bit too large. Even then no President will be able to save too much out of it, even in eight years.

The typhoid epidemic at Ithaca is attributed to the unsanitary condition of the watersheds which supply the creeks which provide the city with water. With a population of 14,000, Ithaca has had between 400 and 500 cases of typhoid. The effect of the epidemic on Cornell University gets attention from all parts of the country. There were about 2700 students at Cornell this year. About one-third of them left town. Among those who remained in Ithaca seventy-five were reported on February 24 as ill with the fever, and fourteen had died. Other students are sick at their homes. The epidemic is extremely serious, but it is thought at this writing that the worst of it is over. In the matter of typhoid, as in most other troubles, it is easier to be wise after the event than before. But Ithaca is a centre of scientific knowledge, and it seems astonishing that it should have required so fatal a scourge to warn it that its water-supply needed looking after. There are cases of water-poisoning which no reasonable foresight could have prevented. Ithaca's case may be of that sort, but it does not appear so.

Mr. Newell has drawn for this number of the WEEKLY the Kaiser, Unafraid. It is a characteristic attitude of the Kaiser. He is a man of courage, bold even in the face of bogies. Witness the resolution with which he has spoken his mind on the subject of the Scriptures and religion. These are days when the Bible is being weighed, scrutinized, and discussed with zealous candor by the wise men of science. Explorers keep digging in the superannuated parts of the world and turning up documents thousands of years old, from which they get such information as they may. There is much new knowledge of very old times, and some of it seems to have a bearing on some of the Bible stories. But the Kaiser is not disposed to sit quietly and see the Bible's prestige undermined. He has cautioned the German Oriental Society that Professor Delitzsch is unwisely polemical in his discussions of the Bible's origin. The professor, one of the most learned of contemporary Germans, seems to doubt the need of using the theory of a special divine revelation to account for the books of Scripture, and sees a prospect of being able to trace them all back to historical sources. "Step lightly!" says the Emperor. "If we upset the Old Testament too rudely, we shall lack a form to use in teaching our children about God. The Old Testament will be substantially modified under the influence of research, but it will always remain the great record of God and His works." That is moderate, and it is interesting to know the state of the Kaiser's mind on such a subject. If he has views on "race suicide" and the comparative capacities of the various races, it would be interesting to us Americans to have him speak on those subjects also.

The Democratic Tendency

DEMOCRATIC politicians of the more serious kind are manifesting a good deal of interest in the forthcoming Presidential campaign, and there is much talk of both candidates and policies. Moreover, there are manifested signs of wisdom and of a certain sense of responsibility which are gratifying and encouraging. The talk of candidates is directed toward conservative men, and that touching policies indicates that there is a general disposition on the part of Western and Southern men to turn their backs upon the past, to accept realities, and to cease flying after shadows. How deeply this change of mind reaches down among the masses of the party time alone can reveal, but the outlook now is that the next Democratic national convention will be controlled by a very different sentiment from that which was manifested at Chicago in 1896 and at Kansas City in 1900.

It seems to be apparent to the Democrats who are expressing themselves on the policy which their party ought to pursue, that they must win the confidence of the conservative people of the country. This in itself is an enormous advance for the good of the country, for it betokens at least the release of the old party of conservatism from an unnatural alliance with the radicalism of unrest and of despair. Events have crowded upon one another so rapidly since the panic year 1893, and changes in political theories have come with such marvellous swiftness, that the slow tendency of Democratic leaders back to sane conservatism has hardly been noticed. Even if the movement had been more definite than it has been, it would have been obscured by the counter movement of the Republican party, or at least of that small but obvious part of it represented by the President, toward radicalism. Nevertheless, from time to time, we have had evidences of this changing Democratic sentiment, until this winter we have seen the party which for a moment advocated fiat money and declaimed against banks, the sounder party of the two on financial legislation.

The lesson of defeat has been learned by some of the most influential of the Democrats who followed Mr. Bryan away from old party traditions and against old party principles. From the Western States which went for Cleveland in 1892, and from the Southern States, one story is borne upon the wind. It is, that the Democratic party should put itself in position to carry the next election, by deserving success, and, in order to deserve success, it must accept the verdicts of 1896 and 1900 as a final judgment of the country. The mere desire for victory, however, is not the motive for this change of opinion. Recent defeats, expressive as they were of the country's utter disapproval of Mr. Bryan and his platform, called a halt and compelled reflection. The result was the conviction that, in dropping the tariff issue on which it carried the country in 1892, the party had sinned against its own traditions and against light. Thus the leaders are pulled back naturally to their old beliefs, while the movement is aided by the instinct for a real opposition party. Any effective opposition to the President's policy must be conservative, and opposition to his party's policy must be anti-paternalism. So we have the basis for the change, and for the rehabilitation of the Democratic party.

If we can judge of the future by the opinions expressed to-day, the Democratic party will go into the Presidential campaign with an Eastern State candidate on the tariff question. From leaders of the South and those who are talking seriously on the subject, we hear only of Judge Parker, or Mr. Olney, or Mr. Gorman. That the tariff is to be the main issue, and that the lowering of duties on trust and other products is to be urged as the best instrumentality for the curbing of what are called trust evils, were plainly set forth in Mr. De Armond's speech on the Littlefield bill. Only one hostile voice breaks in upon the apparent harmony, and that is the voice of Mr. Bryan insisting that no one shall be nominated in 1904 who was not openly for the platforms and the candidate in 1896 and 1900. In other words, Mr. Bryan has apparently become one of those unfortunate beings known as irreconcilables. His obsession is unfortunate for the country and for the party. His personal attractions have given him a large following. Although not large enough to control the next Democratic convention as to its platform, which can be adopted by a majority, it may be that he can prevent the nomination of any individual whom he especially dislikes, for, in choosing a candidate, the two-thirds rule continues to govern in Democratic national conventions. Mr. Bryan, however, will doubtless find it impossible to dictate the nomination or the character of the nominee. The Democratic party might just as well go frankly out of business for good and all as to yield any essential point to the man who seduced it from its principles and led it to humiliating defeat. There is much kindness still felt among Democratic leaders for Mr. Bryan. When Mr. Bryan reflects upon the consideration which has been shown him, despite the injury he has done the party, despite the valley of the shadow of death through which he has led it, he might well pause before dictating to it, now that it seems to behold a gleam of hope. He is treading on ground that is dangerous. Some of his closest followers differ with him. Most of them are for "sweet reconciliation" with those Democrats who could not follow with them. They say that if the leaders of 1896 and 1900 are to call upon these men to repent, or if they are to humiliate them, or to deny them leadership commensurate with their ability, their character, and their standing before the country, the hope of Democracy is a delusion. The Democratic party is on its way back to its old camp; all that Mr. Bryan can do is to weaken the forces, and thus aid its and his ancient enemy, the Republican party.

Has the Monroe Doctrine Been Weakened?

WE have several times expressed the opinion that the American people have been deluded in the matter of the joint blockade of Venezuela, and that, by the solution of the affair, the Monroe Doctrine has not been strengthened, but weakened. We pointed out, in other words, that the original pronouncement of President Monroe, that the United States could not permit a European power to *oppress* a Latin-American republic, or *in any way control its destiny*, was a much broader declaration than that made by Mr. Roosevelt in his second annual message, to the effect that a European power might do anything it liked to a Latin-American republic, provided it refrained from a *permanent* occupation of territory. It will have been observed that Mr. Roosevelt did not even define the word *permanent*. The British government has repeatedly declared that it has not contemplated a permanent occupation of Egypt; but there it is, and there, apparently, it purposes to remain forever. But let that pass. The outcome of the Venezuela affair has been to establish a principle, which, if applied to a heavily indebted commonwealth like Argentina, would involve the sequestration of most, if not all, of its customs revenue for an indefinite period. Inasmuch as all the Latin-American republics depend for the most part, if not solely, upon customs duties for the maintenance of order and the support of their civil and military administrations, it is obvious that, if their customs revenue were wholly or largely confiscated, anarchy and chaos would result, and, ultimately, the inhabitants of the mortgaged commonwealth would implore the creditor nation to annex them outright, so that at least a portion of the confiscated revenue might be expended for their benefit, as is the case in Egypt. With what show of decency could we oppose such a demand?

While this probable, if not inevitable, result of the Roosevelt definition of the Monroe Doctrine has been repeatedly pointed out by HARPER'S WEEKLY, we did not expect a native of Great Britain to take at the outset a similar view of the situation. As a matter of fact, Sir Robert Giffen, who, beyond dispute, is the greatest statistician and economist in the United Kingdom, addressed, on February 23, a letter to the London *Times* in which he condemned the British government's co-operation with Germany in the Venezuela business, on the express ground that the effect of the arrangement extorted for the payment of foreign claims (including ordinary debts as well as the redress of grievances) is to put Venezuela into the hands of a receiver, the security for the payment of the claims to be liquidated by mixed commissions being an international mortgage on the customs duties levied at the principal seaports. It is a timely and just criticism that Sir Robert makes when he says that an arrangement more skilfully calculated to entangle European nations in South-American politics, and to bring them into collision with the United States, could not be devised. It is perfectly true, as Sir Robert says, that soon or late Venezuela, or Argentina, or some other mortgaged South-American commonwealth will fail, owing to internal troubles, to keep its engagements with the mortgagee. Then, under the precedent established by the Venezuela protocols, it will be lawful for some European power to take possession of the debtor's custom-houses and appropriate the duties there collected to the mortgagees. Should the American people consider themselves bound by the dangerous definition of the Monroe Doctrine announced in Mr. Roosevelt's second annual message, they will remain passive spectators of the reduction of Latin-American republics to the position of vassalage now occupied by Egypt. No clear-headed man will deny that Sir Robert Giffen is entirely right when he asserts that the Monroe Doctrine has been seriously weakened, if not nullified, by our approval of Venezuela's agreement to put its customs into commission. This mortgaging of customs duties is to all intents and purposes a partial occupation by foreign states, and is, therefore, indistinguishable in fact, though it may be in name, from the foreign occupation forbidden by Mr. Roosevelt.

Sir Robert Giffen concurs with Professor Goldwin Smith in thinking that, as regards debts accruing under absolute freedom of contract, and alleged to be due from the government or citizens of a Latin-American republic to the subjects of a European power, the latter must be relegated for their remedies to the courts of the debtor country, and must in no case be permitted to collect ordinary debts by acts of war.

All this has for some time been plain enough to sharp-sighted Americans, but we did not expect to see the truth so quickly discerned and published by an Englishman of weight and influence.

The United States Supreme Court Decision in the Lottery Cases

A QUESTION of tremendous importance was temporarily answered in the decision announced on February 23 by the Supreme Court of the United States in the so-called lottery cases, which have thrice been argued in the course of the last two years. That question is, Does the power to regulate commerce among the several States, which is given to Congress by the third clause of the eighth section of the First Article of the Federal Constitution, involve the power entirely to prohibit inter-State commerce in a particular commodity? The lottery and express companies immediately concerned have contended that the question must be answered in the negative, and their position was defended by some of the ablest lawyers in the country, including ex-Senator George F. Edmunds, ex-Secretary John G. Carlisle, and Mr. James C. Carter. Nevertheless, the highest Federal tribunal, by a majority of one, has decided that the question must be answered in the affirmative. The opinion of the majority was delivered by Justice Harlan, and Justices Brown, White, McKenna, and Holmes concurred with him.

On the other hand, Chief-Justice Fuller and Justices Brewer, Peckham, and Shiras dissented in an opinion, the earnestness of which presents a striking contrast to the cold, dispassionate tenor of most decisions rendered by the court; an earnestness that shows how keenly alive were the judges composing the minority to the magnitude of the issues dependent on the construction of the clause of the Constitution above named. It is now the law, and will remain the law until and unless the Supreme Court itself shall reverse its decision, that the power of regulating inter-State commerce given to Congress is plenary, and carries with it the right utterly to prohibit such commerce in a particular commodity. We need not point out what a stupendous instrument of control over all industrial corporations engaged in inter-State commerce is vested in Congress by this decision. So long as this decision shall stand upon the statute-book, Congress will be absolute master of the trusts. Endowed henceforth with a giant's strength, it remains to be seen whether Congress will use it like a giant.

That efforts will be made to convince the Supreme Court, as the composition of that tribunal shall from time to time be modified, that this decision ought to be reversed is as certain as it is that the earth revolves upon its axis. It is, therefore, a matter, not of academic, but of urgent, interest, to mark, on the one hand, the principal grounds on which the decision is based, and, on the other hand, the reasons which have impelled four of the nine justices to take a very different view of the constitutional power of Congress.

Justice Harlan, who read the opinion of the majority of the court, admits that the Constitution does not define what is to be deemed a legitimate regulation of inter-State commerce, but he holds that the power to regulate logically involves the power to prohibit, since otherwise in many cases regulation would prove futile. Can it be possible, asks Judge Harlan, that, if the lottery traffic is carried on through inter-State commerce, and is, therefore, a matter of which Congress may take cognizance, and over which it may exert regulative power,—can it be possible that Congress is helpless to suppress such traffic altogether, so far as it is carried on through inter-State commerce? Congress, of course, would not presume to prohibit the sale of lottery tickets within the boundaries of the State wherein such tickets were printed; but the moment an attempt is made by independent carriers, like express companies, to convey such tickets from one State to another, then, according to Justice Harlan, the power of Congress over the tickets so conveyed across State boundaries must amount to prohibition, for, otherwise, its regulative faculty would be a farce. Elsewhere in his opinion, Justice Harlan pointed out that the Supreme Court had previously held in other cases that the power to regulate inter-State commerce involves the power to prohibit. For example, the Sherman Anti-Trust Act of July 2, 1890, which, of course, was founded on the power of Congress to regulate inter-State commerce, had for its object the protection of such commerce against unlawful restraints and monopolies. To attain that end Congress declared certain contracts to be illegal, and the effect of that declaration was to prohibit the doing of certain things. Now those prohibitory clauses have been sustained by the United States Supreme Court in several cases as valid under the power of Congress to regulate inter-State commerce. We take for granted, however, that the four justices who now dissent from Justice Harlan's opinion would hold that the prohibitory clauses of the Anti-Trust Act are unconstitutional.

It is to be observed that even Justice Harlan seems appalled by the possible consequences of the decision rendered by the majority of the Supreme Court, for he undertakes to draw a distinction between plenary and arbitrary power. He denies that the present declaration of the court, that Congress may exclude lottery tickets altogether from inter-State commerce, leads necessarily to the conclusion that Congress may arbitrarily exclude from commerce among States any article, commodity, or thing, of whatever kind or nature, or however useful or valuable, which it may choose, no matter with what motive, to say shall not be carried from one State to another. The lottery cases did not require the court, Justice Harlan thought, to define the full extent of the power that Congress may exercise in the regulation of inter-State commerce; nevertheless, he and the four concurring justices deemed it expedient to assert that the power of Congress to regulate commerce among the States, although plenary, cannot be arbitrary, since it is subject to such limitations or restrictions as are prescribed by the Constitution. In other words, the validity of every statute that may be enacted under the commerce clause of the Constitution must be separately examined and separately decided by the court.

Justice Fuller, who read the dissenting opinion, insisted that the suppression of lotteries, considered as a harmful business, fell within the police powers reserved by the States to themselves, and never surrendered to the Federal government. It is with profound solemnity that he condemns the decision reached by the majority, as inconsistent with the views not only of the framers of the Constitution, but also, and even, of John Marshall, its great Federalist expounder. He evidently regards the principle, now temporarily established, that the regulative power of Congress over inter-State commerce may be carried to the extent of prohibition as a fatal solvent of State rights and of the liberties and privileges of individual citizens. He would not, of course, assert that the outward forms of Republican government may not survive the most dangerous legislation or judicial decision, but he reminds us that it is with governments as with religions — the form may long outlive the substance.

A Personal Question

THE Family Man came in where the Higher Journalist was trying to think of something to write, and began at once: "I don't know whether I should like to be called, even potentially, 'a criminal against the race,' or 'an object of contemptuous abhorrence.'" Then the higher journalist knew what the family man was talking about, and began to listen with interest. "It seems to me that this is not a civic question, or a social question, but a personal question. It is not a question between a man and his chief magistrate, but between a man and his Maker. As I understand the case, we are not here to perpetuate races or nationalities, but to save our souls alive, and one way to do that is not to take responsibilities that we are afterwards tempted to shirk."

The higher journalist went so far as to assent, warily, "There seems to be something in what you say."

"Thank you! There is a good deal. Nobody *denies* that 'the greatest of all joys spring from home life, from the having and bringing up of many healthy children.' But suppose they are many and *not* healthy? Suppose they are most of them sickly? Their health is something you can't forecast. I won't go so far as to ask what about the highest of all joys when you hang over the little bed where a small sufferer lies gasping out his last breaths; but that is not an impossible case, and if it happens in your experience, you probably don't plume yourself so much on having put aside 'mere ease, mere vapid pleasure, mere avoidance of toil and worry'; on the contrary, you probably ask yourself some questions that you don't get ready answers to. But we'll leave that, and take the case of a father who walks the floor most of the night in the interest of a simple colic, with a hard day's work behind him, and a hard day's work before him, tossing the colic up and down, waving it to and fro, cooing to it, cursing to it, and trying to keep his patience with his poor wife, who is crying in bed, and pitying him, and advising him, and generally driving him mad. She has been up the night before with one of the other children which has overeaten itself, or hurt itself, or has the measles or chicken-pox, and he doesn't blame her. Oh, I know you'll say that I mustn't be so squalid, but that is what the thing comes down to in cold facts. It isn't an abstraction, it isn't a matter of public duty, it isn't an affair of 'racial qualities.' It's concrete, it's private, it's inalienably personal. It's whether you want to chance all those things that go with having a large family of children, whose health you can't insure. It's whether you want to face the inexorably recurrent bills for rent, and coal, and groceries, and butcher's meat, and gas, and clothes, and the other contingencies of the highest of all joys. If you have unlimited leisure, so that all your next days are days of rest; or if you can afford nurses enough, trained and untrained, to take the work and worry of the highest of all joys off your hands and your wife's, go ahead. But if you are the average middle and lower-middle class American father,—the best father in the world, and the kindest husband,—and have your way and your children's way to make, well, wait!

"I don't resent the President's attitude, though I wish he wouldn't call names. I don't think it's undignified for him to turn aside from the trusts, and the Venezuela question, and the rest of them, and talk to us face to face about our duties as husbands and wives. I like to have him do it. It shows that he feels the Americans to be one family, and that he knows he can talk openly to the whole nation and not

be misunderstood. It's the kind of thing that makes the people believe in him, and love him, but I wish he would measure his words a little, and measure his thoughts too. There is a good deal to be said on the other side, and I should like to say it."

"What is to hinder?" the higher journalist suggested.

"A great deal: delicacy, Anglo-Saxon shyness, misgivings about what it is best for young people to hear."

"Ah, there is that!" the higher journalist admitted.

"The man with a small family may be reasonably sure of weathering a storm, and not be such a bad fellow, either, but the man with a large family can't see any port ahead, and yet he may not be worthy of any particular praise. Suppose, in addition to the small colic that you are carrying up and down the room half the night, you are carrying a note that comes due in the morning, and you have nothing to meet it with? Or suppose that you have been laid off your job, if you are one of those poor hand-to-mouth fellows who are so mindful of their race obligations, and do more than any other sort to swell the census? Is the President prepared to advise some sort of legislation that will support the large family which is coming to want, and still save the self-respect of the patriotic parent?" In the silence of the higher journalist the family man went on: "I suppose you think that was a very witty answer Napoleon made to Madame de Staël, when he told her the greatest woman in France was the one that had borne the most children?"

"Not necessarily," the higher journalist temporized.

"Ah, you don't! Then I needn't remind you that Napoleon also sometimes spoke of that sort of mother's children as cannon's meat — as *chair à canon*. I don't associate him with the President in their ideals; I was thinking of those economists who regard wars and pestilences as the providential means of reducing the redundant populations which are the concomitants of large families. A man who avoids marriage, and the woman who shrinks from having children, may be criminals against the race, or they *may* be people whose sober second thought is too much for their inebriate emotions. It will not do to defend them, however, even to those who are like them, for a large family is an old American ideal, like taxation based on representation, and government by the consent of the governed, and brotherly equality, and some other things that seem to have gone by the board. There are some queasy-minded people so awed by the dreadfulness of life's mysteries, that they have not the courage to bring beings into life, even for the sake of continuing their particular race. But I leave them out. I prefer to consider only those who are anxious to secure the future for their children before they launch them into the present. This anxiety is now the American ideal. Our conscientious fathers and mothers would rather deny themselves the highest of all joys than foresee privation or destitution for their little ones, or blindly shut their eyes to the possibilities. I know that the large families struggle through somehow, and get there, but it is a bitter struggle, and we seem to have so often seen the righteous forsaken, that we cannot very gayly trust ourselves to Providence in the matter. I suppose this is rather shocking to you?"

"I feel that it ought to be," the higher journalist said. "I am sure that it will be to our readers."

"Well, I prefer to clear my mind of cant, and I am at the point of chucking the superstition that the children you cannot take care of will be mystically looked after by the moral government of the universe. They won't. They will suffer on and up, or they will suffer on and down. If you regard this life as a school of experience, in which we shall be made wise and good enough for another, very well. But that is not clear. What is clear is that we are here on earth, to do the best and kindest that we can; and we ought to think twice before we go in for the highest of all joys for ourselves, which may be the lowest of all miseries for others. Until the state is prepared to say that it will look after the large families which the parents cannot support, and rear them in comfort, and educate them so that they can earn a living for themselves, and then give them the chance to earn it, the state has no right to demand large families from parents. It had better leave that matter between them and their consciences, their God. No doubt He will look to it which race had best survive, and if the other old American ideals have gone—"

"Oh, oh!" the higher journalist interrupted, thinking it best to check the family man at this point.

"I don't say they have hopelessly," he hedged. "But I will ask you whether this aggregation of millionaires, this riot of luxury, this ambition for foreign titles among our women, and this love of sport and indolence among our men; this aristocratic society; these palaces and villas, and steam-yachts and private cars, are the vision of republican simplicity which the fathers beheld when they founded the republic?"

"Come now," the higher journalist said, "you are getting off the track." Then the higher journalist mused a little space, and came out of his muse with an inspiration which he thought would rather get the family man. "How many children have you yourself?" he asked.

"Eleven," said the family man, with dismaying promptness.

"Ah!" the higher journalist breathed, as if this were not quite what he had expected. Then after some time he asked, "Why not an even dozen?"

The family man went out without replying, but he came back directly, so far as to put his head in at the door, and to say: "When some society leader, or some prominent club woman, or some average American wife who keeps one girl and has the wash done at home, or has the wash done at home without keeping the girl, comes forward and declares for a large family of children, with the chance that they shall be healthy or unhealthy, it will be time for the men to accuse themselves of contemptible criminality and race suicide. Till then, I think they can possess their souls in peace."

"But that," the higher journalist retorted, "is just what you don't seem able to do. Like all our cowardly sex, you want to put the blame on the women." Then, with the family man's final going out, the higher journalist thought of something at last, and he wrote a scathing and ringing article on the cowardly behavior of Adam in attempting to throw the responsibility on Eve in that affair of the apple.

Some Sensible and Pleasing Praise

We Americans are accustomed to adulation, and the people of New York especially are fairly sure not to lose sight of their disposition toward rich splendor, so much is it talked about by foreign visitors. There is a kind of praise-to-one's-face which brings not only the blush and awakens a longing for a hiding-place, but also leads to doubt as to whether the compliment be generous flattery or subtle irony. In the *Metropolitan Magazine* for March, however, Edouard de Reszke treats us to commendation with genuine good taste, liberally, but not too profusely, for virtues which we are glad to possess, and our possession of which we are glad this admirable gentleman recognizes.

When the usual traveller from Europe talks about our wonderful millionaires, their achievements, and their bank accounts, we inevitably want to send for Mark Twain and give him another Bourget to skin. We are always quite sure that Mark could make the most bedazzled European see that our millions have a good side, or, failing that, could silence the critic. Here, however, is a commentator who needs no silencing, and to whom we listen with pleasure.

That which interests Edouard de Reszke among the many characteristics of our country leads us to think the more of him. He is not caught by our glitter; he is not under the influence of our stupendous power; here is a foreigner who realizes that we have something besides material prosperity and grandeur. First, he rejoices in the uplifting of the people of his own Poland, who have come here. "I rejoice to know," he says, "that they are in this great free country, where they learn to carry their heads like aristocrats, and look every man straight in the eye. . . . I compare them with the poor peasants in my own country, and I thrill with gratitude toward this new country, that has transformed in a few years the senile peasant to the thinking man."

Next he is pleased with our "self-supporting woman," with her appearance, her manners, her intelligence, her character, and her home, which he has visited. Americans who are proud of their virtues more than of their splendor will rejoice that this visitor and friend, who has so inspired us with his art and so enchanted us with his beautiful voice, takes us seriously. For he loves his kind, both his countrymen and the rest of humanity, and he feels that in America people are able to achieve for themselves social altitudes to which, in Continental Europe, men and women are usually born.

This little article in the *Metropolitan* is full of suggestions of the differences between the New World and the Old, differences which have appeared to Mr. de Reszke in more ways than one. The story of his own struggle, told in all simplicity, is a fine tribute to the democracy of our wealth; to the far-reaching blessings which are carried by its generous distribution. After fifteen years of a successful career in all the art centres of Europe, Mr. de Reszke rebelled against his fate. With all his toil and all his fame, he had not saved a penny. He had barely earned what he calls "the living of a gentleman." The education of his children had been paid for from the private fortune which had been left him by his parents.

"Much has been said," he continues, "of the great fortunes foreign artists make in this country. As a matter of fact, there is exaggeration in this matter. But America is generous and just—to both the native and the foreign artist. I have found a welcome here, and a recompense for the effort it has cost to come and the work that I have been able to do. When I return to my own country and my family it will be mine to show, not a great fortune, but a result—a fair return for my labor. In America the artist as well as the artisan works, but both work with hope and assurance of reward, and therein lie the glory and the prosperity of the country." There was never a finer tribute than this paid to the country, nor could there be to any country.

The Motor-Car in England

By Sydney Brooks

LONDON, *February 11, 1903.*

ENORMOUS crowds are travelling daily to the Crystal Palace to see the Automobile Show. It is a good exhibition, not perhaps quite up to the standard of the Paris exhibition of 1901, when 637 varieties of cars were on view, but still very good. It proves that England is at last beginning to make up for lost time in the motor-car industry. Manufacturers here have not yet reached the American and Continental level of excellence, but they are approaching it. They have had to fight their way through obstacles unknown in other lands. The history of this great new industry, if properly analyzed, would be found to contain the secret of England's commercial decline. Here was an industry that had obviously come to stay, that promised enormous profits and a world-wide trade—already there are motors in Bulawayo and the Malay States—and that sprang up so suddenly as to place practically all countries on an equality in engaging in it. How has England borne the trial? Roughly speaking, she is still behind both France and the United States, and very little, if at all, in advance of Germany. The causes of her inferiority are both public and private. English manufacturers will tell you they are wholly public, due to the local government board, the hostility of rural authorities, the state of the law, and so on. But this is not quite correct. It is true that before 1896 the law did make it virtually impossible for Englishmen to turn out horseless carriages on the same scale as the French. As lately as 1895 inventors were being prosecuted for driving their cars at a speed of four miles an hour and for daring to appear on the high roads unheralded by a man with a red flag. But after the law was altered a good deal of time and money was wasted in experimenting with models that had already been discarded on the Continent. Parliament can hardly be held responsible for this. Legislative conservatism and the national preference for profiting by English mistakes rather than by French and American successes combined to give the industry a poor start. English cars got a bad name to begin with, and they are still engaged in living it down. A few years ago every smooth-running, compact, and efficient machine was suspected at once of a non-British origin. Even to-day England imports from abroad over $6,000,000 worth of motor-cars a year, and all the foreign firms that have established themselves in London are working overtime. That does not mean that English firms are slack. On the contrary, they are doing an enormous business. It is almost impossible to get a car delivered in less than eight months. All the leading English firms have already closed their order-books for 1903, and except through an agent who may happen to have a supply on hand, there is practically no chance of obtaining a first-class English-made car in under a year. The supply, in short, is not equal to the demand.

Within the last twelve months the general public attitude towards motors has turned a complete somersault. Not that all prejudices have vanished. You may still in all parts of England be forced to listen to heated harangues on the smell, noise, dust, recklessness, and unreliability of motor-cars and their drivers. But, on the whole, as the crowds at the Crystal Palace prove, the average man is converted. The motor has successfully weathered the toy stage, and is now regarded by the majority of Englishmen with positive sympathy, as a pleasant and permanent addition to the world's means of locomotion. The business man, too, is being rapidly won over. Light delivery wagons, run by petrol, are making their way, slowly but surely. Several of the largest firms in London have joined with the manufacturers, and the Automobile Club is promoting a series of trials for thoroughly testing this class of machine. Mr. Hanbury, the president of the Board of Agriculture, rarely makes a speech in which he does not urge the importance of a motor-car service to farmers, and especially fruit-growers, dairymen, florists, and market-gardeners.

An agricultural motor has been lately invented that can be used for mowing, reaping, binding, ploughing, chaff-cutting, grinding, and hauling loads along the highway. I have seen it plough nine inches deep on heavy land with two ten-inch furrows—and that without imbedding the land in the slightest degree. In London there are three public services of motor-cars now running, and if they were to succeed in driving the diabolical omnibuses off the streets, Londoners would not grumble. At present there seems little hope of that. A really dependable and comfortable vehicle for this class of work has not yet been devised, and though the cars are well patronized, there is not nearly enough of them. The battle between the horse-drawn 'bus and the motor-car can hardly, therefore, be said to have really begun. So far as I know, Eastbourne, a watering-place on the south coast, is the only town in England that has a well-organized motor service, and deliberately and officially prefers it to cable or electric cars. A syndicate is being formed, though with what prospect of success I do not know, for the purpose of linking up towns and villages with the main trunk lines of railroad by means of motors. This is an idea which has taken healthy root in Ireland. Lord Dudley, the Lord-Lieutenant, who is himself an ardent and experienced motorist, came out strongly a few days ago in favor of motor-cars as being better suited to Ireland's industrial and agricultural needs than even light railways. One or two of the county councils in England have placed motors at the disposal of their surveyors. The Post-Office has also taken them up. A motor postal service between Liverpool and Manchester is in running order, and in London alone there are over fifty motors in Post-Office employment. Several of the London borough councils use steam-lorries for the conveyance of building materials and other mechanically propelled vehicles for the removal of street refuse. There are nearly a dozen towns where motor fire-engines are operated. In South Lancashire a company has shown that with skilful organization heavy loads can be transported by road more cheaply and more expeditiously than by either railway or canal. It is now handling at a profit over 2000 tons of merchandise a month.

With all this, Parliament remains immovable. The Act of 1896 remains on the statute-book unamended. That Act did away with some of the most absurd restrictions on the building-up of the motor industry; but it had one cardinal, vitiating fault. It tried to lay down the lines on which motor-cars were to develop. It is a sound rule that legislation should follow an industry and not precede it. If the Act of 1896 had been content to prescribe only broad conditions, perhaps the fact that it was attempting to regulate something that had hardly come into existence might not have mattered so much. But instead of that, it went into details, and concerned itself with a number of technical minutiæ, such as the limit of the "tare" weight, the width of the wheels, the number of brakes, and the speed of travel. Being a non-expert body legislating for a new industry, in which fresh inventions were being made daily, Parliament naturally failed to achieve finality. It fixed, for instance, the maximum of speed at twelve miles an hour. Nobody from the King downwards takes the trouble to observe this rule, and unless policemen are detailed off to line every hedgerow in the country, it can never be enforced. In some parts of the provinces, on the road, for example, between London and Brighton, this practically is what is done. Rural magistrates are whimsically conservative, and the village police force is converted into a band of motor-car hunters. Automobilists argue that the real object of legislation should be to protect the public from the "scorcher": and that this can best be done by abolishing the legal speed limit, but at the same time enforcing responsibility by issuing licenses and having all motor-cars properly numbered and registered. If this were done, a conviction for furious driving would involve the loss, or suspension, or "magisterial endorsement" of the license; and drivers, it is urged, would become as prudent as captains of yachts. Bills proposing these and other reforms have been introduced into Parliament, but without result, and the Act of 1896 remains in the anomalous condition of a deterrent that does not deter.

It is of course in the country that the development of the motor can best be seen. Practically no country house is now complete without one. The rural doctor uses it on his rounds, the country surveyor on his tours of inspection, the sportsman to convey his shooting parties and beaters to the covertside, the huntsman to attend a distant meet. For the country gentleman it has enormously widened the area within which he can "get about." For the City man it means that he can live away from the smoke and grime of London and yet be within easy reach of his office. Indeed, since the rise of the motor-car, the value of property along the highroads leading out of London has advanced twenty per cent. It is even possible that the dastardly condition of country and provincial hotels in England may in time be reformed under the pressure of motorists. The Touring Club de France has done excellent work in improving French inns, and the Automobile Club of Great Britain, with its 3000 members, is devoting itself to the same task not unhopefully. Lamp-makers, furriers, tailors, and opticians are all profiting by the "motor boom." But its greatest surprise has been the revelation of the exceeding badness of English roads. As a system they have remained practically untouched for the last sixty or seventy years, ever since the railways dispossessed them. No new main thoroughfares have been built, and even the maintenance and repair of existing ones have fallen far short not only of the French and Italian, but even of the German, standards. It is one of the prime results of the extension of motors and motor-cycles that public attention is being called to the whole subject of highway administration. A roads improvement association has come into active life, and is vigorously preaching the necessity of reform. Whether it will move the government remains to be seen. The work needed is work that only the government can undertake. The local authorities are too scattered and too ill connected to be able to evolve anything in the nature of a systematic plan of road construction; and without good roads and plenty of them, the social revolution of which the advent of the motor was supposed to be the prelude, must remain, so far as England is concerned, very largely a dream.

Raising the Venezuelan Blockade

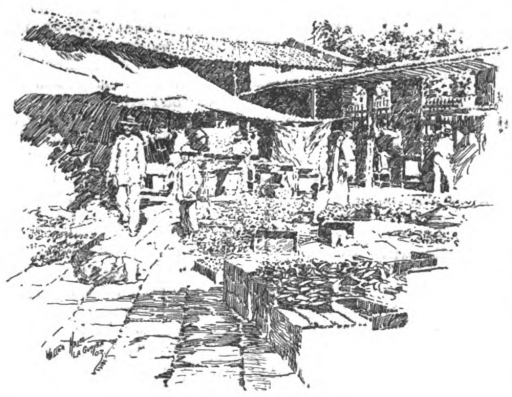
(With Sketches made on the Ground by our Correspondent)

La Guayra, *February 15, 1903.*

The harbor of La Guayra is an open roadstead of crescent shape. Perpendicularly almost from its water's edge rise mountains, some of them 8000 feet high. What little room there is left between the deep sea and, if not the devil, the deadly fever-laden clouds

The Main Street in La Guayra

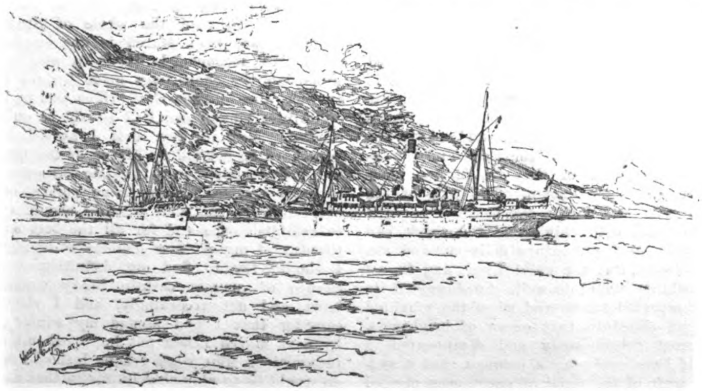
that hang and float around the mountainsides, is occupied by the town of La Guayra.



Some five hundred houses are here scattered along the water-front in shape of half a "frankfurter," a few dozen more are clustered about on rocks and crags above. Today at sunrise, as every morning for five long and weary blockade-weeks, half-starved fishermen come down from these old stone houses of sixteenth-century pattern. Stick and rod in hand, they wander lazily to the water-front, bent upon fishing to provide for a noon meal.

Negroes, mulattoes, mestizos, and zambos they are. Some show a complete mixture of all these varieties, strongly reminding the observer of Darwin's "missing link." But different as may be their hair and skin, common is to all these children of a mongrel race the same careless, aimless, shiftless way. Shoulder by shoulder and elbow by elbow they sit slowly down on the long stone wall built as a breakwater to shelter the harbor from the swell of the sea. Lighting the cigarette, without which the picture of no Venezuelan would be complete, they begin to discuss the political situation before they drop the bait. "Un momento!"

The big British cruiser *Tribune* is still there at the end of the mole, but, as everybody assures his neighbor, the blockade will be raised to-day, for—such is the general view among them — the German war-ships have been wrecked by the guns of Fort San Carlos, and the kings of Italy and Great Britain have, terror-stricken, appealed to the United States to arrange for peace at any cost.



Is there any news from the revolutionary camp? Of course there is! Fighting has been going on all night near Macuto. It is a habit here, adhered to even by the foreign merchants, to tell you in the morning that battles raged while you slept. Venezuelan politeness thus expresses itself.

By seven o'clock the general desire for information seems to be gratified. Everybody lights a fresh cigarette, gathers his rags about himself, and drops the bait. Patiently waiting sits the long line of men. Soon all seem to doze, some yawn, a few even snore; few of the small white fish are caught. Thus they will sit all forenoon in burning sun and blinding light, their silence only interrupted by an occasional splash in the water when a dizzied or sleepy black

La Guayra's Market-Place

head, followed by a scantily clad darky who has lost his balance, drops or rolls into the deep. The others don't even laugh while he paddles ashore. They only yawn longer.

The American Merchant-Ship "Maracaibo" entering La Guayra Harbor with a Cargo of Flour and Provisions

A Landmark—the Tower of El Carmen

Next time it may be their turn to swim. Business is completely at a standstill.

Eight o'clock sounds the bell from the church tower, and one of the daily star performances of this merry war-operetta begins. The consuls, including those of the nations at war with Venezuela, enter a shore-boat, are rowed into the harbor, and meet a steam-launch from the *Tribune*. A lieutenant from the cruiser receives telegrams arrived overnight for the captain, and exchanges with the gentlemen in the row-boat news, letters, and perchance a cigar.

A "peaceful" blockade it is indeed! One day the Prefect, a man with a fine sense of humor, asked the consuls bent on this daily errand if they would not beg the captain of one of the men-of-war to send the band ashore to play on the plaza. He might return the favor by sending the sorely missed fresh vegetables for the officers' mess. In the cable-office the telephone is kept ringing all day, and "not yet!" is the reply to all inquiries.

Six o'clock finds stores and warehouses closed and all hopes deferred for the following day. Night falls, and unhappy-looking men retire to their homes, while mosquitoes begin to enjoy life. Now and then the moonless darkness is lit up by the search-light of the *Tribune* sweeping around the horizon, playing on the harbor, and fastening its rays on the half-destroyed torpedo-boat *Ossun* in the inner bay.

Eleven o'clock! At last! The steam-launch of the *Tribune* rounds the cruiser and makes straight for the shore, a lieutenant mounts the few stone steps and hands a letter to the British consul, who soon turns to the Prefect and announces in Spanish, "The blockade is raised!"

Wild shouts go up, the darkies dance, the foreigners shake hands, the Venezuelans embrace each other. Then the Prefect hastens to the cable-office, writes out two messages, one of thanks to Mr. Bowen in Washington, the next congratulating Castro "upon his splendid success and victory!"

The Book of Months

By E. F. Benson

OCTOBER

I AM back again to the level uneventfulness of these pleasant days, with a great sense of having "come home" continually with me. This little stuccoed house, with its little garden, has become to me my "angulus terræ"; the deep vibration of "home," incommunicable and to many unmeaning, is here; I can no longer imagine myself permanently anywhere else. All day long I continually find, as it were, intimate glances. The line of the downs, a group of trees, or a corner of my own room catches my eye as one catches the eye of a friend across a roomful of acquaintances. That glance says nothing in particular; it only means "I am I, you are you," but it is only between friends that such a glance can ever pass. Soul beckons to soul, with gesture invisible to others, and a smile answers it, For it is friends who are our anchor in this swift rushing stream of days and years; secure there, though time eddies in froth and flying spray about our bows, it does not whirl us away, straw and flotsam, down the racing flood. And above us, when we look up from our anchorage through the flying wrack of storm-cloud and torn fringes of wind-swept vapor, there glimmer the steadfast and immutable stars.

I left Capri, as you will have guessed, somewhat in a hurry; in fact, I firmly and speedily ran away as hard as I could. All September, so I see now, I had been living in the flimsiest paradise of a fool. I had thought it was possible to detach oneself so utterly from the joys and frailties of the human race that one could take any liberties one chose, look at and live in beauty and cease to be man. Then suddenly the flesh twitched me, and like the flowers of Klingsor's garden my sexless paradise fell in red ruin of autumn leaf about my ears. For me anyhow such a Paradise was not possible, and I had—only just—the sense to see that it was better to live decently and dully than—otherwise.

So I took ship at Naples and came home by sea; for why one should shut oneself up in a grilling-box of scarlet velvet and grind along a steel path to the din of rolling wheels, when the divine waterways are at the door, is more than I ever could imagine. Two moments of the voyage I shall never forget. Out in the Bay of Biscay we had a couple of days of heavy gale, the wind blowing from the west like a solid thing. The sea, which till then had been calm, gradually began to get up. There was no sun, and from a gray and infinite flatness it grew streaked and wrinkled. Then the wrinkles began to amalgamate, every two or three wrinkles turning themselves into one definite furrow, and the streaks formed themselves into sprayed wave-caps. When I went to bed the ship was still fairly steady, but full of wandering creaks and groans, and clothes hanging up on my cabin walls whispered against the woodwork and oscillated backwards and forwards. During the night, however, we began to pitch and roll in earnest, and waking once, I heard the scream of the screw whirling impotently out of water, and the jar of straining wood and rivets. All next day the riot of the skies and din of the seas grew greater, until coming on to deck after dinner one had to dash at suitable moments over the open to gain handhold before the next lurch. Eventually I found a corner sheltered from the wind behind the smoking-room, and sat there with the gale thundering madly above my head and yelling and thrumming in the quivering rigging. The sky was quite clear and cloudless, and though there was no moon, the stars made a gray twilight overhead. As the ship labored on with reeling gait the mast near above me would strike wildly right and left through a hundred stars, scoring a black line through the Pleiades and the Bear. For a moment Orion's Belt would be framed between the yard-arms; the next it would plunge out of sight behind me. Then Cassiopeia's Chair would waver over the bulwarks, tremulously perched, and in a second, as if it was roped to some celestial swing, would soar high to the zenith. Then the bulwarks themselves would rise a black blot into the sky; the next moment they reeled giddily downwards; and at my feet, almost, then raced by huge dimnesses of gray sea and flying foam, with veiled and luminous specks of phosphorescent light glimmering like marine glowworms.

Then suddenly from the deck came a cry I have heard only once, "Man overboard," and in a moment, coming it seemed from nowhere, the deck was alive with hurrying figures. The thump of the screw grew slow and ceased, women screamed, and from a big chest near me three sailors got out a flare-buoy, a wooden frame with a light attached to it. In a few seconds it was lit and flung overboard, and flaring high it rose and fell, a veritable dance of death, among the hills and valleys of the sea. It was impossible at the pace we were going to reverse the engines at once, for the strain would have endangered the lives of all on the ship, but gradually as we slowed down this was done, and the churned water from the screws hissed past us. The buoy was already far behind us, but gradually we got nearer to it, and a boat was launched with infinite difficulty and danger, and we lay there, the ship's company hanging on the lee bulwarks while it put out into the night and the storm. There we waited, rolling and bowing to the waves for an hour maybe, watching the flare and the light from the boat, now riding high against the horizon, now completely vanishing in the trough of some wave. Then the flare burned out, and the boat returned. The search had been fruitless. And slowly the tramp of the screw worked its way to its accustomed speed, the identity of the man was established, an entry was made, and we went on again ever faster through the yellow twilight of the stars and the big pitiless sea.

The second moment was next morning. The wind had *gone* down, though the sea still ran high, and all heaven and earth were one incredible blue. A sun of transcendent brilliance flamed overhead, and not a cloud flecked the huge azure dome. Below, the great translucent waves were at play in jovial boisterousness; the blue monsters flung themselves against the black side of the ship and were shattered into a cloud of dazzling white, which, as it rose into the air, was momently iridescent with rainbow, a high-day of light. About eleven of the morning a sudden whisper and rumor ran round the ship, and by degrees the sequel of that tragic hour last night was made known. The wife of the man who had fallen overboard the night before was with child, and the shock had brought on a premature delivery, and she had died. But the child lived, and in all probability would do well. So *June* had its tale repeated again, and when the weighted shroud slid into that ocean of brightness, wavered subaqueously and disappeared, I could have sworn for a moment that a sudden waft of the smell of sweet peas pierced the pungency of the sea.

So both lie there in the depths of the unquiet bay, though leagues apart. Will those two poor tabernacles of mortality, I cannot but wonder, find some subtle mode of telegraphy in their green sea caves and speak to each other, or go to each other across the ooze of the depths, moved by some thresh of current? Or will they have to wait there patiently in their crystal tombs till the sea gives up its dead, and they float up as the chrysalis of the dragon-fly floats up through the water, to find that the new heaven and the new earth are fair, at the dawning of the supreme day? Such was the incident of my home-coming: in the midst of life there was death, and in the midst of death, life. It is always so.

The long dark evenings are beginning, but day after day unclouded October weather, with its brisk air and its exquisite clarity and luminousness, prevails. It reminds one of nothing in the world so much as a boy's soprano; nothing else in the world gives a sense of such absolute perfection and purity of vehicle, the one expressed in terms of light, the other of sound. And as the boy's voice rises and fills the great spaces of some sunlit cathedral, so this light pervades these aisles of yellowing trees and spaces of swelling downland. About each there is an utter absence of all passion or emotion. A woman's voice, it seems to me, is like the mature light of summer, broad, full of feeling, full of the tenderness of sex. But in this October weather you have mere brightness: in the air there is a certain chill which gives the precision that the warm flower-blurred light of summer lacks. It promises nothing like the languors and brightnesses of spring, it gives no fulfilment like the noons of summer, it is just itself, exquisite, meaningless, and at times horribly sad. For the year has turned; we have had our bright and our beautiful times and they are over, and soon will be the season of long dark evenings, and the blear-eyed peerings of the remote sun through the fogs of November. In the winter, too, there is something of the hibernating spirit about us; we dream and doze, and vitality sometimes burns a little low, and age looks over our shoulder, and we tend to be possessed with the Spirit of the falling leaf.

What one sets oneself to do, I think, matters nothing in comparison of the main point, namely, that we set ourselves to do something; for any employment, so long as it is not harmful, is essentially good. Many of us have our ordinary work to do, which takes most of the day, now days are short. In the summer, perhaps, we were accustomed when the day's work was over to be out-of-doors, but now in these lengthening nights we have to seek our employment inside. The great thing, then, is to do something definite and to do it seriously. To read the whole of Shakespeare before next March is one employment that recommends itself to me; but supposing the choice was made for me by another, who told me that bridge was to be my winter employment? I should be quite content. But in that case I should try very hard to get rid by March of the fatal indecision which prompts one sometimes to make spades, sometimes no-trumps, out of practically the same hand; I should try to establish once and for all the best suit to play if my partner doubles no-trumps; I should try to find out definitely what chance of success certain heavy *finesses* have, and act accordingly, and I should consider that I had wasted my winter if by next March I had not improved out of recognition. But what I hope I should not do would be to play slackly, for in that case one might as well talk to the Spirit of the falling leaf at once.

To be Continued.

Lady Rose's Daughter

THERE is nobody damned in Mrs. Ward's new book; all the good people keep on being good, the bad become repentant, and the doubtful ones grow in grace and promise finally to come out on the Lord's side. It is a very nice book,—"nice" in any sense you like; pleasing, discriminating, fine. This time Mrs. Ward has written a novel of entertainment, and done it with admirable art. Whether it was art for art's sake or art for the reader's sake doesn't much signify, but certainly the reader has been very gently and benevolently used. When one considers the people and situations and dispositions used, and considers what a cloth-bound nightmare of a book might have been made of them, mere gratitude seems insufficient recognition of so different an outcome. When the juggler keeps balls in the air it is edifying; much more so when he uses knives — sharp ones — with points. Mrs. Ward has played with edged tools, and to the beholder's delight, and there has been nobody hurt.

When you have finished a good novel, turn back to the beginning, and notice how it has been put together, and especially how the characters have been constructed. Behold, good friends; a bottle of oil, a jug of vinegar, salt, pepper, this and that. Watch the compounder sitting in a cool place with the great bowl in her lap! Some oil, a few drops of vinegar; *beat! beat! beat!* sweeps the shining fork! A little more oil, a few more drops of vinegar, a pinch of salt, a shake of the pepper-box, and ever swiftly and easily sweeps the fork, mixing the incongruous, bringing form and substance out of chaos, compounding under our incredulous eyes the mayonnaise Le Breton with which the cold Delafield is to be served.

It is a great dish, and we like it. Dear! dear! How near the Warkworth flame came to spoiling the salad! How impossible seemed the reconciliation of the warring elements! But it was done; made, not mixed; compounded, not confused.

Since Becky Sharp threw the memorial of the great lexicographer out of the coach window at Miss Pinkerton and her academy, there has been no girl in English literature quite fit to compare with Julie Le Breton. The editor of HARPER'S MAGAZINE calls her "the most appealing type of heroine ever presented in fiction." She is different from Becky in such vital particulars that the reader's reluctant and disapproving sympathy never leaves her, from her first appearance at the top of the stairs at Lady Henry's Wednesday night, till the little Duchess takes her abroad to repair her shattered energies after a great peril and a great escape. Even then the reader's sympathy does not leave her, but only his disapproval. She is superlatively interesting to the very end. Even the process of rearing a new edifice of affection on the ruins of a conflagration does not try the infatuated reader's patience. That perilous attempt is successfully worked out. It does come about that the woman who would have run away with Warkworth does finally, and without violence to human nature, seem likely to make Jacob a truly helpful wife. After all, Jacob had crotchets. His virtues were in some measure the virtues of his defects. His preposterous fidelity was a fruit of self-abnegation, and that was characteristic of a nature noble but not quite normal. And Julie's defects — her propensity to weave a tangled web—if not defects of her virtues, were compensated by great virtues and notable talents and charm. Warrington found himself drawn to Pendennis as a youth who had shown himself capable of a great, unreasonable, affection. Julie, a woman of wiles and designs, could fall in love, most inopportunely and ill-advisedly, with Warkworth. Count it to her for a virtue, but, oh! tell it not in the girls' schools, or in households where there are growing daughters, that a capacity for loving a detrimental and engaged man is to be put down on the credit side of a maiden's account. Let us waste no pity on Jacob. He got a charming wife who will evidently put her mind on being devoted to him, and to whose devotion he will evidently owe a large part of whatever satisfaction he finds in living in the sphere of usefulness to which fate has called him.

Mrs. Ward always takes us into good society in her books. In this one there is a better company of dukes, duchesses, ministers of state, and makers of history than we wistful republicans have sat down with since the days of Trollope. Dukes, if not good company, are good accessories to company, and as for duchesses, they can be pleasantly, humanly agreeable. We think we have had a turn at high life in London. If we haven't—if it wasn't real high life—then so much the worse for high life, for where we have been the talk was lively; the matters discussed were interesting and sometimes important; the lords had brains, and the editors learning; the houses were handsome, and the paintings on the walls were Gainsboroughs or better. There is no objection to high life if it is lighted up, and Mrs. Ward snuffs all the candles in her great houses. Lady Henry is a distinct and distinguished person whom it is profitable to have met. Lord Larkington, who served as a midshipman in 1812, died at the age of seventy-five or thereabouts, so the time of the story is early in the seventies, and it is years now since the Duchess of Chudleigh put on mourning for Lady Henry. She was a loss to London, and she is a gain to literature. And the book she figures in is a great gain to literature. Merely as a story it is extremely successful, and has held our interest intensely for a year, as it has come out in monthly instalments. In the development of character, in the clear delineation of many interesting personalities, and in occasional passages of wise and penetrating discourse, it is a book of distinction, charming and edifying.

England was still decidedly English in the seventies, and this book is British to the back stitching—all except its illustrations; they are Mr. Christy's, and therefore American. Probably they would fit better into contemporary London than into the London of twenty years since. They are variable. The best of them are felicitous, and some of them are charming. The worst of them, towards the end, are very shattering to one's ideals. These were du Maurier's people in this book. Of Mr. Christy's very last effort —Julie on her knees by the distressed Jacob —it is not too harsh to say that if Jacob looked like that, that sort of a Julie was a fair match for him.

The Real Value of the Rhodes Bequest

THERE has been quite a lot of talk in the American press of late about the Oxford scholarships bequeathed to Germany and to this country by the late Cecil Rhodes, and it seems to us that many of our journals have laid themselves open to a charge of narrowness and churlishness in the attitude and spirit they have assumed in relation to the question. We quite understand the feeling that an American boy can get a more practical and probably a better all-round education at an American university than he could at Oxford; but we do not share the opinion of the eminent New York daily which disdainfully says that Cecil Rhodes "evidently regarded Oxford from the viewpoint of . . . a poor boy and a remote colonist; that is to say, as a focus of dazzling social radiance, a fountain of aristocratic and pan-Anglican influence which no colonial, American, or Teuton youth would be able to resist. In fine, the Rhodes bequest was based upon a flagrant misconception of facts, and inspired by an ill-considered purpose."

Now Cecil Rhodes may have had many defects, but no one who knew him well would accuse him of having any special regard for "dazzling social radiance," or for "fountains of aristocratic influence." Moreover, whatever else he was, he was a man of brains, the sort of brains America knows and likes, a man not much given to "flagrant misconception of facts," or often "inspired by ill-considered purposes," and it is more than likely that he knew just what he was doing when he made the scholarship bequests. His aim was to further the cause of international amity and mutual understanding by bringing about the intimate contact and prolonged close relationship of highly endowed young personalities from countries which he thought ought to be fast friends.

It is just this spirit of Mr. Rhodes's intentions which the protesters to whom we have referred seem to miss. They can see no further than this, that American universities are the best equipped and most efficient in the world, and that to send some of our best young minds to Oxford is not only to cast a slur on our own fine institutions, but also to commit the almost criminal error of sending those young minds away to feed on the second-best when the best lies right at their hand. This view, we repeat, we believe to be short-sighted. To begin with, Oxford is surely not such a hopelessly antediluvian and stupid place as some would make it out to be. It has developed some very respectable minds in its time, and a really vigorous young intellect can probably get almost as much of what it needs there at the present time as it could, say, at Yale or Harvard. Character and discipline and manliness, for instance, are things that may be had there, and character and discipline are not to be despised.

Admitting, however, for the sake of argument, that the education a young man can get at Oxford is inferior to that to be had at an American university, we still think there is a lot to be said for the Rhodes bequest. The young fellows who take up the scholarships will be old enough when they go to England to have acquired a thoroughly American spirit which nothing can afterwards extinguish. There will always be enough of them at Oxford simultaneously to enable them to manifest that spirit to a certain extent. If they are receptive and adaptable—and receptivity and adaptability are eminently American traits — they will blend into their own native spirit the best of what Oxford life has to give. They will have some chance of getting to know intimately much that is admirable in English character and custom. They will doubtless acquire a true sympathy with the elder branch of the Anglo-Saxon race. They will gain the breadth and culture that residence in a foreign land always gives to superior minds. They will come to see their own land and its institutions and customs, its virtues and its defects, with surer vision and with deeper understanding when they return to it after absence abroad. In any case, if bright representative young Americans take up the scholarships, there is little doubt that the results will be highly favorable to Anglo-American friendship, understanding, sympathy, and good-will.

Books and Bookmen

MR. WILL N. HARBEN, of whom a camera interview is given on another page of this number of the WEEKLY, is an author whose name is destined to become familiar to every American household. As one has said, "He has an eye for the home virtues, the ties of neighborhood, the adventure of the commonplace. He writes of common things only to make you wonder at the homespun beauty and true worth at the heart of them." The author who can weave humor and imagination about the common everyday things of life, and lift them out of their dull monotonous routine, is always welcome. He imparts to the unseeing that attribute of genius which has been called the sixth sense, the sight of the unseen wonder and beauty that lie in the rut of the ordinary. It was Coleridge who said that genius was the power of glorifying the commonplace. Certainly this definition fits Mr. Harben's claim to write himself novelist, and as he is also a born story-teller, the reasons for his growing popularity are obviously apparent.

Mr. Harben is a native of Georgia, and was born at Dalton about forty-five years ago. He has been described as a typical Southerner possessing all the enterprise of a Westerner. Amongst his ancestors he numbers Daniel Boone. He began his literary career by making translations, and for two years he was one of the editors of the *Youth's Companion*. He then went to London, and for another year applied himself to study in the British Museum. It was with some timidity he attempted his first short story, but the effort was successful, and Mr. Joel Chandler Harris welcomed his work as that of a coming novelist. His first novel appeared in 1889, and was followed at intervals by several stories which seem to have reached a culmination in *Northern Georgia Sketches*. In these sketches the author had at last found himself, and at the instigation of Mr. Howells he decided to concentrate his fiction on his own region of northern Georgia. His next novel was *Westerfelt*, published about two years ago. This book was begun in the British Museum, continued at Oxford, and completed, in its first draft, at Paris. Afterward, it was largely rewritten between the intervals of superintending the building of two business houses. There is no doubt that Mr. Harben struck a new vein in *Westerfelt*. He wrote like one who was at home among his scenes and characters: so much so that he was accused of having taken some of his characters from life. Mr. Harben denied the charge, but admitted that the characters were none the less real to him for that. "I have lived the greater part of my life among these humble types, and I have simply absorbed their general characteristics. When I am with them I am one of them in every possible way. I am not spying on them, and making notes for future use, but just enjoying it all as if it were a delicious book which only I could read and understand."

Mr. Harben's next book was *Abner Daniel*—aptly called "the *David Harum* of the South," with more regard for truth than such analogies usually imply. It was a triumph for Mr. Harben as a humorist. Humor, when you come to think of it, is the most individual gift of an author, as well as the rarest in fiction. It is the most striking quality in *Abner Daniel*—the quality of humor that is blent with humanity, the sunlight that catches the smile with a tear in it and makes it glisten. Oftentimes the smile breaks into laughter, as the humor becomes pure fun, for Mr. Harben knows a good story, and how to tell it. But it never broadens into farce: Mr. Harben is instinctively too careful an artist for that. It is not claiming too much to say that few of last year's novels were at once so human and so humorous; and to this may be attributed the fact that no other novel of Mr. Harben's has enjoyed so wide a circulation. Some authors have popularity thrust upon them, some achieve it, some are born to it. Mr. Harben, we should say, is of the deserving class who achieve popularity. The reading public may be slow in recognizing an author's merit, but once they do, they are not slow in appreciation, and the reward of the author is sure if he continue to prove worthy of their affection and esteem. Mr. Harben has won this favor by unremitting labor and care in developing a fresh field, and by impregnating his work with a wholesome, sane personality. He writes from a fulness of knowledge, and a varied experience among his own people. He is fertile in resources, and never at a loss for a good story. He reminds us of a remark of Mrs. Hillyer's—a humorous character in his forthcoming novel, *The Substitute*. Mrs. Hillyer has some great news with which she is bursting. "I thought at fust," she reflects, "that I'd not let Mrs. Dugan in on this, but I mought as well. That's about all the pleasure the lone woman gits out o' life, an' she's entitled to this morsel." Mr. Harben enjoys his own story so keenly that he tells it as if he were bursting with its great secret, he chuckles over the delight it will give his readers, and he takes you into his confidence with much the same happy condescension with which Mrs. Hillyer treated Mrs. Dugan. The result is one of deep satisfaction in the personal relationship set up betwixt author and reader.

Mr. Harben's fidelity to the type as well as his truth to nature, which is something more than being merely true to life, has frequently got him into a tight place. We have already stated that on more than one occasion he has been charged with transferring his originals direct to the page. One day a mountaineer and ex-moonshiner called on Mr. Harben in his office in Dalton, Georgia. The author saw, by the angry fire in the man's eye and the imprint of a big revolver under his short coat, that serious trouble was brewing. "Look y' heer," said his unwelcome visitor, "folks says you've been pokin' fun at me in a book. I don't know whether it's so or not, but I'm heer to say ef it is, me 'n you'll hitch in short order." The man, the prototype of Mr. Harben's Pole Baker, in *Abner Daniel*, was a powerful fellow, who had had as many shooting scrapes as he had fingers and toes, and the worst part of the affair was that the author had really drawn his portrait in the novel. Harben deliberated, and then said: "Mr. ——, I know you are a fair man, and will do what is right. Here is a copy of the book. Sit down and read it, and then, if you desire it, I will give you satisfaction." The man flushed under the singular proposition, but finally consented, and sat down beside the author's desk. All the afternoon he bent over the book. Mr. Harben went in and out of the office several times without causing the reader to raise his head. Once he heard him laughing heartily, and at another time there was a suspicious moisture in his eyes. Finally he laid the book down and said, sheepishly: "I don't think I kin kick. I was a little afeerd you'd made me show the white-feather, but that feller they say is like me 's got a sight more grit 'an I have. Huh!" admiringly, "he'd fight a circular saw barehanded. No, I don't think I kin kick." Mr. Harben breathed freely once more, and felt duly thankful.

In his rambles among the people of northern Georgia, many of them primitive types and simple specimens of humanity, Mr. Harben has met with many rare experiences which have yielded him rich material for his novels. He was benighted once in a mountain cabin where a family of five daughters and a mountaineer and his wife ate and slept in the only room the house contained. With characteristic hospitality the farmer said the stranger was welcome if he would put up with things as they were. It was late, and as there was no other cabin in sight, Mr. Harben accepted the kind offer with what grace he could summon. There were four beds in the room and no curtains, and the visitor wondered what they would do with him. They all sat cheerfully around the fire after supper, and about nine o'clock the mountaineer said, "I reckon me 'n' you'd better go down to the spring an' git us a drink." At the spring the host obviously detained his guest for a few minutes, and on returning to the cabin they found it wrapped in darkness. The two men went in and slept in a bed together. The next morning, before dawn, the author was awakened from the most delightful sleep he had ever experienced. It was the mountaineer bending over him. "I reckon," the man said, "that me 'n' you'd better crawl out an' give the women folks a chance to git up an' cook breakfast."

Some American Music

NOT many years ago one of the most acute and clairvoyant Englishmen of his generation, Mr. George Meredith, observed that it would not surprise him if, within fifty years, the centre of creative literary art were in America. For those of us who would modify this prophecy so that it should accord with a conviction that the American genius will find its most potent expression in music, rather than in that art of which Mr. Meredith himself is so consummate a master, the immediate past has yielded surety and confirmation of a very definite sort.

One of the younger group of contemporary American composers, Mr. Arthur Farwell, recently established at Newton Center, Massachusetts, a press which is devoted wholly to the publication of the best of this new music that he can procure,—considering it solely on its artistic merits, and entirely aside from the question of a profitable popularity. It is an altogether admirable enterprise—probably the most determined, courageous, and enlightened endeavor to assist the cause of American music that has yet been made. Already it has begun to justify itself through its results: for within the month there was produced, at a concert given in this city under private auspices, certain of the music discovered and published by Mr. Farwell. We remember with a very keen pleasure Mr. Harvey Worthington Loomis's exquisite arrangements of two Verlaine poems, "On the Terrace" and "In the Moon Shower,"—the last contrived, curiously but with haunting effect, as a spoken recitation, with obbligato of piano, violin, and voice; a movement from a piano sonata by Mr. Farwell, Mr. Henry F. Gilbert's ardent and colorful scene for dramatic soprano, "Salammbô's Invocation to Tänith" (the text from the novel of Flaubert); and his superb setting—still in manuscript—of the Lament of Deirdre from Ferguson's "The Death of the Children of Usnach": music saturated with the sense of that "heart-break over fallen things," that wildness of passionate regret, that tragic and piercing melancholy, which are Celtic—and overwhelming.

Finance

THE course of the securities markets of ...te has taxed to the utmost the ingenuity ...f those persons who are forever demanding ... reason for fluctuations, and even for the ...sence of fluctuations, and who, when such ...asons are not forthcoming, promptly in...nt them. Many speculators, particularly ...e professional, really seek what may be ...illed a working explanation, even while ...ey imagine they are asking for an accurate ...alysis of basic conditions. At this writing ... is not easy to account for the market's ...ovements, or, rather, for the absence of a ...onounced tendency in either direction. ...ne day the stock-market is weak, and the ...ofessional speculators are bearish, with ...guments galore to show that a decline is ...evitable. On the next there is a recovery, ...id the "temper" of the former bears is ...stinctly bullish, with a few dozen reasons ... prove conclusively that the market's next ...big move" must be toward the sky. As ...ight be expected from speculation in which ...e professional element alone takes the in...ative, the market hesitates, advances, and ...cedes, all within that narrow range of ...ctuation which is so exasperating to the ...veterate trader. From time to time a pool, ...r reasons known only to its managers, ...arks up the price of its specialties, and ...cidentally lets loose a flood of rumors of ... ...als and misdeals, or a clique of the more ...werful "traders" indulges in a sharp lit... raid on values. And meanwhile the real ...iders of the Street give no evidence of ...king the slightest interest in the course ... stock values, and the general public does ...t so much as think of such a thing as the ...ock-ticker. In point of fact, many of the ...ancial powers are absent from the city—... Florida, on their yachts, in Europe, any...ere save in Wall Street, which is where ...ey would be if they had any reason to be...ve that a bull market, or, for the matter ... that, a bear market, was liable to develop ... a sudden.

The trouble is that for some time past ... speculative forces have been in a state ... almost perfect equilibrium. There is no ...at reason at the moment why prices ...uld fall, and none why they should ...e. The future is full of promise, but ... present has some uncertainties, though ... the keenest-sighted and most highly ...aginative bear can discern disaster at ...d. But the most promising source of ...r ammunition for some time to come ...l probably be found in the money-market. ...e reserves of the associated banks of New ...rk are at the lowest point at which they ...e been at this season of the year in a ...ade or more. Not only that, but since ... last bank statement, which reported a ...y substantial decrease in the reserve, the ...nks have been losing cash at a great rate, ... only to the government on their Sub-...asury operations, but by direct shipments ... currency to Chicago and the West. The ...ter movement is not devoid of interest. ...ly last autumn, when many bank presi...ts permitted themselves to predict that ... West would not draw on this centre for ...ch money for crop-moving purposes, at...tion was called in this column to sundry ...sons why the West would take money ...y from New York.

...or one or another reason, Wall Street ... utterly failed to realize the extent ... magnitude of the speculation in land. ...igations incurred through those real-es...e operations are now maturing. Hence ... shipments of currency to Chicago banks, ... latter to send them onward to the ...ious rural institutions. Money rates, ...ugh not yet higher, are beginning to show ...ardening tendency, though this has been ...imized by the fact that even as the ...k reserves were dwindling, sterling rates ... in New York and rose in Paris.

$2,500,000

NEW YORK CITY 3½%

Tax Exempt Gold Bonds

(Payable in Fifty Years)

TO BE SOLD THURSDAY, MARCH 5, 1903

OFFERED DIRECT TO INVESTORS

A legal investment for trust funds, exempt from taxation except for State purposes. No "all or none" bids received, thus giving investors the same advantages as dealers. Bonds are awarded to bidders offering the highest premium.

A bid of 108.75 yields 3.15 per cent. income
A bid of 107.44 yields 3.20 per cent. income
A bid of 106.14 yields 3.25 per cent. income

The average interest-paying basis on which New York City bonds were sold at all sales during 1901 and 1902 was 3.238%.

Send bids in a sealed envelope, enclosed in the addressed envelope. TWO PER CENT. OF PAR VALUE MUST ACCOMPANY BID. It must be in cash or certified check on State or National bank of New York City. This deposit will, if requested, be returned day of sale to unsuccessful bidders. For fuller information see "City Record," published at 2 City Hall, New York.

A GOLD MINE IN CALIFORNIA

The gold mines of California have yielded more than $800,000,000.00.

They are now yielding $10,000,000.00 a year, chiefly from free gold quartz mines.

The stock of these mines is not for sale.

The men—and women—who own it bought it when it was cheap, before the mines began to pay.

The same opportunity exists now to get stock cheap in new mines being developed, which will soon be as valuable as that which is now worth too much to sell

The owners of the WIZARD MINE offer this opportunity.

They are developing a free gold quartz mine on the Great Mother Lode, in El Dorado County, and are selling some of the stock to get a development fund.

This stock is offered cheap, as a genuine investment, and no more will be sold than is necessary to provide the capital to make the WIZARD a dividend paying mine.

You can, by joining with them to develop this mine, become the owner of gold mine stock that will pay you dividends as long as you live. That is what the other mines that have been developed in the same way are doing.

This is a plain business proposition; the offer of an investment of some of your earnings, possibly what you would otherwise squander, which will become permanent capital.

It will pay you to write for our booklet, "A Tale of Gold," which will tell you all about it. It is an opportunity offered NOW, and you should write NOW.

January 15, 1902.

NOTICE IS HEREBY GIVEN, AS REQUIRED BY THE Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond," comprising The City of New York, will be open for examination and correction on the second Monday in January, and will remain open until the

1ST DAY OF APRIL, 1902.

During the time that the books are open to public inspection application may be made by any person or corporation assessed to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturday, when all applications must be made between 10 A. M. and 12 noon.

JAMES L. WELLS, President,
WILLIAM S. COGSWELL,
GEORGE J. GILLESPIE,
SAMUEL STRASBOURGER,
RUFUS L. SCOTT,
Commissioners of Taxes and Assessments.

I [Demosthenes] have been careful to retain as much idiom as I could, often at the peril of being called ordinary and vulgar. Nations in a state of decay lose their idiom, which loss is always precursory to that of freedom. What your father and your grandfather used as an elegance in conversation is now abandoned to the populace, and every day we miss a little of our own, and collect a little from strangers: this prepares us for a more intimate union with them, in which we merge at last altogether. Every good writer has much idiom; it is the life and spirit of language; and none such ever entertained a fear or apprehension that strength and sublimity were to be lowered and weakened by it.—*Landor.*

Humanity ought to wish and to will that youth be happy: not, assuredly, through idleness and luxury—which are the sources of the worst unhappiness, ennui—but through the development of the faculties, through a strong and healthy growth.

J. H. Rosny.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

"NOT ONE MOUTHFUL

of table food should be given a child before it is one year old," says Dr. Holt. What substitute, then? BORDEN'S EAGLE BRAND CONDENSED MILK is absolutely the safest and best infant food obtainable. Avoid unknown brands. Send for "Baby's Diary."—[*Adv.*]

TELEPHONE Service is the modern genius of the lamp. With a telephone in your house the resources of the whole city are at your elbow. Rates in Manhattan from $48 a year. N. Y. Telephone Co., 15 Dey St., 111 W. 38th St.—[*Adv.*]

ASK for ABBOTT'S, the Original Angostura Bitters, when you go to druggist or grocer for a reliable tonic in the spring. ABBOTT'S, the best for all seasons.—[*Adv.*]

AFTER a test of forty years connoisseurs pronounce it the best—COOK'S IMPERIAL EXTRA DRY CHAMPAGNE.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

FOR pneumonia, grippe, pulmonary and bronchial troubles take PISO'S CURE for Consumption.—[*Adv.*]

ADVERTISEMENTS.

Pears'

Why is Pears' Soap—the best in the world, the soap with no free alkali in it—sold for 15 cents a cake?

It was made for a hospital soap in the first place, made by request, the doctors wanted a soap that would wash as sharp as any and do no harm to the skin. That means a soap all soap, with no free alkali in it, nothing but soap; there is nothing mysterious in it. Cost depends on quantity; quantity comes of quality.

Sold all over the world.

"Wonderland 1903"

Will be Ready about MARCH FIRST

In it the Northern Pacific furnishes this entirely new series of articles, descriptive of the Northwest

Priest and Explorer
Relates the travels and captivity of Father Hennepin, the Franciscan Priest, among the Indians in the Minnesota country in 1680. Hennepin wrote the first description of Niagara falls and discovered St. Anthony fall.

The Last of the Mandans
Describes a visit to the tribe of Mandan Indians, memorable in the annals of Lewis & Clark, and some of whom still live on the upper Missouri river.

Nature's Masterpiece
Which is Yellowstone Park, is newly described and illustrated. The Government is spending large sums in improving the roads in this WONDERLAND.

Irrigation in the Northwest
Shows the great progress made in irrigation in the far Northwest, and its adaptability to this region.

One Hundred and Fifty Miles with a Pack Train
Recounts an experience in the rough mountains of the Clearwater country, Idaho, with a pack train, while engaged in exploration.

In the Shadow of the Olympics
Describes that part of the Puget Sound region lying west of the Sound and in the vicinity of Port Townsend—an ideal health resort.

Columbia River and Mount Hood
Tells of the finest river and river scenery in the United States and one of its grandest snow capped mountains.

THE BOOK IS APPROPRIATELY ILLUSTRATED, ALSO HAS MAPS AND GIVES TOURIST RATES TO ALL POINTS IN THE NORTHWEST.

Send SIX CENTS for the Book to CHAS. S. FEE, Gen'l Passenger Agent
Saint Paul, Minnesota.

The First Asiatic Collection

By Waldemar Jochelson

See page 376

THE chief purpose of the expedition sent out in 1900 by the president of the American Museum of Natural History, Mr. Morris K. Jesup, to the extreme northeast of Asia, was to study the tribes whose culture is similar to or identical with that of the aboriginal tribes of America. The scientific results of the expedition are being worked out by Mr. W. Bogoras and myself, under the auspices of the museum.

Besides this, the museum requested me to make a study of the Yakut,—a tribe which belongs to the Uralo-Altaic peoples, and whose culture is of a pure Asiatic type.

The Yakut collections, comprising the whole of the material and spiritual life of the tribe, and consisting of more than a thousand specimens, have now reached the museum, after a very long and difficult journey; and in a short time they will be open for the inspection of visitors. They have had to travel from the banks of the Kolyma River, fifteen thousand miles, through all Siberia and Europe, and across the Atlantic Ocean, before reaching their destination in New York. On their journey they have been carried by dogs, reindeer, and horses; have utilized the larger portion of the Siberian Railroad from Irkutsk to Moscow; in short, they have been in almost every kind of conveyance that exists in the world.

When travelling from the northern shores of the Pacific overland, I met, in the Yakut, the first tribe which has nothing in common with Indian or Eskimo culture, if we except the Tungus, who form a sort of transition between the Uralo-Altaic group and the Americanized tribes of the northeastern shores of Asia.

Thus the Yakut culture, which is purely Asiatic, makes more striking, by its very contrast, the similarity between the whole northeastern group and the early tribes of America.

The history of the Yakut is of peculiar interest. Their primary territory must be sought on the vast plains of western Asia. Their life, character, and language are not similar to those of the Buriats, their nearest Mongolian neighbors, who drove them northward, but all their characteristics are very near to those of the Turko-Tartarian tribes of western Siberia and southern Europe, though they are at the present time separated from all the latter peoples by very considerable distances.

The language of the Turks from the evergreen shores of the Mediterranean is almost identical with that of the Yakut in arctic Siberia. A Turk would be able to make himself easily understood by the Yakut.

Likewise, Tartars from the banks of the Volga, deported for various crimes to the province of Yakutsk, are able to learn the Yakut tongue in a very short time, as I have witnessed in many instances. Together with most Turko-Tartarian tribes, the Yakut are good horsemen and cattle-breeders. They were the first to bring cattle and horses to the extreme northeast of Siberia, when up to that time only reindeer and dogs were known; and they have pushed on with their herds as far as the neighborhood of the meteorological pole, where the temperature drops in the winter to seventy degrees below zero, centigrade.

The Yakut brought with them to the far northeast the art of preparing various kinds of food and drink from the milk of cows and mares. They consider the kumiss (fermented mare's milk) to be a celestial drink, and a ceremonial is arranged every spring in honor of its consumption. We have in our collection huge birchwood goblets embellished with carvings and silver and brass ornaments. In the ceremonials nine innocent youths and nine pure maidens have to make libations with kumiss from these goblets, after which the goblets are used in drinking by the elders of each clan.

The tubs in which the kumiss is prepared are made of ox-hide tanned in a certain peculiar manner. This latter art is evidently a remnant of their former nomadic life on the treeless southwestern plains.

In contrast with the scarcity of individ-

Coaching in the South

WITH a good plain brake, a good team (not of the Horse Show prize-winner type), and a good man to care for them, we started one afternoon recently from Harrisburg for a hunting and coaching trip through the South. We swung out of the slippery brick-paved streets, across the long bridge over the Susquehanna (where Lee was to water his horses and never did, being detained by an important engagement with a Mr. Meade at Gettysburg), and came out into, not the free world of Nature yet, for a most objectionable trolley has seized that end of the once glorious Cumberland pike, and made a wreck of it, but into a region that was at least part country. Even here the old-time rapacity of the toll gate asserted itself, and endangered passengers, trap, and, most of all, horses, to pay tribute to this archaic trust in the very centre of a narrow road with two lines of trolley and no perceptible width on either side. Beyond, we thought must lie the great old pike; that faultless limestone road from the Susquehanna to the Potomac, of which so much has been said and written. We found a ruin, rough and unkept, with miserable patches and unknown ways that would shame a country lane, first on one side and then on the other, of that monument of waste—a fine road spoilt by neglect.

The Start

Nineteen miles or so of this and we reached Carlisle and a comfortable inn. From there, through the quaint town, it is a pull of twenty-two miles to Shippensburg, and then eleven miles to Chambersburg. Greencastle, a quaint and beautiful little town, with colonial doorways and ancient white stucco houses with green blinds, recalling "the days of long ago," lies just beyond, and presently the whip says that Mason and Dixon's line and good weather are only four miles out of town. Across the line "Maryland, my Maryland," is about the same as Pennsylvania to look at, but the roads are better. On the way to Antietam and Burnside's Bridge one can trace the ebb and flow of McClellan and Lee's great fight by the tablets along the well-kept road. Bloody Lane to-day seems as peaceful as a dove. The government has built a broad, well-planted boulevard from the battle-field through Sharpsburg to the station a mile beyond, and along this we bowled with the glorious Indian summer haze hiding the rugged outlines of the Blue Ridge on our left and of the North Mountain on the right. From Sharpsburg station to the Potomac is the only dirt road of the journey. Although the South is called the bridgeless country, there is a good bridge over the Potomac at Shepherdstown. When we drove out of Charlestown we for once realized what real Indian summer was. The Blue Ridge almost overshadowed our road with its inimitable coloring—soft, indescribable, dreamlike. Daisy and dandelion bloomed by the roadside, every thicket was warm with the scarlet of the creeper and the deep madder-red of the sumac.

We come at last to the quaint white-brick house where our hunting trips begin. The days followed each other quickly, the men off one day with guns and dogs to rest the horses, and with the brake the next to rest the dogs; across the Shenandoah to the top of the Blue Ridge; to Winchester or to a meet of fox hounds, where pink coats and silk hats are at a discount, but where all hands, men and women, ride straight over stone walls and stiff fences with knees well in and hands low down on the withers. We have one woman in the party who does not fear an early start nor barbed-wire fences. *She* has a chaperon, too—a blue-blooded one—for "Queen" shows the lemon-and-white coloring and the long clean head characteristic of the old "Sensation" blood, and in her own doggy way is the respectable mother of a large family. So that day and others are spent. Every evening hears the tale of the wizard covey in the new ground that always gets away to the oak saplings without giving a shot, and who when followed there can discount the dogs. Then there is the ruffed grouse (he has grown to the dignity of a pheasant in Virginia) who flushed from the wild grapevine in the big woods and got away unhurt, and the woodcock which we saw sail away to the farther shore and safety, despite the fourfold call of our twelve bores. Country wagons are commandeered for this work, and our own team rests and fattens, while the whip wonders whether they will prosper on a corn diet.

As we turn North again the whip draws a sigh and confides to his companion on the box that he does not expect to taste anything like that fresh sausage until he can get down there again next year. Then he turns to business, for he wants to make the "clustered spires of Frederick town" that night, which will give the horses a forty-five mile pull. A rest at Harpers Ferry, with its narrow, crooked streets, rich in memories of the war, and then on in the hazy autumn afternoon to the home of Barbara Frietchie.

We got off early next morning, and rested that noon at Union Bridge, twenty-five miles away. Here again the whip had a triumph, for the inn, though small and unpretentious, was neat and the food excellent. That afternoon we drove for fifteen miles over a rolling country to Westminster. Here again a good inn, but modern and improved, a reminder that we were leaving the old, free, half-wild life of the country and nearing a land of dress-suits, straight fronts, and stock quotations.

(Continued from page 401.)

uals in every one of the northeastern Americanized group, the Yakut are next to the Buriats the most numerous tribe of Siberia. They count at present about 270,000 souls. Least of all could they be called a vanishing tribe. On the contrary, they are tenacious of their national existence, and susceptible of culture to a considerable degree.

In contrast with the other Turko-Tartarian tribes, which in early times adopted the Islam, the Yakut were converted to Christianity by their Russian rulers, but at the same time they have kept their old religion of primitive shamanism. We have in the collection six ancient shamanistic dresses which are put on by the shamans when going to sacrifice to the spirits, practise witchcraft, or attend to sick people or animals.

The Yakut knew the art of working iron ore independently of the Russians. Objects manufactured of brass and copper were current among them from very remote times. We have in our collection a great number of silver and brass necklaces and bracelets of ancient shape, belts, breast-plates, and back ornaments covered with relief-work of a middle-Asiatic type, also silver saddles, silver-ornamented horse-gear, horse-cloths, and saddle-covers. It is very remarkable that the shape and pattern of those breast-plates and necklaces are quite identical with those unearthed in southern Russia from well-known Scythian mounds of the bronze epoch.

Not less interesting are the handsome garments made of expensive furs,—coats, richly embroidered with silver and trimmed with the much prized sea-otter, or fur seal; large turret-like caps of black fox-skins adorned with silver disks finely carved; and boots and mittens of the same material and workmanship.

The Yakut collection of the Jesup expedition is the first of the kind brought from the province of Yakutsk in a complete state. The ethnographical museums of Russia have nothing that can compare with it. The Museum of the Imperial Academy of Sciences of St. Petersburg has a few dozen Yakut specimens, and the Museum of Moscow only two figures representing Yakut people. Of the museums of Europe, only that of Leipzig has a small Yakut collection, which was bought for R. 2000 at the Paris Exposition of 1900. That collection was sent by the governor of Yakutsk, and had only eighty-seven specimens.

The Yakut, who belonged originally to southern latitudes, and were driven northward by the Mongolian tribes, in the course of time have acquired some of the culture of northern tribes. This fact is also to a certain degree represented in the collection. On the whole, however, the Yakut collection is the beginning of an Asiatic section in the ethnological department of the museum. From one side, through the Mongolian Buriats, who mixed with the Yakuts on the latter's way northward, it is connected with the Buddhist civilization of middle Asia; from the other side, through the Turko-Tartarian peoples, it leads to the Mussulman world of western Asia and southeastern Europe.

Employees as Partners

WHEN the United States Steel Corporation, commonly known as the Steel Trust, announced, at the beginning of the present year, an elaborate profit-sharing plan for its employees, making partners, practically, of its workmen and all other employees, there were many who boldly asserted that the plan would not be a success. Some said the plan was too elaborate to be understood. Others said it was a sop thrown to labor. Still others said it was merely a plan to unload stock.

The time for subscriptions expired on February 1, and the result is known. The corporation set aside 25,000 shares of preferred stock at the price of $82 50. It has since gone up. The employees were divided into six grades, A, B, C, and so on, according to the amount of salaries they draw. Class A was formed of men earning $20,000 or more a year. Class F was composed of men who earn $800 or less a year. Class E was composed of men whose salaries are be-

What PURITY Means

Schlitz
THE BEER THAT MADE MILWAUKEE FAMOUS

Purity requires pure water.

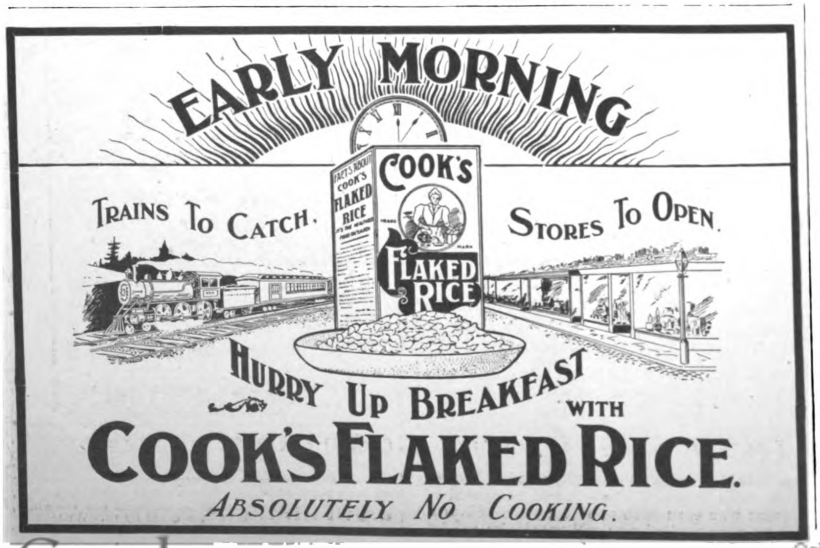
We get it from six wells, driven down to rock. No purer water flows anywhere in the world.

Purity necessitates pure air.

All the air that touches Schlitz Beer, after the boiling process, passes first through an air filter.

Pure beer must be filtered.

Every drop of Schlitz beer is filtered by machinery through masses of white wood pulp.



Pure beer contains no germs.

Schlitz Beer is sterilized after it is bottled and sealed, by a process invented by M. Pasteur, of France. It requires one and one-half hours.

That's how we double the necessary cost of our brewing. We do it to make purity certain—to make Schlitz Beer healthful.

Will you drink common beer, and pay just as much for it, when Schlitz Beer can be had for the asking.

Ask for the Brewery Bottling.

tween $800 and $2000. The stock was subscribed for twice over, 27,633 men subscribing for 51,125 shares.

It was felt by the Steel Corporation managers that not only should the workmen be made as prosperous as possible, but that the personal interest of the managers of each subsidiary concern must be continued, and it was to secure both of these ends that Mr. Perkins drew up his elaborate plan. The plan had two parts. The first was the purchase of 25,000 shares of preferred stock for which the employees of all kinds might subscribe, the shares to be carried on the books for them by a system of easy payments, the employee receiving the seven-per-cent. dividends and paying five per cent. interest on the amount not paid for. The dividends will keep up constantly, and the interest will gradually dwindle until the employee owns the stock outright, and is at liberty to do with it as he pleases.

The second profit-sharing plan is exclusively for salaried men, and is devised to secure the constant personal interest of those who formerly acted as managers and superintendents and the like. Whenever more than $80,000,000, the amount necessary for dividends, betterments, etc., is earned by the corporation, one per cent. is set aside, and so on, by a sliding scale, until $150,000,000 a year is earned, when two and one-half per cent. is set aside, for distribution *pro rata* among the men entitled to share in it. One-half of these bonuses is to be paid in cash to the men, and one-half is to be invested in stock. Of this stock one-half is to be given to each man and the one-half is to be retained by the corporation, to be paid to the salaried man if he remains five years in its employ. If he does not so remain, he loses this stock, and those who do stay benefit by the lapses.

Mr. Perkins the other day illustrated the effect of the profit-sharing plan upon the working-men. "Suppose," he said, "a man buys one share of this stock at $82 50. He gets seven per cent. in dividends and pays five per cent. interest on it until he owns it outright. Now suppose he gets $5 a year for two years as a bonus. Then he leaves the company. Not counting his two-per-cent.-interest profit while the stock was being paid for, he has had $10 in addition. In other words, the net cost to him of his stock is $72 50, and, besides, he has had his investment profits, which will lower the sum considerably. If he wishes to sell, he has already a wide margin of profit upon which to base the transaction."

Former Judge E. H. Gary, chairman of the executive committee of the Steel Corporation, says of the profit-sharing plan: "The proposition seems to have been thoroughly understood from the outset; and it is recognized by every one that our people were actuated by a desire to benefit the employees, and expected no benefit in return except such as naturally results from a friendly and loyal feeling on the part of the employed. While the United States Steel Corporation will expend several million dollars in furtherance of the plan, the advantages indirectly resulting will more than offset the cost. The employees will receive stock at less than its value, and secure the same on very favorable terms, but continuous and faithful service will fully compensate; and the interests of capital and labor will be drawn more closely and permanently together.

"Two features of the profit-sharing plan are important. First, distributions are made from a percentage of profits over and above $80,000,000, or a sum sufficient to pay interest and dividends on both classes of stock, besides a large sum for maintenance of properties, so that every reasonable effort will be used by the employees to reach and pass the necessary total; and, secondly, the money is distributed by the United States Steel Corporation, and this necessarily eliminates any disposition to manage the business or appropriate the money of any subsidiary company to the prejudice of the combined interests of all."

The primary purpose of any organization like the Steel Trust is to secure profitable co-operation, instead of destructive competition. To do this there must be economies of administration, resulting in a lower cost of manufacture, and ultimately in a lower cost of material for the consumer.

Don't Buy Any Whiskey Until You Read This

DO YOU KNOW that choice grain and pure water are the two essentials for making good whiskey?

DO YOU KNOW that Government statistics prove that the Miami Valley, in the very heart of which our distillery is located, produces the best grain and has the purest water of any section of this country?

DO YOU KNOW that we have one of the largest and most completely equipped distilleries in the world?

DO YOU KNOW that we have had over 37 years' experience in distilling good whiskey?

DO YOU KNOW that we have a capital of $500,000.00, paid in full?

DO YOU KNOW that we have more whiskey in our bonded warehouses than any other distiller in the world?

DO YOU KNOW that there is more **HAYNER WHISKEY** sold than any other brand of whiskey in the world?

DO YOU KNOW that we supply regularly with **HAYNER WHISKEY** nearly half a million of the most prominent and influential business and professional men in this country?

DO YOU KNOW that these are the very people who want the best and wouldn't be satisfied with anything else?

DO YOU KNOW that **HAYNER WHISKEY** goes direct from our distillery to you, with all its original strength, richness, and flavor, thus assuring you of perfect purity and saving you the enormous profits of the dealers?

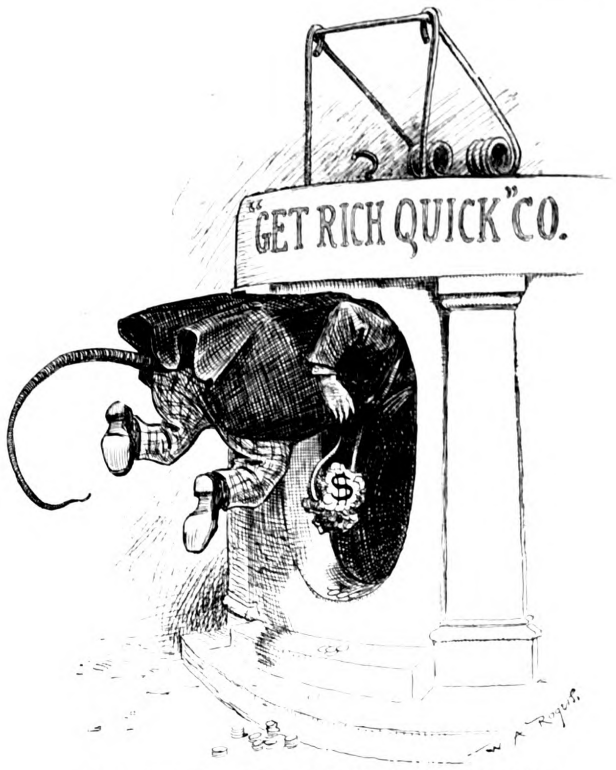
DO YOU KNOW that **WE ARE THE ONLY DISTILLERS IN THE WORLD WHO SELL DIRECT TO CONSUMERS,** though we have many imitators who call themselves distillers? These imitators don't distill a drop of whiskey. They are simply dealers who buy to-day cheap spirits made yesterday and, after "doctoring" it up, sell it to-morrow as 8 to 20 year-old whiskey. It is nothing but cheap, adulterated spirits and nearly half water. We sell whiskey, pure whiskey, all whiskey, and no water. You cannot buy anything purer, better, or more satisfactory than **HAYNER WHISKEY,** no matter how much you pay.

IF YOU DIDN'T KNOW these facts before, you know them now, and, knowing them, how can you longer doubt our ability to please you? How can you hesitate to accept our offer? **YOUR MONEY BACK IF YOU'RE NOT SATISFIED.**

OUR REGULAR OFFER We will send you **FOUR FULL-QUART BOTTLES of HAYNER'S SEVEN-YEAR-OLD RYE for $3.20,** and we will pay the express charges. Try it and if you don't find it all right and as good as you ever used or can buy from anybody else at any price, then send it back at our expense and your $3.20 will be returned to you by next mail. Just think that offer over. How could it be fairer? If you are not perfectly satisfied, you are not out a cent. If you don't want four quarts yourself, get a friend to join you. We ship in a plain sealed case, no marks to show what's inside. Write our nearest office **NOW.**

Orders for Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, or Wyoming must be on the basis of **4 QUARTS for $4.00 by EXPRESS PREPAID, or 20 QUARTS for $16.00 by FREIGHT PREPAID.**

$1.00 TRIAL OFFER $1.00



Now, if you feel that you do not care to order four quarts before trying it, we will ship you in a plain sealed box, with no marks to indicate contents, **ONE FULL-QUART BOTTLE of HAYNER'S SEVEN-YEAR-OLD RYE for $1.00,** and we will pay the express charges. We lose money by doing it, for the packing and express charges are almost as much on one quart as on four, but we want you to try our whiskey. We know, if you do, you will always buy from us. That's why we make you this special trial offer, even if we do lose money. We will refund your dollar at once if you're not satisfied. All subsequent orders must be for at least four quarts at 80 cents a quart, as we cannot continue to lose money. We would prefer to have you order four quarts now, for we would then make a small profit and you would save 80 cents. However, take your choice. $1.00 for one quart or $3.20 for four quarts, express charges paid by us. Satisfaction guaranteed or your money refunded. Order to-day. If you mention HARPER'S WEEKLY we will send you free a corkscrew and gold-tipped glass.

Trial Orders for Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, or Wyoming must be **1 QUART for $1.25 by EXPRESS PREPAID.**

The

MAID AT ARMS

BY

ROBERT W. CHAMBERS

Author of "Cardigan," "The Conspirators," etc.

This is, beyond doubt, Mr. Chambers's greatest novel. It is a romantic and rapidly moving story of American life in 1778, giving a picture of the luxurious families who owned great manor-houses in New York State. Scenes of border warfare, of intrigue, of card-playing, dancing, hunting, and fishing add richness and variety of color to as delightful a love story as has been written for many a day.

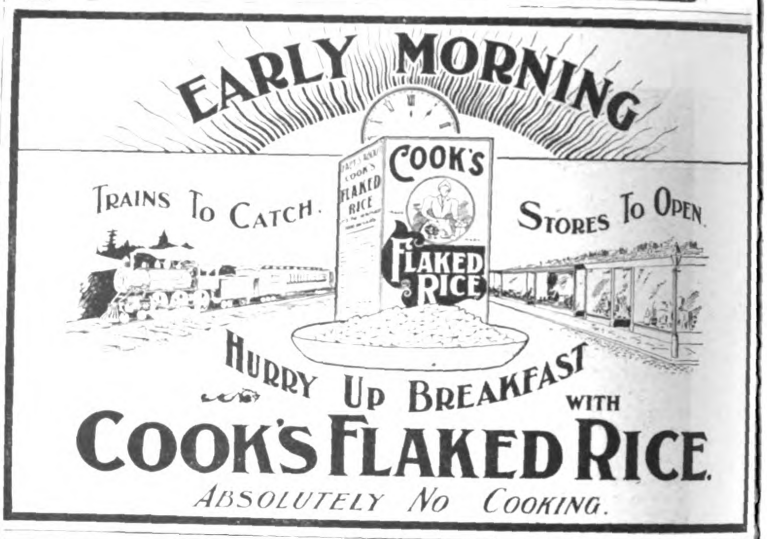
HARPERS BOOK NEWS

THE PRIDE OF TELLFAIR

Every one likes a story in which the characters seem to be real people — people such as one meets. In Elmore Elliott Peake's new novel, "The Pride of Tellfair," there is a young woman and young man who are real average Americans. Their love story, cleverly as it is managed by the young lawyer, is a possible one. It is the reality of the whole thing that makes it appeal so strongly to every one.

PUTNAM PLACE

This, the new book of a new author, deals with a neighborhood where the dwellers are intimately acquainted and live in a rather exclusive circle. Everybody knows everything that happens in Putnam Place, and these small happenings become significant in the skilful hands of the author, Grace Lathrop Collin. For instance, the quarrel between Mrs. Hooper and Miss Latimer, although the only victim was a speckled hen, is a momentous affair to the participants; and when it is over, and they are reconciled, the satisfaction is keenly shared by the reader. It is all in the way it is written.



THE MAID-AT-ARMS

That the author of "Cardigan" is a clever writer was attested not only by the sale of that well-known story, but also upon the publication of "The Maid-at-Arms," his latest novel. This romantic and rapidly moving story of American life in 1778 gives a picture of the luxurious families who owned great manor houses in New York State.

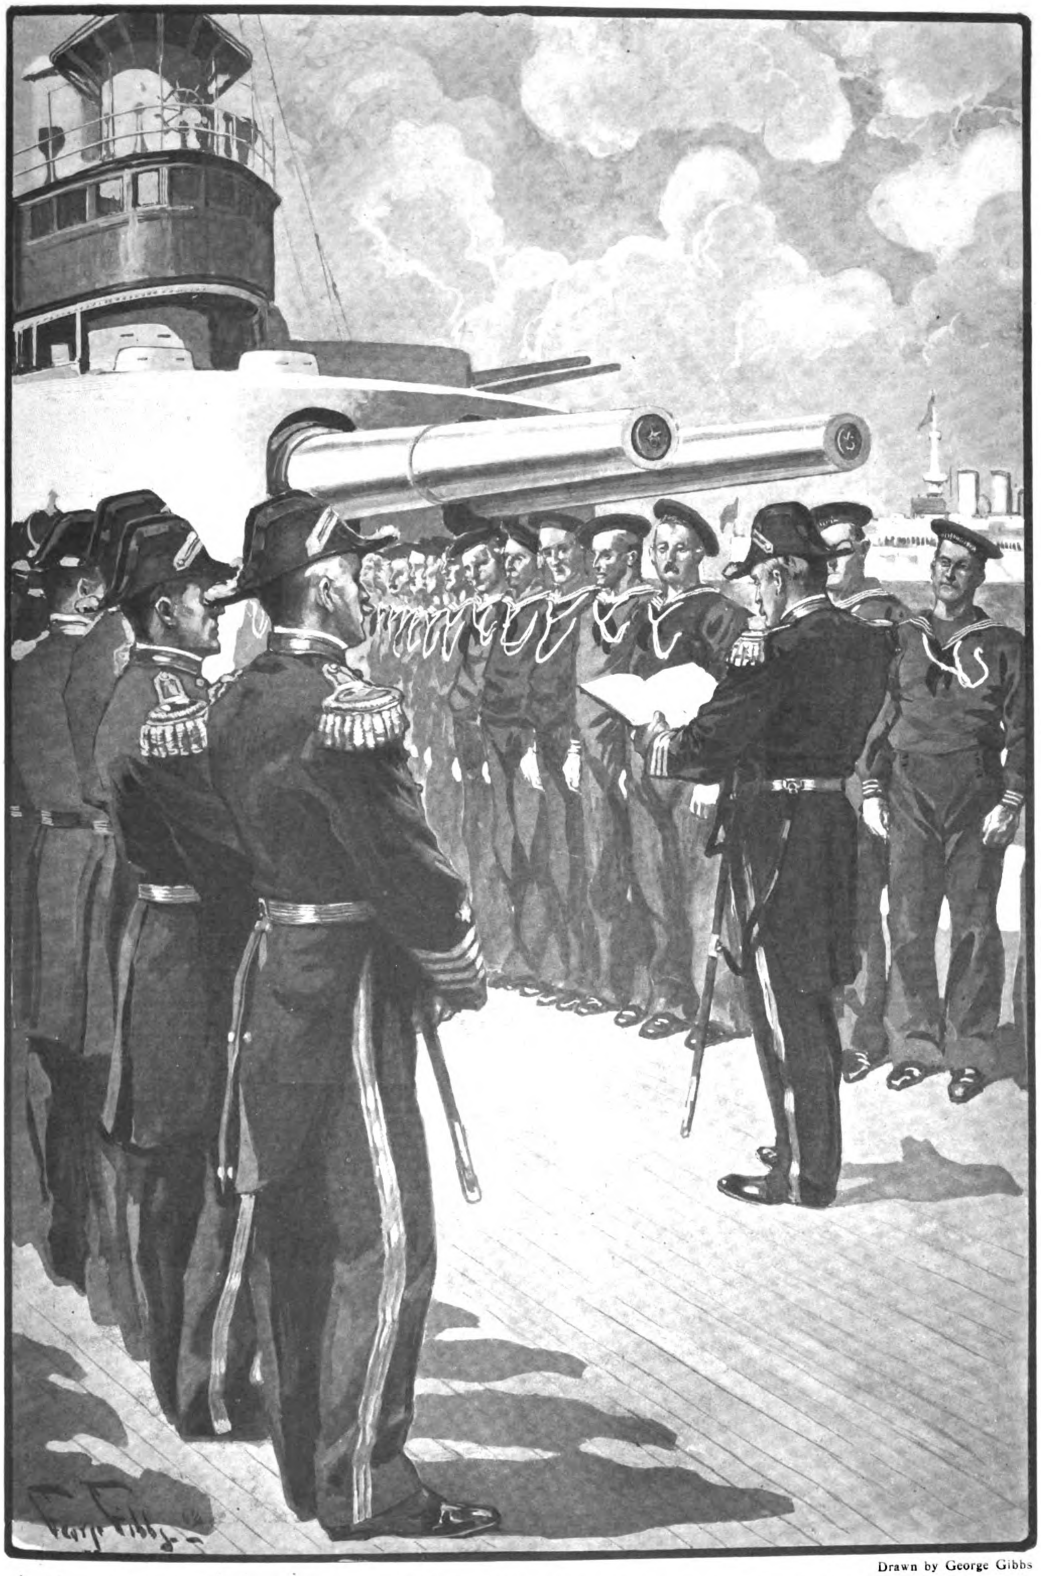
Drawn by Granville Smith

A Mid-Lent Diversion in Society—From a Drawing made by our Special Artist of a Bridge-Whist Party at the Waldorf

The Keeping of Lent

NOT all Lenten exercises are immediately pious, but many are more pious than they seem at first sight. Consider the ladies in the picture above. They are members of a sodality which devotes certain Lenten afternoons to bridge whist at the Waldorf Hotel. Bridge whist has no marked spiritual quality. It gives opportunities for patience, good humor, forbearance, and other virtues, but it is neither better nor worse than other games of cards, except when it is played for money, and then it is worse. Presumably, the ladies above don't play for money. It would not be prudent, with Mr. Jerome's subpœnas invading family life as they do. But is it a proper Lenten exercise to play bridge whist in the afternoon, even when you play for love? Some people consider card-playing rather wasteful of time at the best, and have no patience at all with folks who play cards by daylight. They would consider afternoon bridge whist a frivolous indulgence, and quite unfit for Lent. But that is an intolerant attitude. Works of benevolence are proper for Lent, and three out of every four of these depicted ladies may claim, with a fair show of reason, that they are engaged in a work of benevolence. They are providing occupation for the unemployed. Certainly that is a good work. So long as

> Satan finds some mischief still
> For idle hands to do,



it is a defiance of the Adversary to purvey innocuous employment for hands that would otherwise be idle.

What sort of employments are meet for Lent? Any competent clergyman who recognizes the penitential season has definite views of how it should be spent, and is ready to expound them, but in a general way we all know that the weeks now passing are suitable to devote to works of piety, benevolence, and self-improvement. All these exercises get attention. Protestants do not concern themselves much with the mortification of the flesh which the Roman Catholic Church prescribes, but church-going Protestant women go freely to Lenten services, the industries included under the general head of "church work" are prosecuted with special energy, and self-improvement is conscientiously advanced. This last exercise takes many forms. Some women try to improve their minds, others their health, and many attempt to do both. Forehanded women in New York get all their formal calls made and done with before Ash Wednesday, so that they may have the more leisure and peace of mind for their lenten employments. Then some of them spend a good part of Lent in bed, for in New York at least, the early spring is a treacherous time when the grip lurks around every corner, and pneumonia lies low for the unready. People who can, go South, and from Palm Beach to Lakewood hotels are populous with penitents who take their Lent as cheerfully as they may. Easter this year falls on the 12th of April. By that time the spring has fairly established itself in New York, and mothers who bring their families as far along as that in good condition, may fairly hope to bring them through successfully to the threshold of summer.

Our generation is not irreligious, but the prevailing tendency is to be more concerned about the conduct of life than about salvation. Perhaps we are rashly and ill-advisedly calm about salvation, but our interest in it tends to be indirect. We incline to the feeling that our immediate concern is to make the most and the best of our lives, and that if we do that, whatever follows will take care of itself. Our use of Lent is determined by this general sentiment. We don't so much try to square accounts and make direct and special progress towards Heaven, as to fit ourselves for the recurring duties of earth. And, of course, Lent gets observance chiefly from women. Our leisure class is nine-tenths women, and even the busiest women are better able to adapt their daily tasks the Lenten duties they undertake than most men are. Business does not stop for Lent, though when old Trinity calls Wall Street to prayers, many a man lays down his muck-rake, and heeds the invitation to his soul. The usual concerns of life go on, the children go forth to school, the bread-winner goes to his desk or his bench, the bread-maker to her dough. The fixed employments and engagements do not budge, but the mistress of the house and the grown-up daughters can adapt their occupations somewhat to the season. When a Lenten service comes in the morning, they can get to it if they choose, and when Professor Darley lectures on the Outlook for Civilization, their morning engagements can be arranged to include him also. Reading clubs are particularly active in Lent. So are all other women's clubs, and what with the increased diffusion of ideas, and the moderate slackening of the social pace that gives more time for sleep and reflection, such social intercourse as is left is not unlikely to be exceptionally remunerative.

If all this does not seem like very strict Lent-keeping, it must be remembered that this is in the main a Protestant country, and that not more than one-fifth of our population belongs to either of the two churches that recognize Lent as a season which brings religious obligations. With the other four-fifths Lenten observances are a matter of taste, to be taken for what they are worth, and borrowed or declined, as convenience dictates.

READING THE ARTICLES OF WAR IN THE NAVY

The first Sunday of every month, in spring, the articles for the better government of the navy are read by the executive officers on our battle-ships. The officers and crew assemble on the deck, and the occasion is one of great ceremony and solemnity. The Articles of War contain all the rules—such, for example, as the duties of the men, penalties for unbecoming conduct, and so on—which are in force in our naval discipline

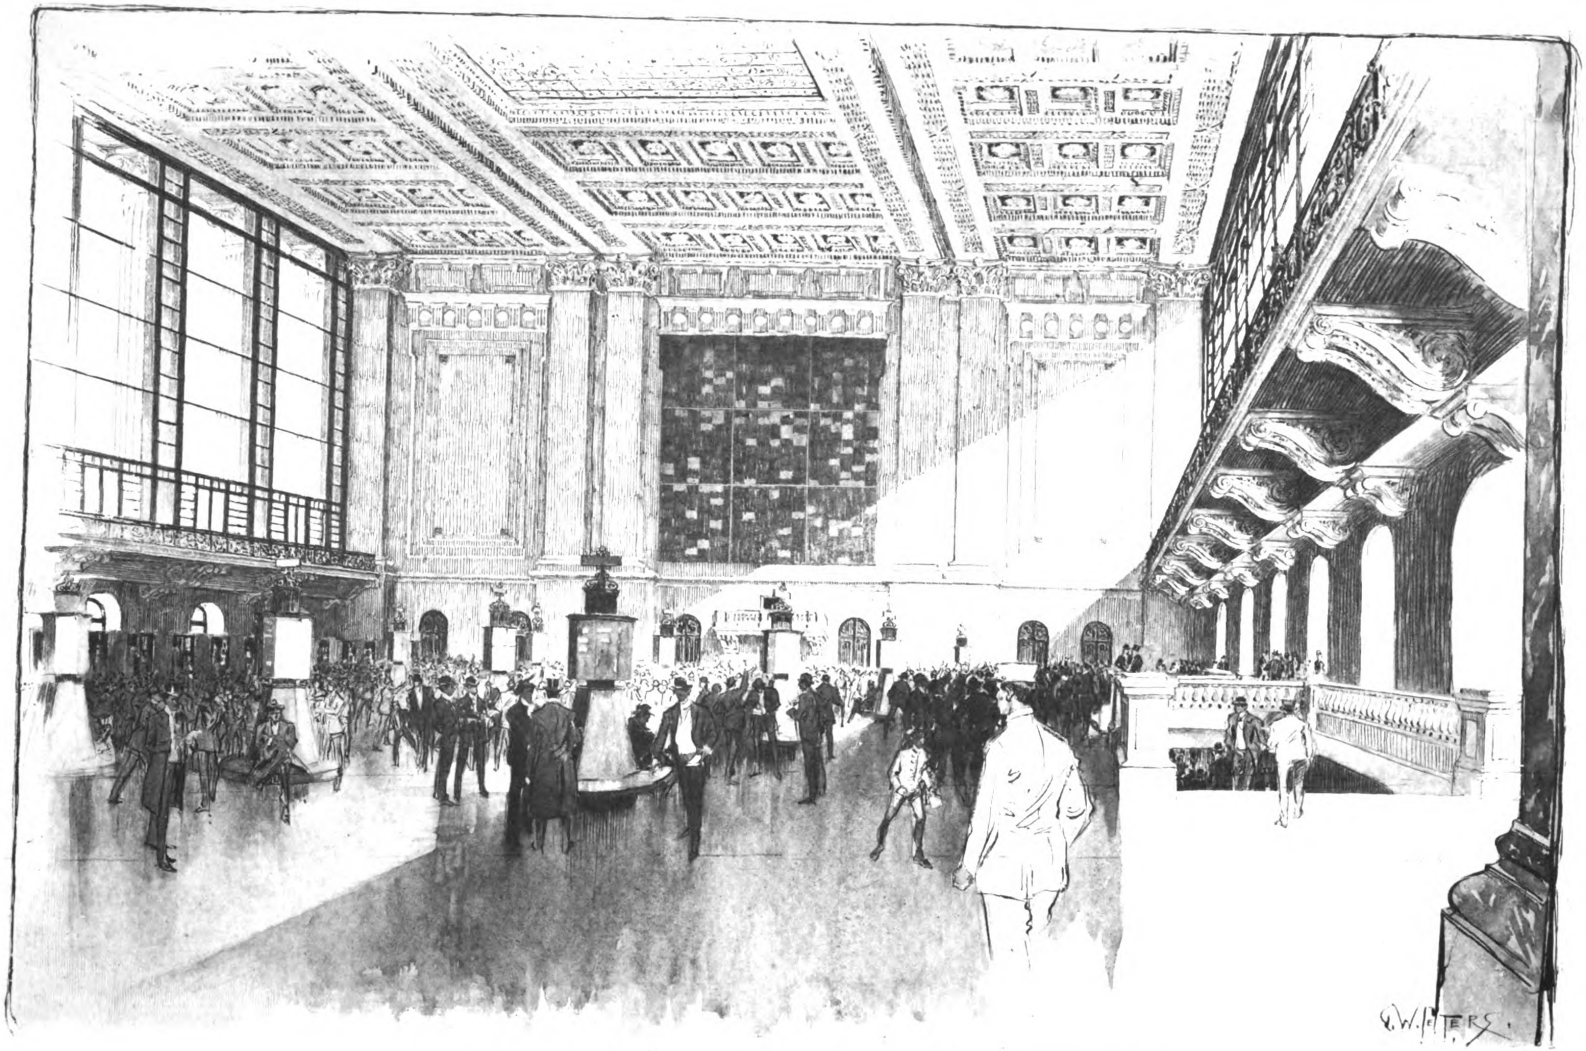
The Art Institute Building in Chicago

CHANCES FOR THE ART STUDENT IN THE MIDDLE WEST

THE largest art school in America — doubtless the largest in the world—is in Chicago, and is the school of the Chicago Art Institute. The institute includes the school, an art museum, galleries of paintings, an art library, the remarkable collection of architectural reproductions made by the French government for the Chicago Fair, and a large collection of reproductions of sculpture. The institute manages frequent loan exhibitions, and keeps up what is practically a continuous exhibition of the work of American painters and sculptors. It is the art centre of the Middle West. Its home, shown above, is the building in which the Congress of Religions met at the time of the Chicago Fair. It was built with funds of the institute on land belonging to the city. The institute, though fostered by individuals, is owned by the city. It is managed by a board of trustees, of which the Mayor and Comptroller are members. It has 250 governing members, 200 life members, and 2000 annual members. Mr. W. M. R. French (Harvard '64) has been its director ever since it was established.

Mother and Child—An Example of the Students' Work

Its art school, quartered in its building, has nearly 2500 students. The school is self-supporting, its annual expenses of $50,000 being defrayed by students' fees. It gives full courses in academic drawing and painting, sculpture, decorative designing, illustrating, normal training, and architecture. In its drawing and painting courses there are progressive sections—elementary, intermediate, antique, and life. Its nude life classes—an important factor in art education—are in session in the evening, as well as by daylight. The school has three travelling scholarships, which will be awarded for the first time next June. An important change just made in its method of teaching is the introduction of the atelier system in the courses in drawing and painting, whereby each student chooses his own atelier and master.



Other departments of the Art School include a school of architecture, which is connected with the Armour School of Technology, a normal school of art in which teachers are trained for work in the public schools, a summer school for teachers who cannot take the full normal course, a three-year course in designing, and classes for children, in which there are now four hundred pupils.

Evidently this great school must exercise a great and growing influence in the development of artistic sense and taste in this country. The reputation of a school of art will finally be measured by the best work of its best pupils. It is too soon, yet, to judge this Chicago school by the work of its pupils, for its earliest pupils can hardly be mature enough yet to do their best. But it is not too soon to recognize the importance of its work, and to foresee the great results that are sure to come of it. A school of art may be big without being great. The Chicago school is big already. The promise of its greatness lies in the strength of its foundation and the enthusiasm that supports it.

THE NEW STOCK EXCHANGE IN NEW YORK

This drawing is the first picture published of the interior of the room that will soon become the centre of financial operations of the world. In a short time the eleven hundred members of the Exchange,—which is, in reality, only a private association or club in which membership costs to-day $80,000,—will meet here daily and carry through transactions which will, in large measure, direct the movements of the wealth of two continents

SINFUL PECK: THE MEDDLER

BY

MORGAN ROBERTSON

PICTURES BY

GEORGE GIBBS

THE same detail from the American war-ship that had escorted the mutineers to jail brought them aboard when the ship was ready for sea, and with them came an official from the consulate—a deputy, a brisk, middle-aged gentleman in a warm overcoat—Shanghai is cold in winter—who immediately entered the cabin with Captain Jackson, while the ensign in charge of the detail, after lining his men around the prisoners at the gangway, sought the society of the three mates waiting near the mizzen hatch.

"Pretty hard lot of men, I hear," he remarked to Mr. Becker.

"Rather," answered the first mate, scowling toward the "hard lot." "Worst I ever seen. This is their second mutiny, an' there's been gunplay and scrappin' all the voyage."

"Which is Sinful Peck," asked the ensign, as he eyed the group.

"Guess you must mean Mr. Peck, here," answered the mate, with a grin, nodding toward the small, fat, and smiling third officer. "He shipped 'fore the mast with 'em, but was taken aft."

"I really beg pardon," said the young ensign. "But there is so much indefinite gossip ashore concerning this crew, and—well, the name Sinful Peck stands out strongest."

"Oh, that's all right, sir," said Sinful. "It's a pet name they gave me; but they've got worse themselves. See that big porker near the rail? He's Bigpig Monahan. That's Seldom Helward next him, the one with grizzled red hair and hook nose."

"What was the cause of the mutiny?" asked the ensign.

"Pure cussedness," answered Mr. Becker. "They couldn't keep their hands off Mr. Peck, and we put the whole thirteen in leg-irons below decks. But that wasn't what jailed them. The skipper'd ha' let 'em out and paid 'em off here, only they captured and disarmed the three of us, one after another—hands were free, you see—and wouldn't let us go. Well, the skipper was squeamish 'bout shootin' men in irons, so, all he could do was to starve 'em—and us, too—" Mr. Becker's face took on a grieved expression—"and after two weeks of it they hadn't strength to untie us if they wanted to."

"They are good American citizens," said the second mate, derisively, speaking for the first time. "Wealthy business men who respect the law. Townsmen of Mr. Peck."

"Dock rats and hoodlums," responded Sinful. "I've known them forty years."

The appearance of the captain and deputy consul interrupted the talk. The latter held two large sheets of paper in his hand, and said to the ensign, "Mr. Belknap, will you bring those men here?"

The ensign marshaled his charges aft to the hatch, where the deputy faced them with the papers unfolded in his hands.

"Men," he said, in his brisk voice, "I am directed by the consul-general to investigate this petition sent by you from the jail, in which you complain of cruel and unjust punishment on board this ship. It seems to be in the handwriting of the one who signs the name Captain John Monahan. Who is this Captain Monahan?"

"Me," growled the big man designated as a porker by Sinful. "I'm Captain Monahan on the Lakes—Bigpig Monahan aboard this hell ship. Is this the way you investigate?—after the ship's ready for sea, and we're hauled aboard under guard, like so many convicts?"

"You have been properly investigated. You may be captains at home—"

"We're not—except for three of us; but we've money and pull enough to make some one walk the floor over this business."

"Don't threaten," answered the deputy, stepping back a pace, however. "Whatever grievance you may have against Captain Jackson for, as you say here"—he glanced at the petition—"taking you forcibly to sea from New York, is nullified by the fact that you signed articles at Singapore for the passage home, stopping at intermediate ports. You are sailors before the mast."

"We're not putting that issue to the front. What we insist upon is that it'll pay you and your boss to consider our standing at home. Sinful"—the big man's voice sounded husky and broken—"aren't you satisfied with your work? We want to get home. You know there is money in this crowd. Tell the truth."

Sinful's face became grave, and he raised his hand dramatically.

"Bigpig, I will speak the truth," he said, and he turned to the deputy. "I also come from their parts, sir, and in my professional capacity have known these men for years. I can confidently assure you, sir, that, at home among customary surroundings, there is not a man of them who could not at any time stick his hand into any pocket he's got and—scratch himself."

They all turned their eyes upon him; their feet shuffled nervously, and their fingers twitched, as though they longed to reach for him. But none moved; the presence of the armed man-of-war's men was restraining.

"This is something over which the consular service has no jurisdiction," said the deputy, folding the papers and handing the articles to the captain. "You have been properly punished for your mutinous conduct, and should feel thankful that you are under a kind and merciful captain, who, instead of demanding the full enforcement of the penalty prescribed for your offence, has consented to take you to an American port. Remember, that you are under the Stars and Stripes, the flag of the free, homeward bound to a land whose laws deny justice to no man, no matter how humble—"

"Rats," interrupted Seldom Helward, explosively, his scowl deeper than usual.

"Well," said the deputy, in some confusion, "I'm through. You know your position."

"Rats, I say," continued Seldom. "Now, Captain Jackson," he said, turning to the quiescent skipper, "we're responsible American citizens, shanghaied in your ship by your third mate, and you know it. You've denied our statements, enslaved us, shot at us, ironed us, starved us, and jailed us—all under cover of the law. And through it all you've encouraged your mates to devil us into resistance that you call mutiny. It won't be the law you'll deal with at home; it'll be the men who make the law. Do you care to discharge us now, so we can go home by steamer, and so save trouble for yourself and loss to your owners?"

The captain's gray eyes grew serious, and he did not answer at once; the first and second mate looked interested, as though they might have welcomed such a solution to the problem. But Sinful Peck, with a face perceptibly lengthened, drew near the wavering captain, offering silent admonition to be true to himself and his dignity.

"If I should do so," said the captain at last, "I should not be influenced by your threats. I neither believe nor disbelieve your statements. Your standing at home cannot conflict with your present position—sailors before the mast who signed my articles at Singapore. You are powerless to make trouble for me at home. Also do I remember that I have always conquered you, and have not failed to punish you as you deserve."

"Hurrah for you, Capt'n," shouted Bigpig, with a smile of amnesty on his rugged face. "We'll call it off." Then others joined in: "Must be plenty o' men ashore. We want to get home. Keep Sinful with you; we don't want him. We can fix him up later."

"Will you sign a quitclaim for damages against my owners, and will promise never to sign in my ship again? Frankly, I am sick of you. If you can quit my ship without another fight you can go." The captain finished with a smile.

"Yes, yes," they shouted. "Of course—we want to get home." The last came from several of them.

The captain looked from one to another, with a little of uncertainty showing in his face. "If you discharge them, sir," said Sinful, "they'll consider it weakness, and follow you up. Plenty of cheap shysters would take up their case, just to force a compromise."

"No," said the captain, firmly. "If they are dock rats and hoboes, they can't trouble me; if they are responsible men they will keep their word."

"We're responsible enough, captain," they chorused. "We'll stand by what we agreed. We waive all claims. Call off these dogs and let us go ashore."

"I think, Capt'n," said Mr. Belknap, lifting his eyes from the petition, "that their story may be true—that they may be re-

sponsible men. I see two names here in brackets, and written against them a firm name which I recognize — Galvin & Company."

"Do you, sir?" asked Bigpig, joyously. "You may know some of us. Step out here, Tosser, and be identified." Tosser Galvin emerged from the group.

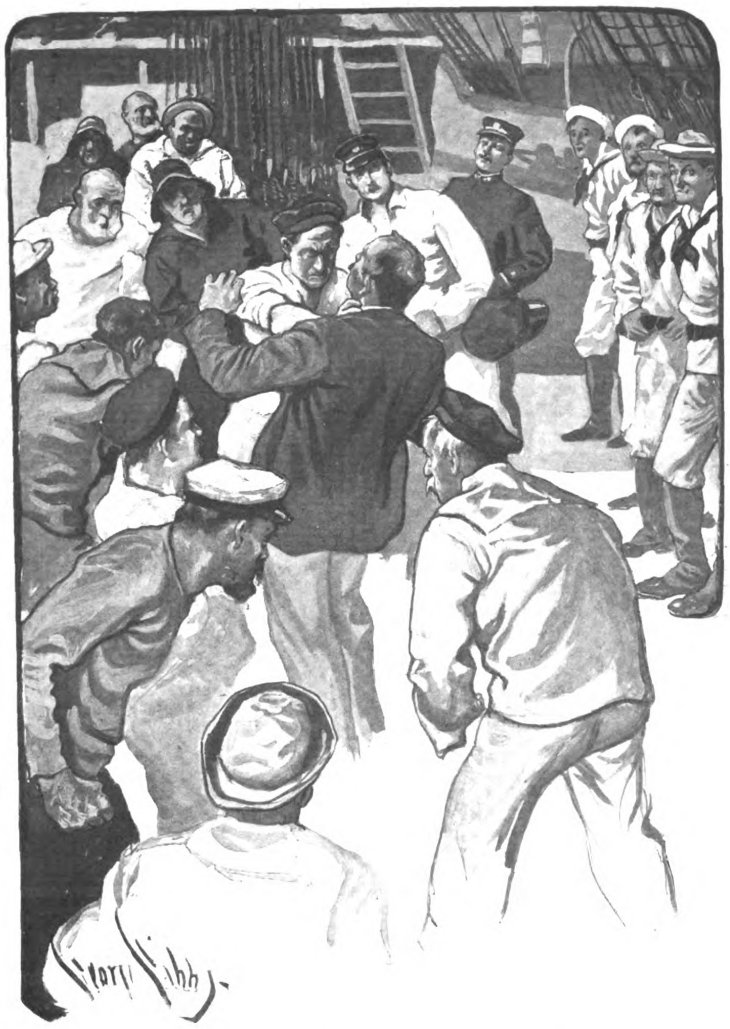
"I'm John Galvin, sir," he said. "Know me, sir?"

"I am satisfied," said the ensign, turning to the captain, "that this man is an influential citizen. I know the firm name well."

"Now, I beg of you, sir," said Sinful, coming forward with a deprecating shake of his head, "not to be taken in so easily. John Galvin is my best friend. This man was there, too, but as a poor relation of Galvin's; his job in the firm was to open the door. He cleaned the mud from my shoes and I tipped him a dollar. He made a pile that night, and was drunk for a week."

"You d——d liar!" yelled Tosser. "You tipped me? I cleaned your shoes?" In an instant he had Sinful by the throat, and the two rolled on the deck together.

All might have been well — the friction confined to these two, for the state of mind induced by mutual concession tends to leniency and condonence—but there was one man there immune to such influences, whose mind could only grasp that an officer was assaulted by a sailor. With his ready brass knuckles clinched on his fingers, Mr. Becker sprang toward the combatants just in time to collide with another peacemaker — Bigpig Monahan — who, with more amicable intent, and cautionary words to Tosser on his lips, sprang from the opposite direction. Mr. Becker's bull-terrier instincts responded to the collision; he struck Bigpig in the face; then, with a furious imprecation, the big sailor struck back, and another battle was on. Others surrounded the struggling pair on the deck, bent only upon separating them; the deputy sped up the top poop steps; the captain drew his revolver, but for some reason—perhaps the presence of a navy and consular officer — put it away, and armed himself with a belaying-pin from the rail. Then the captain's belaying-pin began operations, crashing down indiscriminately on head and arms; the victims, if able, secured similar clubs, and the fight became general. And over the sound of oaths and shouts rang the ensign's orders to his men: "Don't shoot—don't injure a man. Overpower them, and stop it."



There were ten heavily built, muscular, and active navy sailors in that detail, and they were trained to fight with fists as well as with weapons. Man after man went down under their blows—and to the credit of their seamanly sympathy be it said that two were Mr. Becker and Mr. Brown—until the last responsible citizen was put out of commission.

Then they stood up — or sat up, as they could — and looked around ruefully. All were more or less disfigured, a great many were bleeding from cuts in their heads and faces; Sinful Peck, nearly purple in the face, was breathing heavily, and the two mates could barely see through their puffed and blackened eyelids, while the captain was feeling of loosened front teeth and spitting blood upon the deck. It was not time for frivolous comment, but the uninjured though pale-faced deputy above must speak.

"By George, Captain Jackson," he said, "I'd pay that crowd off, if I were you—discharge them without characters."

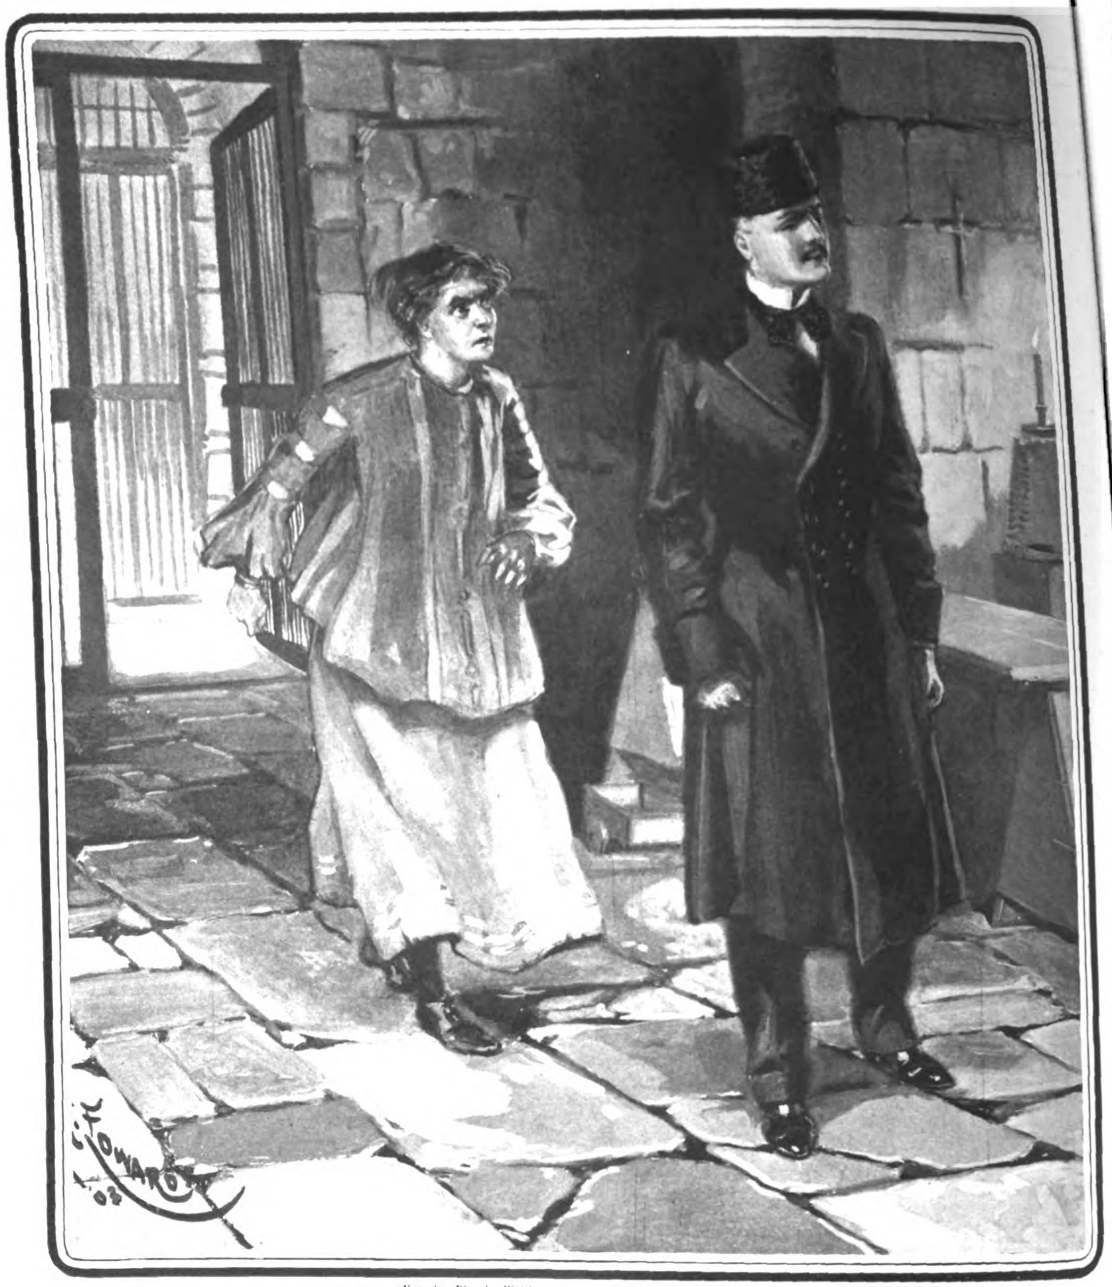
"Pay them off," sputtered the captain. "Not by a d——d sight. I'll land them at 'Frisco in irons, by Gawd. Mr. Becker, get that mooring chain down to the 'tween decks this time, and stretch it fore and aft on the midship's stanchions. Iron every d——d one o' them by the legs, where we can watch them. D——n a fool, anyhow, that'll trust to a sailor's promise."

Expostulations began, but soon subsided, and in twenty minutes they were confined as the captain directed—nearly beneath the mizzen hatch, yet far enough from the notched stanchion used for descent to give a visitor to the 'tween deck immunity from capture. And as a further precaution, when the last man was ironed, the keys went somewhat ostentatiously into the pocket of the captain, of all on board the man least likely to visit them.

"In an instant he had Sinful by the throat"

But it was Sinful Peck who had snapped the irons on the ankles of the turbulent thirteen, and this he did with an earnest, serious expression of face, impressed either with the painfulness of the duty, or the possible danger of his proximity to those long arms and powerful fingers—more probably the latter: for when the other victors had climbed to the deck above he lingered behind, and smiled at the line of scowling faces, sweetly, benignly, and triumphantly. A few cursed him, but he answered not, and, still smiling, ascended the stanchion.

As he approached the gangway his superiors were bidding good-by to the deputy consul and the ensign, and thanking the latter for his assistance — which assistance the young officer was deprecating.



"I feel my position," he said, embarrassedly. "I was bound to deliver them to you, but have meddled too much. Now, that you have them in irons, of course it is the wisest thing to keep them there; but, seriously, captain, I think you are overharsh with them. They may be what they say."

"Not at all, Mr. Belknap," said the deputy. "They are mutineers, pirates, murderers. I was a witness, captain, and I am going home by the next steamer. I will probably be in San Francisco when you arrive, and will gladly testify. Keep them in irons, by all means, captain."

"I certainly shall," said the captain. "They have made it an object with me—a matter of pride"—he felt of his loosened teeth. "I shall hand them over to the harbor police at 'Frisco." And though the condition of his teeth made it painful, he joined Sinful in his smile. Then he bowed them over the side, and two hours later, when his remnant of a crew had cleared a troublesome "foul hawse," he tripped his anchors, and with a Shanghai tug at the end of his line, began the long tow down the river.

Sinful took his position where he could command a fair view of the prisoners, and wondered how far the ankle-irons would hold.

Katusha (Blanche Walsh) Prince Neckludoff (Joseph Haworth)

Act II. Katusha: "Your offer is an insult. Any one but you!"

Tolstoy's "Resurrection"

THE appearance of Tolstoy's "Resurrection" in our theatres is in many ways a portent, the significance of which we should do well to ponder over. In the first place, in this century, in which Russia and the United States are destined to emerge, as the two great world powers, Tolstoy's "Resurrection" is the first serious and sincere attempt to present Russian life and the Russian genius to an audience of Americans. And, if we consider the matter, we shall see that no happier choice could have been made for a beginning than this gloomy and heart-rending tragedy of "Resurrection." Its high seriousness shows us, at the very outset, the profound significance which the Slav attaches to art, as a part of life. For the Slav, art is not an amusement, an entertainment, a recreation; it is a revelation, an unveiling of the human heart, to the end that our own hearts may be touched. It means a deepening of our sense of life. If we think of the themes that occupy our own theatres, while this great Russian tragedy is being performed, we may well feel a sense of shame at the levity, the flippancy, cheapness, and vulgarity of our own "art," which is rapidly becoming "the dramatization of noise," and can arouse no human emotion more profound than a giggle and a grin. This is the first lesson we should learn from our revelation of the Slav genius, with the tremendous earnestness, the deep humanity, that go to make it. In "Resurrection" the aim of the dramatist is not, as many of the critics have fancied, a solution of some single problem in life; as, say, the "social evil," or the question of anarchy against despotism. The real issue is far deeper, and goes to the very roots of our life. Let us approach it in this way: After the material furnishing of our lives is completed, what is our main concern? It is the realization of our living humanity, through the intuition of other human souls. On this feeling of other human souls all our truly human life is based, and has always been based, from the beginning. All our passion and ambition, our hate as well as our love, bear testimony to our sense of the kindred soul in the other person, to be loved or hated. And the great awakening, the "resurrection," is the realizing of this; the direct and fully conscious intuition of other human souls. The Russian, and, in general, the Slav, sees in this intuition of other human souls the real purpose of life, underneath all our material and social energies; and this is the mainspring of all Slav art, and pre-eminently of the art of the great Russians, like Tolstoy.

COMMENT

THE President's proclamation convoking the Senate in extra session at noon on the 5th of March affords conclusive proof of his determination to secure the ratification of the canal treaty with Colombia and of the reciprocity treaty with Cuba. Should either of those treaties now fail to be ratified, the American people will know on whom to fix responsibility. Public opinion will justify Mr. Roosevelt in keeping the Senate in session all summer sooner than acquiesce in the rejection of either convention. The admission of Cuban sugar to our markets on terms that will assure to the planters a reasonable profit, and thus avert the extinction of a branch of agriculture upon which the prosperity of the island depends, has been recognized as a sacred duty not only by Mr. McKinley and Mr. Roosevelt, but by every right-minded American. It has never been opposed by anybody except the representatives of the beet-sugar industry and of the Louisiana cane-growers, who have seemed to care more for their selfish interests than for the national honor. It is not by the President, but by the peremptory dictates of the popular heart and conscience, that the Senate will be coerced into pursuing a righteous course in this matter. The Legislatures of many States in which the sugar beet is extensively cultivated have unmistakably indicated their wish to see justice done to Cuba. We did not emancipate the island in order to condemn it to destitution. As to the canal treaty, there is not a doubt that more than two-thirds of the Senators are ready and eager to sanction it whenever they are permitted to vote.

The long and discreditable failure of the State of Delaware to secure any representation in the Senate of the United States was brought to an end on Monday, March 2, by the twenty-one Union Republicans who accepted the proposal of the ten Regular Republicans (of whom only eight had proved steadfast in their opposition to Addicks) that each faction should designate a candidate for Senator other than Addicks, the long term naturally being conceded to the majority. The designated candidates, who were, of course, elected, were, for the long term, James Frank Allee, a firm friend of Addicks: and, for the short term, Dr. Louis Heisler Ball, a stanch Regular, and the present Representative of Delaware in the Lower House of Congress. It will be remembered that, some time ago, the Union Republicans offered to go into caucus with the Regulars, and to stipulate that neither of the candidates selected by the caucus should be Addicks. This offer was refused by the Regulars, on the ground that they were as much opposed to Addicksism as to Addicks himself, and would not vote for any of his friends. Subsequently, most of the Regulars, and almost all of the Democrats, seemed to be on the verge of an agreement to elect a Regular Republican for the long term, and to leave the short term vacant. Could that agreement have been carried out, it seems to onlookers that the Regulars would have been placed in a position stronger than that which they now occupy. As a matter of fact, to what extent can the actual outcome of the protracted contest be regarded by them as a triumph? Unquestionably they have succeeded in keeping Addicks out of the Federal Senate for a time, but they have had to swallow Addicksism, since they have co-operated in giving the long-term Senatorship to an Addicks man.

It will have been observed that the National Republican Editorial Association, which held a meeting at Washington the other day, refrained from commending the course pursued by the President toward the "Lily White" Republicans in the Southern States. It will also have been noticed that the editors greeted Senator Hanna with enthusiastic applause. We presume it to be well-nigh certain that Mr. Roosevelt will get very few, if any, of the delegates from the Southern States to the next Republican national convention. It was those delegates, it will be remembered, who enabled Harrison to beat Blaine in the convention of 1892. The delegates from most of the States on which the Republicans rely for electoral votes were disposed to favor Blaine. It is reported that Mr. Roosevelt does not desire a nomination unless it comes to him from delegates representing the States that the Republicans are sure, or have a fair chance, of carrying. A nomination given under such conditions he would deem almost equivalent to an election, but he would look with grave misgiving on the result of a nomination bestowed under other circumstances. It is probable that some Republican statesmen would be less squeamish, and would accept a nomination, no matter from what sections it might come. That Mr. Roosevelt can get the delegates from almost all of the States west of the Mississippi seems at the present hour to be assured. It is by no means so certain that he can get the delegates of Ohio and other States of the Central West, and there may be a fight for the delegates of New York. It is conceivable that the opposition to Mr. Roosevelt may be so strong that the delegates from Pennsylvania would turn the scale. What would Senator Quay do then? Probably he does not know himself, although he has hitherto professed to be a zealous supporter of the President. The truth unquestionably is, with regard to Republican delegates from most of the Southern States, that they possess altogether too much power over nominations in Republican national conventions. But for Senator Hanna, who resisted the demand for a reduction of that power in 1896 and again in 1900, the demand would have been granted by a Republican national convention.

Mr. Bryan in his *Commoner* has served notice on Chief-Judge Parker of New York that the latter may as well save himself the worry of a campaign if his acceptance of a nomination depends on the adoption of a platform that repudiates the Kansas City platform. The words do not imply a threat to bolt on the part of Mr. Bryan and his friends, for, as the context shows, the word campaign, as used in the *Com-*

moner, means a campaign for the nomination, and not a campaign for election. Mr. Bryan assumes that Chief-Judge Parker will not accept a nomination, for the reason that the Kansas City platform will be reaffirmed by the next Democratic national convention. That platform will be reaffirmed, he says, because the Kansas City platform Democrats will attend the next national convention. We have never doubted that Mr. Bryan will have a following in the next convention, but why should he take for granted that it will constitute a majority? Nobody knows better than Mr. Bryan that the believers in that platform did not constitute a genuine majority at Kansas City. Senator Money of Mississippi, who had been a strong supporter of free silver in 1896, told the platform committee at Kansas City that a canvass of the convention made by the chairman of each State delegation showed that less than one-fifth of the delegates favored the insertion of a sixteen-to-one plank. It is well known that, after a twelve hours' discussion, the insertion of the plank was carried in the platform committee by the vote of the delegate from Hawaii, a newly acquired Territory unrepresented in the electoral colleges. Nor is this all. Four other votes for the silver plank were cast in the platform committee by delegates from Territories that could give no electoral votes for President. On the other hand, of the thirteen Southern States that constitute the backbone of the Democratic party, nine voted against the free-silver plank. It is further to be borne in mind that even the ultimate majority of one in the platform committee would not have been obtained but for Mr. Bryan's threat that he would not accept the nomination unless the free coinage of silver at the ratio of sixteen to one were distinctly called for.

In view of these facts, one is led to ask what Mr. Bryan means when he says that the Kansas City platform Democrats will attend the next national convention. Does he mean that the convention will be attended by those who heartily approved of free silver at Kansas City, and who needed no threat on Mr. Bryan's part to induce them to vote for the insertion of the silver plank? This he must mean, for he well knows that a threat on his part to decline a renomination would be futile, since nobody intends to renominate him in 1904, and he has himself repeatedly declared that he is not a candidate. Does he think, then, that the convinced free-silver men will be more numerous in the convention next year than they were at Kansas City? This he cannot believe. He knows that free silver is incomparably weaker, even in the silver-producing States, than it was four years ago. He knows that he has not the slightest chance of procuring the insertion of a free-silver plank in the next platform framed by a Democratic national convention. Why, then, does he assert the contrary? Why does he virtually tell Chief-Judge Parker that the next convention will adopt the Kansas City platform? Two motives for the wild declaration are conceivable. He may desire to encourage his following, which is dwindling rapidly, and he may wish to intimate to Chief-Judge Parker and other possible candidates of the conservative element in the Democracy that he (Bryan) must not be left altogether out of the reckoning, but that he must be treated with the consideration due to a man who has twice been the nominee of a great political party for the highest national office. We ourselves think that now and hereafter Mr. Bryan should be treated with deference in all ways except as regards the formation of the Democratic platform, as to which his views, unfortunately, seem irreconcilable with those who now constitute a very large majority of the organization. There is no reason, however, why Mr. Bryan should not adhere to the Democratic party even if some planks in the next platform should meet with his disapproval. In supporting the candidate of the convention under such conditions, he would be doing precisely what Chief-Judge Parker did in 1896 and 1900, and what Mr. Bryan himself has repeatedly declared it to be the duty of all Democrats to do. No sane Democrat desires to drive Mr. Bryan out of the party, and Mr. Bryan on his part is too young and has too bright a future before him to pursue the rule-or-ruin policy adopted by the aged Van Buren in 1848.

Of the $35,000,000 which the Cuban Congress has authorized the Executive Department of the insular government to borrow, all but $4,000,000 is to be applied to the payment of officers and soldiers who took part in the late insurrection, and to the discharge of debts contracted by the chiefs of the revolutionary army between February 24 and September 19, 1895, and all the subsequent debts contracted by the revolutionary government of which Señor Palma was the head. Not more than $4,000,000 can be assigned to the discharge of the last-named classes of obligations. In other words, if we assume that the bonds are sold at par, $26,000,000 will be distributed among the officers and men who profess to have taken part in the last uprising against Spain. That is to say, provided there were 26,000 of them, they would get on an average $1000 apiece. There is no reason to believe that from February, 1895, up to the evacuation of Cuba by the Spanish troops, there were 26,000 Cubans under arms, or anything like that number. We tried in vain to obtain an authentic list of the officers and enlisted men when, soon after our provisional occupation of the island, we made Cuba a present of $3,000,000 for the purpose of preventing the transformation of the alleged patriot-heroes into brigands. Under the so-called Platt amendment to the Cuban constitution, our government would have a right to protest against the issue of the bonds, if it were improbable that interest and sinking-funds could be provided without crippling the resources needed for the proper administration of the island's affairs. As a matter of fact, the interest and sinking-fund required for the bonds are to be obtained from new sources of revenue, namely, from taxes on liquors and matches, on cigars for export at the rate of two dollars per thousand, and on cigars for domestic consumption at one dollar a thousand, and on sugar, which will be taxed five cents a bag containing 350 pounds. It is computed that these taxes will yield an annual income of $2,500,000. If this expectation is realized, there will be no need of trenching on the customs revenue, most of which is needed for the ordinary expenses of administration. There is, moreover, but little doubt that, when the Cuban Reciprocity Treaty is confirmed, the purchasing power of the island will be much increased, and that, consequently, the customs revenue will be expanded, notwithstanding the diminished duties leviable upon imports from the United States.

The Pennsylvania House of Representatives has rejected a resolution asking Congress to call a convention to propose an amendment to the Federal Constitution making United States Senators elective by the direct vote of the people of each State. There are, it will be remembered, two methods of amending the Constitution provided by the fifth article of that document. In the first place, the Congress, whenever two-thirds of both Houses shall deem it necessary, may propose specific amendments, which shall be valid when ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by Congress. Experience has shown, what might have been foreseen, that this method of amending the Constitution can never be made operative as regards the mode of choosing United States Senators, for the reason that two-thirds of the Senate will never accede to the proposal. Those, therefore, who desire the election of Senators by the people of their respective States have been compelled to fall back on the alternative mode of amending the Constitution. The fifth article of that document further provides that, on the application of the Legislatures of two-thirds of the States, Congress shall call a convention for proposing amendments, which, as in the former case, will become valid when ratified by the Legislatures or conventions of three-fourths of the States. In other words, this method of amending the Constitution is mandatory, and cannot be thwarted or evaded by the United States Senate.

It is extremely doubtful, however, whether two-thirds of the State Legislatures will ever insist upon the convocation of a constitutional convention. For two reasons. In the first place, there is no ground for believing that Senators chosen by the popular vote would be men of higher character than Senators chosen by a Legislature. In the former case, a candidate for Senator would be nominated by a State convention, and experience has shown that it is just as easy for wire-pullers to manipulate a State convention as it is to manipulate a State Legislature. In the second place, the fifth article of the Constitution does not limit the constitutional convention which Congress is bound to call on the application of two-thirds of the State Legislatures to any particular amendments. On the contrary, the convention

would be at liberty to propose such amendments as it chose, and it might use its plenary powers as sweepingly as did the Philadelphia Convention in 1787, which, having been brought together for the purpose of amending the Articles of Confederation in some particulars, swept them out of existence. The small States have everything to dread from a constitutional convention which would have plenary powers; for the convention, holding that it could no more be bound by the text of an old instrument which it was authorized to reconstruct from top to bottom than was the Philadelphia Convention, which had no such authority, would probably proceed to extinguish the last clause of the fifth article, which provides that no State without its consent shall be deprived of its equal suffrage in the Senate. The only safeguard for the rotten boroughs is to avert the convocation of a constitutional convention, and to insist that all changes in the Constitution shall be specific amendments proposed by Congress.

Although the decision of the United States Supreme Court in the lottery cases has been differently interpreted, according to the varying interests and wishes of the interpreter, its significance can hardly be mistaken by any clear-headed man who carefully examines the majority and minority opinions. Following the custom of the highest Federal tribunal, the five members whose views were expressed by Justice Harlan confined themselves to the particular question before them, which was, Does the power to regulate inter-State commerce give Congress the power to prohibit the conveyance of lottery tickets by independent carriers from one State to another? They refrained from saying in so many words that the power to regulate includes the power to prohibit in all cases. It is true that, in order to decide the particular question before it, the court had to lay down the principle that the power given to Congress by the Constitution to regulate inter-State commerce is *unlimited*. At the same time, Justice Harlan declared that the exercise of that power could not be *arbitrary*.

That is to say, the United States Supreme Court may inquire, in any case where the power to regulate is extended to prohibition of commerce in a given commodity, whether the exercise of the power is arbitrary, or has a reason assigned for it. But has the court a right to say whether the reason is valid, or, in other words, whether it is good or bad? Can a bad reason be described as a *reason* at all? Here is where eminent lawyers differ. Some say that the court must have power to determine the soundness of a reason assigned, otherwise the attempt to draw a distinction between *unlimited* and *arbitrary* would be futile. Others insist that the validity of the reasons given for the extension of the regulative power to prohibition must be determined by Congress alone. Otherwise the regulative power of Congress would be limited by the right of another body to repudiate its reasons and reject its conclusions. The four members of the court who concurred in the minority opinion read by Chief-Justice Fuller evidently thought that no distinction can be drawn between unlimited and arbitrary, and that the principle adopted by the majority would practically give Congress absolute power to prohibit inter-State commerce in any commodity. No doubt a reason for the prohibition would be set forth by Congress, but the soundness of the reason could not be made the subject of inquiry by any other body. This is the view of the meaning of the decision which the administration is understood to take, and we believe that events will justify it, unless, of course, the composition of the United States Supreme Court shall hereafter be materially changed. It is well known that, owing to a change in its composition, the court has several times reversed itself.

The question as to who was to blame for the failure of the Aldrich bill has become academic, perhaps, but it is worth while noting. The bill undertook to meet a real public necessity. It was a hopeful effort to take the government out of the money-market, and to leave the currency of the country in the channels of trade. It clearly had the support of a majority of the Senate, and this support was non-partisan. It was killed for two reasons,—one was that it did not occur to Mr. Aldrich early enough in the session, and the other was that some Democratic Senators were willing to sacrifice the public interests because Mr. Aldrich had, very properly, been opposed to the wretched Statehood bill. Now if the Democratic party ever comes back into power, it must make up its mind that its lease of life will be disgracefully short if it does not drive out the leaders who are capable of this kind of pettiness and partisanship, and replace them with men of larger minds and of finer patriotism. There is one very strong reason for driving the Republican party out of power, and that is its attention to the private interests of its own leaders and its own beneficiaries and supporters, at the expense of the country. There are some Democrats who would better this state of affairs, and who would devote themselves unselfishly to the general welfare. They are not leaders in Washington, unhappily, and it is unfortunate for them and for the country that this is so. Unpopular as the Republican party may be, or as it may become, this country will not intrust its government to the small-minded politicians who are willing to defeat a sound currency measure, which, among other things, will cause our annual dearth of money and bank notes, because Republican leaders have been unwilling to admit four new Senators from silver-mines and alkali deserts.

The Berlin Foreign Office has announced that it has no desire to protest against the Monroe Doctrine so long as that principle of American policy bears the definition given to it by Mr. Roosevelt in his second annual message. In that message the President practically said that a European power might go to any lengths against a Latin-American republic for the redress of grievances or for the collection of ordinary debts, provided she stopped short of a permanent occupation of territory. There are many ways of killing a cat, and none of them is unknown in Germany. One of the most efficient methods of strangling a Latin-American commonwealth would be the confiscation of all or most of the customs revenue on which it depends for the maintenance of civil and military government. Another method, slower, but, in the end, scarcely less effective, would be the promotion of colonization on a great scale, so as to infuse a strong German element in the social, industrial, and political system of the American republic which Berlin desires to influence. To what an extent this process may be carried is shown in Argentina, where the Italian element is increasing so fast that it will soon be numerically preponderant, and seems certain, ultimately, to thrust the Spanish element to the wall. What has been done by Italians in Argentina can be done by Germans in the southern province of Brazil, and especially in the province of Rio Grande do Sul, which repeatedly during the last eighty years has tried to acquire a separate political existence, and which at any moment may repeat the endeavor. The United States never protested against the disruption of the old Colombian confederation founded by Bolivar, nor against the disruption of the old Central-American confederacy; how, then, could we object to the secession of a province or two from Brazil? It is certain that at this moment a good deal of literature referring to the Germanization of southern Brazil is circulated in Germany. Herr Wiegand, for instance, at one time manager of the North German Lloyd Steamship Company at Bremen, and afterwards director of the colonial section of the German Foreign Office, is the author of a glowing description of the position and progress of the German element in Brazil. Certain portions of Brazil also figure in the ethnographic maps published by the Hansiatic Colonization Society for the purpose of indicating the territories in which the German element already is, or may easily become predominant.

There is still another way in which the Monroe Doctrine, as defined by Mr. Roosevelt, may be evaded. Admitting that a Latin-American confederation in an exhaustive sense of the word is impracticable, because the interests of certain states, such as Chile and Peru, for example, are irreconcilable, we must still recognize that, since their boundary dispute has been virtually settled, there is no insuperable bar to a confederation of Chile and Argentina, which powers might be joined by Uruguay. Such a confederacy once formed, and strengthened by the annexation of the southern provinces of Brazil, in which the Germans and Spanish greatly outnumber the Portuguese, might enter into very close international relations with Germany, relations which, on the one hand, might assure exceptional commercial privileges to Germany, and which, on the other hand, might promise military and naval support in certain exigencies. Germany might say, for instance, that she would not permit any European power to confiscate the customs revenues of the friendly confederacy

for the payment of ordinary debts. How could we protest against such a transaction? Mr. Roosevelt, for his part, has declined to safeguard the customs revenues of American republics against confiscation. How, then, with any show of regard for our Latin-American brethren, could we object to Germany's playing the part of savior which he himself has refused? This is no academic suggestion. The project of a partial Latin-American confederacy, to which Germany should play the part of next friend or patron, has been seriously and favorably discussed in German newspapers.

The world in general, and the great European powers in particular, are to be congratulated on the partial solution of the Macedonian question. The Balkan storm-cloud is perceptibly lightened, and, while there is still considerable menace in the air, it is felt on all sides that, granted the smooth working of certain forces, a permanent peace for the Balkans may be in sight; a new era of well-being for the long-suffering Slavs of the three Macedonian provinces may be at hand. This pacific settlement is chiefly due to the same sentiment in the Russian Czar which inspired the proposal for the Hague court, and the success of Count Lamsdorff in carrying to a certain finality the Czar's policy of humanity and mercy is by far the greatest achievement as yet to the credit of the Russian Minister for Foreign Affairs. The main point, diplomatically, was, to gain the friendship and sincere co-operation of Austria; and, partly as a result of the ripe experience of Kaiser Franz-Josef and the Slavonic leanings of Count Goluchovski, and in part as a result of the growing insight into Russia's real political motives, this good understanding with Austria has been made possible and actual. It is by far the strongest factor for good in the future of the Balkan problem.

It was not to be expected that Germany would acquiesce willingly in this new state of things. Germany's jealousy of Russia, and the uneasiness of Prussia over the Slavonic problem within her own boundaries, were sufficient causes for her present attitude; as they were sufficient causes for the Kaiser's parade of brotherly love for Abdul the Damned a few years ago, and for the present visit of the Prussian Crown-Prince and Prince Eitel Frederick to the Sultan, with gifts in their hands. Germany has persistently opposed Russia, rather from an instinct of fear than from any reasoned policy, and the Macedonians have suffered a quarter-century of oppression as the result of the Berlin treaty, which destroyed Russia's work of liberation in the last Turkish war. The present pretext for Germany's opposition and jealousy is contained in certain sentences in the Russian note to the Porte, the real motive of which was to tranquilize the Macedonians, and to check the revolutionary movements emanating from Servia and Bulgaria. Russia reminded the Balkan States that they owe their independent existence to her, which is, of course, the mere statement of a self-evident fact, and then asks them to argue from the past to the future, and to rest assured that their welfare and the material and moral interests of the Christian populations would be watched over by Russia with unceasing solicitude, and finally assuring them that they could depend on the considerable and powerful protection of the Russian imperial government.

Our own recent experience of German methods and aspirations will enable us to rate at their true value Germany's present opposition to Russia, and the suspicion of Russia's motives so openly expressed in the German press. The *Morgen Post*, for instance, tells us that "no one will be deceived by the paternal assurances of Russia," and the German press generally sings in the same strain. It may be answered that no one outside Germany will be deceived by the Kaiser's fraternal advances to Abdul the Damned, or by the insinuations against Russia which will find their way into the German-inspired press.

The action of Russia and Austria follows a clearly conceived plan: to remove the trouble in Macedonia by taking away those evils of maladministration which are its perennial cause. These evils fall under two heads—the assaults on the persons of Macedonian Christians, both men and women, by Turkish gendarmes and soldiers; and the abuses due to extortion and robbery accompanying the collection of taxes. To remedy the first of these evils, the Russo-Austrian note requires the appointment of an Inspector-General of Gendarmerie for Macedonia, who will almost certainly be a Christian, and whose nomination must be confirmed by Russia, Austria, and the other protesting powers. Further, in all Christian districts, a proportionate number of gendarmes must be drawn from the Christian—that is, Slavonic—population; while the appointment of all the subordinate officers of gendarmerie will obviously lie with the Inspector-General, and therefore with Russia and Austria. It can easily be seen that in this admirable plan lies a hope for the speedy elimination of those "Turkish atrocities" which have horrified Europe and devastated the Balkans for generations. An equally sound principle is introduced to alleviate the evils which hang round the collection of taxes by Turkish troops and the endless extortions therefrom resulting. Safeguards are suggested, and it is required that all local taxes shall, in the first instance, be applied to local needs; and only after these are supplied shall any surplus be forwarded to Constantinople. This is a very effectual measure of home rule, and will certainly be extended in future, so soon as the first footing of the new measures is secured. Measures are also aimed against the cutthroat lawlessness of the Mohammedan Albanians, whose armed clansmen out-herod Herod in the Macedonian villages. The fact that one of these Albanian bands has recently carried out a threat, made months ago, to murder the Russian consul at Mitrovitsa and to destroy the consulate, shows sufficiently the temper of these Albanian anarchists, and, incidentally, greatly strengthens the hands of Russia in the present negotiations.

Lord Rosebery was quite right when, on March 2, he denounced in the Upper House of the British Parliament the co-operation of the Balfour government with Germany in the blockade and bombardment of Venezuelan seaports. If Englishmen really desire to secure the friendship of the United States, they will do well hereafter to avoid implication in transactions that, as experience has shown, are almost certain to lead to outrages which cannot be viewed by the American people without indignation and resentment. For the second time Lord Lansdowne, in defending the course pursued by him in the Venezuela affair, declared that his Majesty's government had excellent reasons for knowing how the United States was likely to regard the action taken. Is he making the mistake of confounding a particular Federal official with the American people? Does he or does he not mean to say that our State Department, having been formally or informally consulted, approved in advance of the Anglo-German demonstration against an American republic, although the deplorable incidents attending the demonstration might easily have been foreseen? Ultimately, no doubt, we shall learn the whole truth about this business. Meanwhile Lord Rosebery is justified in saying that the Venezuelan Blue Book is singularly meagre and reticent, throwing as it does no light at all upon the steps taken by the British Foreign Office to secure the assent of our State Department to the projected acts of hostility. Lord Tweedmouth, also, on March 2, pointed out that the despatches published in the Blue Book do not support the statements publicly made by Premier Balfour and Lord Lansdowne that our State Department was practically an accessory before the fact.

We do not know what immediate purpose, beyond giving the Canadian newspapers something to worry about, could have inspired the concurrent resolution introduced by Representative De Armond of Missouri in the last days of the dying Congress. The resolution provided that the President be requested to learn upon what terms, honorable to both nations, and satisfactory to the inhabitants of the territory primarily affected, Great Britain would consent to cede to the United States all or any part of the territory lying north of and adjoining the United States. The resolution went on to say that the territory when ceded should be formed in due time into one or more States, and admitted into the Union upon an equality with the other States; and that in the mean time the inhabitants thereof should enjoy all the privileges and immunities guaranteed by the Federal Constitution. No impartial onlooker can doubt that the cession contemplated by Judge De Armond would be expedient for Great Britain and for the Canadians themselves. What Great Britain would gain by the transaction is evident. She would no longer be obliged to protect Canada, which, on her part, has refused to make any contribution to the cost of maintaining the imperial navy. Moreover, she would free herself

from a dependency which has long been a source of annoyance and provocation to the United States, and would thus signally promote the establishment of the most intimate international relations with the great American republic. With Canada annexed to the American Union, and with the discontent of Ireland permanently allayed, as it seems likely to be by the projected Land Purchase Bill, there would be no serious obstacle to the formation of a close political alliance between all sections of the English-speaking world. Hitherto Canada and Ireland have blocked the attainment of such solidarity. What the Canadians would gain is almost too obvious to mention. The provinces of the Dominion, transformed into States, would retain absolute control of their religious arrangements—a point of vital moment to Quebec—and they would acquire the inestimable privilege of absolute free trade in the vast and constantly expanding market south of the Canadian border. The one great impediment to Canadian prosperity would be levelled at a stroke. We observe, finally, that, had the concurrent resolution introduced by Representative De Armond been passed by Congress, we do not doubt that the President would have signed it, and promptly taken steps to elicit the views of the United Kingdom with regard to the cession proposed.

It is well known that in France the government monopolizes the manufacture and sale of cigars, cigarettes, smoking-tobacco, and snuff. That is to say, France is one of the countries that is safeguarded against the invasion of American monopolies. The Chamber of Deputies, on February 28, took another long step in the same direction, incorporating with a law imposing a tax of twenty-five cents per one hundred kilos on petroleum, a provision that a government monopoly of kerosene oil should be established with the least possible delay. M. Rouvier, the Finance Minister, willingly accepted the provision, which was adopted by 349 votes to 188. Of course, the Socialists were delighted, for they desire to see all branches of manufacture undertaken by the State. Few persons realize how much further many European governments have gone in the way of accepting and applying Socialist doctrines than has our Federal government, or the government of any of our States. Our Federal government carries the mails, but it has not yet gone so far as to assume control over even the telegraph business. As regards municipal ownership, we are a hundred years behind Great Britain. It is true that most of our cities and towns control their water supply, which cannot be said of London. On the other hand, most of our cities are supplied with light by private corporations, and very few of them own and operate their own street railways. In English and Scotch cities, on the other hand, municipal ownership has been extended over many of the necessaries of life. It is true that the political conditions differ. There is no city in Great Britain, not even London, which can approach New York as regards the proportion of the alien element of the population. It would be a very dangerous experiment to place the gas and electric lighting, and the elevated, underground, and surface railway systems of the Greater New York in the hands of a municipal council which any year might fall under the control of Tammany Hall. The last state of that city would be incomparably worse than the first.

When Kipling called the Kaiser a Goth and a Hun, apropos of the storming of Fort San Carlos, we foresaw that the matter would not end there, and advised Rudyard to get behind something. Our warning has been made good. The formal reply for the Kaiser was, of course, made by the serviceable von Bülow, who handed Kipling the epithet "savage," but the real reply has just materialized, with Max Beerbohm as spirit medium. And a delicious reply it undoubtedly is. He begins by telling Rudyard that that warlike person has an essentially feminine mind, because he writes of men as he thinks they ought to be, not as they really are, for all the world like our own lady novelists, whether from Boston or from the Old Dominion. Max Beerbohm says Rudyard loses his heart to a red coat, like a very nursemaid. But farther his femininity does not go. For your lady novelist, while she idealizes man, at least understands the workings of woman, and here Rudyard is hopelessly at sea. And then comes the unkindest cut of all. The critic reminds us of a *bon mot* of our own Mr. Howells, who said that, while George Sand was to all intents a man, she was yet "no gentleman." Max Beerbohm says that, while Rudyard is in the same sense to all intents a woman, he is no lady. After that the Goth can rage, and the Hun imagine a vain thing, but Kipling certainly "has it," in the old gladiatorial sense. We trust that he will read this, or that one of those kind friends who always rise to this sort of occasion, will send him a copy of the Max Beerbohm piece, marked with red ink; for we may confidently predict a permanent addition to the literature of objurgation when Rudyard begins to talk back. By the way, what an admirable thing it would be if Kipling and Swinburne, duly loaded up, should fall foul of each other about imperial destiny or any old thing! An admiring world would pause to hearken to the melodious caterwauling that most assuredly would supervene. Life would have a new value thereafter.

Professor Alfred Russell Wallace, the eminent scientist, has an article in the *Fortnightly Review,* which persons who accept the theories it expounds will find not a little flattering to human self-conceit. Elsewhere we have commented more fully on his discovery. Dr. Wallace reminds us that the early astronomers considered the earth the centre of the universe, but that, gradually, as telescopes improved and astronomical science was perfected, the conviction grew that there were an infinite number of worlds, and that ours was probably one of comparatively small consequence in the multitude. Dr. Wallace thinks that there are not so many worlds (or stars) as has appeared. He finds that the great telescopes which reach the remoter depths of space find the stars much less numerous in those distant regions. From this he argues that the number of the stars is definitely limited. That being so, they have a centre, and he suggests that the cluster of stars to which earth belongs, being near the centre of the plane of the Milky Way, is really at the centre of the universe, as the early astronomers supposed. The probability that earth occupies this remarkable position he finds helpful to the belief that the Creator had extraordinary intentions with regard to it, and planned, in making it the home of man, that on earth the ultimate purpose of creation should be worked out. So Dr. Wallace doubts that any other planets than ours are inhabited, and that anywhere else than near the centre of the universe could an orderly development of living souls have been attained. It is a consoling theory. Only astronomers are qualified to weigh or discuss the assumption on which it is based, but we can all hope that it is true and that man is, after all, the one pebble of consummate consequence on the vast starry beach. Dr. Parkhurst doesn't think Dr. Wallace is right. To him it seems wasteful to have made so many worlds and only peopled one. What would you think, he says, if you saw a city with accommodations for a million inhabitants, and only one house with people in it? But, after all, that is the point of view of a mind busied with municipal economies. Dr. Parkhurst and the Almighty may have different conceptions of waste. Dr. Wallace's theory is encouraging and therefore welcome.

One of the stones which the builders of physiological theories had rejected bids fair to become the head of the corner. Dr. Sajous of Philadelphia has disclosed to his medical brethren some surprising theories about the ductless glands in the human body. There are two small organs called the suprarenal glands (placed just above the kidneys) which have been thought to be useless, but Dr. Sajous avers, as a result of fourteen years of investigation, that they are of vital consequence. They secrete a substance which, carried to the lungs, takes up oxygen, and forms another substance which becomes mixed with the blood. It is this last substance, called adrenoxin, which does the work of supplying the tissues with oxygen which has so long been credited to the red corpuscles. The suprarenal glands are connected by nerves with a small organ in the brain (the use of which has not been known) which governs them and regulates their absorption of oxygen. Dr. Sajous says that it is on this organ of the brain, called the anterior pituitary body, that all poisons work, and it fights them by stirring up the glands to take up more oxygen. More oxygen means more combustion, the burning up of poisons,—of which the symptom is fever. A strong pituitary enables a man to lay in a good supply of oxygen and destroy disease germs, and now that the use of pituitaries is understood, they can be stimulated on occasion by drugs, so that folks with weak ones may make a better fight against germs. Dr. Sajous considers that what we have been used to call vitality is

simply pituitary efficiency. All this is good for the doctors to know, if it is so, and it is interesting anyway. It is always a satisfaction, when a job is found for an organ that has been held to be useless. Some day it may be discovered that the vermiform appendix is a valuable anatomical asset, and that no man who has lost his may reasonably aspire to be President. That the body should contain an organ the sole use of which is the enrichment of the surgeons who remove it is not reasonable.

The relation of music to mastication has never received the attention which appears to be due to a conjunction of such important arts. In the last quarter of a century the presence of music, or at least orchestras, in public dining-rooms, has become so common that we have neglected to comment upon it. Proprietors of restaurants and hotels have found that there is some subtle relation between a fugue and a fricassee, and between a scherzo and soup, and that after introducing an orchestra into their *salles à manger* people ate who, apparently, never ate before. The orchestras more than paid for the extra expense, and the music not only aided mastication, but digestion as well, for dyspepsia rapidly disappeared when accelerated by the art of Brahms and Chopin. There has arisen but one protestant against this combination of gastronomy and music. But it is no less a personage than Mrs. Patrick Campbell, the distinguished actress. At the Russell House in Detroit last week, she demanded that the orchestra which was discoursing digestive music in the dining-room cease playing. She said, "Such vulgar rasping disturbs my desire for a restful atmosphere." On the refusal of the manager to stop the music, Mrs. Campbell took herself away to a hotel where no orchestra played. Of course one would have to hear this particular band before judging whether Mrs. Campbell is right or wrong, but as a general proposition it must be admitted that if the music in a restaurant is good, one can forgive the *chef* for a steak which is in the worst sense of the word a *pièce de résistance*.

Boston has a new and valid claim to distinction in the palace art museum of Mrs. John L. Gardner. Every newspaper reader knows more or less about Mrs. Gardner of Boston, and the Venetian palace that she imported, and set up with intelligent variations in the made-to-order end of the town, called the Fenway. The construction of this edifice was carried on with careful privacy. Outside it was simple and unattractive. How it was inside very few people knew, but many hoped to know. When the building was nearly finished it was incorporated as a museum, and its inventor has since moved into it the remarkable collection of pictures which she had spent many years and much money in acquiring. On February 22, the museum was opened to the public. It was not opened very wide. The advertisement says that two hundred persons will be admitted on two days of each week if they will buy tickets beforehand at a dollar a ticket. But since Mrs. Gardner lives in her museum some limitation of attendance was inevitable. The place and its contents are described as exceedingly interesting. The interior of the building is a bit of Italy set down on the shore of New England; the pictures include many paintings of extraordinary merit and value, and the effect of the whole is reported to be altogether admirable and charming. Many Americans nowadays have more money than they need, but few have found so interesting a use for their surplus as this Boston lady. Unlike most American benefactors, she has spent her fortune and her strength not for the promotion of utilities, but of beauty. There is no doubt that it has been a very successful expenditure, and one that will have its effect upon the development of the artistic sense in America.

An old Congressman told the story of his constituent who asked for a collection of Congressional memorial addresses, giving as a reason for the unusual request that he "always read them with a great deal of satisfaction"—a naïve expression which may mean much more or much less than it says. It is not probable that many persons delve into the literature of Congressional funeral eloquence, and yet a glance at almost any collection reveals many interesting side-lights on the Congressional nature. At almost the close of the recent session of Congress, a Sunday afternoon was set apart for the delivery of eulogies on members who had died during the session, and an issue of the *Congressional Record* is devoted to their reproduction. Now the *Record*, as a rule, merits the name it has acquired of being dry; but there was clearly nothing dry in the soil from which grew the vines of luxurious phrase and the blossoms of exuberant encomium. Your average Congressman may be a creature of the caucus, a being of election tables, a seeker for plums and appropriations; yet when he comes to the duty of funebrial speech, he is a man of unexpected capacities. One of these capacities is for quotation—and perhaps that is the most apparent to the casual glance over the printed page, dotted with verse in fine type. On that Sunday afternoon, three of the orators quoted the whole of the passage from "Thanatopsis" beginning,

> So live that when thy summons comes to join
> The innumerable caravan,

while another quoted a part of it. "Lives of great men all remind us," "None knew him but to love him," "Finds tongues in trees, books in the running brooks," "Our lives are rivers gliding free," "We live in deeds, not years," "There is no death, what seems so is transition," "Art is long and time is fleeting," "The fathers, where are they?" and "Leaves have their time to fall," are a few of the familiar strains which fell from the speaker's lips, though they by no means exhaust the list. And beyond these the prose quotations are all but uncountable. Perhaps there is a significance, which may be assuring to those who mourn the eclipse of the English Bible in popular regard, in the fact that most of these quotations are from this same Bible. If it may be permitted to harbor the suspicion that the Congressmen crammed for the occasion, it is still evident that they knew where to go for their material. Naturally, there are queer and incongruous passages in these speeches—as, for example, one in which the orator could think of no finer tribute to the dead than that "he bred and raised some of the best trotting stock" in his State—a service more useful to horsemen than adaptable to eloquence. To a serious mind, however, there is under all the forced and tawdry eulogium, even in addresses which are too plainly manufactured with more thought of the orator than love for the dead, a current of sincerity which is a saving grace. Apparently there is not too much heart in the proceeding, but still there is heart.

A report of the Department of Agriculture tells of an interesting and profitable innovation in tobacco-growing in the Connecticut Valley. Last year, at the instigation of the department, thirteen Connecticut farmers put forty-one acres of land under shade and planted it, at a total expense of $657 an acre. Most of this land was planted with Sumatra tobacco. The department estimates that the crop cost, baled and ready for market, 51½ cents a pound. It brought an average price of $1 20 a pound. The yield of baled tobacco was about 1144 pounds an acre, worth $1372, leaving a profit of $715 an acre. This sounds like pretty good farming, and the department is proud of the results of its suggestions. Ordinary out-of-doors Connecticut tobacco raised without artificial shade brings about twenty cents a pound. The shade-grown tobacco is used for wrappers for cigars. The cigar-makers say it does wonderfully well, and the next crop promises to bring higher prices than the last. It will be a much bigger crop than last year's, for this year the Connecticut Valley has had about 700 acres under shade, which are expected to produce 800,000 pounds of baled tobacco, worth nearly a million dollars, and yield a profit of more than half a million.

George Ade has achieved something that falls to few of us in this life. He has hit upon something new. He has presented to the American public and to the world in general a new kind of humor—American humor—Middle-Western humor; but that may not be so new. His achievement has been to draw with wit and humor the characteristics that belong to every American family, but that belong especially to the man, woman, boy, or girl who was born and has lived always in the central part of this republic. These people are strong Americans, but they have never existed until this generation. They are a new, creative, vigorous people, with an admirable sense of humor, and it was necessary to wait until one of them should arrive before their story could be told. That was what George Ade did. And he promises so much for the future that he is eminently an American of To-morrow. He was born in Indiana, and has lived and worked most of his life in Chicago. He is thirty-seven years old.

The Session

When the session of Congress which came to an end on the 4th of this month was young, we ventured the suggestion that the President would be disappointed in its results. The opening was certainly auspicious. Senators were silent, perhaps cynically silent, but the members of the House of Representatives were bubbling over with gratitude. Many of them were convinced that the President had saved the party, consequently the country. They assured him that he was the party leader; that the country was with him; that whatever he desired must be popular,—whether it was right or not,—and that he could command their votes. It looked as if the President would have easy sailing. It was to be a Roosevelt winter, if promises of Congressmen go for anything; and yet the Weekly thought even then that it was quite probable that the usual conditions would prevail, and that Mr. Roosevelt would find once more how very little a President can accomplish, unless, indeed, he be the skilful negotiator that Mr. McKinley was.

The session is ended, and the President can take account of stock. He started out with the determination to secure important anti-trust legislation. He did not outline any definite plan in his message, but he permitted it to be understood that the policy set forth in Mr. Knox's Pittsburg speech was that of the Administration. This plan included not only improvements of the Inter-State Commerce Law with the view of more surely preventing discriminations and rebates, but the exclusion of the products of monopolies and of so-called trusts from the channels of inter-State and foreign commerce. Publicity, naturally, was one of the remedies to be applied, in order that no corporation should be able to market shares representing what is vaguely known as over-capitalization. The President had assumed, in his own campaign speeches, that the Federal government could not reach State corporations under the Constitution as it stands; he therefore framed a constitutional amendment. Mr. Knox, however, pointed out a way for the evasion of the Constitution which the President gladly accepted. In effect, it was determined that the Federal government might declare that a corporation which was sinless under the laws of the State creating it, and who under the laws of the State to which its goods might be consigned, was not good enough to engage in inter-State and foreign commerce. The position of the Administration was clear, and it added greatly to the tenor of business. Radical measures were introduced in both Houses, but, finally, the Attorney-General was heard from, and his suggestions were embodied in the Littlefield bill. This bill spoke the mind of the President as it was at the beginning of the session. It was passed by the House of Representatives unanimously. It was killed in the Senate, whose leaders had never any idea of permitting the President's notions to be incorporated into a law. Mr. Roosevent can, indeed, say that his excitation resulted in some legislation, but it is legislation which does not bear the faintest resemblance to the plan with which he threatened the country, or, at least, it is but the shadow of a name. In other words, Mr. Roosevelt has happily failed to effectuate the dangerous features of his attack on corporations and their business, although the law relating to publicity may become dangerous in other hands than his or Mr. Garfield's.

Another scheme which he urged was the creation of a tariff commission. Not a step has been taken in the direction of carrying out his recommendations in this respect. Both of these subjects involve the dearest interests of the Republican party, and, in taking them up for consideration, the President strained his influence to the utmost. He was in reality, questioning institutions which stand for the essential policy of his party. The intelligent Republican leadership in the Senate, at the head of which is easily Mr. Aldrich, took alarm at once on the mention of trusts and the tariff as subjects for reformatory legislation. Mr. Roosevelt doubtless believes that trusts should be curbed and that the tariff should be changed, and doubtless, too, he disbelieves the assertion, made by Mr. Havemeyer, that the tariff is the mother of trusts, but the tariff leaders of his party know better, know that the two hang together, and it was therefore natural, when the President made his proclamation against trusts, that these tariff leaders should come to the rescue. At any rate, they did come to the rescue, and the session has come to a conclusion to the satisfaction of the business interests of the country. All of which were endangered by the character of the outcry against combinations, and of the protected interests who have received renewed assurances of the distinguished consideration in which they are held by the Republican party.

The President was especially assured that his Cuban reciprocity plan would certainly go through at this session. The beet sugar law-makers were exceedingly humble. They had prevented the passage of the President's bill through the Senate at the last session, and they had heard from the country. It was clear to them now that they had been guilty of a serious blunder, and that the people, even those who dwelt in beet States and some who raised the beet itself, believed with the President and not with the rebellious law-makers. The latter, therefore, were willing to do anything the President demanded, for all the beet sugar-makers held their annual convention in Washington, and passed a resolution in which they assented that the United States government might keep its faith and preserve its honor even at the expense of refined beet sugar. Never was a treaty negotiated with such gayety, and with such seeming certitude of ratification. The Senators were consulted in advance, and, having received Mr. Oxnard's permission, they assented to the treaty.

Another treaty in which the President was deeply interested was with Colombia touching the Panama Canal, its purchase and its construction. There was difficulty attending the negotiation of this treaty, for Colombia was exacting and insisted upon extravagant terms. Threats were made to buy out the French Company without a treaty—and regardless of the clause of the company's concession forbidding its purchase by a foreign government. Other threats were made to the effect that we would go to Nicaragua and make terms with the two governments owning the territory through which that route passes. At length Colombia came to terms, but the Senate would not, although the President endeavored to hasten matters by cabling to Paris an acceptance of the French Company's offer which expired by limitation on the 4th of March, although an acceptance implied necessary ratification by the Senate.

The President has been obliged to call an extraordinary session of the Senate in order to procure ratification of these two treaties. It is fair to say that their failure at the regular session was not due to the refusal of the President's party to act, or to its hostility to these two policies. It was due, in one instance, to Mr. Quay's futile insistence on his Statehood bill, and, in the other, to Mr. Morgan's obsession in favor of Nicaragua. At the same time, the two treaties, which was surely counted on, fell with the session.

The President also undertook to secure lower tariff duties on Philippine products imported into this country. Backed strenuously by Governor Tafft he urged upon Congress the necessity of granting this relief to the Filipinos, because, as he said, they actually needed it. Governor Tafft and the President even made a second appeal for a seventy-five-per-cent. cut, but the Republican party once more declined to accept the President as a leader on any question affecting its sacred tariff policy. He procured $3,000,000 to be distributed in charity among the suffering people, but he could not secure a relief which would have greatly increased our trade with the islands, and would have made for the permanent welfare of their people. Congress will follow the lead of any one who desires to give away the public money. The man who induces the Republican majority to make a tariff concession must be a leader of very high order.

Mr. Roosevelt himself made no effort to secure reform of our banking and currency system. What was done in this direction was by Senator Aldrich, who is a real party leader when questions of finance or taxation are under consideration.

The President, aided by Mr. Root, secured the adoption of the general staff proposition for the army, and provision has been made for important addition to the strength of the navy. For the latter legislation, Mr. Moody is entitled to a large share of credit. Possibly the President does not care to share, with Congress, the responsibility for the latter's extravagance in respect of new public buildings.

The session, to sum up, shows that, on questions of economic, industrial, and commercial policies—the policies which lie nearer to the President's heart—the party is not with the President, and that he escaped open defeat on these subjects, partly because the Senate leaders slightly yielded, or seemed to yield, to the public sentiment which he had aroused, and partly because they desired to preserve outward harmony in the party.

The President's Doctrine and the Facts of History

In his letter to Mr. Clark Howell, the President recurs to the policy which governs him in naming negroes for office, and he declares that he has been "surprised and somewhat pained at what seems to me the incomprehensible outcry in the South about my actions—an outcry apparently started in New York for reasons wholly unconnected with the question nominally at issue."

It is, indeed, the fact that the South is seemingly more sensitive on the negro question than it has been for several years,—since the political race question was settled by acquiescence. There is a reason for this state of mind, however, which, as one who loves to look facts squarely in the face, Mr. Roosevelt ought to recognize. It is not necessary, in seeking this reason, to take into account either the personal factor or the suspicion which the President entertains of some of his New York antagonists. The South did not like the Booker Washington incident, which is regrettable, but that alone a few years ago would not have created the storm of indignation which has swept over that section of the country. Nor would the appointment of Dr. Crum then have moved the city of Charleston and the State of South Carolina so deeply as it has. The President must go beyond himself, beyond his own conduct, for his explanation.

His policy is in fine contrast to that of

his party. It is true that even his theory as to the negro in public place is distasteful to the South, but differences of opinion on this subject between men of the two sections are inevitable. Mr. Roosevelt says that, with him, color is to be no bar to appointment to office, and, just as little, is it to be counted as conferring a right. This, however, does not fully set forth nor precisely define the President's attitude toward the negro. As the New York *Sun* justly points out, Mr. Roosevelt, in a letter published last November, then announced his intention "to let the colored man know that if he shows in a marked degree the qualities of good-citizenship—the qualities which in a white man we feel entitled to reward—then he will not be cut off from all hope of similar reward." The President, in other words, will welcome opportunities to reward exceptional black men with public office. While, other things being equal, this is a commendable spirit, it has given occasion for the outburst which has "surprised and somewhat pained" the President.

The President's attitude is the proverbial last feather. He is reaping the whirlwind sown by his party and his predecessors. If the Roosevelt policy had been consistently and constantly applied by the Republican party, the negro, or race, question might never have arisen. Certainly it would not have disrupted social conditions in the Southern States, made their partisan solidity inevitable, and set them apart, politically, from the other sections of the Union. Such a policy would have had the support of the best Southern public men, who, in their time, possessed enormous influence over their neighbors. The *Tribune's* extracts from the speeches of the late Justice Lamar clearly show this, although they are quoted for the purpose of illustrating Southern inconsistency. In fact, the extracts prove nothing of the kind, but they do prove, on the contrary, a disposition to help the negro upward, and if the Republican party, which charged itself with the tutelage of the enfranchised race, had co-operated with the best element of the South, Mr. Roosevelt would not now be stirred by a desire to do something political to show the exceptional negro that the white man is ready to treat him on his individual merits. Such treatment would have long since been accorded to him naturally, both in the North and in the South. As it is, he does not stand on equal terms in either section with white men who may be intellectually his inferiors.

The history of the negro in politics has changed the attitude of the South toward him, and Republican leaders, North and South, are responsible for that history. Without inquiring into the motives of those who gave the suffrage to the negro, it is true that the gift has been made the instrument of his corruption from the very first. Unscrupulous politicians first used the overwhelming negro vote for the purpose of enabling them to plunder and debauch the Southern States. In carrying out their criminal intentions, they developed the most depraved of the black race, and transformed them into the basest of politicians. They taught the negro the vilest of their own arts. When the South had stood the reign of thieves and outcasts as long as white communities could be expected to endure outrage of this kind, the sustaining arm of the Federal government was taken away from the criminals, and the rule of the blacks and their corrupt white leaders tumbled to the ground. The end of black rule was brought about by a Republican President, and, for years, there was universal acquiescence in the practical exclusion of the negro from the exercise of the right which he had abused, and which, in turn, had actually defiled his race. Attempts by Republican leaders to gain advantages in Northern States, where there is a black vote, by the passage of force bills, reacted on their authors, until it was finally accepted as a stubborn fact by Republican leaders that coercive measures were not popular in the North.

Matters ran along in this way until Southern States undertook to make black voting impossible by the adoption of constitutional amendments which excluded the negro without apparently offending against the Fifteenth Amendment. Consequently, there had grown up a vicious black Republican organization in the Southern States. For a time, the Southern whites, in their turn, seemed to acquiesce in a plan which left them in possession of their State and local governments, and which left to the black and to his white Republican associates the Federal offices. It was, however, an unnatural state of affairs, and was bound to come to an end. Since 1896, the South has felt that it has been treated by the Republican party as a "conquered province," to use the striking expression of Hon. John R. Procter, chairman of the National Civil Service Commission. The Federal offices in the South have been filled by men of the worst character. Dive-keepers, forgers, embezzlers, smugglers, violators of the local excise laws, professional gamblers, burglars, murderers, black and white, have been appointed to collectorships, postmasterships, and other offices. The black voters, no longer useful for the purpose of plundering the local and State governments, have been employed to debauch the Republican organization itself. The Republicans of the Southern States, under the present rule, elect about one-third of the delegates to the national convention of their party. Their organizations have been put into the hands of men who will sell them to the highest bidder, and part of the price of corruption consists of Federal offices.

Therefore it has naturally come about that the uses made of the black vote by Northern politicians have taught the Southern whites to regard the negro in politics as the fruitful source and the instrument of corruption and of political debauchery. The black man in office stands for all that is base and oppressive. His presence in the custom-houses and the post-offices is a constant reminder to the Southerner of what might happen if the negro returned, by force or fraud, to local power. It so happens that the exposition of black corruption in Southern politics has been especially evident since Mr. Roosevelt's administration began. This is not only due to the fact that the actual corruption of the Republican party in the South is now greater than it ever has been since the sorrowful days of reconstruction, but Mr. Roosevelt himself has done much to lay it bare by some vigorous efforts which he made at the outset to work reforms that are impossible so long as his party remains under its present leadership.

Here is an explanation of the reason for the unusual sensitiveness of the South at the present moment. Every effort which Mr. Roosevelt makes, under these conditions, to bestow political honors upon the black man, exceptional or not, is sure to be received in the South as an attempt to promote black politics, than which, as the whole country knows, nothing is more corrupt. It is a pity that this should be so—a pity for the exceptional black man, who frankly accepts the situation, a pity for the South, and a pity for the country. But, as the President says, facts are what we ought to reckon with, and facts teach us that nothing but havoc can come to the exceptional black man by pushing him in among the degraded of his race, as a Federal office-holder.

Our Own and the German Navies

THE report of Chief-Constructor Bowles to Secretary Moody, forwarded by the latter to the President, is an enlightening, if somewhat disturbing, document. The facts narrated in it justify the impatience which both Mr. Roosevelt and Mr. Moody have exhibited touching the delays in the construction of our battle-ships and other war vessels. The subject is very serious, especially when we consider the relative strength of our navy to that of Germany, the navy nearest our own in size, and, consequently, that with which comparison is most natural. Seven battle-ships are in various stages of completion, the degree of completion of the *Nebraska* being 15 per cent., that of the *Missouri* 84 per cent.; that of the *Virginia* 18 per cent.; and that of the *Ohio* 69 per cent. The time already elapsed beyond the contract period ranges from 13 to 30.6 months. The *Missouri*, for example, should have been in the hands of the government nearly two years ago; the *Ohio* should have been delivered more than two and a half years ago. Six armored cruisers are from seven to sixteen months behind time, and the same tale is true of every class of war vessel now in process of construction for our navy. The longest delays have occurred in the building of the torpedo-boats, which are from forty to forty-eight months behind the contract time.

The reasons given for these delays are not encouraging. No one seems to be to blame, in the opinion of Mr. Bowles, although the hasty plans of which he speaks, which have had to be altered at a large expense of time, would seem to be avoidable. Apparently, also, the government has no power to compel the delivery of armor, and does not possess sufficient facilities for the manufacture of ordnance. Steel-makers find it more profitable to supply the demand for structural material for domestic purposes than to meet the orders of the ship-builders for the higher grades of steel demanded for ship-building. There ought to be a way found for remedying all this, and perhaps one will be found. It is evident, however, that *no method* has yet been discovered by Mr. Bowles, and it is fair to say that much of the trouble is caused by the unprecedented demand for steel in this country, and, perhaps, to the further fact that it is impossible, here, to bring imperial pressure to bear upon private firms and corporations.

In view of the revelation thus made by Mr. Bowles's letter, a comparison between our own and the German navies will be interesting. It is made from authoritative statistics never before published. We have ten battle-ships in commission, three of which, the *Indiana*, *Massachusetts*, and *Oregon*, launched in 1893, must be modernized. But for the delays which have occurred in the construction of the others, we might have afloat at least five more, or, altogether, twelve first-class modern battle-ships, instead of seven, or fifteen with the three mentioned as needing modernizing. The newest of our battle-ships in commission is the *Maine*, launched in 1902. Next to her, in age, come five which were launched in 1898. Since 1896, Germany has launched at least one battle-ship a year, with the exception of the years 1898 and 1902. In 1899 two were launched; in 1900, two more; and in 1901, four were launched. Since 1896, the year when our *Iowa* was floated, we have added six battle-ships to our navy. During the same time Germany has increased her navy by nine battle-ships. The *Maine* is the only American battle-ship of more than 11,500 tons; she is of 12,500

tons. Germany has five battle-ships of 12,000 tons each. The speed of the *Maine*, our swiftest battle-ship, is 18 knots; that of the others ranges from 16.2 to 17.1. Five of the German ships have a speed of 19 knots, and five more a speed of 18 knots. The ten German ships are armed alike, each carrying four 9.4 inch and eighteen 6-inch guns. All told, our ten battle-ships carry 184 guns; thirty-two of these are 13-inch, and eight are 12-inch. The Germans have no guns of a larger calibre than 11-inch, but they greatly excel us in rapid-fire guns, having 180 6-inch guns in their fleet of nineteen battle-ships to our 70. Here is a mooted question. The important point, in respect to our tardy building, being that Germany has nineteen first-class battle-ships to our ten, and ten thoroughly modern battle-ships to our six, while five of the ten are as swift as the *Maine*, and the five others are swifter.

Of second-class battle-ships, including monitors, we have nine, and the Germans have eleven. Besides these eleven, Germany has thirteen armored gunboats for coast defence. In this class we excel in speed and armament, and, besides, two of our nine were launched in 1900 and 1901, respectively, while the newest of the German ships of the class was launched in 1895. Some of the German vessels date back to the sixties, whilst the *Miantonomah*, our oldest, took the water in 1876. The second-class battle-ship, however, is practically abandoned.

The armored cruisers constitute the most important class after the first-class battle-ship. Of these we have two, the *Brooklyn* and *New York*, and are building eleven. Germany has seven, three of which are pretty old and slow, dating back to 1868 and 1874, and rated at 15 knots. Four, however, are much more modern than our two, about as fast, and more heavily armed. We have fourteen protected cruisers, and Germany has eighteen. Our oldest were launched in 1884 and 1885. Germany has one ship of this class launched as far back as 1887. Our newest, the *Albany*, was launched in 1899. Germany launched four in 1900, and two in 1902.

Germany has thirty-four torpedo-boat destroyers to our four, and eighty torpedo-boats to our thirty, the grand result being that the German navy consists of 182 vessels, while that of the United States consists of sixty-nine. Not taking into account the different methods of armament, which raise a controversial question, Germany possesses a much larger number of very recently built good and serviceable warships than we have afloat.

When we take into consideration the vessels in construction for the two navies, we get some notion of what the delay revealed means to this country. We are building seven battle-ships and the Germans are building five. Of our seven five are from 1600 to 2000 tons larger than the German ships, all of which are of 13,000 tons. For these new ships both countries are using the 12-inch gun. Five new battle-ships are also appropriated for, three of which at least are to be of 16,000 tons. The Germans have projected six, the last to be completed in 1908. If the two countries complete their battle-ship programme by 1908, the United States will have twenty-one first-class battle-ships and Germany will have thirty. Of these thirty we can count perhaps five as of little value except as commerce-destroyers. We are building and contemplating more armored cruisers than is Germany, and in 1908, unless the delays continue, we should have thirteen first-class cruisers of from 9000 to 14,000 tons, and with a speed ranging from 21 to 22 knots, as against Germany's nine of from 7391 to 9000 tons, and with a speed ranging from 15 to 21 knots.

Omitting torpedo-boats and destroyers, and counting first-class cruisers as superior fighting-ships in 1908, the United States would possess fifty, while Germany would have fifty-three. The Emperor, however, would still have an advantage over us in his fleet of thirteen coast-defenders, while we would quite match him in protected, but not first-class, cruisers.

These statistics are not offered by way of promoting alarm, but merely to show how much more energetically the Emperor is able to carry out his naval programme than our authorities have been. As long as we have a programme of ship-building, ought it not to be carried out in a businesslike way? Ought the government to permit itself to be outstripped in enterprise by Germany or by any other power?

The Spread of the Hook-Bug

UNTIL we read Mr. Harvey Sutherland's delightful *Book of Bugs* we never believed that entomology could be recognized as a gay science, but that charming treatise taught us to see the fun of a great deal of sound information. It will be remembered with joy by his readers how Mr. Sutherland takes up the common house-fly, the mosquito, the wicked flea, the cockroach, the moth, the wasp, the ant, the bee, and even the unnamable insect

> Which has no wings at all
> But gets there just the same,

and studies them with equal parts of wit and wisdom, so that you have such a good time you hardly realize how much you are learning. The unalloyed scientist might say that you are not learning a great deal, but if you are honest, you have to allow that you have learnt more than you knew before, or ever expected to know, of the insects in question, and Mr. Sutherland does not claim to speak the last word concerning them. As the satirist corrects manners with a smile, so he chastises ignorance, and leaves his reader fitted to pour out facts and jokes that he had not dreamt of before. He even suggests defences against the insect foes of human comfort, and in respect to some, notably the mosquito, he cherishes a hardy hope of their destruction.

Mr. Sutherland's mental and moral attitude throughout his book is such that we have thought he might very well come forward with his information and diversion, and treat in some of the popular scientific publications of the newly discovered microbe whose haunts the excavations for our rapid-transit lines have laid bare. This bacillus was at first recognized as the microbe of malaria; afterwards it was declared to be specifically the microbe of indolence; and it has since become generally known as the hook-bug, in which jocose and familiar guise it might well commend itself to Mr. Sutherland's inquiry. The various sorts of journalism prevalent in the metropolis have failed, both high and low, to deal with it philosophically. Even journalistic art, beyond representing the imaginable effects of the hook-bug in such ready victims as policemen and district messengers, has done little to throw light upon its nature, and we know practically nothing of the dangers to be feared from it. In fact, an insidious indifference, which may be one of the subtler effects of the hook-bug's ravage in the race, has crept over the guardians of the common welfare, and we have seen nothing about it in the public prints for wellnigh a fortnight. It may be that the newspapers, with their habitual modesty, are waiting the results of scientific investigation, just as they sometimes attend the verdicts of the courts before pronouncing some prominent defendant guilty or innocent. But there is much reason to believe that in the mean time the hook-bug, liberated from the rapid-transit tunnels, may spread over the country, and get in its work in quarters where its presence has not been suspected.

As in many other cases, the successive steps by which the microbe of malaria came to be known as the bacillus of indolence, and finally as the hook-bug, are now lost, and it is not clear why hook-bug should have been finally accepted as its popular name. Possibly some sufferer from it may have been able to get at it with a microscope, and identify it by its curved antennæ, but this is mere conjecture. "If a buff bacillus," says one of Mr. George Ade's fabulous characters, who are the realest Americans going, "with a blue stinger, gets into you, it means lumbago. If one of the six-legged fellows with a plaid husk starts a hatchery somewhere in your preserves, then you may consider yourself elected for spinal meningitis." From its effects, probably, the bacillus of indolence is identified as the popular hook-bug; but before proposing to extirpate it during the coming summer, when the newspapers can give it their full attention, it may be well to inquire whether it is an unmixed evil. The mosquito was hardly detected in the act of scattering broadcast the malaria germ which has now been identified, than it was observed that cancer was unknown in regions where malaria prevails, and if the hook-bug and the malaria germ are really one and the same we ought to think twice before seeking or applying an antidote. Besides, it is very questionable whether on moral or social grounds the hook-bug is to be altogether condemned. It is notorious that the Americans are an overworked people; that the ambition of our men to make money and our women to get into society is resulting in widespread insanity and nervous prostration, as well as universal dyspepsia. We are spreading the terror of our arms and men, especially our business men, all over the earth, and our society women are everywhere marrying dukes, but in the mean while we are, as a nation, losing sleep and flesh, and may well pause and ask ourselves whether the hook-bug has not appeared just in time. We have seen a sort of instinctive effort on the part of the proletariat to protect itself by the legislation of holidays, but our plutocracy, till the rage for the automobile set in, was almost without the means of escape from work. Whether on his yacht or in his seaside or inland cottage, the hapless millionaire was still the victim of his desire for more, and of his study of the means of getting it, and the hook-bug has by no means come too soon to save him. Of course the hook-bug must not be allowed to spread at will among the masses. His diffusion would result in no end of strikes, and the mere endeavor to arbitrate these would annul his benefits in the better classes. But it is to be seriously considered whether a well-philosophized system of inoculation would not prove beneficial to our people at large. Possibly a secondary prophylactic, corresponding to vaccination, could be evolved, and a hook-bug which had been transmitted through some of the wholesomer lower animals might be used to produce a mild type of repose in the human subject, instead of the virulent laziness following its primary attacks. If this could be successfully thought out, the inoculation with the modified microbe of indolence might be made compulsory, especially in the public schools, with great advantage to our population in the future.

King Edward VII.

By Sydney Brooks

LONDON, *March 2, 1903.*

KING EDWARD VII. has now been two years on the throne of England. What sort of a king has he made? The question is easier to ask than to answer. Indeed it embraces so much that within the limits of this page it is impossible to answer it at all adequately. There are two views of King Edward as of every monarch. There is the private view, the view you will hear expressed in the after-dinner confidences of politicians, diplomatists, naval and military men, the household officials, and so on; and there is the public view, the general opinion which the masses of the people, working of course from the outside and in a confusion of half-lights, come somehow to form. There is always a gap between these two views, but nowhere is the gap so pronounced as in England. Nowhere else is the difference between the way men speak of the King in private, and the way they speak of him in public so marked. The difference is not wholly due to the magnificently English turn for flunkeyism. If it were, monarchy in England, instead of being the most stable institution of the country, would be a mere bubble waiting for a hand to prick it. Flunkeyism, and the restraint of the proprieties, and the English worship of "good form," have no doubt much to do with it.

The atmosphere of a monarchy does not permit of much outspokenness. The few who know, and could speak from personal experience, pay tribute to *les convenances* by monastically holding their peace, in public at any rate. The many who do not know, and can only guess, arrive at a few general impressions which are more interesting than valuable. In spite of an overwhelming democracy and the "society" papers, the English monarchy is still a close concern; and those who have intimate access to it are but the smallest fraction of the people. This of course is as it should be. Given a monarchy, seclusion must be one of its attributes. It dare not make itself cheap. At all costs the illusion of dignity and ceremonial aloofness must be preserved. A thousand influences, not all of them, perhaps, of the most praiseworthy kind, combine in England to keep it up. And this is the real reason why the opinions of the man in the street on the subject of King Edward have so little in common with the opinions of those who are really inside the Court circle. Listen to the gossip of a London club about the King, and then question an average provincial Englishman — you would hardly guess they were talking of the same person. This is something that should always be borne in mind. London no more represents England than New York represents America, and the "talk of the town" is very far from being the voice of the country.

One of the warmest tributes to King Edward, as a monarch, that I have happened upon directly or indirectly, came from a cabinet minister. He is one of the three or four most powerful statesmen in the country. Many think him the most powerful statesman not only in the country but in the Empire. When she really got to know him, he became a particular favorite with Queen Victoria. He has been thrown into the closest relationship, both private and official, with King Edward for the last fifteen years. Personally he dislikes the King. He disliked him when he was Prince of Wales; he dislikes him now. He has been known to use some startlingly frank adjectives on the subject. His opinion of King Edward VII. as a king is not therefore influenced by any admiration for him as a man. That makes all the more remarkable his deliberately expressed judgment that "from the day of his accession the King has done perfectly." He went on to say that the King's shrewdness and tact and industry and extraordinary quickness in grasping the point of an argument or a situation, had astonished his ministers. He especially praised the King's "manageableness." His Majesty has proved far more docile, more willing to surrender his private wishes, less crotchety than was Queen Victoria. "He had not made a single mistake"; it was "a pleasure to work with him"; you could always rely "on the right thing being said or done at the right moment in the right way." Above all, he is "a man you can convince"; he gives way with imperturbable good humor when he is satisfied that reasons of State require the surrender of private schemes or inclinations. This is emphatic testimony, but a proof that it was not undeserved was forthcoming at the time of the coronation. There were two gentlemen who confidently expected to snaffle peerages from the shower of coronation honors. They were both warm personal friends of the King and, for reasons on which the gossip of the moment had a good deal to say, the King was most anxious to gratify their ambitions. On all such matters Lord Salisbury was usually the most complacent of Prime Ministers. He looked on with cynical detachment. "Oh, don't bother me about the matter!" he is reported to have said a few years ago when his private secretary came to consult him about the annual batch of honors. "Don't bother *me*. Settle it your own way. Make anybody anything you like." But on this occasion even Lord Salisbury was spurred to action and protest. The elevation of the two would-be peers was not acceptable to the bulk of the six hundred odd gentlemen who are qualified to sit in the House of Lords. Lord Salisbury, it was understood, put his foot down very firmly on the proposal. The result was that after a certain amount of feeling had been aroused, the King gave way. I have heard it constantly said by men who are in a position to know that this quality of reasonableness, so conspicuous in the King, is not shared in by the Queen. Ministers have had far more trouble with Queen Alexandra than with King Edward. The Queen has to a simply miraculous degree preserved all the outward charms and graces of a young woman; but she has the misfortune to be somewhat deaf and to fall very far below the King in quickness of comprehension. The ministers and officials who had to consult with her on the innumerable points of etiquette connected with the coronation did not have an easy time of it. There were some astonishing tales flying round London of her feminine obstinacy first in proposing and then in sticking to all sorts of impracticable schemes; and fresh anecdotes of the same kind crop up nearly every day. Indeed the Greville of to-day, if such a man lives, will have to record that for the past eighteen months more gossip has buzzed round the throne than since the time of the great baccarat scandal.

Very little of this reaches the masses, and when it does it is for the most part flatly disbelieved. King Edward's accession marked a time of amnesty. The past was put away and forgiven if not wholly forgotten. The indiscretions of his youth, which were neither few nor of little moment, were buried out of sight, and the country entered on the new reign with full confidence that King Edward would not prove a second Charles. "What is pardonable in a Prince of Wales cannot be condoned in a King," was the text of the many sermons with which the English press paved the new monarch's way. Whether the sermons were taken to heart and acted upon by their recipient is a point on which there are more opinions than one. London clubmen and "society leaders" will smile if you put it to them, and change the subject. The rest of England will answer with an indignant and unanimous "Yes!" What at any rate is certain is that a veil is drawn, and that the King is very much more tender of popular susceptibilities than he used to be. That perhaps is as much as one can expect of a King these days. It is certainly enough to satisfy England, which is not an exacting country below the surface, and will forgive a man almost anything if he will only take the precaution to attend church regularly. People generally have quite made up their minds that the wild-oats period is definitely over, and that nothing now remains to cause uneasiness. That there used to be uneasiness is undeniable. Indeed for many years Queen Alexandra, as Princess of Wales, had considerably more of the affections and esteem of the country than her husband. But now the King is completely re-established, and has a hold over his subjects that it would be difficult to exaggerate.

I was talking of this not long ago to an engine driver at a country railroad station. He was a good royalist. "The most popular man in the world — bar none," he said. "Bar none," he repeated with relish and conviction. That is literally how the enormous masses of Englishmen think of King Edward. One talks of the popularity of Lord Rosebery or Mr. Chamberlain. It is as nothing compared with the King's. In France he is claimed as *un bon Parisien*, and the phrase pretty accurately sums up the English attitude, too. The masses think and speak of him as "a good fellow"—tactful, experienced, hearty, and approachable. He has the instinct, which is always an attractive one, for combining pageantry, show, and ceremony, with the workings of a democratic system. The people like to think of their King "having a good time," attending the theatre, race-course, and polo-ground, without fuss or unnecessary display or any of the military precautions that on the Continent convert the simplest incident into a State event. They also like to think that when ceremony is necessary, no one can be more ceremonial.

On both accounts their opinion of the King would seem to be well justified. He gratifies them by being visible and public without cheapening the Crown, and by the apparent air of heartiness and good-fellowship he diffuses. At the same time he gives them the pomp and glitter and stateliness that no monarchy can safely dispense with. He did so, for instance, yesterday, when for the third time he opened Parliament in state. So far as weather went, it was one of those perfect days that New York sees oftener than this black-canopied capital. The people turned out in their hundreds of thousands, lined both sides of the route from ten to twenty deep, feasted on the flash and glitter of their beloved Guards, on the gorgeous State carriages—and went home jubilantly monarchical, feeling with justice that they were getting their money's worth. So they were, and so they always will while King Edward is on the throne. This year especially one will have a chance of gauging the effects on social London of the accession of a King and particularly of a King who is, above all things, a man of the world and fond of the good things of life. In 1901 the Court was in mourning; in 1902 the season was spoiled by the fiasco of the coronation. This year everything promises finely. The Court will be brilliantly resurrected.

The Book of Months

By E. F. Benson

NOVEMBER

When the service was over I waited by the west front watching the congregation stream out of the gray gloom inside into the primrose-colored lights of sunset. There were two big collies sitting patiently side by side on the edge of the grass, looking with liquid eager eyes at the people coming out. Suddenly two tails began to thump ecstatically, but neither dog moved. It was she. I think I knew from their eagerness it could be none else. With a smile twinking in her eyes she walked to them, and from where I was I could hear her say, "Dear angels, come along," and two tawny streaks fled over the grass.

I waited a little, then followed her. She turned southwards out of the close, over the bridge below which the big trout lie, and into the path through the water-meadows, the two tawny streaks cutting figures like a swallow's flight up and down the road, running at top speed just for the joy of the life that was in them. And once clear of the town, she looked furtively round, saw only one wayfarer a hundred yards behind, and ran too. The wayfarer quickened his pace, ready to drop into a sedate walk if she looked round. Then on the edge of the water she found a stick, and whistling to the dogs, threw it clean across the river, and a double plunge and splash of flying spray followed it. Then the streaks swam back, each holding one end of the beloved stick, dropped it at her feet, and on each side of her shook themselves, so that she was between the waters, and I heart a faint scream of dismay, and then a laugh. My house stands in the road close beyond the end of the meadows, but she went on, and still I followed, past the group of laborers' cottages, where lights were already springing up beneath the dark thatch, and out into the main road. And at that moment I guessed where she would go. Yes, to that house, no other,—the house where Margery lived, the house which was the scene of my dark dreams in August last. The collies rudely pushed their way in before her, after the manner of their impulsive kind, and the door was shut.

I was dining that evening with some people in the town, and met there an old friend of mine who lives a mile or two from here, who has usually some fault to find with me. She had this evening.

"You are a perfect disgrace," she said. "We consider you an old inhabitant of the town, and yet when new and charming people come you cannot find the civility even to leave a card."

"I am sorry," said I, penitently. "Who are they? You know I have been away."

"Well, they are coming here to-night."

"My dear lady, *who* are coming here to-night?"

Then the door opened, and they came, father and daughter.

This afternoon I went to call, up the dark road of my dreams. She had said they would not be in till nearly six, and it was already deep dusk when I reached the house, which stood a black blot against the gray sky. But the window over the porch was lit and open, and the blind drawn down over it, and from inside came a voice singing. I was admitted, but the hall was dark, and as the servant was feeling for the button of the electric light, a step passed along the passage at the head of the stairs, and began to descend, and it was a step that caught my ear with a strangely familiar sound. Then half-way down, even at the moment the light was turned up, it paused, and a voice said, "Oh, is there somebody—" and in the sudden blaze I saw her, and the passages were dark no longer.

"Ah, it's you," she said; "how nice of you to come. Oh, I've left the dogs shut up. Please go into the drawing-room; I'll be there in a moment."

So I turned up the hall to the right, and through the little sitting-room into the drawing-room beyond. She came in a moment afterwards.

"How did you know where the drawing-room was?" she said. "Isn't it the most inconveniently built house you ever saw?"

"The most," said I; "but I know it well. There was a great friend of mine who used to live here."

She looked up suddenly.

"Dick, do you mean?" she asked; "who was killed in South Africa? He was a distant cousin of mine."

"Then his wife was too," said I.

"Yes, I believe so. Why?"

"It partly accounts for it."

"Accounts for what?" she said.

"That you are absolutely the living image of her."

She laughed again.

"Oh dear, it is a terrible responsibility to be like an old acquaintance of somebody's. I shall have to live up to her. I do hope she wasn't very nice. It will be so difficult for me if she was."

"She and Dick were the greatest friends I ever had," said I.

Those beautiful gray eyes grew serious.

"Ah, how dreadful for you," she said. "It was all very sudden, was it not? The child, too."

"Yes, very sudden. I had been dining with her here, and she had gone up stairs when the telegram came. She heard the ring, and leaned over the bannister above the hall—and knew. Then the child was born. She died just at daybreak next morning. She asked me, I remember, to pull up the blind, and said, 'Let in the morning.' That was all."

"Ah, poor thing! poor thing!" she said. Then she looked at me. "Poor thing!" she repeated.

The tea was brought in, and before many minutes her father came in also. They are coming to lunch to-morrow.

That night I was out to dinner, but came home early, and sat for a long time in front of the fire, with work calling on me to do it, but simply incapable. What a strange, inexplicable coincidence it all is! How I long for and dread and love and fear the thoughts of these days that are coming! Surely this is meant to mean something! Think of the millions of little events and decisions which have gone to make up this particular conjuncture. Is it possible that they were all done in haphazard? Or is it another teasing problem that has been set me on this curious checker-board of life, ending in my checkmate,—just a piece of ingenious manœuvring of the pieces, all leading to nothing? I cannot believe that. Yet if it is not that, if love is the answer to it all.... I love to be with her; and since that afternoon in the cathedral I have thought of nothing but her. But love her? I know it is not that—yet. It is that by this curious trick which Nature has played, I feel, I am cheated into feeling that Margery is here with me again. It is as if there had been made an image of Margery, like in every respect, not only in externals, in voice, appearance, gesture, but in the deeper things as well, in her gayety and her tenderness, in that quick sympathy which sprang into being at the moment the call was made. Yet God never makes facsimiles; she too is a living soul, of her own identity, and none other's. Or—the wildest impossibilities riot in my brain to-night—is this some wraith of my Margery, Dick's Margery, sent God knows whence, to comfort me, or to drive me insane? Was there in my love for Margery, after she was Dick's wife, something which was evil, which kept suggesting, "If this had been otherwise, if Dick died?" . . . Yes, there was that. Day after day there was that. I tried to fight it; indeed, I tried. But I did not conquer it for a whole year. But in June, on the last evening of all, when she spoke to me in the garden of the dear event that was coming, it dropped dead, or so I hoped and believed. Yet for a whole year I let it live: is God going to punish me for that by these cruel means? To make me love again, and again go hungry?

It cannot be: again and again I tell myself it cannot be. But so I told myself when the telegram of Dick's death came, and, in spite of all my telling, it was true, and the tears of the whole world could not wash out a word of it. But if once more I am to go unrequited, I do not see how I can bear it. It would be wiser to see no more of this incarnation of Margery. At present I love seeing her because—because that pressed and withered flower I always carry with me has, so to speak, blushed again with the hues of life, and a living fragrance breathes from it. But Helen—I think I have not mentioned her name before—this incarnation of Margery, is also a living woman with an identity of her own. How if from loving her of whom she so sweetly and poignantly reminds me, I pass to loving herself? And if she does not care?

No, I will see her no more. My life is my own, and I will not risk that great stake again. I know the unutterable sweetness of loving. I know too the unutterable emptiness of love unrequited, even though from her who loved me not I had such a wealth of trust and womanly affection. I know also how good the world is, how full and brimming with things that are lovely and of good report. For two years, in spite of what went before, God knows how much happiness I have been allowed to enjoy, how rich I have been, levying my tax of joy on all created things, on all the strings of human emotions, except one only, love, definite love for one woman. It is strange if I cannot be content without it. True; often and often I have felt and shall feel again that this would crown all the rest; but if I again do my part in it, let myself love this girl, and nothing comes of it, how well I know with what a sense of dejection and impotence I shall have to begin again from the beginning, picking up the scattered pieces of the structure known as "I," fitting them together till some sort of coherent entity, a person of some kind, again pursues some sort of reasonable way through the world. And I distrust my own power of picking myself up again: I am afraid that this time I should let the pieces lie about, shrug shoulders at them, and drift, fossilize, vegetate, what you will.

Bitterness as black as sin and salt as the Dead Sea rises in my throat. What would I not give to see a mother with her child and my child at her breast? How unspeakably I long for that! Was it my fault that Margery loved Dick, not me? Very good; it was my fault: I have borne the punishment, and I bear it now, and I shall always bear it. And I will try to avoid the possibility of being punished for another such fault.

So I fall back again onto my life of little things. I will read the whole of Shakespeare through by next March; I will try to keep my temper; I will try to do a little honest work; I will try dancing here with the rest of the human race.

To be Continued.

Correspondence

THE REPUBLICAN PARTY AND THE SOUTH

PARIS COMMERCIAL CLUB,
PARIS, TEXAS, *February 13, 1903.*

To the Editor of Harper's Weekly:

SIR,—I have noted with pleasure your attitude toward different public questions, and among them the duties that lay before the two great political parties, and I am led to think that you will find something of interest in the enclosed copy of a letter written over a year ago to a Northern friend, who had asked me, in all sincerity, if the real reason of the non-growth of the Republican party in the South was not due to a feeling here of hostility to it as the party of the Union during the civil war:

"The mutations since the civil war have been many, but among them has not been any change in the disposition of the Republican party toward the South; it remains inimical, and yet there is wonder, such as you express, that it has not shown growth here.

"Have you and others ever considered this problem?

"Why a great party, guided by men of brains, pursuing a strong national policy, with issues upon which men would naturally divide, has found no respectable intelligent adherents in one-third of the Union?

"This is the fact. I can only give you a Southern man's reason for it, and the war or the attitude of the party during the war has nothing to do with it.

"First: The men who pose, and who are recognized, as your leaders in the South, do not want a party here other than as it is. They are mainly political adventurers who have formed a close corporation, farm out the negro vote in national Republican conventions, and divide the crop of Southern Federal patronage.

"If the Republican party became strong in the South, if it became a party of patriotism and intelligence, these adventurers would disappear, become 'statesmen out of jobs,' and their whole effort is to prevent this. Their whole aim has been to prevent the righteous people North and South from understanding each other, and as a means to this have used the negro as a cause of irritation to the North and of repulsion to the South: to a Southern man the Republican party means 'the negro'; to the Northern party the South means 'abuse of the negro.'

"Arising from this we have a constant hostility of the Republican party to the South, which has driven Southern men away from any consideration of its claims or policies as a broad national party. That the South is loyal to the Union and has proven it, that she is ready to respond to a generous deed or thought, that, impoverished by the war and under such burdens as few people have ever struggled with, her industrial development has been marvellous, and accompanied by other changes making it a field for the widest and wisest statesmanship—has been ignored; we have been isolated, and forced into one political alliance, and whatever we have achieved has been in spite of, and not with any aid or counsel of, the Republican party.

"To the negro 'as a negro' there is no enmity in the South. In every business relation he has an equal and exact show with his white neighbor. He can be, and is, lawyer, preacher, doctor, teacher, tradesman, craftsman, farmer, and laborer; in these relations he has the countenance and support of the white people and the protection of the courts, fully and fairly rendered. Out of our scant means we have provided for his children the same education we have provided for our own. But here we stop.

"No class of Southern people are willing to be ruled by the negro, or by the designing white men who have had him in hand as a political machine, and run him 'for what there was in it.'

"For the same reason that the decent people of New York fight the rule of Croker and the Tammany grafters do we fight the rule of the Southern wing of the Republican party as now constituted of an ignorant and often vicious mass, led by a few political plunderers. Their rule means the ascendency of ignorance and corruption. One experience we have had when 'the past and the present were plundered, and the future mortgaged,' and we want no more of it.

"If in the North there existed anywhere a negro element such as we have, of large enough vote and under leadership, to endanger what all Americans consider good government, you would have there the same close cohesion of all good people in opposition to negro rule.

"Further, the South is intensely American; nine-tenths of her people are of Revolutionary stock; it has had but slight foreign admixture; its characteristics, thoughts, and ideals are Saxon; it has all the Saxon's pride of race and race achievement, and any one who expects such a people to be ruled by other than their own kind has not read aright the history of the race. To us the negro is alien and inferior, and while he is welcome to live and earn, to all that goes into material welfare, socially and politically, he is alien and inferior and shall so remain; he is not of our race, and with it shall not commingle.

"The South is not naturally Democratic; prior to 1860 it was a strong Whig section, and the Republican party could have been a strong growing factor in Southern political life if it had not pandered to sectionalism and negrophilism.

"Take the free-silver craze. In Texas alone in 1900 140,000 absent Democratic votes simply because Bryan and free silver could not command their support. Many people in the South believe in an assured financial system, in the growth of the country, in our flag, and all it should stand for to the peoples of this world, and in many things not represented by our present style of leaders; but, deep as is our interest in these things, deeper yet is our feeling for a decent, honest, local administration, in the supremacy of our race and its supreme fitness to rule and govern.

"Statesmanship may be partisan, but should never be sectional: sectionalism, destroying the opportunity for growth in the rebuffed section, leaves the party entirely dependent upon the other, and it, quick to see its advantage, soon becomes dictator to the party for its own selfish ends, and today the Republican party is ridden by interests that can take away its strength in your section while its own conduct has barred it from recouping here. This is an evil for the country, and an evil for any great party that seeks to govern the country.

"During the sad days after the tragedy at Buffalo there was heard from the South no word of approval, even of extenuation. Only a deep, sincere sorrow for the President and his loved ones; an equally deep and sincere indignation for the deed.

"The sturdy Americanism of the South would under no conditions condone anarchy. But have you not at the North a large, and, under our loose emigration laws, a growing element that applauded as loudly as it dared the murder of the President? Is not this element a standing threat against a government of the people, against 'liberty under the law'? And is not the day coming when the American people will thank God for the strong, steadfast Americanism of the South as the best safeguard of this government of the Fathers?

"Let the negro go. Let him understand that, North or South, there is a white people who will not link their race to his coarser clay 'to drag them down.' That, politically and socially, the white man is the ruling man. Eliminate him as a national question, and you will nearly eliminate the negro question. Industrially, there is no question.

"When that is done? When North and South there arise statesmen who ignore sectional lines, and with wide and wise vision see that there is a great and united country awaiting their guidance to 'the shining hills of hopes fulfilled,' then will Republicanism, like Democracy, become the faith of a country, and not of a section."

I am, sir,

COLLEGES FOR GIRLS

PASADENA, CAL., *February 26, 1903.*

To the Editor of Harper's Weekly:

SIR,—In your issue of February 14, 1903, you had a fine bit of writing in résumé of gifts to education during the year 1902 (I believe it was so limited: the number is not by me) in which I was interested.

It occurred to me that you might be the means of a great service to the general educational facilities of the country if you chose to call attention to the rather remarkable fact that all the colleges of first rank for young women only are situated in the extreme East, *not one being west of the Alleghany Mountains.* This occurred to me some years ago (while I was visiting this section for the first time) as a strange thing. It also occurred to me that a college of like grade with Smith, Vassar, Wellesley, etc., would be finely located here in Pasadena, where pupils could study out-of-doors *all the year round*, giving to some, who are physically unable to take a college course where so much of the life must be in heated and partially ventilated rooms, a chance to do it in the sunny land, the sunniest good section of our whole United States, where doors and windows stand open (or may and should) all day, every day.

Subsequent residence here has confirmed me in the wisdom of a philanthropy which would found such a college, equal in grade to Stanford and Berkeley, in this choice city of homes. One year I ascertained that 141 young women from this coast were in attendance on the Eastern schools, while Stanford had nearly 300 from east of the Rockies. President Jordan tells me this is a regular thing, and said he believed that such a college here would be a godsend to Eastern girls and parents.

Smith began with less than $400,000. A foundation of that sum might be conditioned on the subscription of an equal amount by the residents of the Pacific coast, which *would be done*, the founder to name the college.

There are a good many on this coast who can't afford to go East, and don't like to go to a mixed college, who would thereby be able to add a college course to the high-school course, with which they now cease school-work.

I have crudely given some of the points. If you should care to put a brief note in the WEEKLY, it might find the founder.

I may add that I am interested in this only as an educator, being anchored *for life* to my Lasell.

I am, sir,
C. C. BRAGDON,
Principal Lasell Seminary, Auburndale, Massachusetts.

The Last Work of Frank Norris

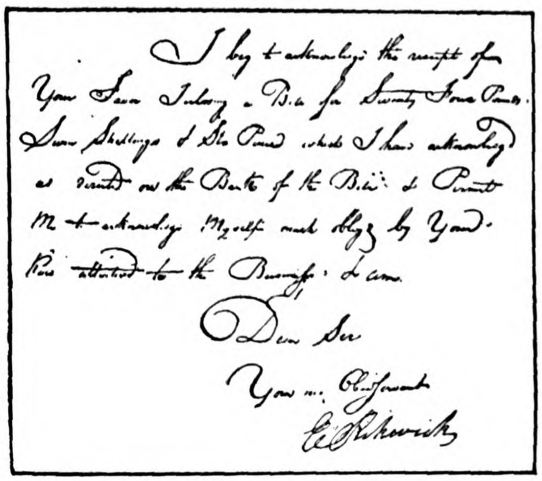
TIME will no doubt undo the effect of death in taking the gifted young novelist from his task, so far as to relieve his last book from the appearance of challenging the primacy of his earlier and more masterly achievements. It is the present misfortune of his fame that the second drama of the three which he imagined for his greatly designed trilogy of The Wheat should follow haltingly upon the first with a pace which the third shall never come to help it mend. But it will be all the more the care, as it should be the generous will, of those who read *The Pit* to remember that we have had *The Octopus*, and that we were to have had *The Wolf*, in which the story of the food and famine of the world was, and was to have been, fully told. The first of these three was adequate, and the second is not adequate, but it is more adequate than it seems in the incomplete perspective. One may fancy in it the faltering of the hand unconsciously prophetic of fate, the impatience of him who fights with numbered days; for as Lowell said of Keats, "as we turn the leaves, they seem to warm and thrill our fingers with the flush of his warm senses, and the flutter of his electrical nerves, and we do not wonder he felt that what he did was to be done swiftly."

The book has the pathos of this apparent haste, and yet looked at with due reflection it has not the effect of a hastily imagined thing. The material is less picturesque and less dramatic than that of the book dealing with the growth and garnering of the wheat in the fields which were robbed as well as reaped. There is no such episode as the struggle of the farmer, gun in hand, with the railroad, but the descent into the Pit of the great Bull who has been destroying himself in his reckless play with the suffering of millions of men and women and children, is no mean incident, and the novelist has wrought it into fiction both strong and fine. The pity of the thing is that so much of the book relates to the unimportant society side of the business, to the half-cultured, half-ignorant, wholly egotistical woman who stands for the heroine, when its sole heroine should have been The Wheat. The author has not sufficiently mastered her personality, though he has almost done it, to let us feel that he feels her essential vulgarity; he has not shown us a rich nature depraved by the reckless game of the man fighting and tricking the hapless unhungered for the bread in their mouths, but a cheap nature ready to betray him for the flatteries and caresses of another cheap nature. The tragedy is not in the domestic story of Laura and Curtis Jadwin, but in that of the poor old Cresslers, who are dragged down with their wreck, and are sacrificed against their wills and principles to the insensate ambition of Jadwin. Before the story is finished, one has quite ceased to care for either of the Jadwins, whether she was ruined through her greedy vanity or he through his ruthless lust of power. Let her go with the meretricious esthete who makes love to her; let him fall under the feet of his enemies in the Pit; we cannot care, and we are not interested to know that they really go to a new scene to rehabilitate their unessential lives.

Perhaps if the author had taken time to think out his material a little more thoroughly he would have found a hint in it of immense importance to our imperfect civilization, a truth known dimly and dumbly to those who suffer the worst harm from the facts. It is not alone the luxury of our Jadwins which is vulgar; it is the Jadwins themselves who are vulgar, by whatever other names they call themselves in Chicago or New York, or by whatever difference of social circumstance they distinguish themselves from one another. It is for such brute state as theirs that the earth groans with harvests and her children with hunger, and we have not quite an assurance from the novelist that he senses their vulgarity. He leaves us to fear that somehow the woman's beauty, and the man's courage have blinded him. Yet there are passages and touches throughout the book that testify to his insight and his ability to paint the make as the well as the manner of his people. There is excellent characterization in his work, and occasionally a robust and powerful dramatization. For him it is too late to inquire whether the savage mock-splendor of the Chicago which he portrays has not held for him the glamour that it may have worn for him in his earlier years, and whether he has not approached it with less detachment than he kept in dealing with the facts of his California story, which he saw with maturer eyes; but for the critic of his work, and for the student, the suggestion may have value.

The book wants balance, as we have hinted, and it is overweighted with fact of the less rather than the greater importance; it should have toppled, if at all, to the side of the wheat gambler—not the wheat gambler's wife. Where the work is with the scenes in the grain exchange, the Pit, it is always masterly, from that first glimpse of the Pit in the beginning, to that battle-piece at the last where Jadwin breaks with tradition and convention, and he, the great Bull, enters the arena in person, and fights the Bears to his death. In these moments, and such as these the book magnificently succeeds, but there are other moments when it is as true and still finer, such as those when it reveals the prim, pure, high nature of a girl like Page Dearborn; the gentle, motherly goodness of Mrs. Cressler; the flat, kind, commonplace of Mrs. Wessels. For the rest, one could have wished the material had been scanned by the severer eye of the author's later experience. It is on the society side that it is weak; it is not so weak on the social side; and on the human side it is worthy to stand with the author's greater work: not on the same level, indeed, and yet not fatally below it, as nine-tenths of our other fiction must. On what may be called the physical side, it is wonderful. You can see, hear, feel those people.

"Astronomy Invoked to aid Religion"



THE geocentric theory of the universe has been revived in a new form, and that by a scientist who, although not an astronomer, has, as a naturalist, acquired the highest reputation in his specific field of research. Dr. Alfred Russell Wallace, the author of the article in the *Fortnightly Review* for March entitled "Man's Place in the Universe"—the substance of which was cabled to the New York *Sun*—does not, of course, assert that the sun moves round the earth. What he undertakes to do is to advance a series of arguments in support of the hypothesis that the solar system is the physical centre of the stellar universe, and that the earth is the only member of the solar system in which life not dissimilar to that with which we are familiar could have been originated and evolved. If these premises are admitted, the conclusion deduced by Dr. Wallace would be that the supreme end and purpose of the vast universe was the production and development of the living soul in the perishable body of man. The arguments may be summed up in a few sentences. First, the stellar universe is limited, the number of stars made visible by telescopes of the highest powers approximating to the number of stars in existence. The proof of this assertion is the fact that while, as we proceed from stars of the first to those of the ninth magnitude, the number at each lesser magnitude is about three times that of the next higher, not only does this rate of increase fail to be maintained as we pierce further into the depths of space, but is replaced by a continuous diminution in the number of stars. An approach to the outer limits of the stellar universe is thereby indicated. To put the same fact in figures, there would be about 1,400,000,000 stars visible, if the rate of increase observed down to the ninth magnitude had been retained down to the seventeenth magnitude. As a matter of fact, the latest estimate does not exceed 100,000,000. The same conclusion as to the limited extent of the stellar universe is deduced from an analysis of the laws of light. Professor Newcomb and other physicists have affirmed that, if the number of stars were infinite, their combined light would be fully equal to that of the sun at midday, while, as a matter of fact, starlight is only one-fortieth as powerful as moonlight. This proof, viewed in connection with the continuous diminution of the number of stars remarked as we penetrate from those of the ninth to those of the seventeenth magnitude, is regarded by Dr. Wallace as conclusive evidence of the limited extent of the stellar universe. It is contended, in the second place, that the inference from the whole mass of facts accumulated by means of the best modern telescopes is that our sun occupies a position very near, if not actually at the centre, of the whole visible universe, and, therefore, in every probability, at the centre of the whole material universe. As for the third position, namely, that life, as we know it, could not have originated and evolved in any member of the solar system except the earth, there is no doubt that a large majority of astronomers and physicists would accept it.

It is obvious that Dr. Wallace's purpose is to overthrow the main objection to the Christian view of creation. The tendency of astronomical research up to the present time has been so to emphasize the vastness and complexity of the stellar universe as to reduce the importance of the relatively tiny spheroid that we call the earth almost to the vanishing-point. In the light of such knowledge, sceptics have pointed out the irrationality of supposing that the Creator of such a universe should have felt any special interest in so pitiful a creature as man, the imperfectly developed inhabitant of one of the smaller planets attached to a second or third rate sun. They have dwelt on the inconceivability of assuming that the Creator would have selected this tiny orb for the scene of the sacrifice of His Son, in order to save a portion of its inhabitants from the natural consequences of their sins. This objection to Christianity's conception of the cosmos would lose much, if not all, of its weight could we believe with Dr. Wallace that we occupy the central position in the universe, and that nowhere else could the orderly development of living souls be attained. What ground is there for assuming that the conditions would be more favorable on a planet belonging to a system at the centre of the universe than they would be on a planet belonging to a system remote from the centre? Does Dr. Wallace mean to assert that the heat generated by our sun is greater than that emitted by any other of the stars? That, certainly, is not the conclusion at which many of the foremost astronomers have arrived. This, at least, however, must be said for Dr. Wallace, that he has taken the bull by the horns.

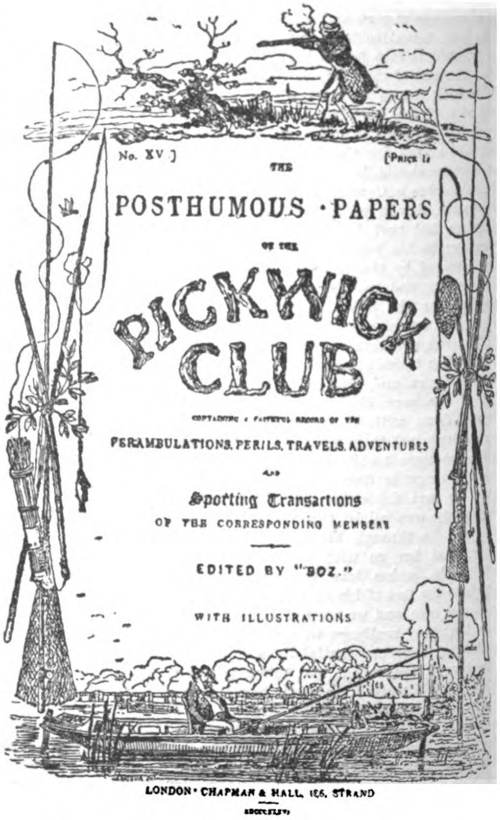
Books and Bookmen

THE anniversary of the birth of Charles Dickens was celebrated at Bath, on February 7, by the unveiling of a tablet, and a Dickens dinner. Dickens never lived in Bath, but his intimate friendship with Walter Savage Landor, who lived there for many years, took him to the city often. On such visits he stayed at Landor's house in St. James's Square, and here he planned out the story of Little Nell. The tablet to Dickens has been placed on No. 35, St. James's Square. It was hoped that Dickens's only surviving son, Mr. Henry Fielding Dickens, K.C., would have been able to unveil the tablet to the memory of his father, but he was unable to leave London, and the task was performed by Mr. Percy Fitzgerald, President of the Dickens Fellowship. The ceremony was witnessed by a large gathering. In the evening a dinner was held in the Assembly Rooms, where a delightful Dickens *menu* was provided. The courses included "boiled mutton and caper sauce, with the usual trimmings," and "chops and tomato sauce," etc. Interesting letters were read at the meeting, from Lord Roberts, Lord Rosebery, the Dean of Rochester, and others. Lord Rosebery said: "I am glad to hear you are going to celebrate the birthday of Dickens at Bath, and trust that your celebration will be held in the room in which Mr. Pickwick played his immortal game of whist." Lord Roberts wrote: "The works of Charles Dickens always had a great fascination for me, and I well remember with what delight I used as a boy to look forward to the arrival of the monthly number of *David Copperfield*, and I have always retained my admiration for his works."



Facsimile of a Receipt signed by E. Pickwick

The accompanying facsimile of a receipt, signed by "E. Pickwick," which is dated Bath, January 5, 1802, is a curiosity inasmuch as it is the original document from the hand of a celebrated coach proprietor at Bath, from whom or from whose coaches Dickens derived the name of his hero in *The Pickwick Papers*. Another curiosity is the reproduction of the original cover design that was printed on the celebrated green covers of *Pickwick*, as it appeared in monthly numbers. The drawing was made by Seymour, and it is noticeable that the only figures in the design—Mr. Winkle with the gun, and Mr. Pickwick angling—are both engaged in sport. The fact is, as nearly every one knows, that Seymour's sketches were to be the chief feature of the work; the facetious drawings being intended as a joke at the expense of the Cockney sportsman, and as Dickens had made an impression as a facetious humorist in *Sketches by Boz*, the suggestion that he should write up to the drawings came about naturally. Observe that these papers are put down as being "edited by 'Boz.'" But the work, undertaken at first as a bit of hack writing, took hold of the writer's imagination, and very soon he insisted that the drawings should grow out of the text, and ultimately obtained permission to write in his own way. The design for the cover and four illustrations in the first number were all that Seymour executed. Dickens set out with only the vaguest scheme for the book, and even the personality of his central character was not clearly defined. The first type for Pickwick was a long, thin man. It was Mr. Chapman, the publisher, of Messrs. Chapman and Hall, who originated the figure of Pickwick as we know him, by a description which he gave Seymour of a friend of his at Richmond, who wore drab tights and gaiters.

The opera bouffe burlesque, "Mr. Pickwick," which is being played in this city has started several metropolitan pens writing on past performances of Dickens, and possible revivals and new versions in the future. So far as we have observed, none of these chroniclers has recalled the interesting fact that Dickens himself showed early theatrical proclivities. At the age of nineteen he had resolved upon a theatrical career, and while preparing himself to become a reporter in one of the offices in Doctors'-Commons, he applied to the manager of Covent Garden Theatre for an opportunity to show what he could do. Only the accident of illness prevented his keeping an appointment which was granted him, and, getting a start in journalism soon after, the application was not renewed. Plainly, as Mr. Gissing in his admirably written *Life of Dickens* points out, Dickens came very near indeed to entering upon an actor's life, and so close throughout was his connection with the theatrical world, that one cannot glance at this incident as a mere detail in the story of his youth. It declares a natural bent of mind, and he did in the end become, if not strictly an actor, at all events a public entertainer whose strongest efforts were produced by the exercise of melodramatic talent. As an amateur, he acted frequently throughout his life. As a dramatic author he might have succeeded had he bent his energies to the task with serious intent; but what attempts he made in "The Strange Gentleman," a farce played in 1836, in "The Village Coquettes," a libretto produced in the same year, and in "The Lamplighter," a farce written in 1838, but never acted, gave no great evidence of dramatic powers.

The recent news of the arrest at Budapest of a notorious gang of thieves, whose chief turned out to be a publisher, recalls the story of George Augustus Sala's presenting a Bible to a certain London publisher who had handled some of his books. The publisher was at a loss to understand just why he should have been singled out for this peculiar gift, until some time after he discovered a slight change in the wording of John xviii. 40, where the phrase, "Now, Barabbas was a robber," was made to read "Barabbas was a publisher." When Miss Corelli's *Barabbas* appeared with this text on the title-page, a reviewer, quoting the words in his review, evidently indistinctly written, received the proof with the amazing statement, "Barabbas was a ratter." Correcting it, he deemed it wise to see the review through to a finish in print, and asked for another proof. Either the proof-reader was not given to searching the Scriptures, or his zeal for truth led him to overconscientiousness, for the writer found his correction garbled to read, "*Barabbas* was a rotter!"

Finance

THE vision of financial reform and of a much-needed elasticity of currency, held out before American business men, has passed in a political wrangle in which jealousy and the spite of factions have unfortunately figured. It was hardly to be expected that a short session of Congress could have passed a measure of so much moment and one so radical in comparison with our own antiquated system. But the crisis of last fall demanded that legislative precedents be set aside in the universal clamor for ways and means of conducting the business of a constantly expanding nation. The opponents of the Aldrich bill in the Republican party, or rather those who silently condemned it while they attempted to substitute their own proposal for asset currency, are now considering the introduction of a bill at the next session of more popular form, and are likely to make concession to the demand for less liberality in banking convenience. With Congress adjourned and the currency system on the old basis, there is no loss and probably a good deal of gain, as the necessity for legislation that will improve the banking methods of the United States is more prominent to a larger number of persons than ever before. Recent years have produced a cumulative moral support to financial reform measures of sufficient strength to give authors of currency bills ever-increasing audiences. Eventually, some degree of success will be accomplished. But the question that is agitating bankers, who cannot act on promises or possibilities, is, What is to be done until a new Congress meets? What will the Secretary of the Treasury do to assist, now that he has bought all of the government bonds available, and with the necessity for withdrawing deposits in national banks to fulfil government obligations, rather than to augment those deposits, as he did last November? The municipal bond dealers, who have had an unmarketable mass of securities for several years, seem to think that the solution of the whole problem lies in the acceptance of their various issues as security, but the Treasurer withdrew his act of purchase as soon as the money stringency had been relieved. He may, however, renew it in emergency. It is emergency measures that will have to be appealed to until the statutes are changed. The situation will be more complicated and much more serious this year, inasmuch as $40,000,000 (estimated) of moneys will be withdrawn from circulation by the trust companies of New York city, who are required after June 1 to maintain a reserve of 5 per cent., gradually increasing to 10 or 15 per cent. Heretofore their moneys have been on deposit with the local banks, who have loaned them out on call.

The stock-market is without a leader; is likely to be for some time. No one wants the task of infusing the speculative spirit into a public that slowly accepts the current preachments on ways to secure material profit. And the men who might lead have no encouragement from the more powerful ones who really create the conditions. The lack of support given to syndicate operations, which two years ago would have yielded very handsome profits to subscribers, shows conclusively that even the largest banking interests have extended their credits to a point where they are approaching deadweight. The latest return of the associated banks of New York city gives the loans as $950,156,000, and the deposits as $956,206,000. A $75,000,000 expansion in loans in a month's time is quite too rapid an increase for safety measures. A vigorous Western money demand has started, and the South will soon be requiring her seasonal fund for planting. The enormous home consumption, which draws on the markets of foreign countries and adds to our customs receipts, while decreasing our balance of trade, puts money into an unyielding treasury to the country's exasperation. The money-market has started in to show these unsatisfactory conditions, with the result that mercantile accommodations for time periods have risen 1 per cent. in a comparatively short period. This is one of the most salient causes influencing the stagnation and the slight weakness in the stock-market.

The prospect of gold exports, which has been hanging over the market for some time, has passed into a somewhat remote contingency since the advance in money rates. It has been figured out that a very large sum would be sent to France to pay off the loans made during the past twelve months. As it is now, the shipments are likely to stop with small amounts sent to Argentina. As a matter of fact, the past week has seen the reappearance of loan bills on the New York market. There is not much likelihood of borrowing money in London, where the demand for domestic needs maintains a firm rate, but a 5-per-cent. time rate here will, if continued, send funds this way from French bankers, who, with large supplies, have not a very heavy home requirement. The New York bank reserves are down to the lowest point for this season for many years. There is still enormous business activity, and corporate enterprises are reaping a large proportion of profit from their activities. So the good and the bad features of the general financial situation are curiously intermingled, balancing, in some instances; again, the one outweighing the other. On the one hand are seen increased dividends, and, on the other, increased capital issues. And there are current examples of new capitalizations being spread over a very thin surface.

A PLAIN TALK ABOUT HARPER'S WEEKLY

NEARLY a year ago HARPER'S WEEKLY first appeared in its present form—an editorial comment section of sixteen pages and an illustrated section of twenty-four pages, forty pages in all, not counting the special numbers. From the start the New WEEKLY succeeded even beyond our own expectations. Its appeal is to every American of intelligence. If you have seen a copy of the WEEKLY during the past year, you know how its aims—the interesting exposition of American progress and of the vital questions of the day and hour—have been carried out. And if you are a reader of the WEEKLY, you know, also, that if you never saw another paper, daily or weekly, you would have every week from HARPER'S WEEKLY the complete news of the world in text and pictures, by the best writers and artists.

Every week there are, besides the editorial comment and special articles on the vital questions of the hour, complete articles on American progress, summing up fully the present situation and showing where we lead or will lead in art, science, industry, education, literature, the mechanical arts, etc. In a forthcoming number, now arranged for, William Dean Howells will write an article on the outlook in literature, and will, besides, be a regular contributor on current questions and events; Mark Twain, also, will write regularly for the WEEKLY. There will be special articles on the home—home life, the outlook in business and in the professions, and so on—which will be of special interest to every woman. This issue begins the series of new covers. There will be a different cover from now on every week.

Next week, among other features, there will be a character sketch of King Edward, drawn for the WEEKLY by Peter Newell; twenty years of American opera with the outlook apropos of the 20th anniversary of the Metropolitan Opera House in New York; the practical use of wireless telegraphy in actual war, etc.

We want you to see HARPER'S WEEKLY regularly. The subscription price is $4.00 a year. If not already a subscriber order from your nearest newsdealer, or send direct to

Official Legal Notice

THE CITY OF NEW YORK
DEPARTMENT OF TAXES AND ASSESSMENTS, MAIN OFFICE, BOROUGH OF MANHATTAN,
NO. 280 BROADWAY, STEWART BUILDING.

January 12, 1903

NOTICE IS HEREBY GIVEN, AS REQUIRED BY THE Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens, and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903.

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturday, when all applications must be made between 10 A. M. and 12 noon.

JAMES L. WELLS, President,
WILLIAM S. COGSWELL,
GEORGE J. GILLESPIE,
SAMUEL STRASBOURGER,
RUFUS L. SCOTT,
Commissioners of Taxes and Assessments.

THE NEW BOY AT DALE

By CHARLES EDWARD RICH

Illustrated by Florence Scovel Shinn

Before his arrival at Dale school, Giovanni Martin's experiences had been many. Stolen when a child, he runs away, joins a circus, becomes a clever acrobat, saves a child of the Stantons, who are, in truth, his own parents. Intensely interesting, full of incident, with a tone of wholesome sincerity that makes right reading for boys and girls.

JOSEPHINE DODGE DASKAM'S NEW SERIAL

THE BIOGRAPHY OF A BABY

Illustrations by F. Y. CORY

This is the first serial by Miss Daskam, whose short stories of child life have made her famous.

"PICTURES OF PEACE," . . . . . by Marion Foster Washburne
A most unusual article. Illustrations by Clarence F. Underwood.

"TWO CAREERS," . . . . . by Miss Jessie Wilcox Smith
Two exquisite full-page pictures by one of America's best artists.

"AUNTS," . . . . . by Margaret Deland
A brilliant paper in which one of the best American essayists pays her respects to that misunderstood and noble band.

OTHER FEATURES

COLORED FRONTISPIECE, by the Roses, of Paris.
"THE EARTH CRY," a Poem, by Theodosia Garrison.
"THE ULTIMATE MOMENT," Chapter IV.; by Wm. R. Lighton.
"AN EASTER CANTICLE," By Clinton Scollard.
"SPRING RECIPES," By Maria Blay.
"HOUSEHOLD LACES."
"THE TAILOR FINISH."
"STORIES WITHOUT WORDS," Picture No. 4, by Florence Scovel Shinn.
"OLD BLUE CHINA," by J. W. Guthrie.
"THE RESIGNATION OF THE SECOND VICE-PRESIDENT," by Caroline Benedict Burrell; illustrated by J. K. Bryans.
"ROUNDING OF A SCENE" (Short Story), by E. Nesbit.
"MIDNIGHT SUPPERS," by Josephine Grenier.
"BOOKS WORTH READING."

AND MANY WELL-FILLED DEPARTMENTS

HARPER & BROTHERS, FRANKLIN SQUARE, N. Y.

THE REFLECTIONS OF AMBROSINE

By ELINOR GLYN

Author of "The Visits of Elizabeth."

The story of a woman of fascinating personality. Ambrosine's highly original and entertaining comments enliven every page in the book. Colored frontispiece. $1.50.

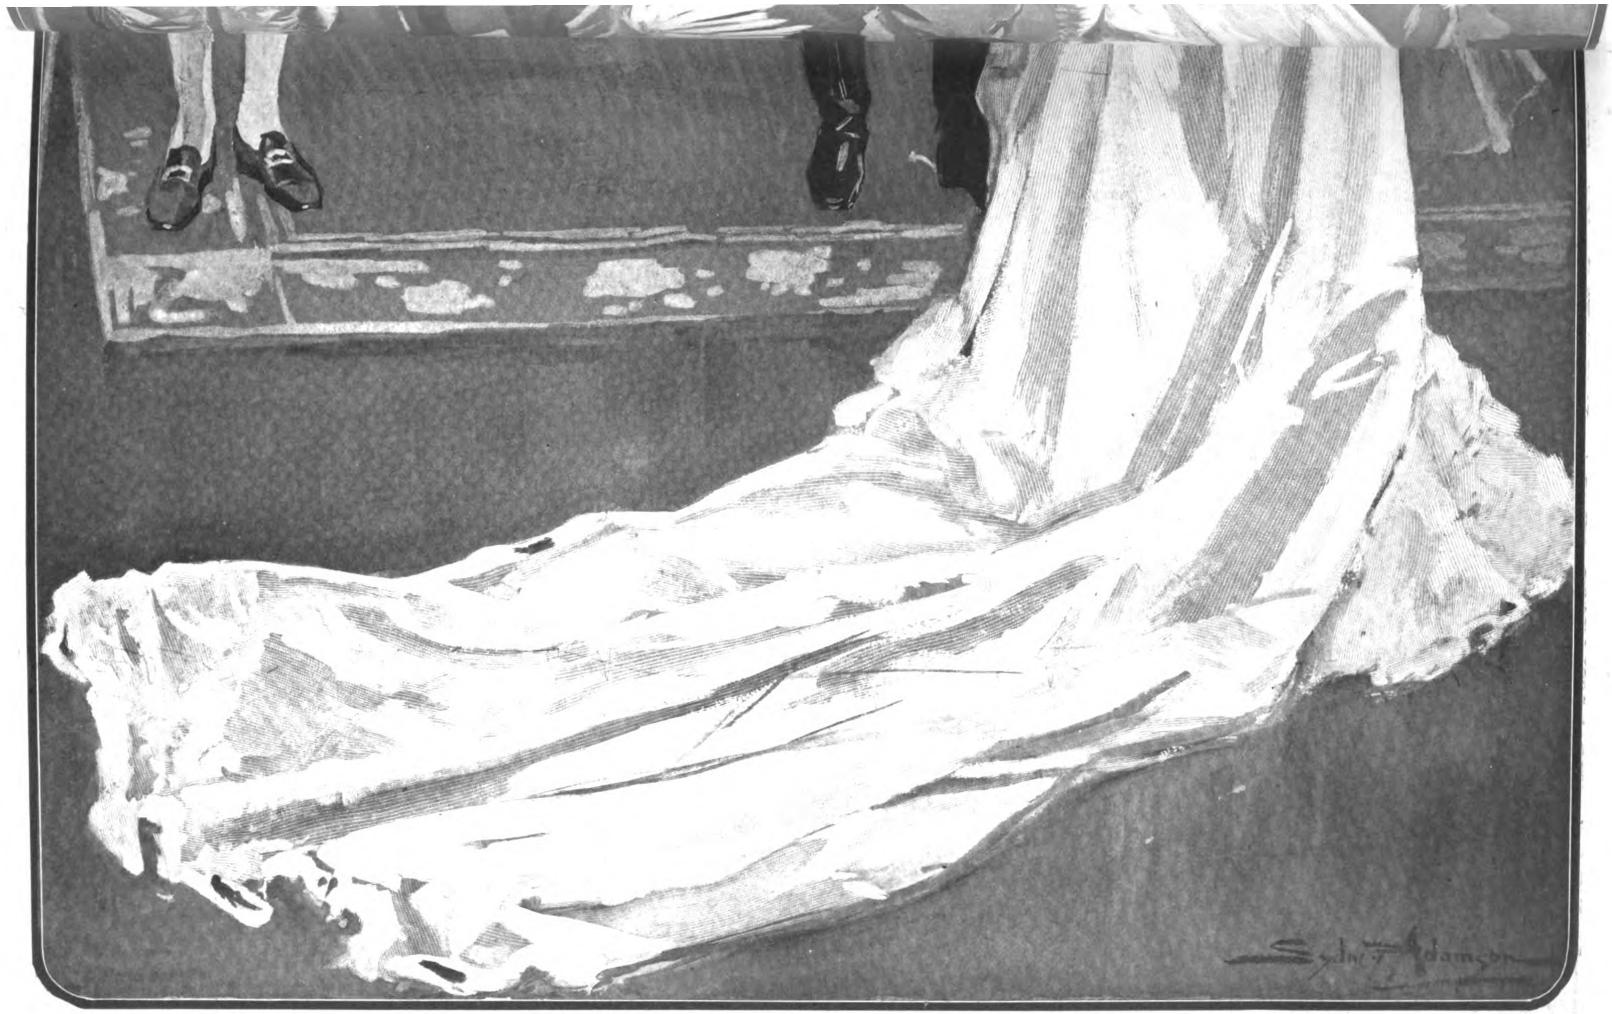
WAITING



Here am I, but where is he?
What delays him? What beguiles?
Whose distracting words or wiles
Keeps my fated one from me?

I am I, but who is he?
Is he rich enough to spare
Hours and days that I might share,
Loitering unaware of me?

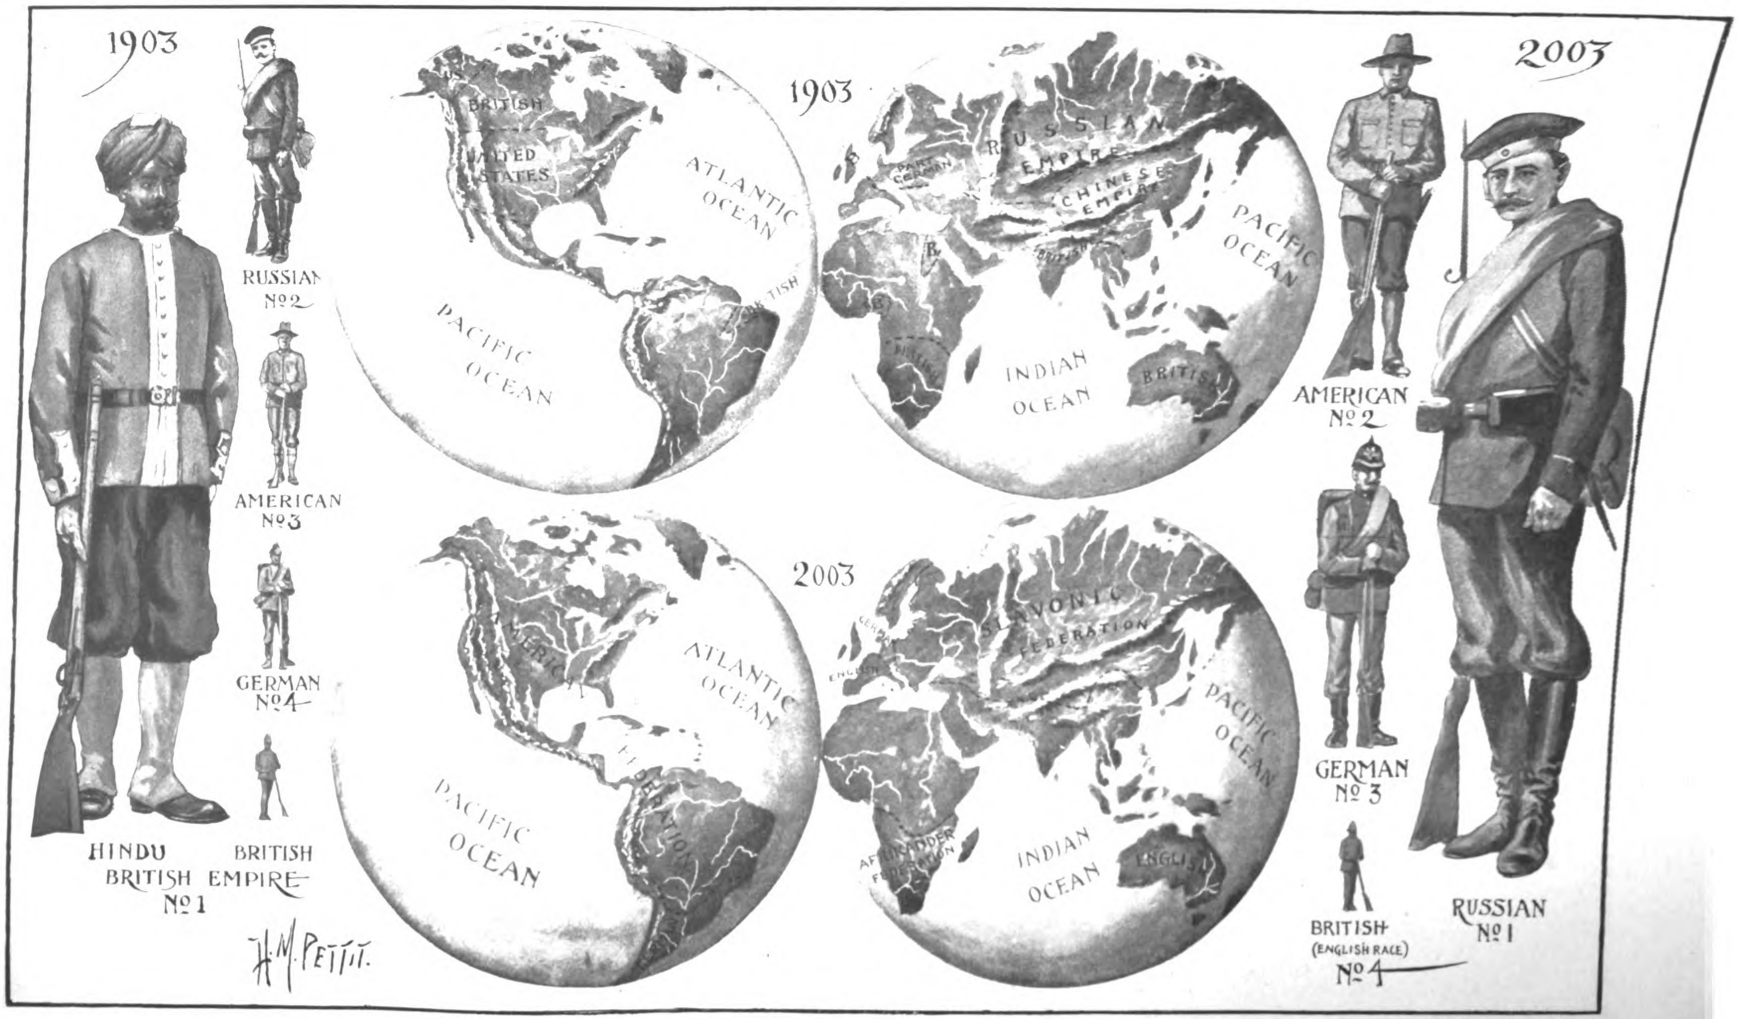
THE AMERICAN GIRL AT THE COURT OF KING EDWARD



The presentation of the American girl at the English court gives her the entrée into the best social life of Europe. This year the first presentation took place on Friday of this week at the Drawing Room in Buckingham Palace. Miss Evans, the daughter of Henry Clay Evans, who has just been appointed Consul-General to London by the President, was the first American girl of the season to be formally received by the King and Queen

WHO WILL CONTROL THE WORLD A HUNDRED YEARS FROM NOW?

To-day, in 1903, the British Empire leads the world in territory, power, and, exclusive of China, in population. To-morrow, in 2003, the prospects are that Russia, having absorbed China, will lead in population, while the United States, having absorbed North and South America, will be first in territory and power. The probable division of territory and the relative development of races in population are shown in the above drawing

A Century Hence

By Charles Johnston

Bengal Civil Service (Retired)

In every community there are a few men ho count; the rest take their direction om these. In society, a small number of omen of originality and power take the ad in everything, while the rest are glad o follow suit. So in the greater society, ne greater community of the world, a few ations or races count, and the rest are uled by these; not only politically, but n thought, feeling, genius, and inspira- ion.

In looking forward to see what a cen- ury may bring forth, the first matter to et clear is which of the nations count, and hich are, as the Sanskrit proverb says, mere empty measures, filling up the gran- ry." One sound and practical way is to ee which races have succeeded in estab- ishing sovereignty over a large number of ndividuals; in other words, to begin with he largest empires, numerically, and to work down from these to the lesser powers. For to establish an imperium over a vast body of men is one of the very strongest symptoms of effectiveness in a race. The

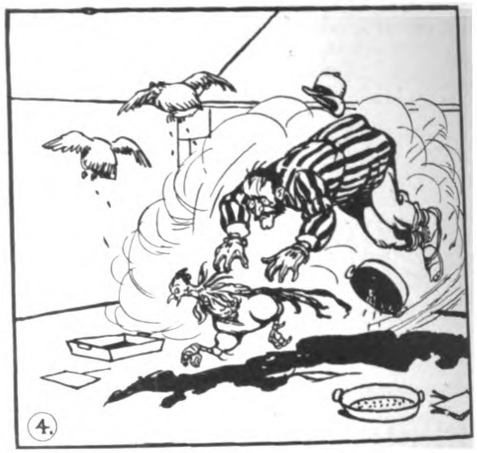
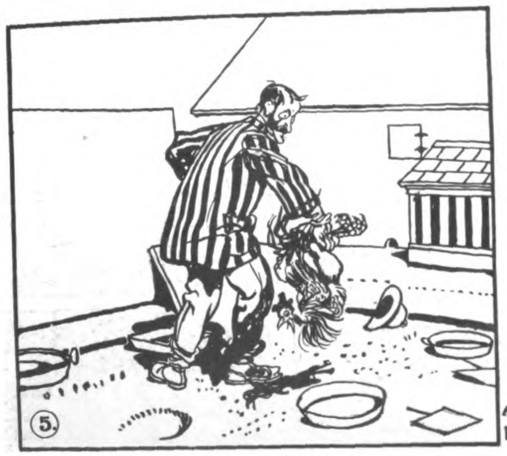
The SUBURBAN GARDENER, and The CHICKENS and The ONIONS

A STATEMENT BY ALEXANDER COMMUTER SMART · A STUDENT

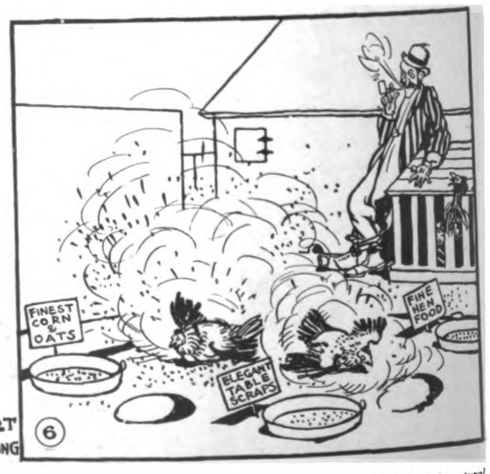


First of all, I must explain that the onion bed was not my idea. Moreover, I was fully aware of the intelligent surveillance which was being kept over my progress.



But since the preceding year I had perfected a sane and no less humane idea, with which I hoped to circumvent their customary depredations.

On a day I found the hens dining freely from my careful preparations. But that hybrid old buzzard was continuing his destructive efforts exclusively to my onion sprouts. Why?



A new thought struck me, and to prove its correctness I determined thereupon the immediate capture of the male bird.

This somewhat difficult task assured I proceeded to incarcerate him in a disused coop of our own, and proceeded to study the hens—

BY ALBERT LEVERING

Who immediately flew to my onions. Thus, good sir, in this natural manner I have proven correct a theory I have long held—that women folk, if quite sure man is away, will indulge in onions.

(Continued from page 439.)

most populous of all states is what our statisticians, most deceptively, call "the Chinese Empire." Let us, then, begin by facing the Yellow Peril. Where will it stand in a hundred years?

Our statistics are deceptive because, strictly speaking, there is no Chinese Empire—that is, the imperium, or sovereign power, is nowhere in Chinese hands. The Chinese cannot even rule themselves, much less do they rule any one else. The imperium among them is held by a handful of stiff-necked Manchu Tartars, men of much the same race as the great mediæval conquerors, Genghis Khan, and Timur the Lame, whom Dryden called Tamerlane, and Coleridge's friend, Kublai Khan, who did a stately pleasure dome decree. These Manchu Tartars undoubtedly had the gift of sovereignty, the genius of rule, the great binding power of collective will, without which even hundreds of millions can no more hold together than so many grains of dry sand. They also had the cementing quality that makes empires, the quality which the true Chinaman so conspicuously lacks.

The Chinamen are an immense heap of human grains of sand, without binding power, without collective will; therefore they have no political weight at all. And with a race so old, so definitely crystallized psychically, so to speak, there is no great chance of their gaining this quality within a hundred years, or thrice a hundred. They are no peril at all politically, so long as they try to stand by themselves. And the Chinese are the first to recognize it. Therefore they tolerated the Manchu Tartars these three hundred years, having already had a Mongol dynasty, cousins of the Tartars, for several centuries before. There was a brief interlude of Chinese rule between the true nomad Mongols and the Manchus, but it ended badly, with the last dynast hanging himself on an acacia-tree. So perished Chinese sovereignty.

Manchuria is in fact a Russian province, whatever it may be in law. Politically, therefore, the Chinese can never count. Commercially, however, they will count in an ever-increasing degree. The commercial growth of Japan will be a drop in the ocean compared with China. Our capitalists and laborers should agree with each other quickly, while they are in the way, lest they be delivered into the hands of the Chinaman. Let them ask the English merchants and officials of Singapore or Hong-kong what the Chinaman can do, economically, and be wise in time.

The so-called Chinese Empire is estimated to number just over four hundred millions. The British Empire is something under the same figure. The two together make up half mankind. We may now look more closely at the British Empire, to recognize the elements of which it really consists.

First comes India, with its three hundred millions of half-starved brown people, who for long centuries have not counted in the world's destinies, nor will they ever count again. There are a few millions of red or white race who do count, but we must pass over them now. Governing these three hundred millions stand some nine hundred inhabitants of the British Isles, many of the most gifted coming from Scotland or Ireland, just as all the soldiers of genius in the British army, the Wolseleys, Kitcheners, Robertses, and the like, are of Irish birth. A small army of English, Irish, and Scotch regiments backs up the nine hundred rulers of India—and, incidentally, consumes the revenues in "punitive expeditions" across the frontiers. Thus in world politics three-fourths of the British Empire does not count at all, or counts as a liability rather than as an asset.

(Continued on page 443.)

Wireless Telegraphy for the United States Government

The exhaustive tests of the leading systems, made under the direction of Gen. A. W. Greely, U. S. A., and Lieut. Arnold, U. S. N., have resulted in the adoption of the

DE FOREST WIRELESS TELEGRAPH SYSTEM

for army and navy use. Simplicity and accuracy in operation were conclusively shown. Aerograms sent over long distances of wooded and hilly country were evenly and clearly received.

The prediction of Prof. Alexander Graham Bell, that wireless telegraphy

WILL SUPPLANT THE 189,000 MILES OF CABLE

in use throughout the world, will be verified largely through the anti-coherer system of Dr. Lee de Forest. This is the AMERICAN SYSTEM, and, along distinctive lines, "is theoretically the best, as well as giving the most promising practical results." (Extract from Gen. Greely's report to Secretary of War.)

The De Forest Wireless Telegraph will talk across a room—or an ocean. It is a commercial success. The allowance of 140 claims by the U. S. Patent Office is the foundation, and there is no infringement of other patents or inventions.

Twelve stations have been erected by the Company, in addition to the six used by the Government. Nearly a score more are under construction. The completion of these stations will establish Trans-Pacific service, place the entire Atlantic seaboard under wireless communication, and cover the Great Lakes.

Estimates Furnished for Equipment of YACHTS, STEAMERS, etc., and the establishing of PRIVATE wireless telegraph service between offices, cities, or other points.

Caught in a Tight Place

A Few Miles of "Flat" Country

Deer-hunting in Automobiles

THE idea of utilizing the automobile in deer-hunting has been introduced in the West. Mr. W. W. Price, of Colorado Springs, probably has the honor of being the first one to go after deer and other big game in a motor-car. Mr. Price has recently returned from a tour in which he was quite successful, and which covered several hundred miles through the wildest portion of the State. Accompanied by Dr. C. E. Smith, Mr. Price started in a Winton car of about fifteen horse-power, going through South Park and Buena Vista, and climbing Ute Pass, one of the most difficult passages in the Colorado Rockies. They entered the "Flat Top" country, as it is called, going directly to the deer ranges in the vehicle. Several fine specimens were shot, and the game "packed" on the front of the touring-car to be brought back to their headquarters at the camp of the Montgomery Land and Cattle Company.

During the trip the auto passed through a considerable portion of the country which has never before been visited by a chauffeur. Near the town of Meeker a band of deer actually followed the car some distance, apparently astonished at the strange animal. While within easy range of the rifles carried by Mr. Price and his companions, no attempt was made to shoot them, as it was not considered sportsmanlike.

The arrival of the huntsmen at Meeker caused a sensation, as few in the town had ever seen such a vehicle, and it was the first to make its appearance within the limits. The local paper, in commenting upon the arrival, said: "The first automobile to make its appearance in this valley arrived Tuesday evening, the distance between Rifle and Meeker having been covered in three and one-half hours, including stops and one slight breakdown. Mr. W. W. Price and Dr. C. E. Smith were the passengers. The machine was given a box-stall at Simp Harp's livery, and 'Salty' was on hand with a new fifty-foot rope and a pair of hobbles to secure the thing. All the horses in the barn talked it over that night, and concluded that when the roads were bad it would be the same old thing—double up and get up in the collar. It will not prove as destructive on the range as sheep."

Meeker is one of the principal cattle-markets of this section of the West, and cowboys are always riding about its streets. When the auto and its passengers came down the main street several of the "boys" got out their lassoes and tried to put the rope around one of the wheels. After Mr. Price had "put it up" at "Simp Harp's," a party of the range-riders entered the stable and went through the ceremony of branding it as a "maverick." The motor was the first of its kind to go through the Grand River Cañon, and for many miles passed over a "highway" which has been literally blasted out of solid rock by the State. The road is only wide enough to allow one vehicle to pass, and on either side the walls in some places reach a height of a thousand feet. Mr. Price states that for much of the way they passed over a solid bed of rock with not even an inch of earth for a top covering.

(Continued from page 441.)

Of the remaining hundred million or so, under British rule, forty millions are Africans, whether Kaffirs or negroes, and, politically, these also may be left out. Then there is an indeterminate fringe of some ten millions; then, and lastly, a residue of about fifty millions of white race, and these last alone count in the politics of the world. Seven or eight millions of these, being in Ireland or of Irish birth, are negatively electrified toward the empire, so to speak, and against them we may count off some seven or eight millions of Scotch birth or descent, leaving some thirty-five million Englishmen.

Here at last we have our British unit, for the purposes of prognostication. And we are instantly faced by one most significant and tremendous fact: that the rate of increase among these men of English race has been dwindling decade after decade, so that they are rapidly approaching the French standard, where births exactly equal deaths, and there is no increase in population at all. This is true not only in England, but also in Canada, Australia, and South Africa, and is, ethnically speaking, the most ominous and overshadowing fact in our whole inquiry.

It points to the eclipse of a race-stock which has played a very large part in recent centuries, and by which the nineteenth century was practically dominated. The pure English race-stock is dwindling and dying out, and will be a constantly diminishing factor in world politics throughout the twentieth century. And the great self-governing colonies like Canada and Australia are swiftly becoming sovereign states, rather than fractions of the empire; so that here all indications point the same way.

In a hundred years the pure English race will be nothing like the world factor that it is to-day. Perhaps Mr. Stead is right in thinking that, long before that, the British Isles will be added to the Insular Dependencies of the United States; in which case England will count about as much as Ohio and Illinois in the total counsels of the nations.

We come now to Russia, at present third among the states of the world, with a population of one hundred and thirty millions. Here the contrast to England is almost total. First of all, nearly all of these are of pure Slavonic race; and the rest are of transitional subraces, closely akin to the Russians, and willing to be absorbed in them. To-day Russia stands first among the white nations of the earth, with a population almost double that of her nearest competitor. More than this, and in striking contrast to the pure English race, Russia has the largest birth-rate in the world, being about fifty per thousand, as against something like twenty-three for France and thirty-three for England. But the Russian death-rate is also abnormally large, through causes which are being gradually eliminated by progress, such as bad food and unhealthy houses. So that Russia takes between fifty and sixty years to double in population, the pure Slavonic element being the most robust, vital, and prolific, and thus evidently destined to absorb and assimilate the whole mass.

Now for our significant fact: Within twenty-seven years, at the present rate of increase, we shall have two hundred millions of Russians. Within eighty years, we shall have four hundred millions; and within the century we shall have a half-billion of Russions, of nearly pure Slavonic

Consumption Can be Cured.

Marvelous Discovery by the Famous Dr. Yonkerman of Kalamazoo, Mich.—State Officials and Great Medical Men Pronounce it the Only Cure for Consumption and All Throat and Lung Troubles.

Consumptives Given up to Die and Sent Back From California Hopeless and Helpless are Now Alive and Well Through This Wonderful Cure for Consumption.

A Free Package Containing Sufficient to Convince the Most Skeptical Sent to All Who Write.

Consumption can at last be cured. Marvelous as it may seem after the many failures, a sure, positive, and certain cure for the deadly consump-

DR. D. P. YONKERMAN
The Discoverer of Tuberculozyne, the Only Cure for Consumption.

tion has at last been discovered by Dr. Derk P. Yonkerman, a great Michigan doctor, who has made a life study of this fatal disease. His wonderful remedy has been fully tested and rigidly proven a sure cure by State officials, and noted medical men all over the world testify to its power to kill the dread germ that causes consumption. The doctor makes no secret of the ingredients of his wonderful cure, believing that the people are entitled to such a production of science, and he is sending free treatment all over the world, bringing joy of knowledge of certain rescue from this awful fatal disease. Such eminent scientists as Koch, Luton, Pasteur, and all the great medical and germ specialists and chemists have already repeatedly declared that the consumptive germ cannot live a minute in the presence of the ingredients of this wonderful remedy that has already revolutionized the treatment of consumption and has taken it from the catalogue of deadly, fatal diseases and placed it in the curable list. Free trial packages and letters from grateful people—former consumptives rescued from the very jaws of death—are sent free to all who write to Dr. Derk P. Yonkerman, 2068 Shakespeare Building, Kalamazoo, Mich. Dr. Yonkerman wants every consumptive sufferer on the face of the earth to have this marvelous and only genuine cure for consumption. Write to-day. It is a sure cure, and the free trial package sent you will do you more good than all the medicines, cod-liver oils, stimulants, or changes of climate, and it will convince you that at last there has been discovered the true cure for consumption. Don't delay—there is not an hour to lose when you have consumption, throat or lung trouble. Send to-day for free package.

blood. This becomes not a menace, but a promise, when we see that sympathy is the true key-note of the Slav, who is far more hopeful soil for the ethics of the Sermon on the Mount than in the self-assertive and dominating Teuton.

Nor will this exhaust the Slavonic area. Draw a line from Rügen on the Baltic to Venice; nearly everything to the east of this line is ethnically Slav. Hence the dire apprehensions of the Prussian and Austrian Pan-Germans, who feel and fear the rising tide. Count von Bülow recently expressed the matter in a nutshell, by comparing the Slavs to rabbits, and the Teutons to hares, for their power of reproduction; beginning with equal numbers, you will have a hundred rabbits before you have a score of hares. So it is with Slav and Teuton. Therefore all eastern Europe, as well as most of Asia, may be added to the Slavonic area.

We come now to the fourth of the great world powers, our worshipful selves. It is evidently impossible to do the subject justice in a paragraph or two. We can only express with the utmost brevity a series of conclusions slowly and laboriously reached.

We at present number some ninety millions, less than seventy millions being of white or nearly white race; a large influx of the inhabitants of southern Europe being amongst the nearly white, the olive races, like the Sicilians or Neapolitans.

We speak of these seventy millions as Anglo-Saxons, using this as a synonym of English-speaking. But even England was never Anglo-Saxon in race. We all nominally speak "English," but some of it is very queer English, from the standpoint of Mayfair, where the court tongue of England is most uniformly spoken. But Anglo-Saxon in race this country is not. And here, as everywhere else in the English area, the pure English race has a dwindling birth-rate, and is rapidly approximating the condition already reached by the French, where births just equal deaths. Mr. Roosevelt's recent letter suggests some of the causes of this; in any case, they are not occult.

At the present moment there are probably between twenty and twenty-five millions of Irish in this country, and, as they are recruited from the most vigorous portion of the Irish race, their birth-rate is unusually high, approaching the Russian standard. So that they will decidedly count in the larger world a century hence. We have also strong elements drawn from Germany, many of Slavonic race; and a large contingent from other Slavonic areas, like Austria and Poland; add to these our immigrants from the Latin countries, and it is evident that the American of a hundred years hence will be the quintessence, the final distillation, of all the European races. The Teutonic element, with its bullying proclivities, will be pretty well drilled out by that time; and the Celtic element will be greatly strengthened. We shall have a type more sympathetic, more psychic, very creative, and with a rich promise of good for the remainder of the world.

The German Empire stands next, and is a strong and vital factor. It cannot extend in Europe, yet extend it undoubtedly will. So we may logically apportion to it a population of a hundred and fifty millions, largely represented in the temperate zone of South America. A subtemperate zone may belong to the Latin races; while we may look to see the red race reassert itself, and dominate tropical South America, as well as most of Central America. But doubtless the whole of the New World will be in touch, joined in a loose confederacy, with this country as a very influential factor.

These are the races which chiefly count,

Mortgages Net 5%
In North Dakota

A 5% investment, if it is safe and prompt in its returns, is considered gilt edged nowadays.

All the favorable conditions—low and steadily advancing prices on land, absolute security and the certainty of returns obtain in North Dakota.

These gilt-edged investments can be had here under the most satisfying conditions.

The time to take advantage of them is now. This is the day of your opportunity.

I can furnish them to you, together with the most satisfying evidence that they are absolutely trustworthy.

I would be glad to have you make the most careful and scrutinizing search of my record, find out whether I will do just as I agree to or not, and then find out if the mortgage securities I offer for sale are the kind described as gilt edged or not.

If you find them gilt edged, as you are bound to, I will be glad to sell them to you, collect the interest and forward it, and personally look after the investments.

You will find me safe, honorable, reliable and responsible. I will see to it that you do not regret making an investment in North Dakota.

Interest and principal collected without expense. Remittances at New York exchange.

and a century hence they will stand somewhat thus:

First, we shall have the Russian realm, with a population of not less than five hundred millions,—equal to a third of the whole human race at the present time. This population will be of almost pure Slavonic blood, and the small extraneous elements in it will be made up for by the strong kindred Slavonic element at present beyond the borders of Russia.

Second in numbers, we shall have the new American race, in extent about two hundred millions. The birth-rate in the United States tends to decrease, but the number of immigrants tends to increase; and this, of course, means an increasing departure from the first race-type. All evidence points to the thought that, while Russia will without doubt tend to become Americanized, by the devolution of responsibility to ever-widening circles of the population, the opposite course will prevail in America,—a more collective consciousness growing up, and gradually approaching the Slavonic moral standard, with its sympathetic general consciousness. Thus the two greatest world powers will approach each other, the one growing in individual responsibility, while the other increases in the power of sympathetic feeling.

Next in order we shall probably have a hundred and fifty millions of pure Teutons, divided between central Europe and temperate South America, a race whom we should look on as the intellectual heirs of Goethe and Wagner, of Kant and Schopenhauer, the masters of great realms of the noblest thought and art, and therefore a treasure-house of one of the great heritages of mankind.

The English race is evidently destined to dwindle, as did the Spanish power which overshadowed the world three centuries ago. Even now, India is an element of sheer weakness, a mass of magnificent misery; while the great self-governing commonwealths of Canada and Australia are only nominally subject to England, and with every year will more and more become sovereign states. The destiny of Canada evidently is a part of the general destiny of the New World; and, as the English type in Canada, as elsewhere, is dying out, we may add the Dominion to the area of the new American race. The present American invasion of the Northwest Territory shows how this will practically come about. Australia may be expected to remain more English in type.

To apply this to the map of the world: Russia, foremost of the white powers, will extend down to the borders of China proper, covering a vast tract in central Asia equal to about two million square miles. Russia will extend her influence over Slavonic Austria and the Balkan peninsula, down to the borders of Hellas, which will also depend on the greatest power in the Eastern Church.

The American states will doubtless reap, in a fuller and closer federation, that sowing of common interest and feeling which the Monroe Doctrine is bringing about, and which includes Canada just as much as it includes Venezuela. We may, therefore, confidently forecast a federation of the New World, with this country as preponderant member. In this federation, a great German state in South America will doubtless be included, and German political power will absorb a part of western Austria, gaining a port on the Adriatic, and stretching from the Baltic to the Mediterranean.

Whether India is destined to continue its present relation to England, or whether its poverty and distress will become a burden on some other land, is a question mainly interesting to the millions of India, but of no weight in world politics. The strictly English area may, therefore, be limited to England and Australia, with a joint population of under fifty millions.

HARPER & BROTHERS

Harper's Magazine

for APRIL

A COMPLETE NOVELETTE BY **William Dean Howells**

A strong story of deep psychological interest.

NEW LONGFELLOW LETTERS
A number of hitherto unpublished letters written by the poet between 1831 and 1835, throwing new light on his personality, together with many letters of the first Mrs. Longfellow, sketches by the poet, etc.

ENGLISH
Professor **Brander Matthews,** of Columbia, has written a most interesting article on "Briticisms of All Sorts," in which he contrasts some English and American usages of words and discusses some new Briticisms.

TRAVEL
In the few months before his death **Julian Ralph** wrote for HARPER'S MAGAZINE a number of studies of people in various parts of our country. One of these, called "A Trip with a Tin-Peddler," appears in the April Magazine. **William Sharp,** the well-known English critic, writes poetically of "The Country of Theocritus."

PICTURES IN COLOR
There are fifteen pages of pictures in color and tint in the April Magazine, including paintings by **Louis Loeb, W. T. Smedley,** and **Charles King Wood.**

ECONOMIC MORMONISM
Professor **Richard T. Ely,** of the University of Wisconsin, who has been making a study of various communities for HARPER'S MAGAZINE, writes of the social and economic side of Mormonism as seen to-day in Salt Lake City.

SCIENCE
Carl Snyder, in his article on "Physiological Immunity," gives the latest scientific views on how the human body fights disease—a paper of intense practical interest to every one.

HISTORY
Thomas A. Janvier's story of "The Dutch Founding of New York" comes to a conclusion in the April number. It is a delightful study of the end of the Dutch regime.

SHORT STORIES
In addition to **Mr. Howells'** story, there are short stories by **Robert W. Chambers, Alice Caldwell Hegan, Mrs. Stepney Rawson, Candace Wheeler, Lily A. Long,** and **J. C. Troutman** in the April number—eight complete short stories in all.

Humor and Life in La Guayra

Some Impressions from our Correspondent in Venezuela

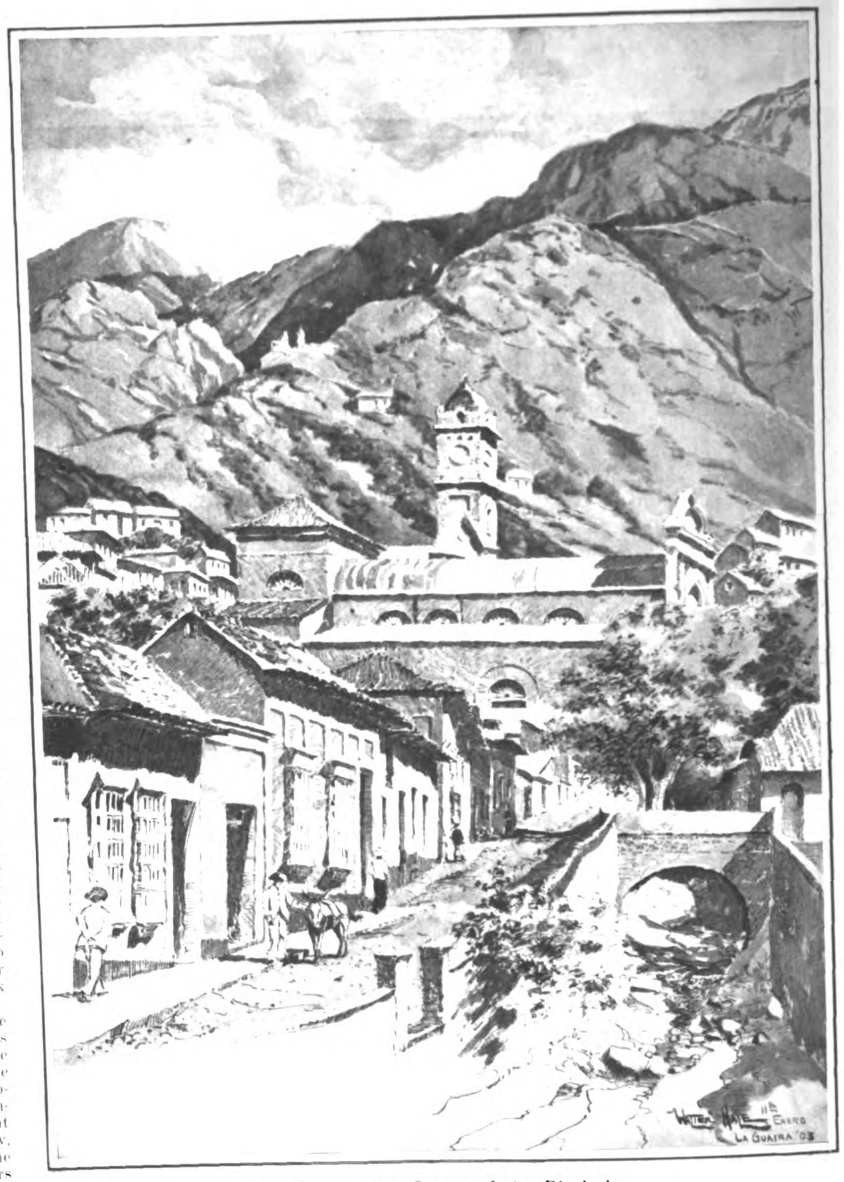
IF not a gay town, La Guayra is a picturesque one in many ways. At the foot of the ravine shown in the sketch one forgets how viciously hot, close, and sickening the day is. Sunlight plays round the mountains, and shows clearly the quaint old convent and church-tower of "El Carmen," with its yellow walls washed to an orange tint, and blackened in spots with dampness. A fountain covered with green moss stands by its gate, around which picturesque groups of native girls and women gather with water-jars.

The white building that you remark across the ravine and up to the left higher in the mountains is a mausoleum. In the house behind its walls of finest marble lived and died old Dr. X——, who was a German student when old Heidelberg was young. For seventy years he carried with him the fear that one day he would be buried alive. To avoid this fate, which—sad to say—fell to the lot of one of his patients, he ordered this mausoleum built with the savings of half a century of practice. His last wish was to be laid at rest there in an open coffin, with a key for the mausoleum door in his right hand. Thus he slumbers, 1500 feet above the sea-level, ready to open the door that leads back to life.

Down where the ravine cuts through the long half-circle of oil lamp-posts that twinkle at night along the quay, you see the spot that mars La Guayra's beauty and romance — at least for the special correspondents who had news to send. It is the office of the Venezuelan censor of telegrams—a man of many, many meals. At least so he seemed necessarily to us, who many, many times hastened tired and perspiring to the cable-office, only to be informed, Call again later, for the censor has gone for his "almuerzo," for his "lunch," his "comida," or his "late supper."

However, there were some moments when the censor was not aiding the blockading fleet in reducing the food-supply. Then he would accept a telegram, gravely and sceptically look it over, giving himself an air of understanding English or German, and then forward the message (I suspect by mail) to Caracas. Experience soon taught us that it was useless to inquire before at least twenty-four hours had elapsed what the powers that be in Caracas had decided. Perchance on the following day one would get hold of the censor rushing through Main Street for a meal, and ask, "How about my telegram, Señor?"

"Still under consideration in Caracas."



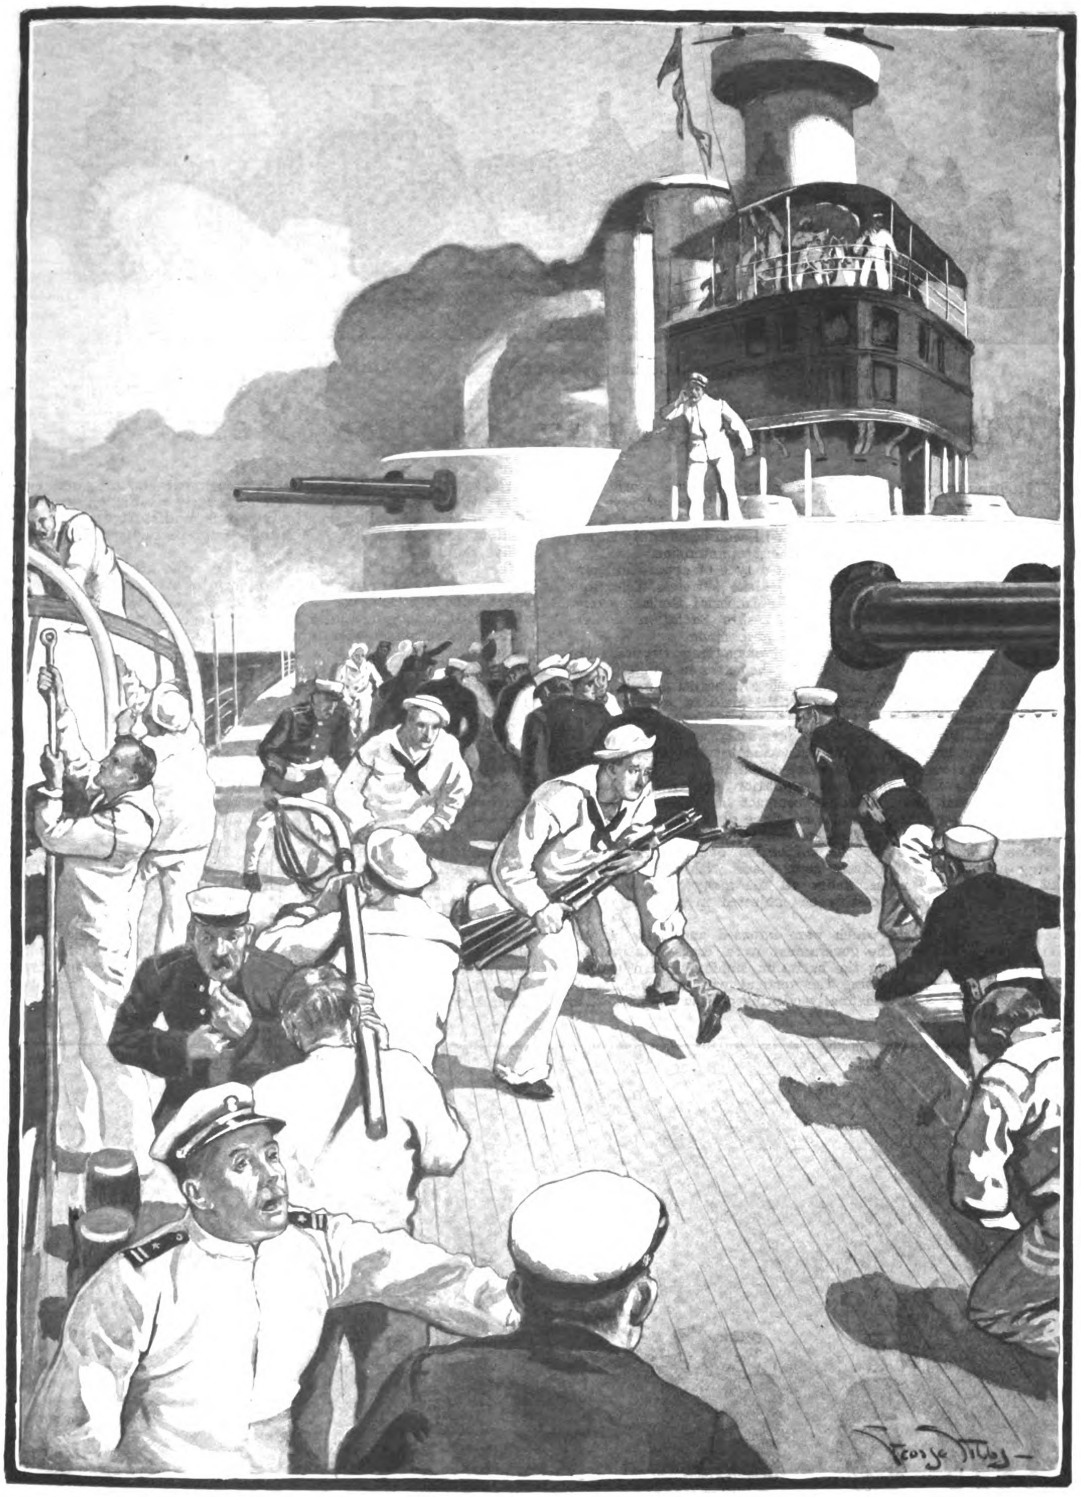
"Thanks, so much, Señor, and I hope you'll enjoy your lunch."

Again a day went by, and again the censor was met in the street, this time saunteringly. He came from a meal. He felt cheery and willing to chat. Taking the cigarette from his lips, raising his hat, and bowing with true Spanish-American grandezza, he would volunteer: "Your telegram has been passed upon favorably, and sent," or regret that "his government could not very well allow a message like the one filed to leave the country." No ill-feeling was shown in that case, but the censor, with equal politeness and ceremony, informed that by this time the captain of the *Carlo Alberto* had probably filed the message in Curaçao, whence it would leave without censorship.

For many reasons we thought it wise to avoid the latter, and to send our telegrams on board one of the allied war-ships to Curaçao. A telegram is apparently believed public property by the Venezuelan authorities.

An English correspondent, very young and very bright, was the first of us to find Castro in La Victoria, and obtain an interview. Sitting down to dinner with us that same night in Caracas, he found it difficult to keep his secret quite to himself, and hinted at some big and exclusive story that his paper would print the following day. You may imagine the look of mingled disgust, indignation, and amaze on his face when everybody at this table volunteered to tell him word by word what he had cabled. His interview had found its way through the doors of the censorial offices, and been offered to every newspaper correspondent for sale.

Of course nobody tried to deprive the winner of his laurels by making use of his property.



La Guayra—the Centre of the Blockade

From a drawing made on the spot by our artist, Mr. Walter Hale

This is the first authentic sketch published of the port of Caracas, which is built on a sea-wall at the foot of the Venezuelan mountains. The roadway represented in the drawing is the route to Caracas, which lies six miles over the mountains in the background. The railroad, which covers twenty-seven miles before it reaches the capital, can be seen in the upper right-hand corner climbing La Silla, the peak which guards La Guayra

"CLEAR SHIP FOR ACTION!"

The home squadron of battle-ships and cruisers is in the Gulf of Mexico, in response to an order of the Navy Department. The object is to improve the efficiency of the men by putting them through the various manoeuvres of actual war. In the drawing Mr. George Gibbs has chosen the moment when all hands are called to quarters to prepare for action

Wireless Manoeuvres in Germany, showing the Air ship Battalion in the Field

Wireless Telegraphy in the Next War

THE military and naval authorities of the world are equipping their respective armies and fleets with special wireless telegraphy apparatus, and the war power without this very modern accessory will soon be as badly handicapped as though it were without ammunition.

The illustrations here shown represent a type of apparatus manufactured by the Braun-Seimens and Halske Wireless Telegraph Company, especially for field use in the Imperial German army, and operated by the Royal Military Air-ship Battalion of Germany, under whose direction the tests were made.

The great difficulty experienced in transporting wireless stations overland has been largely due to the extreme sensibility of the coherer, or electric eye, in the wireless apparatus, and of the relay which indicates the message. With this idea well in mind, the manufacturers designed the accoutrements for military signalling without wires in a way that does away with the elements of danger from breakage or disarrangement which result from hard usage and from the heavy service demanded.

The apparatus is mounted on regulation gun-carriages, the whole arrangement being made as compact as possible. In the recent German manœuvres, there were three of these portable military wireless telegraph outfits, and two permanent station installations, using masts for the suspension of the sending and receiving air wires. The tests took place within an effective radius of thirty-five miles, under all the many varying conditions to which it could possibly be subjected in time of actual warfare.

Among the rigid tests which were imposed and made a condition of acceptance by the government were 'cross-country runs at breakneck speed, halting the battalion suddenly, then making ready the apparatus, elevating the vertical wire a few hundred feet by means of a kite, and finally clicking off the message. The results were as satisfactory as at permanent stations, and messages were received as easily and accurately as though the vital parts of the apparatus had been resting undisturbed on an air-cushion, and all this, it was found, could be easily accomplished in five minutes.

The portable equipments are supplied with kites and balloons of various sizes, in order to obtain for the air-wire the necessary height with the least possible weight. On days when there is no wind small hydrogen balloons are sent up, carrying the thin flexible strands of copper wires, and for this purpose a cylinder of compressed hydrogen is made a part of the outfit, but on days when there is a slight wind blowing, a form of tailless kite known in this country as an Eddy kite is sent up, and from its cord is suspended the air-wire.

Now a tailless kite of the type cited possesses very little stability in the teeth of a stiff breeze, and so recourse must be had to a kite of the cellular type—for example, those that are termed here, Blue Hill box-kites; these may be sent up in a veritable gale. In this way the difficulties due to stormy weather may be readily overcome. As batteries or any similar source of electricity are obviously unsuited for supplying current to operate the transmitter, since they are liable to breakage, leakage, and a hundred and one other little technical troubles, under such trying conditions, a small dynamo, directly connected with a gasoline engine is made to supply the current, and has been found well adapted to the purpose.

Besides the German army, the Danish and Austrian governments, are making thorough tests of its efficiency, and the United States navy is now trying it. The war departments of almost every government have equipped their vessels and their armies with the new mode of wireless transmission, and in the next war game it will play an important and lively rôle.

The German Air-ship Battalion sending Wireless Messages as in actual War

Guarding Three Sea-Roads

The Strategy of the New Naval Stations recently Leased from Cuba

THE President recently signed an agreement providing for two new naval bases in Cuba for the protection of the Caribbean and the Gulf of Mexico. Against a direct dash of a hostile fleet from Europe the long line of the Atlantic coast is reasonably safe. The sole cover is the Bermuda Islands on a line with Hatteras, which is entirely inadequate to the demands of a battle fleet for supply after a quick run across the Atlantic. A fleet hurled directly against the Atlantic coast of the United States from Europe would be already half defeated.

A slight expansion of the United States to the north would eliminate the possibility of recruiting a fleet at Halifax, and there is only the question of protecting the southern coast-line.

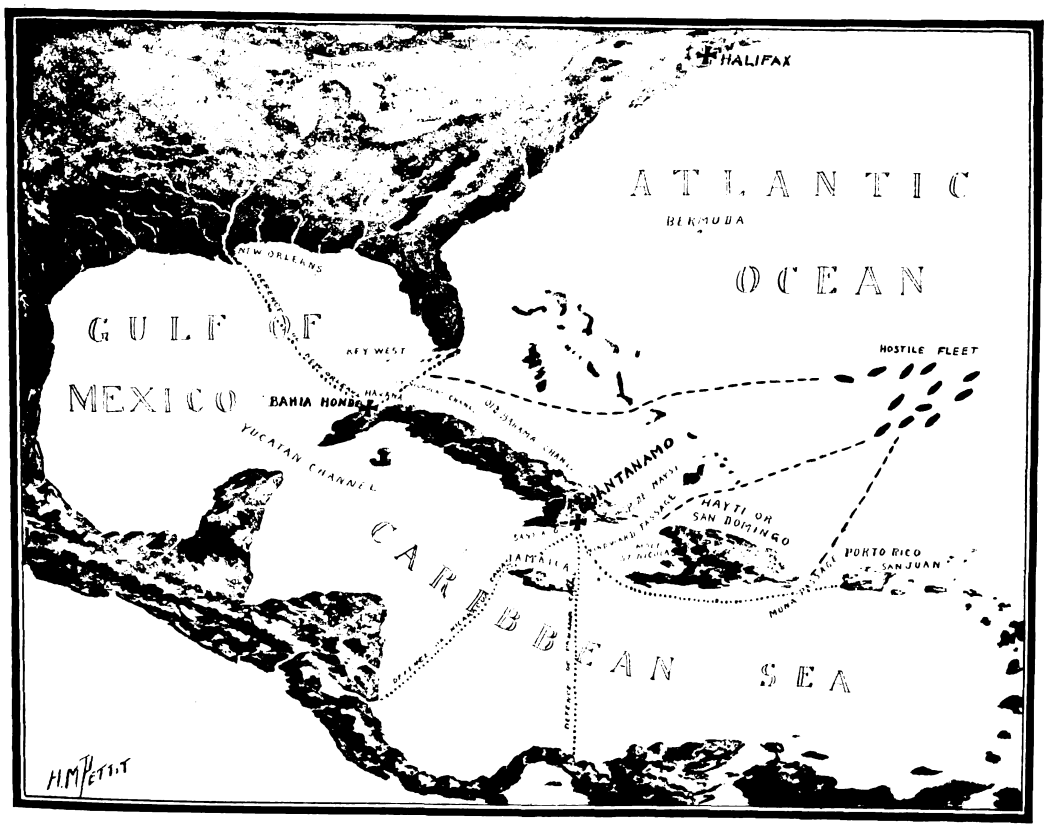
A hostile fleet that would do the correct theoretical thing in attacking on the south would sweep south of the Bahamas, and would round in between Cuba and Haiti. It would establish a base in either republic or the latter island it chose without much regard to the protests of the variously colored peoples of the two republics which divide the area of San Domingo-Haiti, and when ready would run up through the Caribbean and the Yucatan Channel, through the Gulf of Mexico, and to New Orleans, the possession of the Mississippi, and so on.

But it might choose one of three "big roads" into the Gulf of Mexico. The Old Bahama Channel north of Cuba, leading into the St. Nicholas Channel, and so on into the Gulf; the Windward Passage between Cuba and Haiti; and the Mona Passage between San Domingo and Porto Rico. Good little reefs and good big reefs and banks abound elsewhere, and confine big, strange ships to these thoroughfares.

And because it might come on either of the three, Uncle Sam will keep a guard post on each, and seek trouble before trouble troubles him.

Just around the corner, as the ships come in the Windward Passage between Cape Maisi and Mole St. Nicolas, is good entertainment for ships and men at Guantanamo. It is the nearest other thing to Havana Harbor as a desirable port, and its lease to the United States simply closes the Windward Passage to ships to which the government at Washington objects.

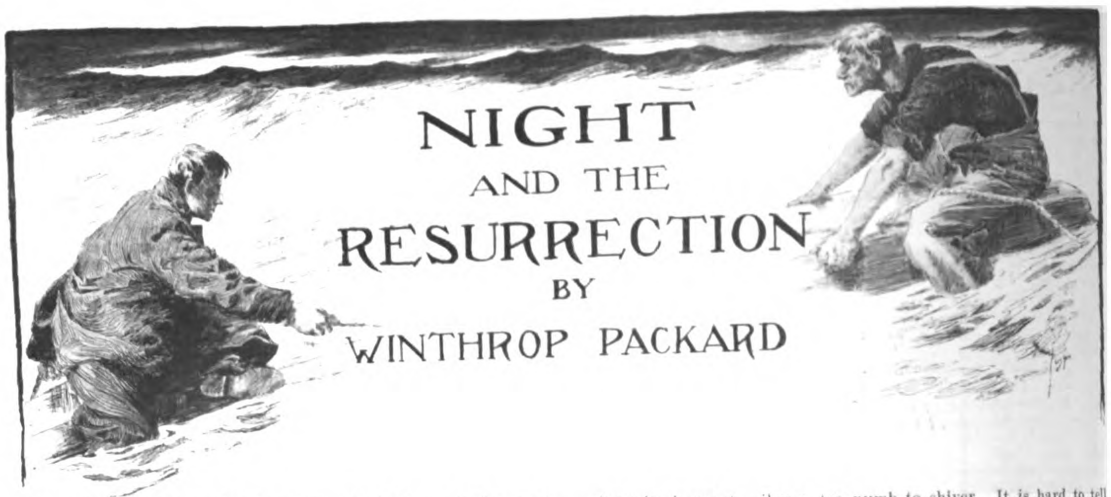
Around on the north coast of Cuba, not a great way from Havana, is not a particularly desirable sort of a bay, but the best there is to be had in that locality. Bahia Honda is not another Havana Harbor, but it is near that desirable port, and is about in the right place strategically. It is on the road to the Gulf of Mexico *via* the Old Bahama Channel, and it is also just around the corner, this time with respect to the Yucatan Channel.



These two late accessions by lease to the possessions of the Navy Department make the trio of road-keeping stations that, in default of the exclusive control of the West Indies, will represent the right flank of the defences of the Atlantic seaboard. The third in the trio is the naval station at San Juan, Porto Rico, the base of the ships that will keep mischievous strangers from coming through the Mona Passage.

Assuming that the United States had a navy of sufficient size to give a respectable battle fleet to each of these stations, this is what might happen:

Granted that an attacking fleet had rendezvoused, coaled, and prepared at an outlying island, the fleet from Guantanamo pays its respects to it as it comes through the Windward Passage, and it goes along in such shape as it may after coming out of the fight. The attacking fleet gets along to the point where the waterway narrows between Cuba and Yucatan, the Yucatan Channel. There it meets the fleet that has run around from Bahia Honda, and while the fight is on, the fleet from San Juan comes smashing along. The defences of New Orleans or the control of the Mississippi will be little affected by what is left of the attacking fleet.



Or coming through the Mona Passage, the attacking fleet meets successively the fleet of San Juan, the fleet of Guantanamo, and the fleet of Bahia Honda; or, coming along the north coast of Cuba, the attacking fleet is held in check by the fleet from Bahia Honda until the San Juan and Guantanamo fleets, racing down inside, have run out through the Yucatan Channel into the Gulf of Mexico, and formed the first line of defence for the right flank.

This is the strategy of the new naval stations at Guantanamo and Bahia Honda, to make a line of defence where the United States is defenceless, to at least hold the roads that lead to the very heart of the nation, to have bases capable of provisioning, supplying, protecting each a fleet, and to have a fleet at each that, combined, will make an attack on the United States *via* the West Indies at least as hazardous as a straight dash at the Atlantic coast.

Map showing our two new naval stations—Bahia Honda and Guantanamo—in Cuba, and their strategic importance in the event of a possible war in defending, with our station at Porto Rico, the approaches to the Gulf of Mexico, the Caribbean Sea, and the Isthmian Canal

NIGHT AND THE RESURRECTION

BY

WINTHROP PACKARD

"LUCKY GEORGE," leaning from the bottom of the dory, capsized and tossing in the white froth of the squall, reached my collar with one sinewy hand while he clung precariously to the painter with the other. Some mystery of Providence had cast the stout rope up across the bottom when we were overturned, else had this story never been told. He waited the swing of the waves, whose ways he knew as only a Georgesman can, and at the right moment lifted me, with the help of a toppling comber, and set me astride of the dory, facing him.

"Come in out of the wet, my son," he said, and though his face was ashy gray in the waning light, his manner was almost jovial. "Here, hang on to that painter. You did a wise thing when you chose Lucky George for a dorymate. This is what you call a snap. That bit of rope is as good as a life-line. It's all the life-line we'll ever need, I guess," he added, suddenly rueful.

I heard, though as one in a dream. Three minutes before, in the lash of the squall, I could have heard nothing, but the gust seemed to pass as quickly as it came, and the white spoondrift no longer sang like blown snow across the long hollows. Instead, the wind had almost ceased, and the wave-tops no longer curled in great cataracts, but toppled and sank lazily. Yet there was occasion for ruefulness. It was late February, and we were on the eastern end of Georges Bank. The schooner we could not see, hardly could expect to see again, and our chances of rescue in the growing winter twilight were slim indeed.

Somehow I did not seem to fear, yet I had a right to be frightened. I was only an amateur fisherman at best, braving the dangers of Georges in the winter that I might see the life, and understand it as did the fishermen themselves, having made up my mind to serve my trick at wheel and trawl as did my fellows. Now the sea was serving me the last trick of the Georgesman. The water was icy, though the Gulf Stream swings by the tip of Cape Cod, and bathes the eastern end of the fishing-banks, and it was only a question of time when the chill would creep into the marrow and leave us to slide off the dory's back into the dark oblivion of the sea.

Georges Bank stretches a hundred miles east of Cape Cod, and is the resort of the Boston and Gloucester fishermen during winter. They plan their trips in this wise: Starting from port in one of the northwest blows that sweep Massachusetts Bay they run down merrily before it with started sheets, and reach the banks just about as it blows itself out. Then often come two, three, or more days of calm, in which they set their trawls in comparatively mild temperature, for the still days in the Gulf Stream, even in midwinter, are idyllic. By the time they have a fare of fish the wind is likely to blow up again from the east, and take them home as merrily as they came.

This had been our plan. Two days we lay to on the eastern end of the bank, until the weather moderated, then made a set of trawls that morning, only to be caught in the last gust of the northwester and capsized, having, in our eagerness, taken too heavy a fare of fish from the lines. Of the fate of the other dories we could know nothing. The schooner was hull down on the horizon when the gust struck, and would lose us completely. Our one chance would lie in being picked up by some other vessel, and in the long winter night already coming on this would be slim indeed. Well, it was the common fate of the Georgesman. Their bones strew the bank from end to end, and a thousand New England widows mourn their loss to-day.

"It's a great pity to lose all those fish and that gear," said Lucky George, after a moment; "but we can't help it now. We hung on too long. That's the worst with the fishing business. When you can get fish you can't get 'em."

He tried to smile at his own epigram, but his teeth chattered. The dory rose and fell on the long sweeps of the lessening sea, and the twilight deepened into gray as we sat facing one another, chilling more and more as the light breeze blew on us. My clothes above water were already stiffening with the frost in the air, and no sign of rescue had appeared, yet I did not feel fear. In the face of the inevitable there is no room for fear. It is uncertain death that fills our souls with terror. By and by a haze spread over the blurring sky, a sort of frost fog rising from the winter sea, and darkness came upon us, unrelieved by moon or star. We clung in desperate silence, too numb to shiver. It is hard to tell the lapse of time under such circumstances; minutes may be hours, or hours minutes, told only by the horologe of eternity, ticked off by the swinging pendulum of an icy swell. I cannot say how much of the night had swung over our heads and still found us dumb, only it could not have been so very much, for, though very numb, I could still cling, when, coming out of a sort of dream, I heard my companion's voice again, and started to see that he gleamed from head to foot with phosphorescence, a luminous ghost in the black centre of endless night.

"Night and the resurrection," he said. "The sea is full of ghosts, and they come to meet those who go to them. Have you seen any yet?" His voice was strange and high pitched. It had the weird ring of those voices which the mind has no longer in perfect control. I, too, must have been phosphorescent, for, though I could not speak, he noted the shake of my head, and went on.

"I have. They come up and sit on top of the waves—trawlers that have lain on the bottom of Georges this many a year. Some of them I know. There are men, but that isn't all; there are ships too. Oh, we won't drown. Georgesmen don't. The ghost-ships come and take them off."

He sang a strange snatch of a forecastle song; then there was a long silence, followed by a moment in which sanity seemed to return to him in part, and he spoke in a natural tone.

"Pretty tough, isn't it, dorymate?" he said. "Well, we'll hang on as long as we can. I've been in worse scrapes than this, and got out of them all right. What was I telling you? Oh, I know; about the *Mary Blake*."

His voice was changing again, and though I could not see his face, I seemed to feel the stare of his eyes as he leaned forward and fixed them on me. He went on:

"She's waiting for us down below here, and she'll come cruising up by and by. Ho, but she sank pretty! One of the old clippers she was, captain's cabin fitted up with every sort of elegant convenience. That was why we could do it. She had a waste-pipe with a valve and a scupper-hole below the load-line, and all we had to do was open that one night, and no man could find the leak. We were three weeks up from Surinam with sugar in baskets, loaded down till she could stand no more, and every ton of ballast out of her. Nothing but the sugar to hold her down. Three hundred dollars was my share for the job, and my wages would only have been forty-five. The owners, blast them, they made well out of it. An old ship and big insurance. It's an old story. Only the poor devil that does the job, he gets his natty money, but the ship gets back at him. Her ghost sails round down below, and some day she comes up and carries him away. I ought to have known better than to have come winter fishing down here. She'll get me all right, this time. We opened that valve just below the South Shoal's lightship, and it was on this end of Georges she sank. She's below us now, cruising and waiting for me. I can feel it. It isn't the sea that will get us. It isn't the cold. It's the ghost of the *Mary Blake* that needs a crew of ghosts to man her.

"Come on; she's coming by now, and we've got to go aboard. Jump quick, or you'll miss her."

I could see his phosphorescent figure move numbly in the blur of the night, as if loosing its hold on the bit of floating planking that was to be our vanishing-point into eternity, and for the first time through the daze that was upon me a horror seemed to penetrate and move me to action. Hitherto it had been but a dumb waiting for the inevitable, a finish that could not long be deferred. Now there came fear of what my mate was about to do, and the thought of being alone in that bleakness of loneliness. Drowning. I clung to two straws, one the boat, the other my comrade's presence. With an effort I broke through the lethargy which oppressed me. It seemed that I moved like a palsied old man, yet I moved.

"Wait," I said, and my own voice seemed to have in it some of the crazy ring that his had: "wait until I help you."

Numb from the waist down with the wash of winter waves eased in frost armor from the waist up, it was no easy thing to keep secure hold on the single life-line, then twist the legs beneath it, and reach over and get my companion by the collar, but that was what I managed to do, and the little stir of blood in the stiffened veins sent sharp pains chasing in agony through them.

Lucky George hesitated a moment, then clutched the life-line again, and it seemed as if once more I could feel the glare of his eyes on mine.

"Ho!" he shouted. "That's right, dorymate. We'll go together, shipmates all. Ho, ho!"

He loosed his hold on the life-line, and grasped me in turn, trying to spring from the dory bottom and take me with him. It was a clumsy struggle, for the cold had taken the strength and agility from both of us. How long it lasted I cannot tell, but this I know, that after the first frenzy I had rather the best of it. In the first few minutes it seemed as if my hold on the life-line would be wrenched away, and with the loosing of the clasp of my numb fingers I should vanish with the madman, a mere splash in the night. But little by little, as we struggled, strength seemed to come to me. The numbness went away with the violence of the exercise, and I began to feel that what had seemed certain destruction might be salvation instead. My companion struggled on, but with lessened vigor, now shouting disconnected bits of crazy utterance, now silent and grim, but always I could feel the glare of those fierce eyes through the dark, or thought I could.

There were moments when his strength seemed to suddenly revive, and in one of these a fatal thing happened. The knot which held the painter to the hoisting-tackle loop in the stern gave way, and with the swing of the rope to one side we went overboard into the icy blackness of the sea.

A moment I clung with one hand to the swaying rope, then the oblivion of a wave smote me, and all things disappeared. It seemed a long time that I was under water. I felt the grip of Lucky George's hand on me still, and realized that we two were sinking into effacement in this mutual grip of frenzy; then something hard and solid struck my feet. Could this be the bottom already? The next moment with a surge the waters fell away, and Lucky George and I were kneeling in the darkness and the open air on something solid. Again the waters engulfed us, and again receded as the solid substance beneath our feet swung up and out of them.

I felt my companion's grip tighten on my shoulder. "Ho, there!" he shouted; "we're aboard! We'll sail into glory in the ghost-ship. Shipmates ahoy!"

Half drowned, wholly dazed, as I was, it seemed as if my own reason had given away, as well as that of Lucky George; and then came a flash of blinding radiance from above and behind, a white glare that lighted a tossing circle of inky sea, and showed the deck of a dismantled vessel on which we clung, a wheel, a ship's cabin, and on the corner of this a name in black letters which read "*Mary Blake*."

The white glare painted rainbow edges on all things, and tipped the heaving black waves as with molten silver.

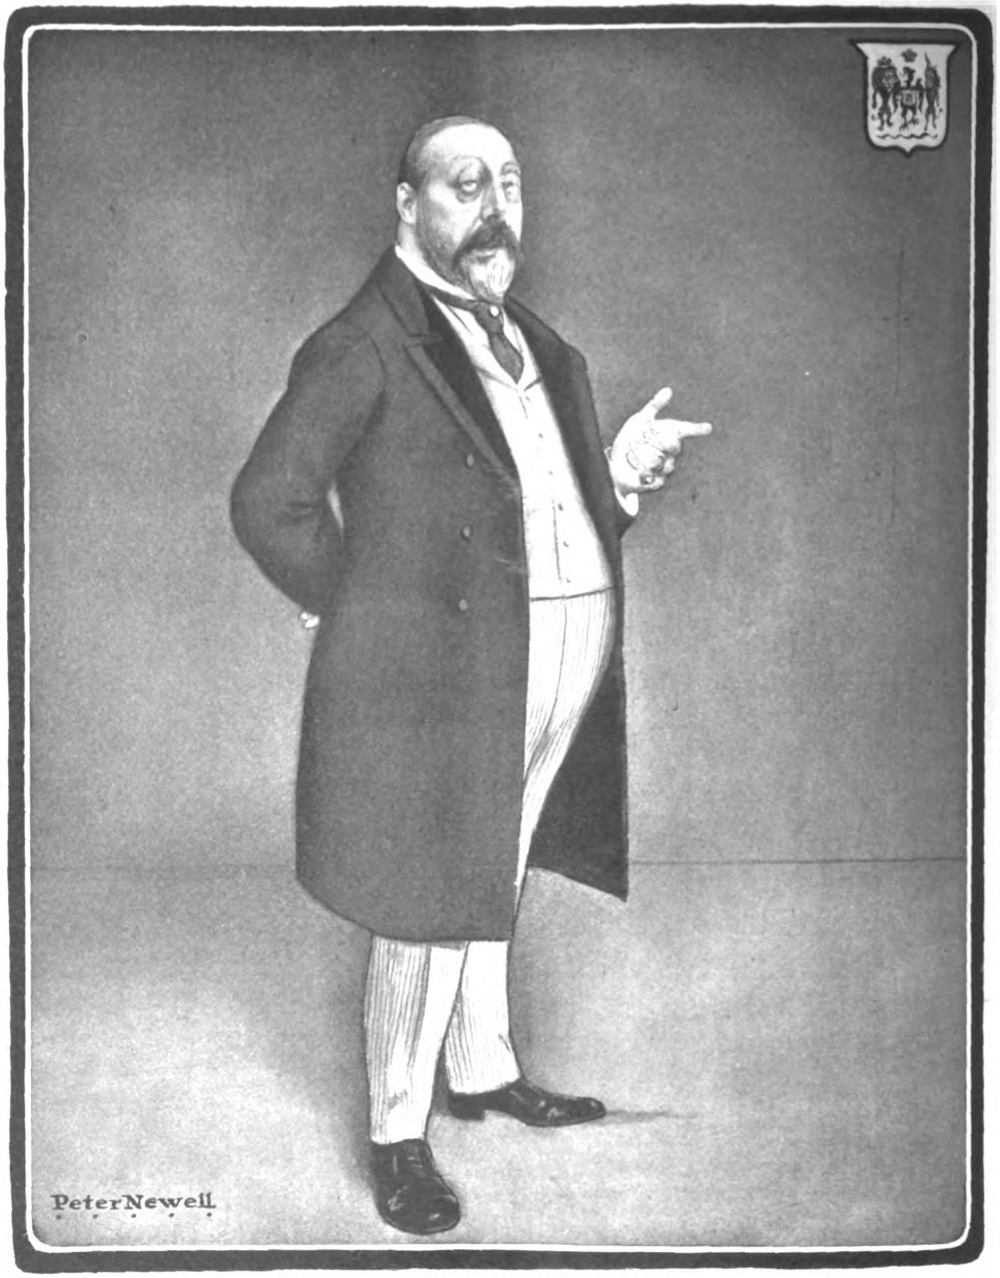
Lucky George stood erect. "Night and the resurrection!" he shouted, in a great voice. "Night and the resurrection, and God have mercy on me, a sinner!"

Then he sank in a motionless heap on the slimy deck. I turned my face in the other direction, and the white lightninglike glare blinded my eyes and seemed to sear my very brain. I, too, sank motionless and half unconscious.

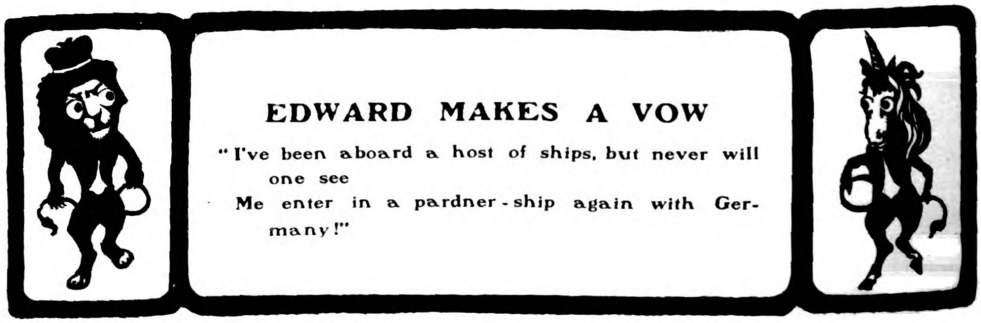
When I revived I was in a man-of-war's boat, Lucky George lying motionless by my side, and six sturdy jackies rowing us to a great battle-ship that loomed near by. From this ship a vivid lane of search-light radiance marked a straight course over golden-tipped waves to a derelict which rose and fell soggily on the swell, her deck now lifted, now awash, as the seas shouldered by. As she lifted I could see the name *Mary Blake* on the stern, and knew that what had seemed to happen had really happened, and was not a figment of a brain crazed by night, exposure, and despair.

"Night and the resurrection!" he shouted

A half-hour later, standing on the forward deck of the battle-ship *Massachusetts*, I saw the last act in the strange life drama of the *Mary Blake*. Four bells and a jingle sounded in the engine-room. The great bulk of the battle-ship surged forward at race-horse speed. The ram prow struck the stern of the waterlogged craft, and sheared through to the stem, scattering timbers and planking to port and starboard with scarce a tremor to the great steel hull, and the fragments of the dangerous derelict, the once proud clipper, the ghost-ship of our terrible night, scattered from the radiance of the search-light, and vanished in the shuddering scud of the winter waves.



All the remainder of the night and part of the next day Lucky George lay unconscious in the sick-bay of the *Massachusetts*. Then he revived, and seemed little the worse for what had happened, except that his recollection of events ended on the morning of the day that he helped scuttle the *Mary Blake*. This fact took a great weight from my mind. Of what use to tell the authorities the story of the scuttling? I had only the unsupported evidence of what he had told me, or perhaps I had dreamt in the darkness and terror of that night struggle with death. Whatever harm had been done by the misdeed was already done, and could not be recalled. I decided, and I think wisely, to hold my tongue.



I did talk with the boatswain of the *Massachusetts* about the *Mary Blake*, however, and he, with a sailor-man's ready knowledge of ships and their mishaps, told me that the ship had indeed sunk on Georges about five months before. She had been from Surinam, loaded with sugar, as Lucky George had said.

"But why," he said, "she did not stay at the bottom after she sank? That's what sticks me."

It would have stuck him harder could he have known all the story. It would stick a wiser man. But there are queer things happen in the sea. One has but to go down to it in ships a few times to find that out.

COMMENT

THE selection of Mr. Gorman as the leader of the Democratic minority in the Senate recalls old days and former struggles. No choice that might have been made could be so offensive to Mr. Bryan, and yet there is no reason in the world for supposing that Mr. Gorman was chosen for the purpose of hurting Mr. Bryan's feelings. Mr. Gorman's selection was unanimous, and, consequently, he received the votes of all of Mr. Bryan's personal friends in the Senate. The fact is probably that no thought was bestowed upon Mr. Bryan, and that no account was taken of his attitude toward Mr. Gorman. This may make the selection all the more galling to Mr. Bryan, for it implies forgetfulness and neglect on the part of those whom Mr. Bryan undoubtedly counts among his followers. It goes to show that, respectfully as Mr. Bryan is treated, and important as he is in some respects, he is becoming less and less a political figure. Mr. Gorman's selection was made for the reason that he is regarded as an astute and able leader, as one who can make the most of what there is of the minority. But he is not wholly confided in by other Democrats than Mr. Bryan. He was the leader in 1894 when the tariff-reform purposes of the Cleveland administration were brought to naught. Mr. Gorman, more than any one else, was responsible for this defeat, for the suppression of the majority of the party by its minority. If he is going to lead the party now, he must cease to be a protectionist, and must accept the party's opinion that the most effective step that can be taken against the trusts will be their divorce from government protection. He cannot, for example, help the Louisiana sugar interests kill the Cuban reciprocity treaty without, at the same time, killing his party. If he is to succeed in his restored old place, he must be a different Gorman from the Gorman of 1894.

Although it has been customary to recall appointments which the Senate has declined to confirm, Mr. Roosevelt has again sent to that body, in its extra session, the nomination of Crum, the negro, for the post of Collector of the Port of Charleston. Nobody disputes the correctness of the abstract principle propounded by Mr. Roosevelt in his recent letter to Mr. Clark Howell, the principle, namely, that mere color should no more be a bar to office-holding than creed or birthplace, provided, of course, that the applicant or incumbent is in other respects a worthy and well-behaved American citizen. Whether principles abstractly correct should be applied at all times and under all circumstances is, however, a question of expediency or opportuneness—that is to say, of statesmanship. To insist upon the appointment of a man of color to a given post against the vehement protest of almost all the white residents in the locality is an act calculated to aggravate rather than allay race hatred. It is, therefore, inopportune. It is perfectly true, as Mr. Roosevelt says, that the appointment of colored men to similar posts in other places has not provoked widespread and earnest remonstrance on the part of the white element of the population. The fact simply proves that an act may be expedient at one time and one place, yet inexpedient at another time and in another place.

The President seems to be less thoroughly alive than Secretary Root showed himself to be, in his speech at the Union League Club in New York, to the marked change which has recently taken place in the attitude of white men throughout the United States toward the colored race. The circumstance was recalled the other day that, at a dinner given in Paris shortly after the civil war, Mr. Robert J. Walker, of Mississippi, ex-Secretary of the Treasury and ex-Governor of Kansas, offered not the slightest objection to meeting a negro as a fellow-guest. No such tolerance would be exhibited by a Senator from Mississippi to-day. The change of sentiment is the outcome, as Secretary Root discerned, of a conviction that the colored man has not so used the opportunities afforded during the last thirty-eight years as to justify the belief in his intellectual and moral capacity that was once held by philanthropists. As this conclusion has been reached by many thoughtful men at the North, the Southern whites cannot be blamed for sharing it and acting upon it.

A remarkable letter has been addressed by a negro to the *Public Ledger* of Philadelphia. The writer opposes the formation of colored men at the North into clubs of so-called "Roosevelt Invincibles," and describes as nonsensical the denunciation of Southern men for opposing the appointment of negroes to conspicuous political positions in the Southern States, positions which are never offered to them in the Northern States. He has no doubt that similar protests would be heard from Northern whites if such appointments were made in their section of the Union. He evidently does not approve of Crum's appointment, for he holds that nothing should be done to inflame the prejudices of the Southern whites against the colored people. The negro problem, he says, cannot be solved by engendering race prejudices and enmity. He goes so far as to maintain that men of color should regard as blessings in disguise the property and educational qualifications lately embodied by some of the Southern States in their State Constitutions. The colored race, he says, should meet these qualifications instead of denouncing them. Rightly viewed, they are incentives to the acquirement of education and of thrift. He believes that their stimulative effect will go farther toward solving the negro problem than any other agency. When the colored element of the population in Mississippi, for example, shall have gained education and property, no human power can debar them from voting or from office-holding. As Mr. R. W. Childs pointed out the other day, should the time ever come when the qualified voters of Mississippi shall elect a negro for their Governor, nothing can prevent his assumption of the office. Meanwhile, the

negro correspondent of the *Ledger* contends that the Southern whites are justified in decreeing that ignorance and thriftlessness shall bar the colored man from the ballot-box.

The Fifty-seventh Congress did well when, in spite of the alleged attempt to bribe a member of the Naval Committee of the House of Representatives, it appropriated half a million dollars for the investigation of submarine and subsurface torpedo-boats. It is believed that some notable improvements on the boats hitherto constructed in the United States have been made by American inventors. There is no doubt that the French navy already possesses torpedo-boats capable of moving under water with great, if not irresistible, efficiency. We take for granted that the mechanical principles and methods embodied in these French craft will be made the subject of careful study by our Navy Department. It should be recognized that the French draw a sharp distinction between submarine and submersible vessels. The French submarine boat, properly so called, can only be used for surface navigation when the weather is fair and the sea is smooth. As, moreover, its radius of action is short and its speed low, the submarine boat is useful mainly for guarding the sheltered waters of harbors. It is also to be kept in view that as in France such boats are driven exclusively by electrical motors, they are useless when the batteries are exhausted, unless they are within reach of a recharging or storage station. None of these objections are applicable to the so-called submersible boat, which has a long radius of action, is capable of high speed, and commands two methods of propulsion, to wit, steam when the boat is on the surface, and an electrical motor when it is submerged, the steam power in the latter case being used to recharge the batteries.

The French submersibles do not dive by poking their noses beneath the surface and raising their sterns. They sink, on the contrary, beneath the surface on a level keel, and thus avoid the danger of thrusting their heads into the mud, or of turning a complete somersault. When the submersibles were tried during the French naval manœuvres in the British Channel last autumn, they achieved remarkable success. In spite of the sharp lookouts maintained by the battle-ships and torpedo-boat-destroyers, the submersibles repeatedly contrived to hit the hulls of war-vessels with blank torpedoes, which, had they been loaded, would have annihilated the objects struck. They also managed to pass under water from one harbor to a second harbor at a considerable distance from the first. On the whole, French naval experts are convinced that the submersibles will prove of inestimable value, not only for the defence of seaports, a function which can be adequately discharged by submarines, but also for the disablement of hostile battle-ships. It is the conclusion reached upon this point that has caused the present Ministry of Marine to decide that the future expansion of the French navy shall mainly take the form of additions to the number not of battle-ships, but of submersibles, and of swift armored cruisers which will play the part of commerce-destroyers. Before the Fifty-eighth Congress meets, our Navy Department should have made up its mind whether we also do not need submersibles of the French type.

For more than one reason we hope that there is no foundation for the report that Chief-Justice Fuller, of the United States Supreme Court, is thinking of retiring from the bench at an early day. It is generally believed that Justice Fuller's health is as good as it has been for some years; if so, he should have a long period of usefulness before him. There is no greater mistake than to assume that a man's fitness for judicial functions is a question of age; it is purely a question of intellectual qualifications. So long as the intellect remains unimpaired, in respect of breadth and penetration of vision, the more experience a judge has had, the better for the bench to which he belongs and for the community. That eminent services have been rendered by judges who have passed the age of threescore and ten can be proved by many examples, of which we mention but two: Lord Lyndhurst became, for the third time, Lord Chancellor of England in 1841 at the age of sixty-nine, and held the Great Seal till the defeat of the Peel government in 1846. John Marshall remained Chief Justice of the United States Supreme Court from March, 1801, until his death in July, 1835, when he was within three months of eighty years of age. That he continued to dominate the Court up to the last may be inferred from the remark made by President Andrew Jackson in 1832, when, in the case of Worcester *vs.* Georgia, the Court declared it to be the President's duty to protect the Cherokees. "John Marshall," said Jackson, "has made his decision; now let him enforce it." It is not only, however, because they appreciate the services which Chief-Justice Fuller has rendered, and desire an extension of them, that thoughtful citizens would deplore his retirement at this time. Of the nine judges composing the United States Supreme Court only three are Democrats, to wit, Chief-Justice Fuller and Associate-Justices White and Peckham. In the interest of the country, and in that of the tribunal itself, it is expedient that the two great political parties should be more equally represented.

Prince Esper Ukhtomski confirms the darkest anticipations for China, which were recently put into concrete form by Dr. Robert Coltman, and endorsed by so great an authority as Count Cassini. Prince Ukhtomski's familiarity with China goes back for several years; at least as far as 1891, the year in which he accompanied the Tsar, who was then Tsarevitch, on his Eastern and Siberian tour. The prince for a long time fulfilled certain special duties, as founder of the Russo-Chinese bank, and showed signal ability in dealing with the Peking authorities, for whom he expresses the greatest sympathy, believing that the Chinese uprisings are an inevitable, almost a justifiable, reaction against the aggressions of the Western European powers. Prince Ukhtomski is singularly outspoken in his criticisms, and has more than once used the columns of the St. Petersburg *Gazette* to criticise the doings of Russia's agents in the Far East, when he believed them in danger of imitating the "predatory policy" of certain Western powers, to quote his own phrase. Recent events in South America have made it tolerably clear to us what a "predatory policy" means. Another Russian whose opinion carries weight is Colonel Verestchagin, brother of the celebrated artist. Colonel Verestchagin fought through the Russo-Turkish war as a member of Skobeleff's staff, and therefore in direct relation with the present Russian War Minister, General Kuropatkin, chief of the staff to Skobeleff, and he also accompanied Skobeleff in the expedition which added the Turcoman districts of Transcaspia to the territory of the Russian Empire. His experiences in these two wars were embodied in one of the best military records ever written, which might serve as a text for his brother's pictures. Colonel Verestchagin agrees with the authorities already mentioned that a new Chinese uprising against the foreigner is inevitable.

Reports of revolutionary successes are once more drifting in from Venezuela. News from the eastern districts tells us that Carupano and Barcelona are now in the hands of the Matos party, the latter city having been recently captured by the revolutionary generals Monagas and Pablo Guzman. General Rolando has once more assumed a strong position in the neighborhood of Guatire, where, it will be remembered, he suffered a defeat a few weeks ago, his army being broken up and scattered over the country. We are further told that the revolutionists are steadily drawing nearer to Caracas, maintaining what is something like a loose blockade of the capital on the land side, while all the western part of the republic, with the exception of the city of Cumana, is in the hands of the insurgents. From Caracas itself comes the assertion that President Castro has been unable to call a session of Congress, because not enough members to form a quorum are available. Finally, news reaches us from Willemstad, the port of the Dutch island of Curaçao, that a steamer from Maracaibo has just touched at that port with less than one-third of her usual cargo, amongst which there is no coffee. The reason for this is that the new export duties by which President Castro is trying to recoup himself for the customs dues which are to be paid to the powers are so heavy as to be prohibitive. Maracaibo merchants say they are more ruinous than the blockade, and it is evident that the probable result will be an entire cessation of Venezuela's export trade, a great curtailment of her imports, and the consequent dwindling of the revenue of the state to a point which will make any useful activities impossible. It becomes daily clearer that, while President Castro evidently

excels his opponents in fighting power, his dictatorship is increasingly ruinous for Venezuela.

Reports from Macedonia are somewhat discouraging. It seems that the various revolutionary movements throughout the country, having made considerable preparations for an uprising against Turkey in the spring, are unwilling to be balked of their sport, so to speak, merely because Russia and Austria have prevailed upon Abdul Hamid to initiate or at least to promise certain reforms. We have several reports of hard fighting from the well-known centres of trouble in the three Turkish provinces which we group under the general and misleading name of Macedonia; misleading, because the name suggests Greek affinities, while the real relations of the country are Slavonic, and to that extent rather anti-Hellenic. The already famous Boris Saraffoff has scored a victory over the Turkish troops near the village of Vladinorovo, and the losses of the government troops appear to have been severe. Similar attacks on Turkish troops have taken place, or at least are reported to have taken place, in three other districts, and in each case the result has been a victory for the revolutionaries. This is in one sense very unfortunate for the ultimate welfare of their cause; for Russia has already declared that she will only bring pressure to bear on the Sultan so long as the Slav populations of the three provinces remain tranquil; and it is obvious that these guerilla fights will render the conversion of the gendarmerie into a Christian and Slavonic body, in the sense desired by Russia and Austria, doubly difficult. This is in the last degree to be regretted, for the peaceful influence of Russia, and the gradual melioration of local conditions resulting from this influence, are about the last hope of the maltreated peasants, as the feeling in Russia against any armed intervention is steadily gaining force.

By a very amusing coincidence, two distinguished European personages recently delivered opinions as to the general character, prospects, morals, and manners of our country, on the same day. These two opinions are diametrically opposite; the one being vinegar and the other milk and honey. The acetic criticism comes from Germany, the spokesman being Professor Adolf Wagner, of the Berlin University. He begins by asserting that the Monroe Doctrine is a colossal piece of assumption. Such a doctrine, he says, was never forced on a conquered nation. Neither England nor Russia nor Napoleon at the height of his power ever made a similar pretension. Neither geographical nor historical relations justify us in our wild undertaking, nor do the really dominant interests of the United States share the extreme temerity of our government. To this he adds an even sharper sting: it is only the divisions of European politics, he tells us, and the lack of solidarity of the interests of middle, western, and southern Europe, "which hitherto have been, and will remain, the chief seats of human civilization," that explains why Europe, why Germany even, takes this empty pretension into consideration. There is something very refreshing in this naïve egotism, this candid self-appreciation; and hardly less amusing is Professor Wagner's patronizing tolerance of the elements of culture which Italy and France and Spain have given so abundantly to the world. He tells us that he, as a member of the Germanic race, does not want to see the Romanic element pressed to the wall, because it is indispensable to the world's civilization, "and is a necessary complement to Germanic culture." He finally asks what the United States has yet done of importance for the real civilization of the world, apart from some technical and business spheres. What has the United States done that has deserved to be named in the same breath with the achievements of Italy and France? And Professor Wagner pauses for a reply.

At about the same hour, one of the Romanic representatives, to wit, the Marchese di Rudini, was trying to answer this very question; and, according to this distinguished personage, the answer is as follows: The United States has already attained the most advanced form of modern civilization, after having eliminated all the old forms by a process of Darwinian selection. The progress of this American civilization will not tend toward decadence, as is the case with the old civilizations of Europe. The Latin races, the Marchese tells us, "are petrified in a proletariat too ignorant to rise higher, a bourgeoisie crystallized in a parasitic bureaucratic mould, and an aristocracy falling into ruins through its own weakness." That is sufficiently crushing; almost as crushing as Matthew Arnold's famous epigram about his own country: "An upper class materialized, a middle class vulgarized, a lower class brutalized." The Marchese considers it natural that Americans should regard as immoral that European society of which the instruments are human passions and weaknesses, which is perishing in the struggle between individuals, and of which the ideal is victorious parasitism. He contrasts this decadent Europe with the United States, where all conflicts are exclusively economic, for the development of wealth, and where the democratic problem is continually being solved in its entire political economic complexity, "the result being a commonwealth composed of individuals all equally laborious, all prosperous, free, and strong." The Marchese has our best thanks. He and Professor Wagner should really know each other.

Without knowing it, this eminent German professor and others of his nation are rendering us a service by the frankness with which they divulge the convictions of their far-sighted and resolute countrymen. As they say, the Monroe Doctrine is a mere bugaboo, fit only to frighten children, unless we have behind it a naval force superior to that of any European power, with the exception of Great Britain and France. Great Britain has nothing to fear from the Monroe Doctrine; indeed, it operates indirectly as a safeguard of Canada and her other American possessions against conquest by any foreign power except the United States. As for France, we shall never again be brought so near to a collision as we were during our war with Spain, when the instinctive sympathy for a Latin-American neighbor was intensified by the fact that a very large part of the bonds issued by the Madrid government were owned in Paris. For the knowledge that the doctrine has no important enemy but Germany we have to thank the leaders of German opinion as we have named above. They build better than they know, but they build on the wrong side of the Atlantic. The Anglo-German demonstration against Venezuela, and the disclosure of the motives which prompted one of the allies, simply had the effect of causing the American Congress in the session just concluded to provide for the construction of five battle-ships instead of two. We could build ten, or even fifteen, battle-ships a year, and still leave a surplus of income over expenditure, whereas Germany has already overstrained her fiscal resources by her present naval programme. It is simply impossible for a poor country like Germany to keep pace with the United States, considered as a sea power, from the moment that the American people are awakened to the exigencies by which they are confronted. We ought to be grateful to the German professors for hastening the awakening.

The London *Spectator*, which has shown repeatedly that it understands the American people much better than any other English newspaper, explained the other day to its readers how and why Emperor William II. has failed to divert American good-will from England to Germany. We may here say, what the *Spectator* omits to state, that the late German ambassador, Dr. von Holleben, took the right course in one respect. That is to say, he sought the acquaintance and respect of men of light and leading. That he gained it is evident from the fact that Harvard University made him a Doctor of Laws, a distinction which, so far as we know, has never been conferred on any other foreign minister, and which certainly nobody would have dreamed of conferring upon Lord Pauncefote. It was no fault of Dr. von Holleben's that his sage and successful programme was interrupted and frustrated by silly and abortive overtures of the Emperor's own devising. The responsibility for these foolish and futile demonstrations should be placed where it belongs, on the shoulders of William II. himself, and not where the *Spectator* mistakenly puts it, on those of the high-minded and far-sighted representative of the German Empire. It is not Dr. von Holleben, but his imperial master, who must be credited, or discredited, with the fatuous attempts to influence American public opinion by the visit of Prince Henry of Prussia, and through the christening of a royal yacht by Miss Roosevelt. Nobody knew better than the late German ambassador

that for royal princes, as such, the American people care not the snap of a finger, and that, in their judgment, as regards the christening of the yacht, Miss Roosevelt was the bestower, and not the recipient, of honor. All this, which is the A B C of knowledge concerning American sentiment, was familiar to Dr. von Holleben, but it seems to have been more inscrutable than the cuneiform characters of Chaldea to the Kaiser.

Especially is it an act of cruel injustice on the Emperor's part to make his diplomatic representative at Washington a scapegoat for the astounding blunder of offering a statue of Frederick the Great to the United States. As Mr. Moncure D. Conway has conclusively shown, the story about Frederick's sending a sword to Washington is a myth without an atom of foundation. As for the refusal to permit German mercenaries, hired by England for use against the American colonies, to traverse Prussian territory, Frederick was avowedly prompted, not by any sympathy for rebels, but by the feeling that if German blood were to be spilled at all, it had better be spilled in Europe. Once more: although repeatedly requested to follow the example of France, Spain, and Holland, and recognize the United States as an independent confederation, Frederick the Great declined to do anything of the kind, and persisted in his declination until some time after the independence of the colonies had been recognized by England herself. In other words, if priority of recognition is to be the test, a statue of George III. should precede one of Frederick the Great at Washington.

In the British Parliament, the most interesting thing is the possibility, the probability even, that Winston Churchill may form a fourth party, of Conservative malcontents, after the manner of his gifted and pugnacious sire, Lord Randolph. His attack on the government's war policy, or, to be accurate, the war policy of Mr. Brodrick, was the most inspiriting feature of the new session; and he has a fair following of young bloods of the Tory party, who will at least make the reports of the debates in the Commons somewhat more lively reading. It is doubtful if they will do much more, however; for the government has a strong majority, and, more important, it has a weak and nerveless Opposition. It seems likely, strange as it may seem, that the government will have more or less active support from the Irish Nationalists, who will probably receive a modified home-rule scheme from the very party which came into existence to defeat home rule. This will be a realization of one of Parnell's prophecies; for, in spite of the numerous measures favoring Ireland fathered by Gladstone, that venerable statesman never won the confidence of his Irish allies. Indeed, Parnell himself used to call him the "Grand Old Spider," a sufficiently satirical epithet, though not one altogether undeserved by that colossal spinner of webs. One would be interested to know what agreement was reached between Mr. Wyndham and Mr. Redmond as a condition precedent to the liberation of so many Irish members recently imprisoned in Ireland under the Crimes Act; but perhaps the voters of the next few divisions will give the secret away. So far, while the Nationalists have not in a body voted for the government, they have on several occasions abstained from voting against it, and have thereby done solid service to Mr. Balfour and his friends. Perhaps there is some highly occult relation between this and the new Irish Land Bill.

With the exception of the *Saturday Review* and two or three other newspapers unfriendly to the United States, the British press is exhibiting impatience at the dissatisfaction with which the Alaskan Boundary Treaty is received in Canada. The Canadians will soon discover that far-sighted Englishmen regard the good-will of the United States as of incomparably more importance to Great Britain than is the so-called loyalty of the Dominion, which declines to contribute a dollar to the support of the Imperial navy. It has come to be well understood in London that with the friendship of the United States the British Empire might defy the rest of the world, whereas our enmity would be a death-blow, because, in the event of war between the two countries, we should cut off not only the food supplies which England is accustomed to receive from us, but also those which she might hope to get from Canada. We should simply have to occupy the railways running from the Northwestern Territories of the Dominion to the seacoast. Thus it is evident that Canada, which will do nothing for the mother country in time of peace, could do nothing for her in time of war without the consent of the United States. It follows that while Imperialist sentiment would doubtless cause Great Britain to fight for the retention of all her other colonies, it is no longer to her interest to retain British North America. That may be a humiliating fact for the hyperfervid loyalists of Canada, but a fact it indisputably is. If the Canadian Liberals should now revert to the annexationist policy which at one time some of them were inclined to favor, they may be sure that the mother country would wish them Godspeed. It would be superfluous to point out what the Dominion would gain in wealth and population by free access to the markets of the great American republic.

We are now in the fifth year since the city of Manila was surrendered to American troops, and since the Philippines were cut off from free access to the Spanish market. What have we done since then to replace the market of which the Philippine products were by our own act deprived; or, in other words, what have we done to stimulate and sustain the industries of our insular possessions in the Far East which henceforward must look to us exclusively for prosperity and progress? The shameful truth must be acknowledged that we have done next to nothing. We have treated the products of the Philippines precisely as if they were the products of a foreign state, except that we have consented to make the derisory reduction of twenty-five per cent. of the Dingley rates in their favor. There is absolutely no excuse for this monstrous discrimination against a particular part of the American domain. The Philippines did not petition to be annexed to the United States; we annexed them against their will; and the least thing we can do with any show of decency is to give them a substitute for the Spanish market, from which, as belonging to a foreign country, they are now debarred. What possible reason can be advanced for treating the Philippines less generously and less justly than we have treated Porto Rico? Only for a very short time did we deny to Porto-Rican products freedom of access to our markets. The bar was quickly lifted, and with beneficent results to both parties. It turned out that justice, like mercy, is twice blessed, blessing him that gives no less abundantly than him who receives. It is true that the American market now takes five times as much of Porto-Rican products as it took in 1897, but our exports to the island exhibit a no less notable expansion. Last year we sent to Porto Rico commodities valued at nearly $12,200,000, our imports thence being $9,634,000.

We may be asked, why has Porto Rico not received a form of government substantially identical with that possessed by the Territories of Oklahoma, New Mexico, and Arizona, a form which would entitle her to a Delegate in the House of Representatives? We answer that, for the moment, such a form of government would be too dearly purchased. If Porto Rico became a Territory in the technical sense of the word, all internal-revenue taxes and customs duties collected would have to be sent to Washington and turned into the Federal Treasury. Now the internal-revenue taxes alone represent about a third of the total revenue of the island, and they are at present needed for indispensable local expenditures. As soon as Porto Rico can afford it, she will be organized as a Territory, and will have a spokesman in the Lower House of Congress. We should add that it is no fault of our House of Representatives that the Filipinos have not been more liberally treated in the matter of customs duties. The House cut down the duties on Philippine products to twenty-five per cent. of the Dingley rates. It was the Senate which refused to reduce the rates on sugar and tobacco more than fifty per cent., and, at last, failed to pass the House bill, even in this mutilated condition.

How are we to account for the fact that the Elkins act, with its rigorous provisions against rebates, has provoked scarcely a word of protest on the part of the common carriers aimed at, that is to say, the railway systems engaged in the transportation of commodities from one State to another? Are we to assume that the common carriers have not been accustomed to violate the law against rebates which previously stood upon

the statute-book? Or shall we rather draw the inference that railway-managers regard the detection of rebates or preferences as practically impossible? There is no doubt that railway presidents have repeatedly promised one another to prevent their agents from offering secret inducements for traffic. At the same time, the agents know perfectly well that the presidents, their employers, do not wish to see the business of their roads diminished. Consequently, they look upon the order to offer important shippers no inducement for their traffic as a counsel of perfection, obedience to which would be irreconcilable with the work expected of them. Touching this point, a correspondent of the Philadelphia *Press* has lately recalled an anecdote of Samuel Sloan, who, on one occasion, when he was president of a trunk line, called his traffic, or general, manager into his office, and informed him that the principal railway presidents had agreed upon a schedule of rates which was to be faithfully observed. The schedule was to be printed, exposed in public places, and to be punctiliously carried out. The general manager heard the words, but he also detected an undertone that might have been unnoticed by ears less expert, and he likewise thought that he saw a momentary twinkle in his employer's eye that seemed to intimate, "Observe these rules, but don't let any other railroad get our traffic away from us." As a matter of fact, no other railroad did, yet no breach of faith was ever brought home to the general manager by his employer.

It is a remarkable fact that of all the constitutional monarchs in Europe the most disreputable has the most power. We refer, of course, to King Leopold II. of Belgium, whose escapades have been for many years of a kind in comparison with which those of Louis XV. were conducted with discretion and enveloped in mystery. Strange to say, although, from one point of view, his life has been one which would debar him from any respectable middle-class household in England or the United States, the masses of his subjects could not if they were Moslems regard his sexual divagations with more indulgence. The recent attempt to assassinate him undoubtedly added to his popularity, and probably has prolonged the life of his dynasty. It is no longer true of Leopold II. that he reigns but does not govern. The Belgian sovereigns were figureheads years ago, when the old-fashioned Liberals were in power, under the leadership of M. Frère-Orban, but since the Conservatives, who are almost exclusively Catholics, have had no formidable rivals except the Socialists, the King's personal influence has become a political factor of the first magnitude. He is even more powerful today in Belgium than George III. was in England during the first twenty-four years of his reign. Not content with the exercise of indirect and surreptitious pressure through the responsible ministers, he has of late not hesitated to place himself in direct and open relation with the people and the people's representatives in the Lower House of the Belgian Parliament. In an address on New-Year's day to the presiding officer of the Brussels Chamber of Deputies, he even propounded the principle that it was the sovereign's duty when, in his judgment, the country's interests should demand it, to take the initiative in matters concerning which the Parliament could be consulted later. Nor was this a merely academic declaration intended to sound public sentiment. He has actually carried out the principle, having just announced his intention to develop the coal-mines, recently discovered in Belgium, at the expense of the state, without waiting for any authorization on the part of the national legislature.

Those Englishmen who imagine and assert that in the United States the dollar is almighty overlook the profound respect, amounting at times almost to reverence, with which Americans regard men, like Ralph Waldo Emerson, who believe in plain living and high thinking. Emerson has had many disciples in public as well as in private life, and the position which they occupy in the esteem and confidence of their fellow-citizens is one unapproached by any of our multi-millionaires. A few years ago the annual income of one member of the Federal Senate was reputed to exceed $14,000,000 from one source alone. So far as we know, that gentleman's voice has never been heard but twice in the Senate-Chamber, and were he to speak oftener he would be listened to with more surprise than respect. On the other hand, there is no Senator who deserves and commands so much attention when he rises to discuss a public question as does the Hon. George F. Hoar, of Massachusetts; indeed, we do not hesitate to say that, since the death of Daniel Webster, there has never been a Senator whose utterances bear so well the searching test of type. Yet this man, who for a quarter of a century has worthily represented the commonwealth of Massachusetts in the Upper House of the Federal Legislature, has never known what it is to possess so modest an income even as two thousand dollars a year, outside of his salary. Up to a twelvemonth ago, he had been unable to rent even a humble dwelling, but had lived in boarding-houses, some tolerable, some intolerable, during the whole of his useful and honorable career in Washington. Has the fact impaired his social dignity or his political weight? We reply, not an iota. That is a truth well known to men who have lived in the Federal capital, and it is a truth as creditable to the American people as it is to Senator Hoar himself.

We thoroughly understand the motives which prompted the Virginia Legislature to pass a bill providing for placing a statue of General Robert E. Lee in Statuary Hall at Washington. Of the many illustrious Virginians, it is doubtful whether Jefferson, or even the Father of his Country himself, is more beloved and honored by the inhabitants of the Old Dominion than is Robert E. Lee. Memorable was his service to Virginia, and never will she cease to cherish his memory. He was a great man and a good man. He did not wish to see his State secede from the Union, but, when she did, he followed her. The conviction that his State had a right to secede if she chose, and that, she having done so, it was his duty to uphold her, was shared, not only by almost all the contemporary statesmen in the Southern States, but also by Josiah Quincy and many New England statesmen in the first fifteen years of the nineteenth century. It will, therefore, be as impossible for the future American historian, however devoted to the Union he may be, to dispute the rectitude of Lee's motives as it will be to belittle his military abilities. The truth, however, is not always timely. There is some reason to apprehend that the hour has not yet come when the organization known as the Grand Army of the Republic, and the Republican majority in Congress, will welcome the erection in Statuary Hall of a statue of Robert E. Lee, or of any other eminent generals who fought for the right of secession. Congress has to act upon the acceptance of the statue, and it may heed the protest of the Grand Army of the Republic, should one be made.

In the *Almanach de Gotha* there is much suggestive reticence concerning the whereabouts and occupations of certain members of the families deemed sufficiently noble to figure in that classical compilation. The relatively modest annual *Perthes's Almanach*, which deals with the German nobility of all ranks, is much more outspoken. In the latest edition it acknowledges that thousands of waiters, coachmen, barkeepers, miners, and other workmen in the United States are recruited from the German nobility. Even in the fatherland itself, the names of the very oldest nobles appear not only in the highest ranks of the army, but in the lists of coachmen and common laborers. In France, under the *ancien régime*, there used to be a *noblesse de la robe*, composed entirely of judges and lawyers, but in Germany it seems that when a man of noble birth has to earn his living, he seldom has brains or education enough to succeed at the bar. In the great city of Berlin only a single lawyer is of noble birth, while, on the other hand, the urban directory enumerates hundreds of noble names in the lists of commercial agents, constables, skilled and unskilled laborers. In other words, the state of things in Berlin, as regards the *dégringolade* of many members of noble families, is rapidly approaching that which obtains in St. Petersburg, where the saying is current that if you fling a stone into a crowd of hackmen on the Nevski Prospekt you cannot fail to hit a prince. Of course, the cause of the phenomenon in both Germany and Russia is the custom of transmitting the father's title to all of his male descendants, instead of to his eldest son alone, as is the custom in Great Britain. Where the eldest son alone retains the title, together with most of the estate, the *prestige* of the family is kept up, and there is always somebody through whose influence the minor members of the clan may hope to secure advancement. In France, under the *ancien régime*, there

existed a species of compromise between the German and the English systems. The eldest son, on his father's death, took the latter's highest title; the second son, the second title, if there was one, and so on; but even the youngest male member of a large noble family had the title of *chevalier*.

It seems to be practically impossible to convince some persons of what ought to be self-evident, namely, that the text of the Constitution of the United States cannot be altered or amended in the slightest particular except by the machinery for emendation expressly provided in the text of the document itself. A paragraph is going the rounds of the press to the effect that the question whether the "United States" should be regarded as a plural or as a singular noun has been definitely settled by the Committee on Revision of the Laws, which, it seems, in reviewing the Federal Statutes, has presumed to decide that the United States *is*. No committee of either House of Congress has the power to decide the question, nor would even an act of Congress possess the requisite authority. That question is settled by the Constitution itself. Thus, in Article I., Section IX., Clause 7, we read, "No title of nobility shall be granted by the United States, and no person holding any office of profit or trust under *them* shall," etc. Again, in Article II., Section I., Clause 7, we read, "He [the President] shall not receive within that period [the period for which he shall have been elected] any emolument from the United States or any of *them*." Once more: Article III., Section III., Clause 1, says, "Treason against the United States shall consist only in levying war against *them*, or in adhering to *their* enemies." But, it may be said, the amendments made to the Constitution during the reconstruction period practically transformed the United States from a confederation into a nation, and thus the noun which had previously been plural was made singular. We answer, first, that no change in the number of the noun, or any other change in the *style* of the Constitution, can be made except by a constitutional amendment; and, secondly, that one of the amendments referred to itself recognizes "United States" as a plural noun.

The first section of the Thirteenth Amendment runs as follows: "Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to *their* jurisdiction." We have here said enough to prove that "United States" cannot be made a singular noun by any committee on revision of the laws, nor by Congress itself, nor by any power on earth, except the power embodied in the alternative methods of constitutional emendation prescribed by the Constitution itself. The last time when the diction of our Federal organic law could be changed in the minutest particular, except by a constitutional amendment, was when, in the last days of the Philadelphia Convention, the document was referred to the committee on style. In the text reported by that committee, and adopted by the convention, the term "United States" is a plural noun; and so it must remain until the Legislatures or State conventions of three-fourths of the States shall decree otherwise. We may add that had the committee on style ventured to make the "United States" a singular noun, the change would have forthwith provoked protest from the Philadelphia Convention, for the reason that the whole theory of State Rights would have been obviously involved. The Constitution would never have been adopted by the requisite majority—nine States—had the term descriptive of the proposed confederation, to-wit, the "United States," been made a singular noun.

Miss Gertrude Atherton, who has done more than any one else in recent years to call to the minds of Americans the fact that they have failed to acknowledge fitly the transcendent greatness of that marvellous man of genius in statecraft Alexander Hamilton, has now fallen afoul of some of Hamilton's admirers. She has admitted that the news that he was of illegitimate birth almost made her ill, and has added to this statement the words, "Both enthusiasm and imagination would shrivel were I obliged to accept as a fact that Alexander Hamilton had negro blood in him." Miss Atherton is pointedly rebuked for acknowledging this prejudice. Yet the confession certainly does not hurt her as a student, nor even as a eulogist and glorifier of Hamilton. The unfortunate prejudice itself would undoubtedly be entertained by a good many people who would not have the frankness to confess it; and if in the face of the suspicion Miss Atherton has been able to retain every shred of her sentiment for Hamilton, we are forced by her confession to entertain new respect for the compelling genius of the man and the power of his very wonderful story. A certain American Southerner, who was a warm partisan of the Cuban revolutionary cause, and who also entertained all the prejudices of his section against social contact with the African race, was asked what he would do if Antonio Maceo came to visit him. A little shiver passed over him, but he answered, "I would entertain him as an equal." One honored his Cuban enthusiasm all the more for that shiver of race pride. We like, in this conscious age, to have a biographer—even a biographer of romances—confess his prejudices, and then ride over them rough-shod. It is much better than to have him say nothing about them, and let them color everything he says and does. As for Hamilton, it is to be said that if he had negro blood it did not hurt him. He was one of the world's greatest men. His part in the making of the American republic was second only to Washington's, and he should be honored next to Washington. The rest of the world owes him a larger tribute than it supposes, for the triumph of the principles of constructive statesmanship which he conceived has affected the history of other lands than ours—notably, beyond all doubt, that of the new German Empire.

It may be asked if American domestic habits have not something to do with the frequent breakdown of American nerves. In perhaps the majority of cases, in cities at least, the day is admirably arranged so as to give the business man no rest whatever until he gets into bed. It has come within our observation that, in our civilization, there are three systems of living out the ordinary working-day. There is the French system, which is that of the continent of Europe in general; there is the English system; and there is the American system. The last combines the chief features of the other two. The Englishman goes to work late and comes away early; but during working-hours he works all the time. His luncheon is light, and eaten hastily—perhaps at his desk. For this he makes up by a leisurely breakfast and a leisurely dinner; while he has the early part of the morning and the latter part of the afternoon to himself. The Frenchman, on the other hand, goes to work early, and works hard till noon. The American is apt to underrate the energy with which the Frenchman works while he is working. But at noon work ceases, and he sits down to an abundant meal, well cooked, well served, and eaten with appetite and in peace.

After his *déjeuner* he has his *petit verre*, his smoke, and perhaps a game of dominoes or cards; while he discusses politics, the arts, or the topics of the day. He takes his two hours of refreshment as a matter of course; he has no prickings of conscience at wasting time, nor searchings of heart lest some one else should "get ahead of him." Even the laborer, who in America eats his cold midday meal in a ditch or behind a pile of boards, generally sits down in Europe to a decent table, deftly served, and, however coarse his food, has time to eat otherwise than as the lower animals. Then, with mind cleared and cheered, and body strengthened and refreshed, laboring-man and business man return to their tasks, to work hard and late. The American system, as we have said, combines the chief features of the other two. The American goes to work early, like the Frenchman; like the Frenchman, he works hard; like the Frenchman, he works late; but, like the Englishman, he takes no time to himself at midday. His luncheon is the merest "snack"; it is often cooked badly and served worse; it is oftener still, perhaps, drawn from a paper in his pocket, and not served at all. As for any intellectual repose or mental distraction from the grim facts of work—not only is it not thought of, but the very idea would be laughed to scorn. From the moment of setting forth to the moment of return mind and body alike are deprived of their proper nourishment and rest. It is scarcely strange, therefore, that Europe should be rich in elegant American widows and orphans, and the churchyards at home too full of young men's graves.

The Special Session and the Canal

THE other day Mr. Depew announced to the Senate that it was on trial. No one who has read the current literature of the last six months has any doubt of the truth of this, but much more immediate is the fact that the Democratic party in the Senate is on trial.

It is the natural tendency of the aggressive politician to think that the way to public favor is through opposition to his party's antagonists at every point. There is certainly no easier way to avoid thinking, a hard task for most of us, and, sometimes, there is no easier road to defeat. The real way to secure public favor is, of course, by gratifying or winning over public opinion. This involves a knowledge of what existing public opinion is, and, necessarily, the man who assumes that it is precisely opposite to the opinion of his political adversary, is much more likely to be wrong than right if that adversary happens to be in power. The Democratic Senators have not of late shown much sense of public sentiment. Many of the old leaders have assumed the acceptance of Republican policies to be wisest, a state of mind that is quite as irrational as the opposite one to which we have referred. Now, however, that Mr. Gorman is back, and the party has thereby gained a new and a real leader, it was falsely assumed that the pending treaties are to be opposed by the Democrats for no other reason than that they constitute the party of opposition, and, consequently, must be against any policy that is Republican,—the policy of either the Administration, which is one thing, or of the party leaders, which is quite another thing.

There has been no public sentiment in recent times so easily understood as that on the question of an isthmian canal. The man or the party which fails to grasp it is open to suspicion. It is either utter folly or corruption which determines its attitudes. Senator Morgan we can comprehend. He is as honest a man as ever sat in the United States Senate, but he has apparently staked his reputation and his career on the Nicaragua route, and is obsessed. We can pity him, but we cannot condemn him. On this question, however, touching which his long and special studies ought to make him an expert, his opinion is worthless, and if his party had helped him to gain his fight against the Panama route, it too would have become worthless, and would have demonstrated, at least as far as its leaders in the Senate are concerned, its utter valuelessness to the country.

There are times in the history of every government when a statesman must obey implicitly the public sentiment of the country which he helps to govern. Elizabeth held no more with Puritanism than did Charles I.; but Elizabeth knew her nation, and she yielded when she had to yield, and that with a graciousness which made the Commons believe that she was the real defender of their inheritance, while Charles I. stood so obstinately in the way of political theories that had been written down more than four hundred years before he was crowned that he lost his head. Now the Democratic Senator who, in the slightest degree, helped to defeat the Panama canal treaty was as foolish as was Charles I. If he had been backed by his party in the Senate, the party would not soon be permitted to govern this country. The people of the United States favor the construction of an isthmian canal. Many believe that the transcontinental railroads are opposed to such a canal. In this they are mistaken, for the railroads are wiser than they are sometimes thought to be. However, some people are bound to hold that opposition to the canal means subserviency to the railroads, or something worse. With the majority the railroads do not figure, but these are eager for an interoceanic canal, and they are sincerely in earnest, even enthusiastic, in their desire that this country should construct, own, and operate the water-way between the Atlantic and Pacific oceans. Moreover, the country has settled down to the conviction that the Panama route is the only one that is to be thought of. In reaching this conclusion, public opinion has vindicated itself, and once more proved its soundness; for the Panama route is the choice of practically all the engineers who have investigated all the routes, and, with most of them, it is the only route.

We are quite safe in saying that unless the Panama route had been adopted no canal would be constructed. This result would have confirmed the suspicions of those who believe that the transcontinental railroads were behind all opposition to the canal treaty, but what is of more importance to all who were contemplating opposition was the fact that the failure of the Panama treaty, and the consequent postponement, perhaps the ultimate defeat of any canal, would have excited public wrath that the party responsible for the defeat of the enterprise would have suffered enormously. If it had been the Democrats, they would be likely to stay "out of business" for some years. In other words, opposition to the Panama canal treaty was opposition to public opinion. Nor was the public deceived by specious arguments against "this particular treaty," or against any of its provisions. The country believed that Mr. Hay had negotiated a good treaty, a treaty which gave us all that we needed for the construction, the ownership, the maintenance, and the defence of the canal. No one can convince the American people that this is not true, any more than Mr. Morgan can now convince us that the canal ought to have been built at Nicaragua instead of at Panama. If any Senator had insisted on a provision giving to this country the fee in the strip of land through which the canal is to run, instead of a perpetual lease, the country would have understood that the proposed amendment was, in essence, veiled hostility to the canal itself; for we all know that the constitution of Colombia prohibits the alienation of land to a foreign government, and that a perpetual lease is not only all that is sufficient, but all that it is possible to obtain. In the same way, an effort to provide for the fortification of the canal would deceive no one, for we all know that that project was long since laughed out of court because it was once mediæval policy, but is now archaic nonsense. The country would, in short, have interpreted any effort to amend the treaty as an effort to defeat it, and any effort to defeat the treaty as an effort to defeat the project of the canal itself. That the treaty has been ratified, notwithstanding Mr. Morgan, and Mr. Morgan's position in the Democratic party, is of good augury for Mr. Gorman's leadership. The first step in the trial of the party has been in its favor. It was at first reported that the Democrats intended to filibuster and to insist upon amendments such as we have outlined, but, as it turned out, all the amendments proposed were non-partisan, although some of them might be called sectional. The vote was taken on Tuesday of this week, by consent of all Senators, including Mr. Morgan, who only insisted, in consideration of giving his assent, that his speech should be printed in the *Record*. Mr. Gorman is entitled to the chief credit for bringing Mr. Morgan to so speedy a surrender.

The New Leadership of the Democracy

THE ascendency of the conservative element in the Democratic party was definitely established, when, on the meeting of the Senate in extra session, the Democratic members of that body unanimously chose Senator Arthur P. Gorman, of Maryland, to be Chairman of their Steering Committee. There is no doubt that the leader of the Democratic minority in the next House of Representatives will act in concurrence with Senator Gorman, and Democrats, therefore, throughout the country may look forward to a reorganization of their party on sound and sensible lines, and to such an exhibition of political strategy and tactics as will enable them to make the best of their opportunities in 1904. The unanimity with which Mr. Gorman was selected for the post of leadership is, of course, a tribute to the reputation for astuteness and efficiency which he gained during his previous period of service in the Senate. The unanimity is also tantamount to an acknowledgment that the supreme needs of the Democratic party at this juncture are caution, sobriety, and sagacity. Nobody that knows Mr. Gorman would describe him as magnetic, but the Democracy is thoroughly tired of magnetism. It has taken eight years to recover from the electrifying shock which Mr. Bryan's "Cross of Gold" speech administered to the Chicago national convention. It has come to the conclusion that magnetism spells defeat, and that calm, undemonstrative, long-headed leaders of the Gorman type are considerably more likely to bring the party to the promised land. Not even the late President McKinley was a keener observer or better judge of public opinion and popular sentiment than is the junior Senator from Maryland. Under his guidance the Democracy is unlikely to make any flagrant mistakes, or to miss any chance of regaining the confidence of the country. He has announced no programme, nor is he expected to commit himself in advance regarding any public measure. He will cross bridges when he comes to them. If we recall, however, the positions which he took when he was formerly the leader of the Democratic Senators, we may be certain that he will not suffer the party to array itself in vexatious and futile opposition to measures which visibly commend themselves to a large majority of the voters. We believe, for instance, that, had he occupied a place of authority in the Fifty-seventh Congress, the Aldrich financial bill, or the Fowler bill, or some amalgam of those projects, would have been allowed to pass, for he would have recognized the expediency of relieving the stringency of the money-market. We believe, also, that he would have assured the enactment of the Philippine tariff bill, the failure to pass which involved a grievous violation of public duty on the part of the last Congress. Neither is he likely to countenance filibustering for private purposes, such as Senator Tillman indulged in, when he forced the Conference Committee to sanction the payment of a claim put forward by South Carolina, which by an official investigator had been pronounced unfounded. It was, by the way, an act of characteristic shrewdness to make Senator Tillman himself a member of the new Steering Committee. The Senator from South Carolina, who, hitherto, has often been inclined to act as a free lance, will henceforth be personally interested in the enforcement of discipline.

The view of Senator Gorman's elevation that will be taken by Mr. Bryan in his *Commoner* will be interesting, though not very important. Unquestionably, it means the relegation of the silver element to the rear.

We do not see how Mr. Bryan himself can fail to recognize this fact, although he said the other day that the control of the next Democratic national convention by the believers in a gold standard was to his mind inconceivable. We are at a loss to understand how he reconciles such a statement with the record of the Kansas City convention. Nobody knows better than Mr. Bryan that the reaffirmation of the silver plank was carried in the platform committee of that body by a single vote, and *that* the vote of the delegate from Hawaii. Unquestionably, the opponents of free silver constituted a majority of that convention, and they were only muzzled by Mr. Bryan's declaration that he would refuse a nomination unless the silver plank were inserted in the platform. Such a threat will have no terrors in 1904, for Mr. Bryan will not be a candidate. Although, however, Mr. Gorman's accession to the Chairmanship of the Democratic Steering Committee in the Senate must be looked upon as a victory for the conservative element in his party, the junior Senator from Maryland is quite too skilful a tactician to antagonize Mr. Bryan in any unnecessary way. Not only will no attempt be made to drive Mr. Bryan out of the Democratic party, but every precaution will be taken to avoid giving him a pretext for bolting. We do not believe that Mr. Gorman will sanction any endeavor to dislodge the late Democratic candidate for the Presidency from such control as he at present exercises over the party organization in Nebraska. That would be an act of open war that Mr. Bryan's friends might be expected to resent. It will be, in truth, a memorable achievement to reorganize the national Democracy without losing in one direction as many votes as may be gained in another. We believe the feat may be performed, however, and that Mr. Gorman is the man to do it.

Tainted Money

ANY constant reader of the daily papers must be rather more struck with the gleams of light which find their way through the darkness of the world than the darkness itself. Amidst the general clamor of the talking, there is here and there some one, every now and then, who sets up a thinking strong enough to be heard above the uproar, and so convincing that it makes an end of controversy as to the right thing to be done, and breaks a way for mankind to get on again in spite of the obscurity hemming us in. Such a one the Rev. Percy S. Grant, of the Church of the Ascension, seems to have been, and such a good work he seems to have done in an informal discourse which he has delivered on the subject of "Clean and Unclean Money," with reference to the very prevalent misgiving whether educational and charitable institutions ought to take the gifts of guilty millionaires.

It appears, even to the worst doubters, that there are, in millionaires, as in deacons and fagots, odds which have to be taken in account by casuists dealing with the morality of their benefactions. It would perhaps be going too far to say that there are good millionaires, but certainly some of them seem better than others, or, if not quite that, then worse. It is said, with what truth we cannot now declare, that some of them have got their millions by means that would have railroaded minor offenders to the penitentiary on grooves treated to the point of the least resistance by the finest quality of lubricating oil, and it has been supposed that their money has thus received a taint which all the perfumes of Arabia will not sweeten, but which will indelibly impart itself to the touch of the taker. This is the contention which Dr. Grant met so boldly when he held that money itself could not be fouled by the foulest methods of acquisition, but was purified to the finest use by the mere fact of giving. He thought it generally understood that such gifts were expiations, reliefs of conscience, proofs that the giver was sorry. He noted that the thirty pieces of silver themselves were used for the common good, and he declared his belief that by giving and encouraging giving we might reach a state when we would not try to wring the last cent from our neighbors.

The common sense of all this is a form of piety which we could wish always to find in sermons, or even in sociological articles or addresses. In the meagre report of the discourse which the daily press vouchsafed we were not instructed how far Dr. Grant went in following the line of thought suggested; but with a little thinking of his own the reader will feel it penetrate to the darkest depths of his soul, or call them the most luminous heights. The preacher avouched a truth which no honest man will disown for his neighbor at least, if he does for himself. It would hardly be too much to say that all giving comes from a bad conscience, from the sense that we somehow have no right to more than suffices us for our daily needs. The contrary is defended by the whole machinery of the law, by all the theories and practices of civilization, but in his heart, where each of us is alone in that solitude so inaccessible to human fictions, each of us knows it true. Of course, the man who has not so much more than he needs does not feel himself so bad as the wicked person who has a great deal more, or that lost wretch who has so much more that he cannot compute it, and can hardly imagine it. But whether we have much more or little more than we need, we all give from the same bad conscience, and as we hope somehow to be forgiven for our own gifts, we have no right to spurn the gifts which come from others, or to stand with our cleanly scruples in the way of the atonements they wish to make.

The preacher was right when he claimed that gifts took no taint from the greed of their givers. He was right when he demanded for these the privilege of giving freely and fully. Their giving is restitution, of the same pathetic nature as that of the barons of old who rendered to the church of God the wealth that they had rent from the weak and poor. Let them give and give, and let no college president or library committee, or board of trustees, assume to stand between the penitent and his Maker, with question of the purity of his money. "'Tis mine, 'twas his, and has been slave to thousands." It is said to talk, but it is really as dumb as the earth which men furrow with their cannon and their ploughs alike, and which they sow with the grain of the harvest-field, or the corpses of the battle-field, and which makes no sign of consciousness to either. What we have to do, in order to keep our self-respect, is to guard ourselves from looking upon these penitents as philanthropists in disguise, or as beneficent altruists giving from the love of giving, and not from the fear of having got too much. In the presence of every such act of restitution, let us keep our eyes from being dazzled by the vastness of the sums bestowed. Let us remember that for some men to give a million is less than for others to give a postage-stamp. Let us never forget that it is the heart that really gives, and not the hand, but let us be very careful not to deny that a sore heart may be giving itself as well with the million as with the postage-stamp. It was what went with the widow's mite that consecrated it, not the smallness of the mite. Otherwise, the reader who gives nothing might indulge a spiritual pride at the expense of the reader who gives a great deal.

Although Bird o' Freedom Sawin made bold to say that—

They didn't know everything down in Judee,

still we have not much improved upon the morality of the great Casuist who taught by parable, and we can still learn wisdom from Him. From His teaching we know that there is more rejoicing in heaven over one millionaire that repenteth, than over ninety and-nine just men who have only their doubts whether the millionaire's money can be given without evil from its source such as would contaminate the taker. It is a terrible tempter, money is, but if he who has made it, and prizes it only as a rich man knows how to prize his money, can so far overcome its lure as to give it, why should not the taker be able to resist its corrupting effects? It is to the danger of these that we are now exposed, and are likely to be exposed more and more, for the tide of giving has set in so strongly that no casuistry, however mistaken, can stem it, and we are to look not at the origin of the money, but to its power over ourselves. If it does not buy our truth and honor, it can only do good, as the world now goes.

Judge Grosscup and the Trusts

JUDGE PETER S. GROSSCUP of the United States Circuit Court, whose recent decision in the "Beef Trust" injunction suit has attracted wide notice and interest, is a judge who has never taken the vow of "intellectual celibacy." He is content to interpret the law when he is on the bench, but he is disposed to do his part as a citizen toward making law when he is off the bench. Almost on the very day on which he delivered his opinion in this case, he also delivered a lecture before an academic body which is an original contribution to the present trust discussion. He decided in the morning on the bench that the Beef Trust was a combination unlawful in the sight of the Sherman Act. In the evening on a lecture platform he said that consolidation had come to stay, and that if honestly organized and managed, it would turn out to be a step forward in the progress of mankind. It is not likely that his decision as a judge will be reversed by the Supreme Court; and it is quite as unlikely that his seemingly inconsistent private opinion will be reversed by those who have a right to give an opinion on controverted industrial questions.

The present problem is, however, primarily social and political. It is to restore the citizen to the status of proprietor. In the last ten or fifteen years, the period of consolidation, the small capitalists in numbers alarming (from one point of view) have become employees. They have sold their businesses, and there has been a consequent swelling of deposits in the banks, national, State, and savings, and in loan and trust companies. During the last five years, covering the climax of consolidation, though the increase in wealth and population has gone on at the rate of twenty or twenty-five per cent. per ten years, the increase in deposits has been at the rate of more than 100 per cent. The inference to which one is compelled is that the people have changed the object of their investments. They have become lenders rather than proprietors—but standing aloof from both the dangers and the profits of proprietorship. And this because, as Judge

Grosscup says, of their want of trust in their country's industrial corporations.

It is true that the great sums deposited by the people "furnish most of the capital upon which modern consolidation is exploited," but this does not constitute the depositors, proprietors. The borrowers are the owners; the lenders get no share in the country's prosperity except the interest on deposits. And the fact that "they get so little and the borrower seemingly so much is the sore spot. It is this feeling—ill founded as it may be—that some one has cheated and some have been cheated in the distribution, which is driving the undiscerning toward public ownership and socialism. The menace of such a political and industrial system, consolidation has accentuated. But what is more serious, in narrowing the *personnel* of the proprietorship of the country, it is "detaching from the friends of property the great middle class of citizenship." The peril is that this conservative force will in time swing to those whose attitude is already opposed to property. And Judge Grosscup is forced to the question, "Can our old ideals stand against such an alliance?" His answer seeks to avert forever such a test. It carries its suggested remedy in the very phenomena which have attended consolidation—the people, the great middle class must be restored to proprietorship.

But will they enter, to any large extent, the field of corporate ownership under any condition? His confidence that they will, if the fortunes of these enterprises are bound up in the legitimate vicissitudes of the business itself and not in over-strained organization, rests upon these conditions: that we have a people to whom the acquirement of property is an instinct, possessed of financial means and unafraid of corporate property merely as corporate property. With this instinct, with this financial equipment and this attitude on the part of the people at large, the "peopleization" of the proprietorship of the country is certain to come if only corporations are "fairly organized and conducted."

The novelty and originality of Judge Grosscup's plan lies in its feature of governmental assurance. The government must exercise its powers to reach and protect the would-be proprietor to the extent of guaranteeing that the assets and proposed stock issue have been looked into "by some responsible authority, and that their proportion to each other have been adjusted to conform to the known legal basis." And once the corporation has been organized, it is to be subject to "visitation" by some department of government not as a mere newsgatherer, for purposes of publicity, but as a trustee, to take note of dangers in sight and adequately to meet them.

This is the suggestion of a keen, thoughtful man without mental excitement—an interpreter of the laws of the past—who sees that in the future there must be some "far-reaching reconstruction of our corporate policy," such as will enable the people at large to re-enter the proprietorship of the country, or we shall find ourselves left with two alternatives both of which menace wide individual enterprise, personal freedom, and Republican institutions.

By far the greater part of the suffering and crime which exist at this moment . . . arises simply from people not understanding this truism—not knowing that produce or wealth is eternally connected by the laws of heaven and earth with resolute labor; but hoping in some way to cheat or abrogate this everlasting law of life, and to feed where they have not furrowed, and be warm where they have not woven.—*Ruskin.*

Intercollegiate Athletics

FAR be it from us to enter into the field of tangled controversy over intercollegiate athletics. There are, however, certain phases of the subject which seem to be beyond controversy, certain evils the existence and seriousness of which must be admitted, and of these we can speak with some degree of confidence, especially since we find ourselves in agreement with Professor Hollis, the accomplished chairman of the Harvard athletic committee.

The most obvious, or at least the most widely recognized, feature of college athletics is their apparently engrossing power over the minds and imaginations of the students and of the public. The reality of this absorption and its pervasiveness depend largely upon the particular college or university. There are many institutions of learning in the country where intellect and intellectual industry take the first place in the thoughts and conversation of the scholastic community. There are, indeed, others where muscle is unduly glorified, and where the studious are more or less despised. College presidents have been known to send forth their "team" on the fateful day, from morning prayers, with such a benediction as Muldoon might bestow upon Corbett at the ring-side. Faculties have purchased athletes by concessions in entrance examinations. Still, these are happily eccentricities in educational communities, and scholarship ranks higher in the most successful football institutions than the public wots of. Indeed, the public itself is largely responsible for the atmosphere of bodily strife which seems to distinguish American universities and colleges. Led by a considerable body of graduates, many of whom have become de-educated since quitting college, a large public, decorated with pins which represent their bets, and not their educational history or their identity with the institutions thus painted on their shirt-waists and their waistcoats, make Rome howl and the heavens shiver on the day of a great contest. The struggle, the noise, the bets, and the subsequent hysterical joy and grief constitute all that the de-educated alumni and their lay followers know of the distinctive and inspiriting features of the higher education in the United States. With the players in the field, who must keep up to a certain standard in their classes, it is different. It may be, indeed, that too much thought is given to athletics by collegians, but the sporting outsiders are wrong in fancying that students and faculties and their different institutions are to be accurately measured by success or failure in rowing and football. Indeed, the statistics of defeated universities and colleges show that other, and presumably higher, considerations determine the attitude toward them of parents and the heads of preparatory schools.

Whether the interest of a college life centres about the training-table or the classroom, depends mainly on the professors and instructors. Intellectual enthusiasm can always win out against bodily exercise among ingenuous youth.

It is still true that there are those whom the goal grazed by the glowing wheels elevate to the gods, and there always will be such, but there are many more to-day than there were in the days of Augustus who can sing with Horace,

> Quod si me Lyricis Vatibus miseres,
> Sublimi feriam sidera vertice.

But whether the student wants to walk among the stars with the poets depends much on his bringing up.

But to the confessed evils! The first of these is the brutality of the game of football. No one but he who loves brutishness will deny the truth of this charge. We confine ourselves to one manifestation of it which is too common if it appear but once a season, whereas, as is well known, it is to be looked for in every game in which there is one star player. It is the fashion of concentrating all the force of the opposing team for the purpose of crippling the star of the other team. The occasional slugging, the effort to tease an opponent into a state of useless nervousness, and the savagery called forth by sudden temptation are all bad enough, but the cool, deliberate, cruel purpose of driving an opponent out of play by disabling him is barbarous and unmanly, and they who resort to it in the name of sport do not know the meaning of sport.

Another evil is the mental attitude of one college toward its rival. As Professor Hollis well says, there is an entire "absence of chivalric conduct. It is the rarest thing to note even an evidence of generosity among players. The visiting team goes to the college where the game is played, rides out to the field, performs its engagement, and then goes home. The interchange or attention that the ordinary laws of hospitality indicate as proper between friends is reduced to mere business arrangements." This is bad enough, but, what is worse, is the suspicion manifested by these college contestants of one another's honesty. In many instances, neither team can imagine that its rival is honest, and detectives are employed to spy upon the suspected college, and to "work up" cases against supposed ineligibles.

These two specimens are sufficient to point Professor Hollis's real moral, and that is that intercollegiate contests have ceased to be amateur sport, and have come, in essence, to be tainted with professionalism. Colleges make rules for the determination of professionalism, and students who have played for money, or who have accepted valuable gifts for athletic services, are rigidly barred out. Sometimes a mean spirit governs in the application of this rule; advantage is now and then taken of a slip which ought not really to disqualify a player. All this comes from the fact that if the outward form of professionalism is sternly excluded, its inward spirit is always manifest. The game of the year has become the business of the year. It is no longer the joyous contest in which each side will do its best, and be content and happy, however fortune may award the palm. It is, rather, a stern struggle of young giants whose business it is to ruin, at all hazards, by all devices not absolutely prohibited, by driving opponents from the field by crippling them, by disqualifying others by evidence obtained by hired detectives, by schemes and practices that are absolutely incompatible with the true spirit of sport, and that are out of place everywhere, unless we are to consider that the end of the game is to win rather than to play it fairly, honorably, generously, in friendly spirit, in the only true amateur spirit—"may the best man win."

These evils cannot be cured by rules. They germinate and develop in the minds and hearts of the players and their fellows. Their eradication depends upon education. Time was when the spirit of sport prevailed, and when one college would no more have thought of "putting a detective" on its rival than it would have thought of breaking into the strongbox and stealing the athletic fund—at least, if it had then been thought that a rival team was deserving of police surveillance, it would simply have been dropped out of competition. What is needed by intercollegiate athletics is a little spiritualizing, a little leaven of the spirit of gentlemanliness, which is another phrase for the true spirit of amateur sport.

Washington's Birthday in London

By Sydney Brooks

LONDON, *February 25, 1903.*

NOTHING is so hard as to convince an Englishman that Americans have memories. He cannot understand why they or any other people should bother themselves about hundred-year-old events, why they should speak and on occasion act as though the "Boston Massacre" were an affair of yesterday, why they should be perpetually canvassing and celebrating each dominant event in their early history. This vivid consciousness of the past is something he has no share in and very little sympathy with. He is rather disposed to deride it as a bit of puerility that no nation can outgrow too quickly. That is one of the reasons, perhaps it is the fundamental reason, why he has never quite understood the Irish. To do him justice, the Englishman fully practises what he preaches. For his own past he has no memory at all. You could live a lifetime in England without knowing that she had a history. Before the Boer war it was easier to purchase a Union Jack in Chicago than in London. The centenary of some great event, some signal victory, comes round, and all the record it will get is an obscure paragraph in the newspapers. The "man in the street" closes the record of English history when he leaves school, and there is nothing to open it for him again. Parades and processions and "memorial exercises" and set orations in honor, let us say, of Waterloo would strike the average Englishman as a foolish waste of time. The Navy League, it is true, has taken of recent years to decorating the Nelson column in Trafalgar Square on the anniversary of Trafalgar day.

The League does so as part of its political propaganda for rousing and maintaining popular interest in the navy. A few hundred idlers will watch the ceremony with a sort of amused interest, and then pass on to the day's work, totally unthrilled. The survivors of the famous, fatuous charge of the Light Brigade meet and dine, I believe, once a year. For the public it is merely a sentimental item in next morning's papers. All such celebrations have come to be alien to popular instincts—possibly because whenever there is any question of pageantry or formal rejoicing, Englishmen have got into the habit of looking to the Crown for a lead.

In one of Mr. Kenneth Grahame's delightful child-sketches, he most charmingly portrays the efforts of a girl patriot to interest her brother in the twenty-first of October. "It's Trafalgar Day," went on Selina, tranecdly; "Trafalgar Day—and nobody cares!" Her brother is quite unmoved: he would rather be hunting moles. "Why can't we *do* something!" she burst out, presently. "*He*—he did everything—why can't we do anything for him?" "*Who* did everything?" inquired Harold, meekly. It was useless wasting further longings on that mole. Like the dead, he travelled fast. "Why, Nelson, of course," said Selina, shortly, still looking restlessly around for help or suggestion. "But he's—he's *dead*, isn't he?" asked Harold, slightly puzzled. There you have it. Nobody cares—and he's dead, isn't he?

But this indifference has an obverse and not displeasing side. If it cuts Englishmen off from much of the pride that might justifiably be theirs, if it lowers, as it unquestionably does lower, the general average of informed and intelligent patriotism, it also forestalls many international bitternesses, and robs the past of all its sting.

No nation, it has often and truly been said, is so incapable as the English of keeping a grudge alive. No nation wastes so little of its time nourishing futile antipathies. No nation is so ready to forget and forgive, or so willingly allows the mellowing hand of time the fullest play. What Polyphontes says to Merope in Matthew Arnold's fine dramatic poem could never be said to or of England:

I sought thee, Merope; I find thee thus,
As I have ever found thee: bent to keep,
By sad observances and public grief,
A mournful feud alive, which else would die.

On the contrary, the way in which England ignores what has passed and rushes to "make things up," seems at times to involve a positive loss of dignity. The recent Anglo-German alliance, for instance, struck all outsiders and even a good many Englishmen as passing the permission of meekness and charity. It had something in it that was almost mean-spirited and contemptible, like Lord North's too-facile forgiveness of the outrageous attacks levelled against him by Fox. It showed "the Christian spirit" carried to such an ultra-Biblical excess that it became decidedly unpalatable for human nature's daily food. But, on the whole, the presence of this spirit in Englishmen is so very much in their favor, and is usually so well restrained, that an occasional abuse of it may be pardoned. It has done as much as anything to make Anglo-American relations what they are at this moment and always should be. You could not have a better proof of this than the eagerness of prominent Englishmen to join with Americans in celebrating Independence Day and Washington's Birthday. This eagerness has come to be taken almost as a matter of course, but when one stops to think out all it means, one sees what fine testimony lies hidden within it to the sterling characteristics of the British nature. Such a sight as I saw two nights ago when the American Society of London and several of the most distinguished Englishmen in public life met together to honor the anniversary of Washington's birthday would be flatly impossible anywhere else.

Do you ever hear of Austrians banding together to celebrate Kossuth's memory? Are Cavour and Garibaldi honored names in Vienna? Is Walewski one of the national heroes of Russia? Does Madrid commemorate the birth of Bolivar? A hundred years hence will Gomez and Aguinaldo rank with Canovas and Sagasta? Such questions sound absurd. And yet just consider what it signifies when Englishmen make a feast-day of July 4, and deliver public eulogies on Washington. It means, in the first instance, that they are celebrating the greatest blunder in British history; and, in the second, that they are honoring the memory of the man who brought Great Britain to her lowest depth of humiliation and impotence. All this they do just as heartily and unreservedly as Americans themselves and without the slightest hypocrisy. A strange, if only a superficial, paradox! Year after year this "old and haughty nation" doing public atonement through the mouths of her most illustrious sons for her share in the American Revolution! And doing it, I repeat once more, with absolute sincerity. If their mistake was great, they have amply and handsomely admitted it. I know that as a school-boy in England I was brought up to a reverence for Washington and an indignation against Lord North such as a pupil in any Kansas school might vainly envy. I could multiply instances by the hundred to prove the completeness of the national repentance; but one will be enough. In the visitors' room at one of the greatest clubs on Pall Mall, hanging over the mantelpiece, is a facsimile of the Declaration of Independence, with medallions above and around it of Washington, Lincoln, and Grant. There is, I think it must be admitted, something fine in a people who can thus candidly publish and acknowledge the most appalling and costly error in their annals. Which, at any rate, is the nobler of the two—an Englishman honoring Washington, or an American raking in the dust-heap of the Revolution for his Anglophobiac fuel?

I am not going to weary you with the speeches, nor yet with a list of the Englishmen of note who were present. Like all Anglo-American foregatherings, it was excellently arranged and thoroughly enjoyed. They are the only kind of public dinners I know of that never lose their freshness. There is a brinyness in the atmosphere of this particular sort of international festivity that you don't get elsewhere. Another feature of them is equally permanent and peculiar—the ease with which Americans come out victorious from the ordeal of competitive oratory.

The English are, without exception, the greatest public-dinner givers in the world, yet few of them master more than the alphabet of postprandial speech-making. On Monday they were, by contrast, particularly weak. The Duke of Devonshire, who proposed Mr. Roosevelt's health, the Marquis of Londonderry, and Sir Edward Poynter, who replied to the toast of "Success to the Exhibit of the United Kingdom at St. Louis, 1904," seemed mere amateurs of oratory by the side of the finished, easy eloquence of Mr. Choate, ex-Governor Francis, and Mr. John Barrett. Speechifying of whatever kind is a bore of the first magnitude to the Duke of Devonshire. But on Monday the atmosphere of good-fellowship prevailed even against his constitutional langnor, and the speech in which he gave the President's health was as near being sprightly and connected as any I have heard him deliver. Even the Duke himself seemed to take a far-off ducal interest in what he was saying—an almost unknown phenomenon in him, for, to do him justice, he is always the first to yawn at his own speeches. But the speech of the evening was unquestionably Mr. Choate's. London society demands eloquence from the representative of America so insistently that it has occasionally paid the penalty of being glutted with it. This is not the case with Mr. Choate, who never says too much and never lets his fluency run away with him. There is another pitfall which he instinctively avoids. He never makes the mistake of praising Englishmen to their face. The only American ambassador I know of with whom England got slightly bored was one who, with the best intentions in the world, was forever soft-soaping England and English ways of doing things. Mr. Choate has a nicer appreciation of what it is Englishmen like best. With admirable tact and skill he quietly pokes fun at them, and scores good-humored points at their expense. His argument on Monday that Napoleon sold Louisiana to the United States to prevent England from getting it: that Americans were therefore really indebted to England for the purchase: and that England in consequence lay under a heavy obligation to make the St. Louis Exposition a success—was worked out in the best vein and spirit of American humor. It was immensely relished by the audience, being precisely the sort of point that came with far more effect from an American than an Englishmen—if, indeed, an Englishman would have had the courage and mental agility to make it. The fact that Mr. Choate did not hesitate shows, as all his speeches do, how perfectly he is grounded on the oratorical side of his position.

Leo XIII. and the Next Pope

THE commemoration by Leo XIII. of the twenty-fifth anniversary of his accession to the Pontificate directs attention, not only to his great age—he was born in 1810—but also to the possibility that his successor may modify his policy. Let us consider the chance of such a modification, after a very brief review of the present Pope's achievements. Seldom have the prospects of the Papacy seemed darker than when Pius IX. was succeeded by Leo XIII. It is true that in the fourteenth century many Popes deliberately transferred their place of residence from Rome to Avignon, but never until the nineteenth century, since a large grant of territory was made to the head of the Catholic Church by Pepin, King of the Franks, was the temporal authority of the Papacy avowedly extinguished by any civil power. That phenomenon, however, has been three times witnessed in the course of the last hundred years: first when Napoleon I. imprisoned Pius VII. and incorporated the city of Rome and what was left of the Papal Territory with the French Empire; secondly, in 1848 when, after the escape of Pius IX. to Gaeta, a republic was proclaimed in Rome; and, thirdly, in 1870, when the Eternal City was occupied by the troops of Victor Emmanuel II., and became a part of the new and unified Kingdom of Italy. When Pius IX. died in 1878, his successor, Leo XIII., was confronted by the alternative of becoming a pensioner of Italian sovereigns, or, if he adhered to his predecessor's irreconcilable programme, of accepting poverty, and remaining a species of prisoner in the Vatican. The impotence and humiliation at home seemed likely to be accompanied by an almost total eclipse of papal influence abroad. In Germany, Bismarck had begun the *Kulturkampf*, aimed at the complete subjection of the Catholic Church to the civil power; in Poland, the Czar Alexander II. was contemplating a withdrawal of the privileges which the Polish-Catholic hierarchy had previously enjoyed: in Spain, it was uncertain whether the recent reaction against a non-religious republic would be durable, and in France, there was imminent danger of an abolition of the *Concordat*, because Gambetta had taught his followers to see in Clericalism their chief enemy. In a word, the disintegration and collapse of the Papacy seemed not only probable, but unavoidable.

It is undeniable that, if the catastrophe confidently expected by onlookers has been averted, the credit for the fact is due mainly to the discretion, the sagacity, and the foresight of Leo XIII. Although he has persistently refused to touch a penny of the munificent annual subsidy voted by the Italian Parliament, as a partial compensation for the loss of the Pope's temporal dominions, and although he has, therefore, been forced to depend for the maintenance of the Vatican establishment exclusively upon the voluntary contributions of faithful Catholics, he has never known what it was to be stinted in respect of pecuniary resources. Although he has maintained unflinchingly the position taken by Pius IX. that loyal Catholics should neither vote at Parliamentary elections, nor accept office under the Italian monarchy, he has not encountered the expected disobedience of the injunction, but, on the contrary, through the constant withdrawal of Catholic voters from the ballot-box, the civil power has been rendered incapable of constructing a Conservative party. The monarchy has thus been left to the struggle for its existence against Radicals, Republicans, and Socialists, and might have succumbed but for the insane assassination of King Humbert, which gave the dynasty a longer lease of life. At the end of twenty-five years, the Quirinal has more to gain than to lose by a compromise with the Vatican.

So far as Germany is concerned, Catholicism under the guiding hand of Leo XIII. has triumphed all along the line in its contest with the civil power. Bismarck, who swore that, for his part, he would never go to Canossa, was ultimately forced to do that very thing when he repealed the greater part of the Falk laws in order to secure for his policies the indispensable support of the large and admirably organized Catholic party of the Centre in the Reichstag. Only the other day we witnessed the culmination of the victory when Chancellor von Bülow found himself constrained to urge the Bundesrath to abolish 'the remnant of the so-called May legislation which forbade Jesuits to live in Germany. When we bear in mind that this surrender of the civil power to Catholicism in the empire founded by Bismarck was brought about by a Pope utterly denuded of temporal power, and compelled to rely on Peter's pence for his household expenses, we must acknowledge that sheer intellect has seldom gained a more resplendent victory.

In other parts of Europe the moral influence exerted by the so-called captive of the Vatican has proved hardly less effective. The traditional privileges conceded to the Catholic hierarchy in Poland, which were seriously menaced by the Czar a quarter of a century ago, remain to-day substantially intact. If in Spain the restored Bourbon dynasty which in 1878 seemed destined to be short-lived, has endured up to the present hour, notwithstanding the loss of Spain's transmarine dependencies, the unexpected fact is due mainly to the cautious and far-sighted attitude enforced upon the Spanish hierarchy by the Vatican, which has shown itself as firmly opposed to Carlism on the one hand as to Republicanism on the other. In France, where the problem with which Leo XIII. had to deal was peculiarly difficult, he has at least averted a solution which was long threatened, and which would have been fatal to the interests of Catholicism. There is but little hope that the *Concordat* would ere this have been abolished but for the advice pressed by Leo XIII. upon the hierarchy and clergy of France to accept sincerely the Republican *régime*, and to abjure all connection with intrigues for the restoration of the Bourbon monarchy or of the Napoleonic Empire. During the last twelvemonth, the patience of the Vatican has been subjected to a severe strain by the enforcement of the law against religious associations; nevertheless, by a judicious silence, Leo XIII. has refrained from giving the enemies of Catholicism the desired pretext for a violent rupture. By no means least among the achievements that may be recorded in the epitaph of the present Pontiff is the fact that, thanks to him almost exclusively, the *Concordat* with France still exists.

We need not say that the last quarter of a century has witnessed a remarkable expansion of Catholicism *in partibus infidelium*, that is to say in the British Empire and in the United States. The vast Catholic cathedral about to arise in London is a symbol of the progress made by the Church of Rome toward a partial reassertion of its former influence in the United Kingdom. How does it happen that Catholicism prospers in the two countries where the utmost freedom of thought obtains? That Catholicism should at one and the same time commend itself to the religiously minded, while it escapes rancorous opposition on the part of atheists, is due largely to the wisdom of the attitude maintained by Leo XIII. toward Socialism on the one hand and toward the Higher Criticism of the Bible on the other. While adhering with unwavering firmness to his belief in the inspiration of the Scriptures, and to his belief in the sacredness, necessity and usefulness of the organization whereof he is the head, the present Pope has shown himself willing at the same time to concede the expediency of revising vernacular translations of the Bible in the light of modern scholarship, and willing also to make large economical concessions to the Socialistic movement, provided its leaders would abjure their demand for an utterly godless State. He has not silenced the Higher Criticism, nor has he brought about a compromise between Socialism and Christianity; but he has immensely abated the distrust and rancor with which the Catholic Church was at one time regarded by scientists and by social reformers.

Whether the successor of Leo XIII. will maintain the same attitude toward the Kingdom of Italy, toward other European States and toward the intellectual and economical movements of the time is a question that nobody can answer until the next Conclave shall announce the outcome of its deliberations. There are now more foreign cardinals in the Sacred College than ever before, yet the cardinals of Italian birth still constitute a considerable majority. The Italian cardinals themselves are not united with regard to the position that ought to be taken toward the Italian monarchy, or toward the French Republic. Neither are they agreed concerning Socialism or the Higher Criticism. No man, therefore, may venture to forecast the choice of the Conclave or the possible consequences of its selection.

A Song for the Acorns

(The Acorns are a New York organization for the promotion of good government)

Good government! good government!
That's what we're out to bring.
The honest rule of honest men
Beats any rule of ring.
We're down on blackmail, pillage, graft,
And clutch of greedy boss.
We're tired of all the swarm whose craft
Finds profit in our loss.

CHORUS

Then up, Acorns! up, Acorns!
Sprout, and spread and thrive!
Grow in number, grow in strength;
Show yourselves alive!
Only acorns are we now;
Oaks we'll grow to be:
Stout to beat back fraud and craft;
Stanch for Liberty.

Who would be free, the poet says,
Themselves must strike the blow;
Who would keep honest men in power,
Must lay the rascals low.
Boss-ridden men their feeble souls
Dare never call their own!
Nor freedom, nor content abide
In any boss-ruled town.

We want clean streets and honest cops.
We want our funds well spent.
We want each man to pay his share,
But tribute—not one cent!
We want no profit-sharing vice,
No bribe-dispensing lairs,
We want the town to get its dues,
And all the rascals, theirs.

E. S. MARTIN.

The Book of Months

By E. F. Benson

DECEMBER

Snow over all, and it is spring. Frost binds the icy fields, and in my heart every nightingale in the world makes melody. The bare trees are hung with icicles, and a shrill wind whistles through them, yet to me they are the green habitations of mating-birds, and in the hedgerows, with their mask of snow where the wind has drifted it, are the nests of the hedge-sparrows with the blue eggs that reflect the skies of April. December! Was there ever such a December? All the honey of the summer, all the warmth of the long days, all the mellow autumn, all the promise of spring is gathered here into one sheaf, the sheaf that we put in the chancel at the harvest festival, symbol and offering, symbol of the fruitful, kindly earth, offering in kind to the Lord of the harvest.

Did you see the sun to-day about eleven of the morning come suddenly out through parted clouds and shine on the great fields of virgin snow? He came on purpose to see me. Did you see the maddened whirl of the snowflakes in the afternoon flying in eddies through the air? They were dancing together at my party. I engaged them to dance. They did it well, did they not? Did you hear the cathedral-bells ringing this afternoon, sounding dim and deaf through the snow? They were also my guests. Everything in the world to-day was my guest, and stars were ranged on my ceiling and the Pleiades lay in my hand, and then close by my heart lay the moon, and it was not cold as it looks, but warm.

Day after day and all day, night after night and all night, I have dreamed of the moon, loving it, desiring it. And last night I dreamed that I cast a slender silver thread into the sky which caught the moon, and I drew it closer and closer to myself till it rested on my heart. And it was not the moon at all, only the heart of a woman, beating full and strong. And the wonder of it is that the moon is mine. You shall see it sometimes, you other people on the earth, but all the time it is mine. I know too the other side of it, when we are alone together. You cannot see that, and you will never see it. The moon says it is all for me.

To-day the moon had to be away all day, but the silver thread was between us (it leads to the other side of the moon), so I scarcely envied the folks in London who would see her face merely. Yet all day I fevered for evening, and as evening approached my fever abated not. But you came back, my moon, and we were together again. Other people were there, and for them, as for me, melody after melody flowed from the sweet stress of your fingers. They heard only, but I knew, and to me the sound revealed not the poor clay that wrote those exquisite notes, but you who played them. Your soul, it was not Schubert's that shone in the symphony that shall never be finished, your soul not Beethoven's was passion and pathos, you, not he, turned night into a flame, and in that flame I burned and was consumed, happy as the gods are happy, and happier because I was not content. I shall never be content.

Oh, my own, who did this, thanks is no word between you and me. Do we thank the star that shines in the dark blue velvet of the skies? We gaze only and are drawn thither. For we thank a giver for a human gift: it is in silence that we give thanks for the things that are divine. Oh, I try to speak of what cannot be spoken. Who shall set words to your music?

Let me picture you again with face half-turned from where I sat, tuning the keys which I thought so rebellious into a rain of enchanted harmony. Rebellious too was your hair, rising upward in waves of smouldering gold from your face. And through Schubert you spoke to me, he but the medium or the alphabet of your thought, and I was almost jealous of the dead, because he touched the tips of your fingers. Then from the trim garden at Leipsic spoke that sweet formal soul, a message of congratulation to me, or, so I took it, and Beethoven with fuller voice said the same, and from frozen Poland, and from wind-beaten Majorca came another smile. And when those sweet words were done came other sweet words without interpreter, and the room was emptied and the larger lights were quenched, and only on the walls leaped the shadows and the shine of the flames that plunged on the hearth. Once by night the temple was bright to the prophet with the glory of the Lord, and the hot coal from the altar opened and inspired his lips. With what new vision and eyes enlightened must he have looked on the world after that night, when God revealed himself. And by this revelation which has come to me all things are made new, winter is turned to spring, and the lonely places are desert no more, and the whole world is in flower with the royal purple of the blossoms of Love.

And, now that I know it was inevitable from the first I can hardly believe that it was I who only a few weeks ago made plans to force myself from the possibility. It was ordained from the beginning, and the patient march of the centuries, every step, every year, was bringing us together. Myriads of subtle influences conspired to work it, and how excellent is the miracle they have made. Sunlight and wind, and the love and sorrow and joy of a thousand generations have made the body and soul of this girl: for me she was predestined and for me has the whole creation labored. Blindly, but inevitably, it wrought, even as the shell deep in some blue cave of the ocean thinks only that some piece of grit has got between its iridescent valves, yet all the time it is busy making the pearl that shall lie on the neck of some queen yet unborn.

An immense silence and whiteness lies over the whole earth. Snow fell a week ago, then came several nights of frost, and to-day again a fresh mantle of white was laid down. All roughnesses and inequalities are smoothed away; the whole land lies in delicate curves, swelling and subsiding in gradations too fine to follow. With bar and chevron and a million devices of this celestial heraldry, trees and palings are outlined and emblazoned, and in the graveyard opposite the tombstones are capped with whiteness. From eaves and gutters hang the festooned icicles, and most people find it cheerless weather. But not so we, for between us, with the aid of a prodigiously stupid carpenter, we have designed and executed a toboggan, which is the chariot of love, and on the steep downsides (attended by the puzzled collies who cannot understand how it is that snowballs which so closely resemble tennis-balls vanish in the retrieving) we spend vivifying afternoons. The toboggan has a decided bias, and it is only a question of time before it gets broadside to the slope of the hill, ejecting its passengers. That is the moment for which the collies (Huz and Buz) are waiting, and they fly after us, and lick our faces before we can regain our feet, to congratulate us on the success of this excellent new game. Indeed the "Alliance of Laughter" is in league again, but below the laughter is love, which penetrates to the centre of the world and rises to the heaven of heavens. Then we tramp back, towing the slewing toboggan up hill, and getting our heels kicked by it down hill to the muffled town at dusk, and the long evenings begin.

I have told her all about Margery, as was only natural, but it was no news to her. She had guessed it with woman's intuition, to which lightning is a snail, on the day when I told her how like she was to Margery. I had said, "She was my best friend" in a voice, it appears, that was the most obvious self-betrayal. I have told her too the grim determination I had made not to see her any more: that, it appears on the same authority, was harmless, though silly, since it was utterly out of my power to do anything of the kind. I couldn't have done it: that was all. I, of course, argued that I could. So she said: "Well, do it now, then. It is not too late."

But when I told her about Margery, she did not laugh, but she answered:

"I wanted so to comfort you. And I saw at first that you looked at me and thought of her. Then by degrees I wanted to take her place. And by degrees you let me have a place of my own. You looked at me and thought of me. That was one evening we played cards here."

"You saw that?" I asked.

"How could a girl avoid seeing it, when all the time she—"

"What?"

"Nothing: at least, not much."

"What then?"

She came a little closer in the gleam of the fire light. "When all the time she longed to see it," she whispered.

"And is that not much? Is there anything in the world bigger than that?"

"No: it is *bigger* than the world."

Oh, I am loved: I am loved.

It is Christmas eve, and she has just gone home with her father, and outside in the moonlight the waits are singing. I know they are not in tune, and that *qua* singing it is a deplorable performance, but there is such a singing in my heart that I do not hear the false notes, and the thrill of Christmas too is upon me. I have never quite got over (and I hope I never shall) the childish awe and mystery in hearing the voices from the night, being awakened by the sounds, and being carried, wrapped up in blankets to the windows where I could see dim forms outside black against the snow. I did not know in those earliest years who they were; it was Christmas, and there were mysterious beings singing in the night. On no other night were they there, for they were of the family, I must suppose, of Father Christmas and Santa Claus and the fairy Abracadabra, to whose awful presence—she appeared to be about nine feet high—we had been introduced not without delightful inward quailings before we went to bed. She brought with her a vessel of the shape certainly of a clothes-basket, but as it was of solid gold it could not have been a clothes-basket. And inside were exactly those things for which we each of us had pined and audibly hungered. Such a clever fairy! She never made a mistake or confused my wants with those of my brothers, so probably she was omniscient as well as beneficent. And my good fairies have been just as clever ever since—they never make mistakes, and now they have given me the best gift of all. So listening to the singing in the night now, the years slip back, the child within me stirs and awakens, and out of the rose-colored mists of early years that queer little figure wrapped in blankets and carried to the window looks wonderingly at me and smiles because I am happy. Abracadabra too is with me to-night, not nine feet high any longer, nor girt about with delicious terrors for me, but still my dear fairy, who never fails me.

THE END.

The Stanford Memorial Church

THE church which Mrs. Jane L. Stanford has recently finished as a memorial to her late husband, United States Senator Leland Stanford, on the campus of Leland Stanford, Junior, University, at Palo Alto, California, is one of the most beautiful and artistic church structures in the world. Four years have been consumed in its building. The most famous architects in California, the foremost decorative artists in America and Europe, and the most notable sculptors and workers in mosaics in Italy have striven to the best of their genius in erecting and embellishing this memorial church. Mrs. Stanford has kept secret the large sums she has been furnishing for the building and adornment of this memorial structure as it has progressed toward completion, but competent judges estimate that the superb building, as it stands to-day, has cost at least $600,000. It is the consummation of the architectural ideals of Mrs. Stanford for her beloved university, and is the supreme impressive feature of the famous quadrangle at Leland Stanford, Junior, University. Rev. Heber Newton, recently of New York, has been chosen rector of the church.

A Corner of the Chancel

Part of the Nave

The church is of Romanesque architecture, with a few deviations in detail. The south exterior view of the building, taking in the apse and the wings of the transept, give the most impressive views. Buff-colored sandstone is the material in the walls of the church—rough-hewn exteriorly and smooth-surfaced interiorly. The building is cruciform. The transept have their own entrances, and the four gables of the nave, transept, wings, and apse are united by an imposing twelve-sided belfry tower, of which the base has an outside gallery. Gothic flying buttresses spring below the tower on each side, and the four corners of the tower are flanked by turrets rising from the angles between the gables.

The Tower

Heavily carved doors lead into the wide vestibule of the church, with marble floor and groined oaken ceiling.

All who look within Stanford Memorial Church can never forget the impressive rich beauty of the marble statuary and the prodigious wealth of stained-glass windows. Extending around the entire apse, just above the altar and on a line with the windows, are a line of heroic figures in mosaic, representing John, Jeremiah, Ezekiel, Samuel, David, Elias, Moses, and Isaias.

The series of forty-seven stained-glass windows have won universal admiration.

The wood-carvings in the vaulted ceiling of the nave have been done with rare skill and labor. The carved wood is upheld by copper-finished binding rods and light and graceful hammerbeam trusses. The ceiling is seventy feet above the floor, which is of the richest Moorish tiling, with a slight incline toward the apse.

The carving on the arches and columns is exquisite, and its foliated beauty gives to each of the memorial arches the delicacy of being surrounded by a wide fold of lace. The capitals of the larger arches are surmounted by carven cherubs of most wonderful workmanship. Over the arches of the doorways, which are a study in perfect detail, are large mosaics in rich colors and gold, which latter effect enters largely into the color scheme of the interior. The transept galleries, of carved stone and steel, have railings carved in a chaste design that are said to represent the finest work of its kind in the United States. The finely executed stonework in the church has been under the direction of John D. McGilvray, but the elaborate mosaics came directly from Italy. It is doubtful if more intricate decorations in mosaics can be found in America. These decorations represent an outlay of $80,000.

Looking toward the apse at the northern end of the nave is the choir loft, where a fortune has been spent in intricate designs in wood and stone carving. The organ in the choir loft is the largest on the Pacific coast. There are seats for a choir of 150 persons. The keys of the key-board, below and facing the singers, have electrical connection with the 3000 pipes of the organ. This grand instrument has forty-six stops, contains thirty miles of wire, and has the handsomest front ever placed on an organ.

Naturally, most time and art and wealth have been put upon the chancel, the altar, pulpit, and lectern. One must be altogether blind who does not feel the exquisite beauty of all this. The pulpit is of stone elaborately carved. The altar is a block of Carrara marble, upon whose face has been chiselled a bas-relief of Rubens's "The Entombment." Back of the altar, and below the three great windows of stained glass, is a wonderful reproduction, in mosaic, of Casimi Roselli's "Last Supper"—the only copy of the original in the Sistine Chapel at Rome.

The Cloister

Twenty Years at the Metropolitan Opera House

OPERATIC régimes, even since the modern era was ushered in with the Metropolitan, have usually gone to their sunset amid spectacular clouds of bankruptcy; the sheriff has more than once been called upon to hasten the hour of their official twilight. Yet Mr. Grau's long reign ends under a clear sky, and his successor will doubtless begin his career with a prospect, at least for the immediate future, of settled operatic weather. Mr. Grau's achievement, however, during the dozen years completed with the present week, is, after all, but a fraction of the larger story of the house itself. That story, if completely told, would lay tribute upon no less than twenty seasons, some vital with progress, others (and these mainly recent) dull and undistinguished.

Broadly speaking, Henry E. Abbey's opening year at the Metropolitan Opera House was one of musical "sweetness"; the seven German seasons that followed were deficient in that quality, but aimed successfully at significance. The Abbey and Grau incumbency that in 1891 supplanted the German series was an attempt to return to the earlier ideal, but Mr. Grau analyzed the public afresh, and then sought, in his repertory and singers, to blend the two elements of musical beauty and dramatic verity. This sounds simple enough, but the experience resulting in this policy had cost former managers and stockholders several hundred thousand dollars.

Mr. Abbey was the first victim of the curse that for long rested upon New York operatic *entrepreneurs*. So severe were his losses that he even proposed to act as managing agent for the directors of the house, for two years gratis, provided the directors would pay the deficit.

Gounod's "Faust," then, as now, the most popular opera in the repertory, was chosen for the opening night, October 22, 1883. Campanini was *Faust*, Christine Nilsson the *Margherita* (everything was Italian that winter), Novara the *Mephistopheles*, Del Puente the *Valentino*, and Scalchi the *Siebel*. Mr. Vianesi conducted. Two days later, Madame Marcella Sembrich, then very young, made her American début as the lace-handkerchief heroine of "Lucia di Lammermoor," winning golden opinions. Madame Trebelli and the useful German-Italian Kaschmann were new-comers, and so was Stagno, an Italian tenor, described in print by a dignified critic as "an utterly unmusical bellower." These, with Madame Fursch-Madi, the dramatic soprano; Mirabella the basso, and Victor Capoul the tenor, were the chief members of Mr. Abbey's imposing troup—with Madame Cavalazzi, prima ballerina, whose dancing is still an opera-house tradition.

There were star casts in those days, though the best of them, gathered for "Don Giovanni," November 28, 1883, was probably not a whit more efficient in rendering the letter or the spirit of Mozart's masterpiece than that of a certain February night of Mr. Grau's season of 1899. In each cast Sembrich was the *Zerlina*. Fursch-Madi and Lilli Lehmann were the respective personators of *Donna Anna:* Nilsson and Nordica the *Donna Elvira*, Kaschmann and Maurel the insatiate *Don Giovanni* himself, and Mirabella and Edouard de Reszke the *Leporello*.

The one novelty of the Abbey season was "La Gioconda," Ponchielli's tragic and poignant opera of mediæval Venice, often since then set for revival, but never yet compassed save by Mr. Savage's English-speaking company. Except for this, the Abbey repertory might almost have been exchanged with that of the Mapleson troupe, at the Academy of Music. Yet the unmistakable trend of popular taste toward the dramatic and away from the merely ornamental was noted; the largest audiences, according to a contemporary writer, were drawn by Wagner's "Lohengrin," Mozart's "Don Giovanni," Gounod's "Faust," Boito's "Mefistofele," Ponchielli's "La Gioconda," and Meyerbeer's "Les Huguenots," "Roberto il Diavolo," and "Le Prophète." The repertory also included Bellini's "I Puritani" and "La Sonnambula," Bizet's "Carmen," Donizetti's "Lucia di Lammermoor," Flotow's "Martha," Rossini's "Il Barbiere di Siviglia," Thomas's "Hamlet" and "Mignon," and the stock Verdi trio, "Rigoletto," "La Traviata," and "Il Trovatore."

Studying the tastes and interests of the time, it is now easy to see how ripe the public was for the radical changes of the season 1884-5, which Dr. Leopold Damrosch managed, his offer to give German opera having been made and accepted only after Mr. Abbey and Mr. Gye, of London, had refused to take up the Italian burden. German opera meant that Wagner was to have a larger share in the list, and after the extraordinary interest shown in the Wagner concert festivals of 1882 and 1884 under Theodore Thomas, and the long campaign of education by the Philharmonic Society, it was fair to expect popular support. With the best of the Bayreuth composer's music-dramas still unknown here, a season somewhere in New York would soon have become inevitable.

New operas, old ones long neglected, and new singers crowded the years 1884-91, and for the first time the personality of the conductor became important. Dr. Damrosch lived only to see the artistic success and financial practicability of the first German season. Materna headed his company, and he had revived Weber's "Der Freischütz," and Beethoven's "Fidelio," and given Wagner's "Die Walküre" its first adequate New York performance. E. C. Stanton succeeded him in 1885, and Anton Seidl was brought over to conduct, Walter Damrosch being his assistant. Lilli Lehmann and Emil Fischer, Niemann, and Marianne Brandt, Vogl and Max Alvary made certain Wagnerian characters absolutely their own here. Fischer was *Hans Sachs* in "Die Meistersinger," as Alvary was the young *Siegfried*, "by the grace of God," as a reverent admirer once wrote. Lehmann became the authentic *Isolde*, and the three *Brünnhilde's*. Fischer was *Wotan*, and Alvary a flickering *Loge*, rivalled only by Van Dyck in recent seasons. Niemann's rugged *Tristan* is historic. All these rôles were in music-dramas new on the American stage.

Certain stockholders wearied of paying deficits, and Abbey and Grau took the house. Thus did French and Italian replace German on the Metropolitan Opera House stage, and the living apostles of the new régime were Jean and Edouard de Reszke, Melba, Eames, Plançon, and Lassalle, with Lilli Lehmann held over as a mistress of both schools. Wagner in Italian and a Patti supplementary season were the new features. Then came the destruction of the Metropolitan by fire in summer, 1892, and a year of no opera, until it was rebuilt. Emma Calvé's signature is writ large across the year 1893-4, for then her *Carmen* came into view. The most important novelty since Verdi's "Otello," namely, the same composer's "Falstaff," was produced February 4, 1895, and in spite of Maurel's *Fat Knight*, won little popularity.

Then came Walter Damrosch's striking extra season of Wagner in German, which lead Mr. Grau to adopt his broad policy of "each opera in its original tongue." Since November 27, 1895, when the de Reszkes and Nordica gave "Tristan und Isolde," with Anton Seidl conducting, a new standard of Wagner singing has prevailed. The rest is too recent for comment, but Sembrich's share in reviving Mozart and the old coloratura music has been too important to ignore. To-day, the Metropolitan stands on the brink of still another era. Will it be one of artistic ideals? Mr. Conried's opportunity awaits him.

A Woman's Opera

LAST week at the Metropolitan Opera House Miss Ethel M. Smyth's "Der Wald," a music-drama in one act, was performed for the first time in America. Let it be said at once that Miss Smyth has abundantly earned the right to a judgment of her work based upon standards of the most uncompromising impartiality. Whatever one is prepared to say of its excellences and its defects, "Der Wald" cannot justly be set aside as being merely woman's work, with all that that disposition is made to imply of qualification and denial. Miss Smyth has written with too high and serious an aim, with too ripe and confident an artistry, to be considered with anything but an attentive respect. Dramatically, "Der Wald" is a brief and passionate illustration of that wonderful thought of Plotinus, that "in the particular acts of human life it is not the interior soul and the true man, but the exterior shadow of the man alone, which laments and weeps, performing his part on the earth, as in a more ample and extended scene, in which many shadows of souls and phantom forms appear." Miss Smyth has intended, in her own phrase, to show "the quiet workings of the eternal forces of nature as contrasted with the storm and stress of mortal life"—which is merely a British and modern variant of the meditation of Plotinus. She has chosen (being her own librettist) to set against the background of a primeval and spirit-haunted forest, a tragic human action, contrastingly swift, brief, and calamitous; and at the end, as at the beginning, a mystic chorus—the elemental spirits of the wood—chant, in the words of the argument, "their own eternity and the brevity of things human." With all possible sympathy for its essential, if unrealized, poetry, it must be said that this conception, as Miss Smyth has actualized it dramatically, seems at times a little too obvious, a little too crassly romanticistic (as Mr. Howells would say). We wish that, in developing her theme, she had handled it more subtly, more aërially, with somewhat less bald an insistence upon the point of her allegory. This, however, concerns the dramatic structure alone; of the music with which she has invested it we can speak with somewhat less of reservation. After a single hearing, one recalls passages of indubitable force and beauty: an unflagging sentiment for dramatic appropriateness; a constant endeavor to reflect, as eloquently as may be, the essential poetic substance of the play. Miss Smyth has not escaped a measurable dulness and inefficiency, nor has she scrupled to write without the bidding of that incalculable inspiration which is not to be realized by mere seeking and desire. But for an unswerving fidelity of purpose, a consistent preoccupation with dramatic verity, a deviously contrived significance, "Der Wald" is notable in a considerable degree.

I am as I am, and so will I be:
But how that I am none knoweth truly.
Be it ill, be it well, be I bond, be I free,
I am as I am, and so will I be.

Sir Thomas Wyatt.

Finance

WHAT some people delight in calling a psychological wave" has swept—or is ow sweeping—over the speculative markets. hat is, the state of "sentiment" is such at heed is paid to bad news, and whatever good and reassuring in the situation is ot noticed—at any rate, not enthusiastially. To be sure, there are obvious reasons hy an upward movement in stocks should ot strike the average observer of financial onditions as logical or even desirable, but t the same time it should seem equally bvious that a severe panic would partake f the paradoxical. There is no abatement the country's prosperity; but owing to ne expansion of credits, to the enormous ving-up of capital necessitated by the borowings of corporations and syndicates, here is not enough money to do the business ith. The surplus reserves of the New York anks, according to the last statement of heir condition, shows that the banks then ad but two-thirds of a million in cash over nd above the amount which the law requires them to keep for the protection of heir depositors, and the peace of mind of he speculative community. In other words, oney is in great demand legitimately, and n very short supply. The Aldrich bill, hich would have corrected the absurdity f our fiscal system, was not passed: and ot a week after the adjournment of Conress we find that the Treasury is locking p money, for which it has no immediate se, at the very time when the commerce of he country—not the stock-gamblers—requires as much money as it can get, in rder that the prosperity which has blessed he United States should not be checked. The condition of the money-market, therefore, is responsible for the condition of sentiment; and it is the condition of sentiment which now tells most on the stock-market and the course of security-prices.

The professional speculator, who is extremely bearish at the moment, goes further. In the exhaustion of the bank reserves he finds ample justification for not buying stocks. In the causes contributing to that exhaustion he finds strong reasons for selling stocks—his own and his neighbor's. He will tell you that the inability to extend credits, which must curtail general business, and if continued long enough must reduce earnings, which make values, is due to a large extent to the enormous syndicate borrowings. The syndicates have huge amounts of lately manufactured bonds, which they have been unable to sell. There is no market for the new issues, and yet, in spite of the glut in the bond-market the railroads keep on issuing bonds and more bonds, to increase their equipment. The railroads, one would think from all this clamor, had gone daft. And yet the railroads are doing nothing that they ought not to do in the way of taking steps to handle the enormous business that is thrust upon them. Greatly as some of them have improved their physical condition and increased their rolling-stock and motive power in the past four years, their equipment is none the less inadequate to move the freight which they are to-day urged upon to carry. Every one suffers, the producer, the consumer, and the carrier, from a state of affairs which has been compared, by one of the most dispassionate observers of the situation, to "ten thousand tons of freight to move and only a wheelbarrow to do it with!"

The situation thus presents perplexities which justify caution rather than fear. That the money-market will in a few weeks see improvement may be taken for granted, but it is the manner in which relief will come that worries speculators. The Treasury Department may and probably will help the situation whenever the stringency reaches the acute stage, but not before.

Correspondence

WILLIAM THE TEUTON

(After Peter Newell)

To the Editor of Harper's Weekly:

SIR,—

KAISER, Kaiser, shining bright,
You have given us a fright!
With your belts, and straps, and sashes,
And your skyward-turned mustaches!
And that frown so deadly fierce,
And those awful eyes that pierce
Through the very hearts of those
Whom ill fate has made your foes.
See the eagle on his roost—
Eagle is 't? Or is 't a goose?
Kaiser, Kaiser, man of war,
What a fearful man you are!

Kaiser, say, where did you get
Those big shiny epaulets?
And that military cloak,
Did you, buying it, go broke?
And those decorations, too,
And that helmet! Tell us who
Is your haberdasher? We
Guess they're made in Germany.
And is *that* the mailed fist?
Oh say, *was für einer ist?*
Kaiser, Kaiser, man of war,
What a funny joke you are!

I am, sir.

H. SPENCER.

SOME AMERICAN HUMOR.

ROLLIN'S FORD, NEW HAMPSHIRE.
March 5, 1903.

To the Editor of Harper's Weekly:

SIR,—We are farmers from "'way back," we freely admit, but as compensation thereto the understanding is sometimes given us to know a good thing when we see it. And we certainly *do* see it in Mr. Albert Levering's inimitable "Timely Warning!" The expression of anxiety and uncertainty on Eddie's face as he hands the missiles to Willie, and the state of absolute idiocy and extinction to which Willie is reduced by his cold douche, together with Eddie's refrain, "I got relatives lives there," are simply *great!* The latter has become a byword with us, to be long treasured, and holding second place only to one or two time-honored family jokes that have grown threadbare in our service. I don't know that individual commendation is of any great moment to you, but it can't hurt you to know that your efforts are appreciated, even in the wilds of New Hampshire, so I send it along.

Hoping that we may meet Mr. Levering often in the pages of HARPER'S WEEKLY,

I am, sir,

HANNAH BARTLETT ROLLINS.

THE BIBLE IN THE SCHOOLS.

CHICAGO, *March 7, 1903.*

To the Editor of Harper's Weekly:

SIR,—I wish to correct an article which appeared in your issue of February 19 in reference to the "Bible in the schools," in which you state that in Chicago they do have "a compilation of the Scriptures" for reading in the public schools. Now this is only newspaper talk; it is not so in fact. The Chicago Woman's Educational Union have been attempting for the last six years to have their book called *Readings from the Bible* placed in the Chicago schools, but have not succeeded. In the interest of truth inform your many readers that you were misinformed on this as far as Chicago is concerned.

I am, sir,

E. C. REICHWALD,
Secretary American Secular Union.

A Suggestion from a Reader of HARPER'S WEEKLY

ONE of our readers suggested the other day that "interesting subjects by interesting people" should be the topic for one of our plain talks about HARPER'S WEEKLY. We are very willing—all the more so because for nearly a year now—ever since the appearance of the WEEKLY in its new form—this has been the consensus of opinion from the hundreds of readers who have written us unsolicited letters from all corners of the world. As a matter of fact, to interest intelligent people, to give to every one of our readers an intelligent, complete, and interesting record every week, in picture and text, of the events of the hour, and to show, week by week, the ideals of American progress—where we lead and shall lead in the world's development—this is what the WEEKLY aims to do. And it aims to do this first of all in an interesting way. If you have seen the WEEKLY regularly during the past year, you know in how far each issue has appealed to you personally in the presentation of "interesting subjects by interesting people."

The WEEKLY appeals to intelligent people. If you like it your friends will like it. We want your friends to see the WEEKLY regularly. We should be very glad to send the WEEKLY on trial to any address for twelve weeks, postage paid, on receipt of $1.00. The regular subscription price is $4.00 a year.

THE SUBSTITUTE

by

WILL N. HARBEN

Author of "Abner Daniel," "Westerfelt," etc.

$1.50

A story of Northern Georgia—of George Buckley, who loves a woman far above him socially. Though of humble birth, he has a natively fine character. He is adopted by an old man who desires to atone for a past sin by so educating and training Buckley that he may become his moral substitute in the eyes of Providence. Hence the name. Finally, interest centres in a love affair that has a noteworthy effect on the young man's character, and the end is a happy one. This story is full of the wit, philosophy, and quaint humor that made the author well known through "Abner Daniel."

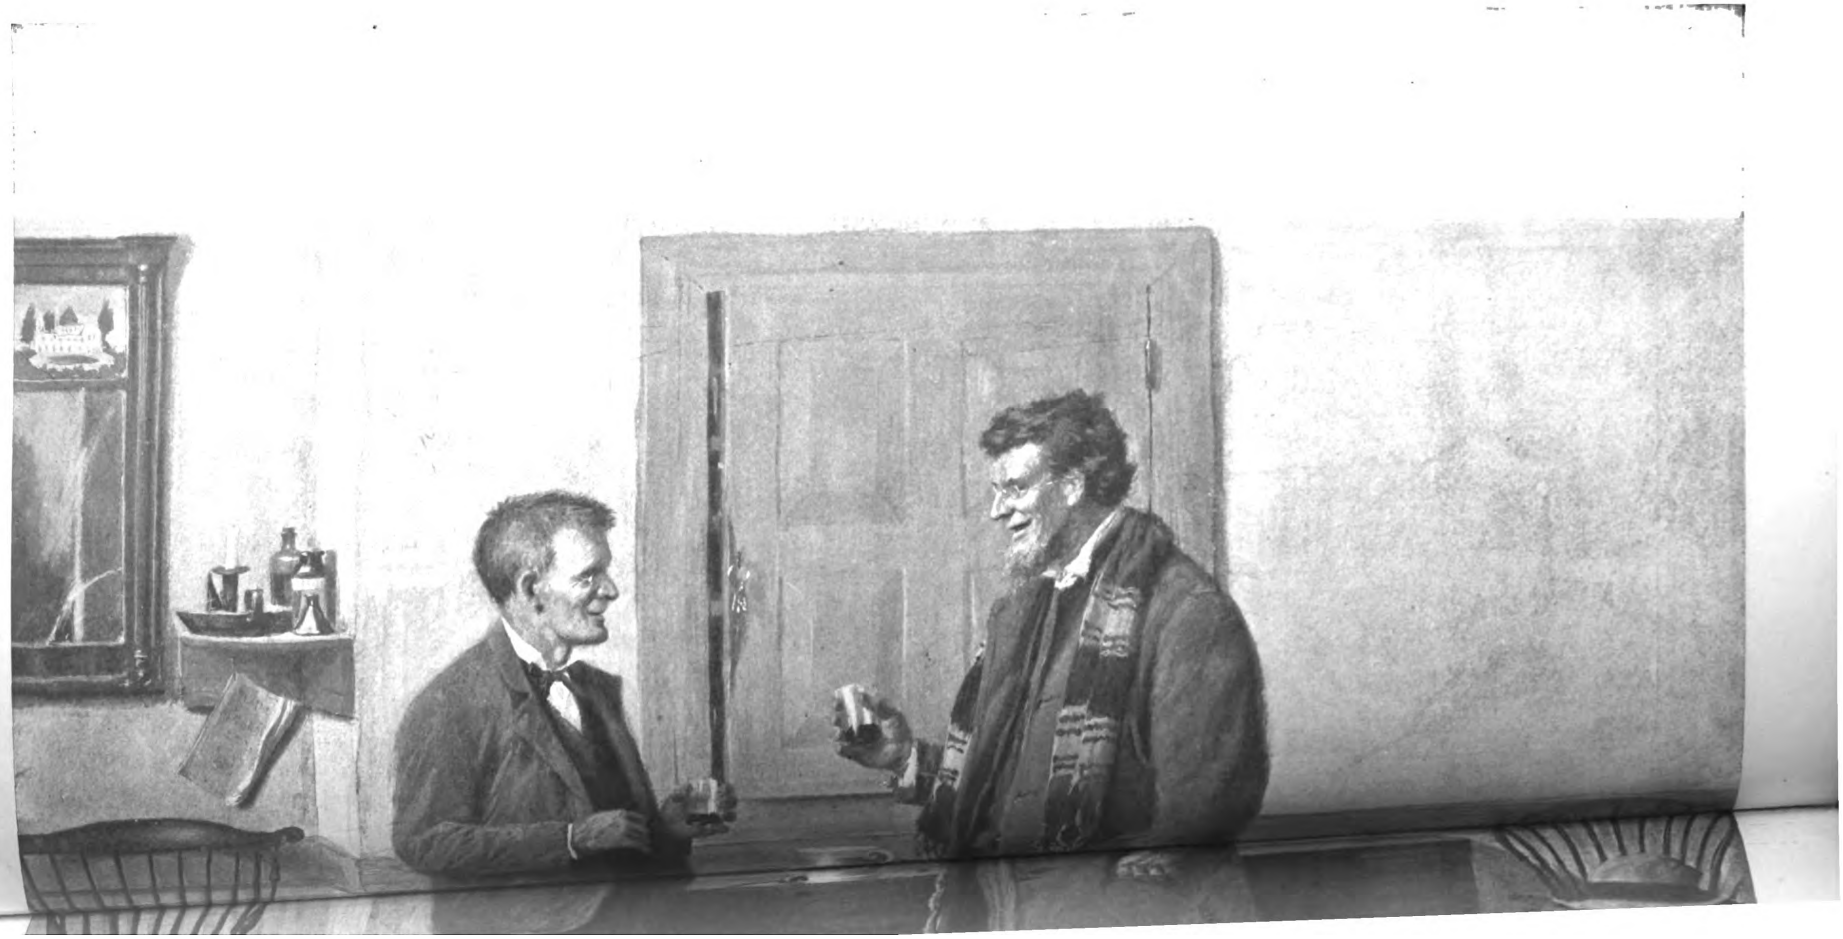
"Mice and Men"

IT matters little in what precise kind of a vehicle the charming talents of Miss Annie Russell are presented to the public, she is always sure of a warm welcome. She has made for herself so distinct a place in the affections of the theatre-goers that if all else were lacking we should still find an abundance of opportunity for praise when she comes to take our minds off our cares by her winsome acting. There is an undefinable something about her, an aura that is peculiarly her own that has won for her a most enviable position among the actresses of her time, and there seems to be something most fitting in her association with one like Mrs. Gilbert, for instance, whose heart must indeed be warmed by the constant demonstrations of esteem which she nightly receives from her audiences. Except Mrs. Gilbert, and possibly Miss Adams, we know of no woman on the stage to-day who makes the precise kind of appeal that Miss Russell makes, and the playwright is indeed fortunate whose work is entrusted to her hands.

This year, as well as last in Mr. Fitch's "The Girl and the Judge," Miss Russell has a rôle that finds a quick response in her peculiar abilities. It is for her a sympathetic part that Mrs. Madeleine Lucette Ryley has prepared in the pleasing little comedy of "Mice and Men," now running at the Garrick Theatre. Quaint humor, tender pathos, delicate personal charm almost roselike in its fragility, quick and refined intelligence—these are the qualities that have to be portrayed in the rôle she essays, and in all of the many graceful moments of the play she is the thing itself to perfection.



One feels after an evening at this performance as if one had walked through an exquisite little garden close with the flowers in full bloom, rare perfumes to enchant the senses, and everywhere a profusion of color that is restful and grateful to the eye. The wit of the lines, the possibly conventional, but none the less absorbing, complications of the plot, the atmosphere of daintiness and wholesomeness that pervades every scene, combined with the temperamental authority of the actress herself, go to make up an evening's entertainment that cannot fail to linger long and pleasantly in the minds of those who seek the refinements of dramatic art, and whose tastes have not been diverted from the themes which have mere loveliness by the prevalence on the modern stage of ruder, if stronger, things.

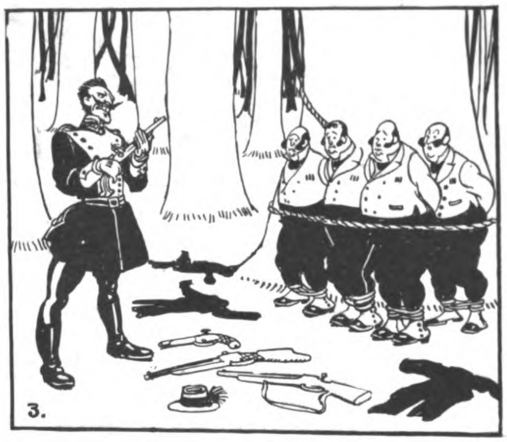
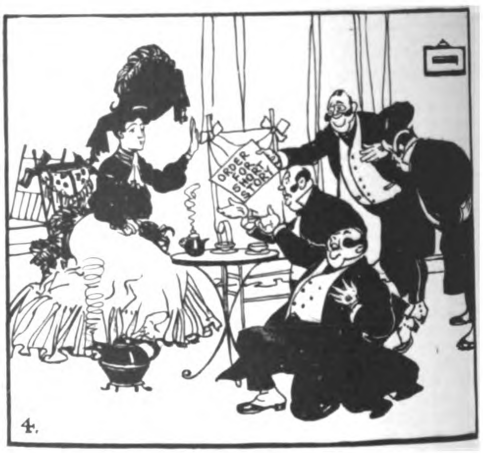
THE INTRUSIONS ON HOPE

A Short Story Which Anthony Did Not Write

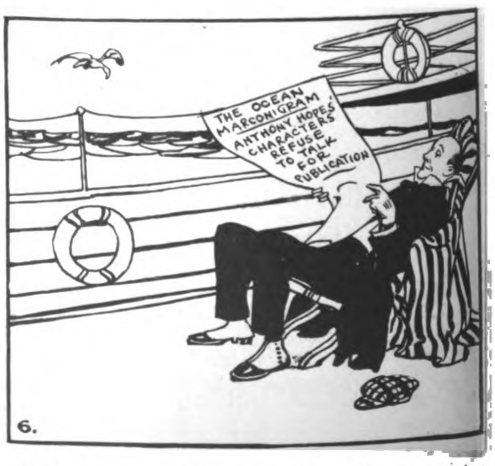


BY ALBERT LEVERING



Mr. Hope (loquitur). "Even my own castle is not impregnable to the editors. I will go to America and leave them to my defenders."

Black Michael. "A short story? You shall have one without words."



Rupert of Hentzau. "A short story? My stories have much plot and few words in them."

Dolly of the Dialogues. "A short story? Hope has fled and left only Despair, and yet—"

Peggy. "A short story? Will it do to intrude on Mr. Hope again?"

Mr. Hope (loquitur). "The only rest is on the sea. American editors have been even worse. Yet my defenders still support me, according to the papers."

HOPE

Did Not

Henrik Ibsen

See illustration on front page

HENRIK IBSEN, playwright and mystificator, has just completed the seventy-fifth year of his life. He was born on March 20, 1828, at the small Norwegian city of Skien.

He has lived long enough to become a prophet in his own land, where they wrote of him in 1858, after the publication of his one historic drama, "The Vikings at Helgeland," when it was proposed to grant him a small government stipend: "Mr. Ibsen, as playwright considered, is a huge naught around which the nation can have no interest in planting a protecting hedge."

It has become possible for him to look back to that time without bitterness, as well as to that later time at Rome in the sixties, when he, the perfection of scrupulous neatness, actually went around in shabby clothing, and his family was brought to the verge of starvation. Of those days and of the long time it took him to gain any recognition at all, he said on one occasion: "I never expected anything else, and I am quite satisfied. In spring you cannot have the treasures of fall. Spring is the sowing-time."

The time for harvesting has now come to him in its fulness. He is the grand old man of Norway. Even his life-long friend and rival, Björnson, does not stand nearer to the heart of the people. The name of Björnson may be greeted more boisterously when mentioned among those of his own way of thinking. It is respected and admired by foe as friend. But to Ibsen are granted a veneration and a love that rise above class and party.

After a voluntary exile of twenty-eight years, broken only by two flying visits to home, Ibsen returned in the summer of 1891 to Christiania "just for a brief stay." That stay has now lasted twelve years. He brought home with him the regularity of habits and fastidiousness of dress that became renowned during his Munich period. The promenade from his home to the Grand Café, where he spends just one hour reading the newspapers and sipping his glass of cognac, is undertaken at the same minute every afternoon. As the Berliners used to watch for the appearance of "der alte Kaiser" in the well-known corner window, so the inhabitants of Christiania are wont to look for the little old man, with his shining silk hat above the bushy head of snow-white hair and his spotless Prince Albert coat, who moves with short, quick steps along the Carl Johan Street, supporting himself slightly on an umbrella—that umbrella is never missing from the picture.

When the celebration of Ibsen's seventieth birthday anniversary in 1898 called forth messages of love and admiration from all over the world, crowned heads and artists and fighters with sword or pen signing their names side by side, it was feared that the master could have but one or two years left. He has surprised all by completing another five-year term, in spite of a spell of serious sickness that nearly laid him low

"The course of true love . . . ."

Domestic Relations of Automobiles

THERE are two great obstacles to the achievement by automobiles of a recognized position as articles that no family should be without. The first cost of a good one is pretty high: that is one obstacle, and the other is that it requires a fairly expert machinist to keep it moving. It is not every one who can run a complicated machine, and of those who can, it is not every one who wants to.

Almost every one can hold the reins after some kind of a fashion over some kind of a horse. For unskilled drivers wise and responsible horses may usually be provided who will haul any not *too* unreasonable person where he wants to go and bring him safely back. It is not necessary to know much about a horse's "works" in order to drive him. If one has training enough to notice when he drops a shoe, and experience enough to keep to the right and go slow down hill and up hill, little journeys by horse power may be mercifully and safely accomplished without serious strain on mind or body. Of course a good horseman is an accomplished man. To know what a horse can do and how he ought to do it; to drive him properly, ease and urge him with consideration, adapt his task to his strength, and remedy the defects in his performance when there are defects, are matters of high skill and trained judgment. But most people think they know something about a horse, and can easily satisfy themselves that they can drive a tame one.

But an automobile is a critter of another breed. It has wheels, levers, chains, valves, tanks to get empty, gauges to watch, boilers (sometimes) to blow up, cranks to turn, appurtenances and appliances that awe the tyro by their intricacy and multiplicity. Before you can have confidence that you know how to run an automobile, it is necessary that you should gain a more or less thorough understanding of what is inside of it and how it works. A horse will limp along without a shoe, but when an automobile stops, there you are, and there you stay unless you can find out what's amiss, and persuade a complicated apparatus to resume motion.

It daunts the average man, unless he has a turn or a liking for mechanics; and as for the average woman, she is altogether out of sympathy with it. There are a few women who can drive a nail, a few who can sharpen a lead-pencil, but they are exceptional. Still more exceptional are the women who can tinker a machine that is out of gear. Possibly there is something about the female mind that makes most women helpless in the presence of a balky machine; possibly it is merely that machine-making is man's work, and women have little occasion to practice at it. Anyhow, when a machine balks with a woman, she usually looks for a man or a boy to fix it. Women will ride in automobiles; will steer, drive, and own them, but very few women will ever domesticate one or trust herself far from home in one without taking a male mechanic as her companion. It is odd. A baby is a complicated machine, very; and yet a capable woman is apt to be a good hand with a baby; whereas with a machine, which is simple by comparison, she is helpless at the first break.

Of course, one can use automobiles, just as one can use horses, without troubling his head about the care of them. Whoever wants mere transportation and has the money to pay for it, does better to buy machinery than horses. For the horse-owner owes thought to his beast, and should make sure that he does not suffer, but the automobile has no feelings, and if it is abused no one suffers but the owner.

Prof. Charles Marchand

Dept. C. 60 Prince St., NEW YORK

(Continued from page 481.)

two years ago. But the end can no longer be far off. From his present lofty position he may view its approach with equanimity.

His work is done. He has fought his battle and said his say. To-day he is one of the very few living men—two or three or four—whose claims to literary mastership are recognized by the foremost thinkers and critics of all civilized countries. He can hardly add to his fame, and it is unlikely that he will try to do so by adding another play to the long series that reaches from the youthful "Cataline," of 1857, down to "When We Dead Awaken," which the author himself has called "a dramatic epilogue." His complete life-work lies before us, and if nevertheless we are still unable to formulate a fair estimate of its value, it is because we have not yet grown up to the level of a large portion of that work.

That Ibsen has written for the future, and that the future will know him for its own true child, seems difficult to doubt. Especially is this so when we recall how the world by degrees, grudgingly, but none the less surely, has come to accept the works of Ibsen's successive creative periods. The men who to-day talk of the "fantastic incomprehensibilities" of "When We Dead Awaken," are the same ones whom the publication of "The Master Builder," in 1892, provoked into the cry "that Ibsen had gone quite bankrupt at last." They are identical, too, with the men who ten years earlier raged and sneered at "Ghosts"—that embodiment of the noblest classical art and spirit in modern form.

Ibsen has been called "the modern sphinx" and "the great questioner." The position thus assigned to him in the realm of letters was frankly accepted when he wrote of himself:

> For solving riddles I am not the man, sir:
> To question is my task, and not to answer.

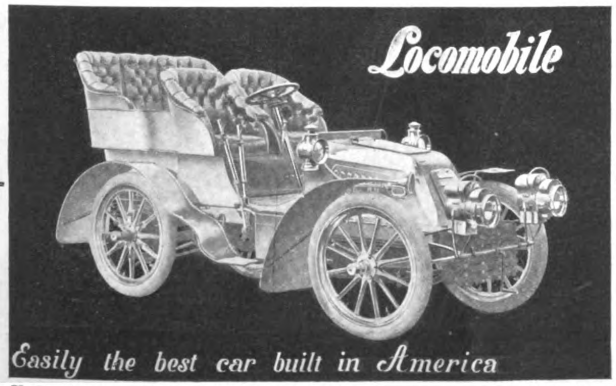
George Brandes, the mystagogue of modern literature, said of Ibsen: "A splendid ideal and moral suspiciousness has gradually become his Muse."

As a man who dares to doubt everything but his own right of doubting, Ibsen has been able to touch the nerve-strings of the ethical and spiritual life of his own day. Whether he was liked or disliked, welcomed or cursed, he cared but little, so long as he was listened to. Wherever he was heard men were compelled to think. But men do not like to think, least of all under compulsion. No wonder, therefore, that Ibsen's popularity with the average man has always been small.

The message repeated over and again by him has been, "Be true to thyself." To live his own life according to his own nature is the highest duty of every man. To be false to oneself is the unforgivable sin. From that sin spring sorrows and sufferings and humiliations. In "Peer Gynt," the play

Power and Control

These essentials of the serviceable and safe automobile are developed in the Cadillac Automobile through new principles of engineering and perfect mechanical construction. The engine is very compact and very powerful; the transmission gear a triumph of mechanics; the steering wheel very sensitive—and absolute in its control; the brakes reliable under all conditions of grade and speed; running gear and body strong, but graceful. The



CADILLAC

is The Automobile that Solves the Problem

of safe and rapid transit on all roads, under all conditions. If you know of an auto fault you'll find it corrected in the Cadillac. Price $750. Detachable tonneau, at an extra cost of $100, converts this graceful runabout for two into a delightful touring car for four.

Our free illustrated booklet M gives address of agency nearest you where the Cadillac may be seen.

CADILLAC AUTOMOBILE COMPANY,
Detroit, Mich.

The 16 H.-P. Four-Cylinder TOURING CAR shown above represents the best development in Gasoline Automobiles up to date.

Improvements:—Throttle Control from Steering Wheel; Simplified Sliding-Gear Transmission (interlocking); All-Steel *Chassis*, allowing customer to order any desired body; Valves removable in minimum time; Spark-Plugs connected to Cables by Chains, thus preventing snapping of wires. We make both 9 H.-P. and 16 H.-P. Cars, and employ the Front Vertical Motor exclusively. Many other advantages.

The *Locomobile* Company of America, 7 East 42d Street, New York

What PURITY Means

Schlitz
THE BEER THAT MADE MILWAUKEE FAMOUS.

Purity requires pure water.

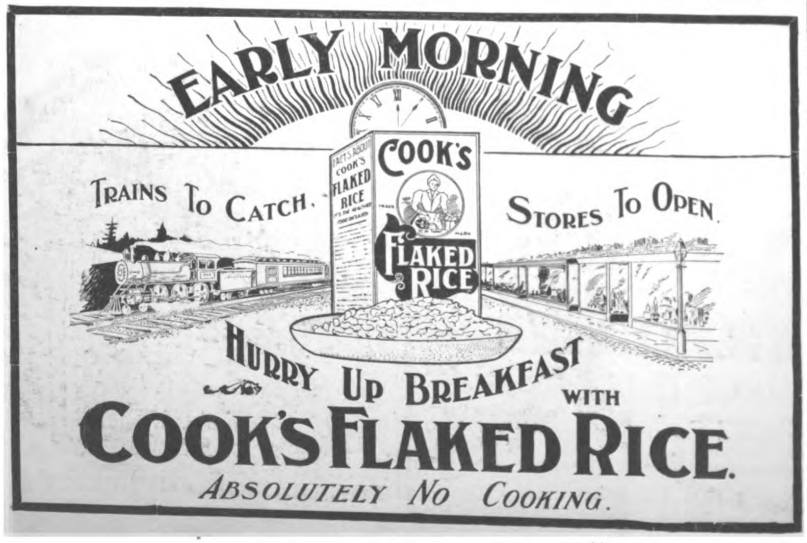
We get it from six wells, driven down to rock. No purer water flows anywhere in the world.

Purity necessitates pure air.

All the air that touches Schlitz Beer, after the boiling process, passes first through an air filter.

Pure beer must be filtered.

Every drop of Schlitz beer is filtered by machinery through masses of white wood pulp.



Pure beer contains no germs.

Schlitz Beer is sterilized after it is bottled and sealed, by a process invented by M. Pasteur, of France. It requires one and one-half hours.

That's how we double the necessary cost of our brewing. We do it to make purity certain—to make Schlitz Beer healthful.

Will you drink common beer, and pay just as much for it, when Schlitz Beer can be had for the asking.

Ask for the Brewery Bottling.

in which Ibsen has spoken more directly and more frankly to his own people than anywhere else, the hero's motto is "Be thyself," and the King of the Mountain Trolls endeavors vainly to make him exchange it for "Be sufficient unto thyself," which is the motto of the Trolls—the dark spirits inside and outside of man.

Whatever the sum of Ibsen's direct influence on his fellow-men, it dwindles into insignificance when compared with the influence he has exerted indirectly, through other artists, who, consciously or unconsciously, have become his followers and pupils. How many men and women of those who are now writing novels or plays, with a faint hope of being remembered by the next generation, are able to say that they have received nothing from the little man of Skien?

This will become truer still of the artists of a younger day. It is hard to imagine a greater future for a budding playwright who would pass proudly by the author of "Ghosts" and "Rosmersholm" and "John Gabriel Borkman," thinking that by communion with him there could be nothing to gain. There is much in Ibsen's position that reminds us of Balzac and Flaubert. To a large extent he is and will ever be a writer for the writers. The mass may fail to grasp his message, whether it relates to life or to art, but his fellow-craftsmen will read it and profit by it. The number of those who go to his pages for guidance and inspiration will increase constantly. This is equally true with regard to form and substance of thought, and the technique used to express it. It seems safe to say that Ibsen's work will form the foundation of the twentieth century drama. This is already recognized in Germany and in most of the other European countries outside of England. And the day is not far distant when the truth of it will be recognized here and in England also.

The New Woman's Hotel

See page 478

THE Woman's Hotel in New York has just been formally opened. It has long been a subject of discussion and discourse. It was projected five or six years ago, but the project languished until three years ago, when $400,000 was subscribed to build it, and in March, 1900, the Woman's Hotel Company was incorporated. Its capital is divided into 4000 shares of $100 each, many of which are held by prospective patrons. The building, at 29 East Twenty-ninth Street, cost $800,000, is twelve stories high, made of brick and stone, with a frontage of seventy-five feet, extending through

Thirtieth Street. It has rooms for 500 permanent and 150 transient guests. The projectors at one time advertised for a name. It appears now that their venture is the Hotel Martha Washington. It is partly speculative, partly philanthropic. It was desired to provide a hotel where working-women could live comfortably at moderate cost, but the intention is that the tenants and boarders shall pay their way, for it is in no respect a charitable institution. Meals will be provided for six dollars a week, or may be had *à la carte* in the restaurant; rooms range in price from three to seventeen dollars a week. The transient rates are from one dollar to three dollars and a half a day. A fortnight before the opening two hundred women had applied for rooms. The manager is a man; the bell-boys, elevator-men, mail and key clerk, and head waiter are men; the other clerks, the cashier, the bookkeeper, the fifty waiters, and, of course, the thirty chambermaids, are women. The hotel ought to succeed. It is well housed, offers good accommodations at moderate cost, and will, presumably, be well managed. There are plenty enough women in New York of suitable incomes and situation to fill it and keep it full. If it doesn't succeed under good management it will indicate that women do not like to seclude themselves from the other sex. But that seems unlikely to appear. In a town that is fairly choked up with bachelor apartment-houses, it will be surprising if a good hotel for women doesn't turn out to be a profitable venture; the more so as the seclusion from men will be limited, since men are to be allowed in the restaurant, though not in the dining-room on the second floor. It is a very interesting venture, though not risky, for the building will be worth what it cost, whether the women patronize it or not. We shall all want to talk about it and hear about it, and see how it turns out.

Now the basest thought possible concerning man is, that he has not spiritual nature; and the foolishest misunderstanding of him possible is, that he has or should have, no animal nature. For his nature is nobly animal, nobly spiritual—coherently and irrevocably so; neither part of it may, but at its peril, expel, despise, or defy the other. —*Ruskin.*

It is something to have an influence on the fortunes of mankind; it is greatly more to have an influence on their intellects. Such is the difference between men of office and men of genius, between computed and uncomputed rank.—*Landor.*

The man who lets the world, or his own portion of it, choose his plan of life for him, has no need of any other faculty than the apelike one of imitation.—*J. S. Mill.*

How to Paint a House Cheap

And Have it Guaranteed to Look Better, Wear Longer and Cost Less Than the Best White Lead Paints.

Never Fades, Cracks, Chalks, Peels or Blisters and is Not Affected by Gases. Fifty Sample Colors and Illustrated Booklet Prepaid to Any Address Absolutely Free.

The cost of painting the house and barn, outbuildings and fences is a heavy burden. Cheap paints soon fade, peel or scrape off and white lead and oil costs so much and has to be replaced so often that it is a constant expense to keep the bright, clean appearance so desirable in the cozy cottage home or the elegant mansion. The following are a few of the large users of Carrara Paint:

Pennsylvania R. R. Co.; Pullman Palace Car Co.; Chicago Telephone Co.; Central Union Telephone Co.; Field Museum, Chicago; Kenwood Club, Chicago; Cincinnati Southern; C. & E. I. R. R. Co.; Denver & Rio Grande R. R.; Wellington Hotel, Chicago.

Carrara is used because it lasts longer, never fades, never cracks, never blisters, never peels, covers more surface than the highest priced paints and costs less than the cheap mixed paints that injure instead of protect. There is but one Carrara. It is made by the Carrara Paint Agency, General Offices, 767 Carrara Bldg., Cincinnati, Ohio, and anyone having a house to paint should send for 50 free sample colors and our handsome booklet, showing many buildings reproduced in all the colors just as they are painted from this great paint that has stood the most rigid tests for 25 years and, bear in mind, that it is the only paint ever manufactured that is backed by a positive guarantee in every case. Distributing depots in all principal cities. Write to-day and save half your paint bills in the future.

The Waldorf-Astoria, New York, One of the Most Magnificent Hotels in the World, Has Used Tons and Tons of the World-Famous Carrara Paint.

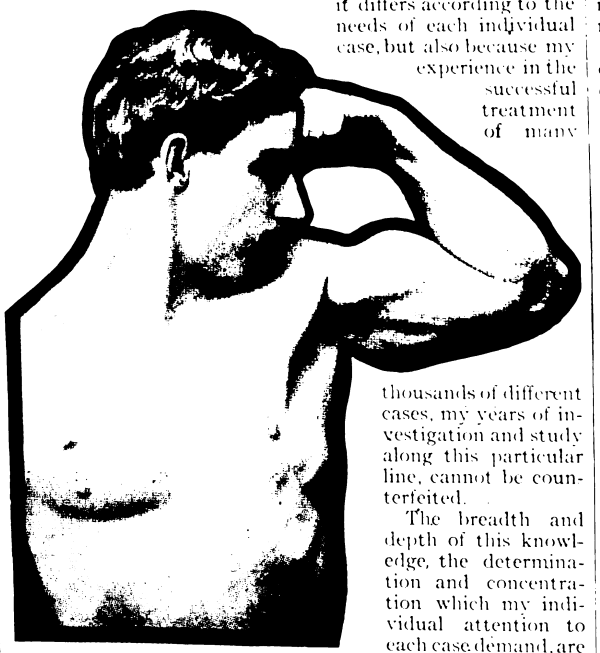
One cent, now—Afterward Years of health and strength

A postal asking about my system, *now*, will not only save dollars in doctors' bills, but also save at least half of my charge.

I Propose to More than Double My Fee.

My system is built around Alois P. Swoboda. It depends upon me and my intimate knowledge of human ailments and their treatment. There is a limit to my personal effort. I cannot give individual attention to more than a limited number of pupils.

I must either restrict the number of my pupils or neglect some of them.



I will not neglect a pupil—I certainly have no intention of reducing my income; hence the increase.

My system has always been worth more than twice the amount I have charged and many times as much as any other system.

Out of a spirit of fairness to those to whom I have already stated my fee, I make this public announcement, so that they may either enroll themselves at once, or have no complaint at the future increase.

I cannot regard great swelling muscles, or the ability to snap chains and lift horses, or even a knowledge of the Marquis of Queensberry Rules, as qualifying a man to keep in repair the most delicate of all organisms, the human system.

I am glad when a thinker begins to investigate the various systems for attaining physical excellence, for when a thinking man investigates, MY system is invariably selected. There is no other like it. It is obviously impossible to imitate my instruction, not only because it differs according to the needs of each individual case, but also because my experience in the successful treatment of many

thousands of different cases, my years of investigation and study along this particular line, cannot be counterfeited.

The breadth and depth of this knowledge, the determination and concentration which my individual attention to each case demand, are evidenced by the fact that, in spite of the volume of my business, my system is still able to effect the same unvarying, marvelous results.

My instructions to my pupils are clearer and more effective than those of others because I speak from years of successful experience. I KNOW

There is no guesswork.

Scientific physiological exercise is NOT a fad. Fads do not relieve hopeless cases of indigestion, dyspepsia, neurasthenia, insomnia, and rheumatism, liver trouble, and nervous diseases of every description, etc.

My system not only does this, but it rounds out the ungraceful form, puts muscle where it is needed, reduces obesity, purifies the blood, and, in fact, fits man, woman or child to nature's perfect mould.

It is right living in condensed form. By it the evil effects of wrong living are neutralized and a splendid condition of robust mental and physical health assured.

This is done without distasteful dieting and without discomfort of any nature. It makes men strong, alert and graceful. It gives women beauty of figure and grace of carriage, with a clear skin, bright eyes and rosy cheeks.

My system is taught by mail only and with perfect success, requires no apparatus whatever and but a few minutes' time in your own room just before retiring, and it is the only one which does not overtax the heart.

There is no wasted effort, no wasted time, the instruction is entirely individual and will fit the exact requirements of YOUR CASE. I don't ask you to take my word for this; judge me by my works—they speak louder than words. Below is the unsolicited testimony of a man who knows through personal experience what the Swoboda system will do. This man is one of thousands. He has no earthly interest in me or my systems beyond what it has done for him.

Here is a letter received from a prominent merchant of Texas. It tells an interesting Story, because it's True.

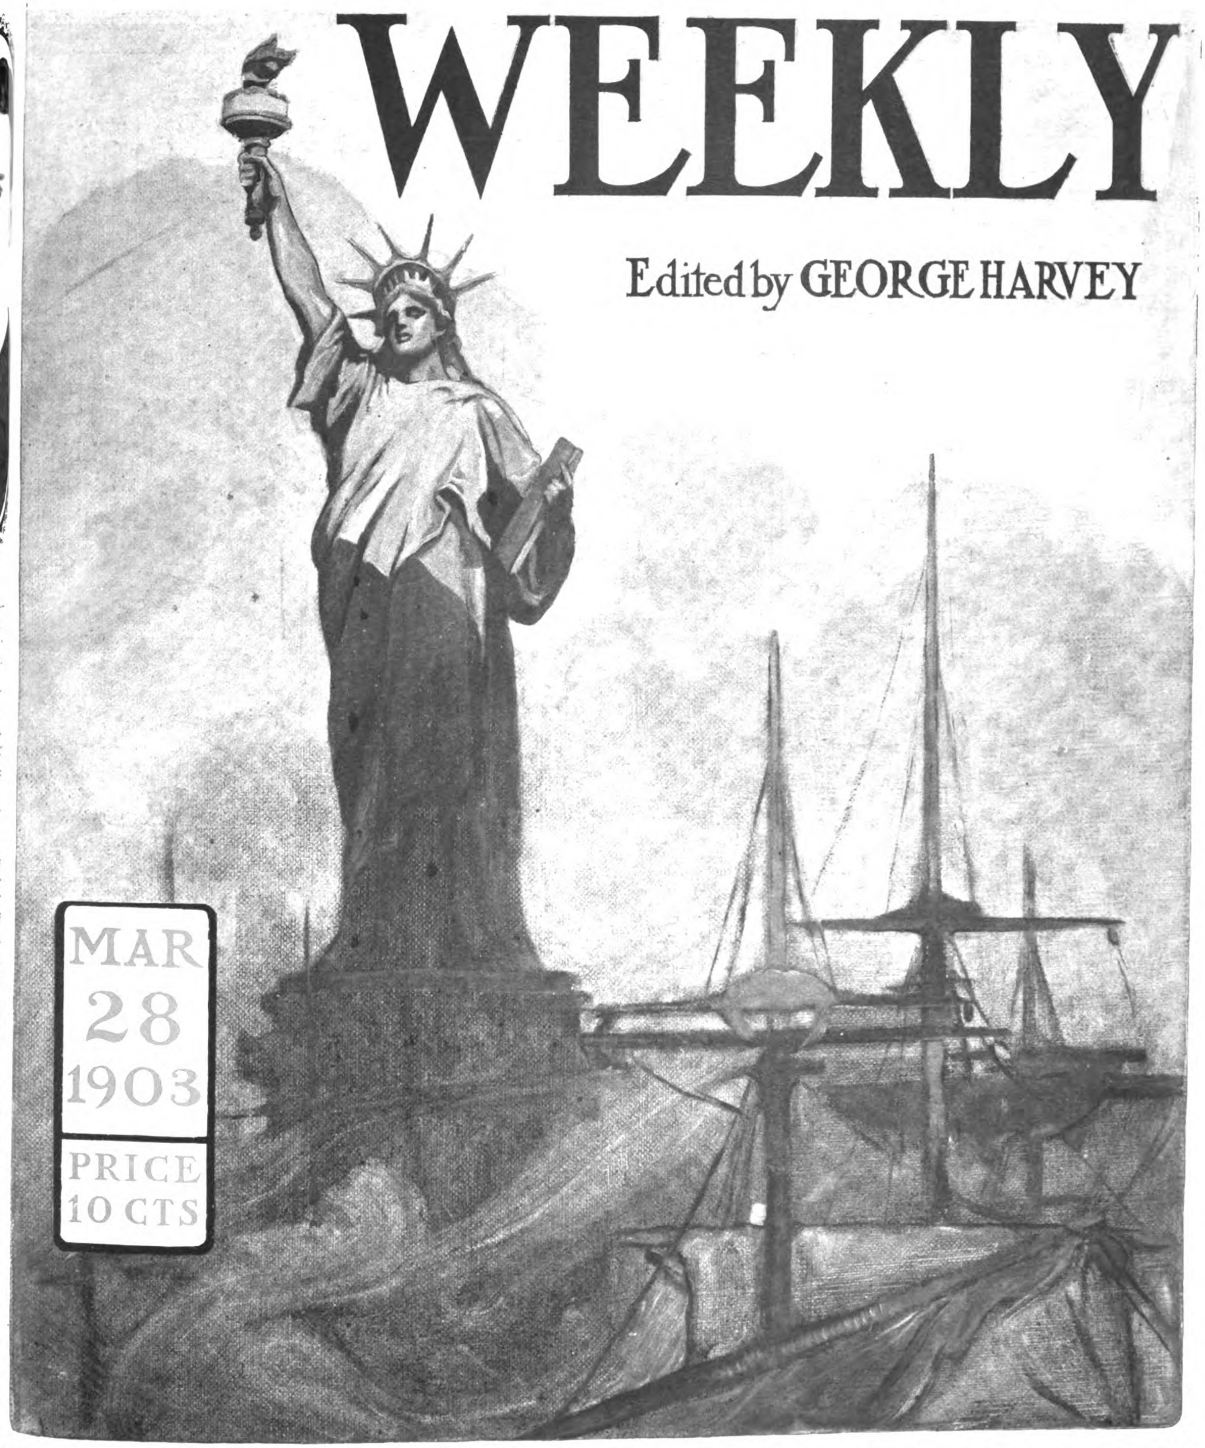
"SAN ANTONIO, Texas, *August* 15, 1902.

"MR. ALOIS P. SWOBODA, 57 Washington St., Chicago, Ill.

"*My Dear Sir*, It is a pleasure to testify to the merits and the benefits to be derived from your system of physiological exercises. Sixteen years of close application to my business has been a severe strain on my constitution. My physician recommended a complete rest for a long period. The benefits received from your system in a few months have been wonderful. My endurance seems unlimited, my appetite has increased enormously, with no difficulty in assimilating and digesting food consumed. My reserve force, which is so essential to every business man, makes me feel that nothing is impossible. My capacity, both physically and mentally, is increasing daily. Your system of exercise is looked forward to, with pleasure, daily. Wishing you deserved success, I am, Yours very sincerely,

"(Signed) P. MAUREAUX."

If you want the names and addresses of others for personal investigation, I will gladly furnish them.



I shall be pleased to send you free valuable information and detailed outline of my system, its principles and effects, upon application. This information, which I furnish free, is very interesting and cannot be secured elsewhere at any price. Write at once.

ALOIS P. SWOBODA, 600 Unity, CHICAGO, ILL.

HARPERS BOOK NEWS

THE PRIDE OF TELLFAIR

"The Pride of Tellfair," Elmore Elliott Peake's novel, recently published, tells the tale of a shrewd young lawyer in the small town Tellfair, in Illinois. This young man was born a farm boy, but has been thoroughly educated and become a keen, prosperous lawyer. His insight into human nature is something prodigious, and, by the way, indicates a similar quality, highly developed, in the author. While the background for this story is the lawyer's business and the life of the town—giving chance for a number of good stories and incidents by the way—the real interest centres in the more romantic love story of the hero.

IN THE GARDEN OF CHARITY

Basil King's new novel, "In the Garden of Charity," deals with a phase of marriage, but differs from his recent success, "Let Not Man Put Asunder," in that it deals not with worldly men and women, but with a simple folk of the Nova Scotian coast. The love story is a strange one—a story of two faithful, loving women and a man. It is told with much tenderness and there is an abundance of quaint and rustic humor in the tale.

PUTNAM PLACE

Grace Lathrop Collin's recently published book, "Putnam Place," tells of the people of an exclusive little neighborhood. While the locality is a small one, the author has woven into the lives of her quaint characters the humor and pathos of the big world.

SIX TREES

In "Six Trees," the latest book by Mrs. Mary E. Wilkins (Freeman), the novel plan is followed of correlating the characters with their favorite trees. The author's deft art is nowhere more apparent than in her sympathetic treatment of these entertaining New England people.

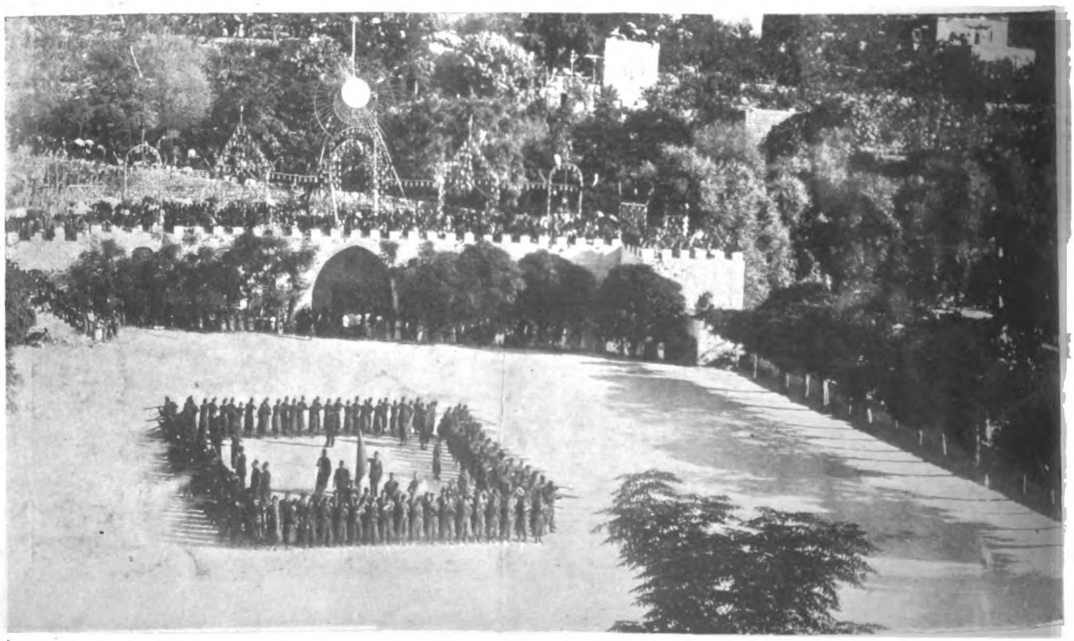
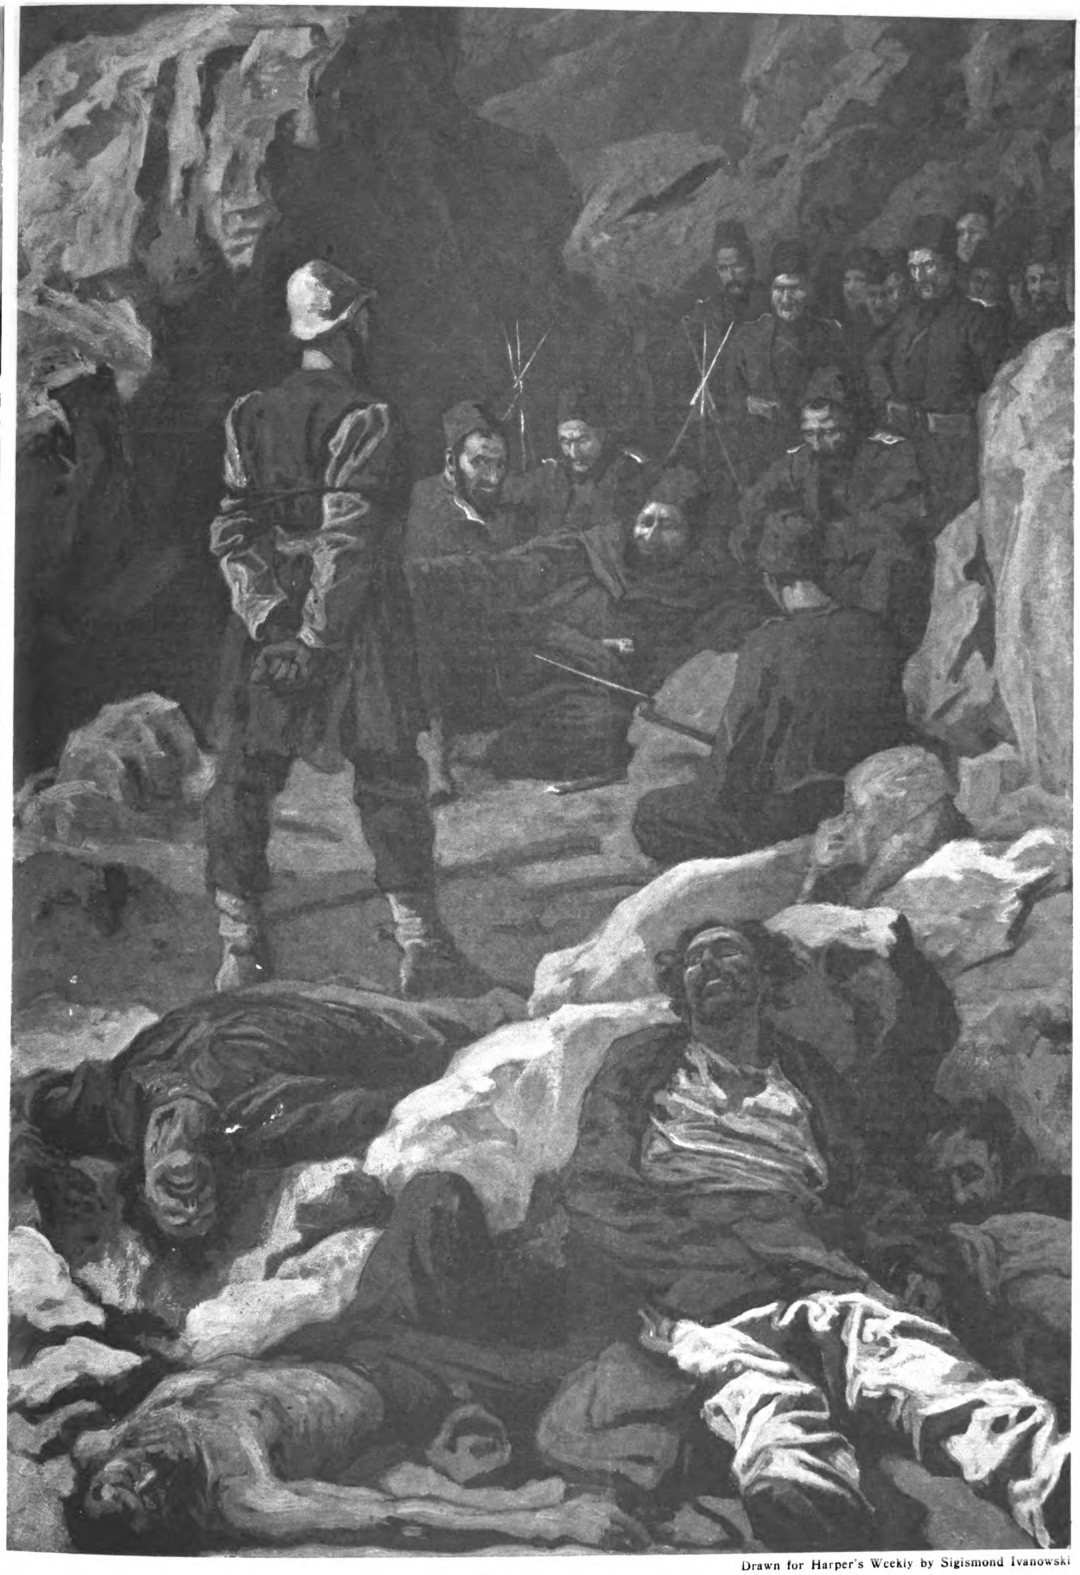
Mouzaffer Pasha, the new Governor in the Asiatic Lebanon



The Arrival of the new Turkish Governor in Bad-Eddin, the principal City in the Lebanon

Naoum Pasha, former Turkish Governor



The Power of the Turkish Empire

SUCH a ceremony as the change of governors in one of the districts of Asiatic Turkey brings out the last flashes of grandeur and pageantry in the dying Turkish race. The events recorded in these photographs belong to the wild mountainous region of the Lebanon, or, as the Turks themselves call it, Jemel Libnan, just north of Galilee and the Holy Land. The Libnan is one of the Pashaliks of the Damascus Vilayet, with between three and four hundred thousand inhabitants of whom not one in ten is a votary of the Prophet. Here, as in so many provinces, the Turks are masters in name, but have failed to establish any firm and ordered government. Here, as elsewhere in the dominions of the Sultan, there are periods of stolid stupor, broken by fierce outbursts of revolution, met with cruel massacres. The Turk has retained this much of the old conquering genius, that he still can slaughter and burn, but any constructive effort is beyond the reach of his dwindling race. Everywhere he is the sullen master of a host of conquered aliens, far outnumbering the Osmanlis, yet unable to shake off their yoke. In European Turkey, with a population of nearly five millions, hardly one in seven, or seven hundred thousand in all, belong to the Turkish race; while in all the territories of the Sultan, who rules over thirty-five million souls, there are less than eight millions of genuine Turks. There is something inexpressibly tragic and pathetic in the sight of the once mighty Turkish Empire slowly sinking into decrepitude and death. In past centuries masters of Europe, sending their conquering hordes as far west as Vienna, and crushing the peoples of eastern Europe under the iron heel of their military prowess, they have been sinking generation after generation, falling into national bankruptcy and political ruin. They are gathered now in Stamboul by the Bosporus, waiting for the end; on their faces is written the word of their destiny, final overthrow and disappearance from the continent over which their name once spread terror and dread. Much of the old manliness still remains, the splendid vigor and valor that won so many fiercely contested battles all across the Balkans and up the great valley of the Danube. But though the old valor, the old lust of slaughter remains, though there remains also the old willingness to meet red death, the spirit of the nation is overshadowed, and their light burns low.

Military Formation for Official Reception and Salute to the new Governor, typifying the Pomp and Ceremony on similar Occasions in the Turkish Provinces

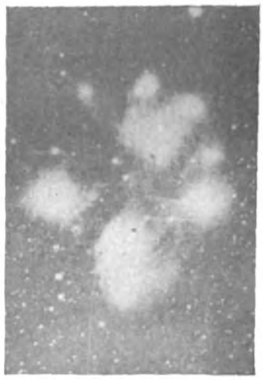
A TURKISH VICTORY IN MACEDONIA



During the present difficulties in Macedonia bands of "Montagnards"—native tribes who live in the mountain fastnesses of the country—have come into frequent collision with armed forces of Turks. These Montagnards are opposed to Turkish rule and to Turkish domination, and their meetings with them result in conflicts and massacres. In the drawing our artist shows the scene after one of these conflicts, where the one survivor, taken captive, is interrogated before being put to death by the Turkish leader

The Pleiades

What a keen eye sees—only a few more than "the storied seven stars"

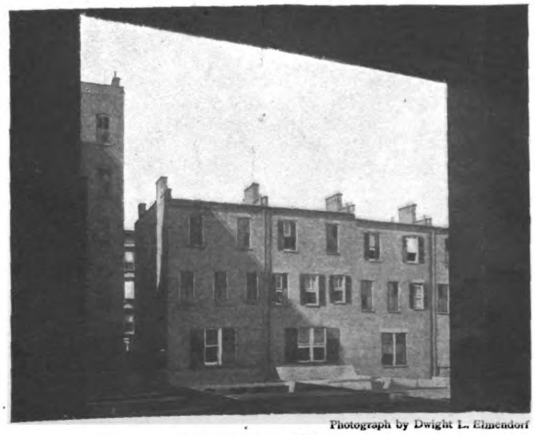
What the camera sees—a thousand stars with brushes of nebulous light

The Trace of an Earth Tremor

If one holds a pencil-point on a flat surface during an earth tremor this will be the result

The result under the same conditions as shown by the delicate seismatic register

Piecing Out the Senses

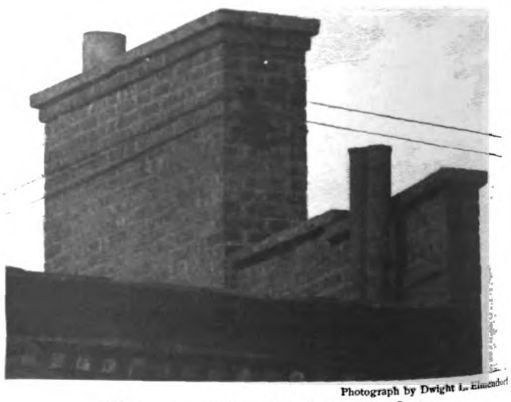


NATURE has denied to man the extraordinary powers granted to many other creatures. His sensory organs are fairly efficient, but he cannot see as the vulture sees, smell as the dog smells when on the trail, or hear with the acuteness of any of the wood folk. Von Helmholtz once said that if an instrument-maker sent him a device as imperfect as the human eye he would promptly return it. But the artificial eye has been in process of evolution for centuries, and it is the most highly and perfectly specialized of all the artificial organs. It readily multiplies the seeing power a thousandfold, so far as dimensions go. One can magnify a diatom too small for the eye to discern until the tracery upon it looks like the lathework on a banknote, or can recognize a familiar face across a couple of counties—forty miles, I believe, is the present record. The artificial eye, vastly more accurate in its construction than the natural one, can be furnished with a very much more sensitive retina. The natural retina, a very wonderful structure, is a sort of self-regenerating and self-developing photographic plate, with every granule of its surface tied to the brain. But considered merely as a photographic plate, it is wofully insensitive. It works only for a limited range of colors, and within this range it requires rather long exposure. Considered as a camera, the eye works at about f7, as the photographers say, at which opening a quick dry plate will, in fair light, receive a good image in about 1-200ths of a second. The retina takes about ten times as long, as one may easily see by looking at the landscape through a shutter having adjustable speed. One looks at the Pleiades in a winter sky. If the natural eye is very keen and the air exceptionally clear he may see the storied seven stars and three or four besides. But if one turns on them the huge inquisitive pupil of his artificial eye and exposes a photographic plate, a thousand stars burst into view enmeshed with whorls and brushes of nebulous light.

The ear has fewer physical imperfections than the eye. It works with greater precision and over a wider range. But it has its faults,—a lack of sensitiveness to very feeble sounds, and a certain tendency to lump impressions together. But even Fine-ear of the fairy tale was deaf as the traditional adder compared to the electro-mechanical man when he takes down his favorite long-distance ear and listens to a whisper over a thousand miles of space. And that whisper can, if necessary, be automatically recorded and filed away for future reference. It comes in the twinkling of an eye. Had it travelled as sound travels to the unaided ear it would have been an hour and a half upon the road. To the inner doings of the earth one can listen with an electrical ear and hear grim mutterings far underground.

Man's touch seems a delicate index of material things, but it is dull and insensible compared with the finger with which the electro-mechanical man can weigh what he cannot feel and measure what no touch can tell him. One can pass his hand over a piece of plate glass and guess that it is flat, but a questioning gleam of light upon the plate finds a hollow a hundred-thousandth of an inch deep as easily as one would put his thumb into a knothole. We may go quietly about our business with a thousand tiny earth tremors quivering beneath us, and our unaided senses will make us none the wiser, but the man who is a bit nervous about earthquakes takes down an artificial finger, sets it up, and tells it to keep watch over the solid ground. Then day by day it watches, and patiently draws for him every infinitesimal quiver that may come from the other side of the world.

Taste and smell, the least acute of the senses, tell us roughly what things are made of and how they dissipate themselves. There is no telescope for either, but if a thing is salted or sweetened, sour or bitter, though the tongue may fail to detect it, the modern man keeps at hand a huge assortment of bottled tongues with queer labels, with which he can detect a grain of salt in a hogshead of water, as certainly as he would find a teaspoonful in his morning coffee, and almost as quickly. And if it comes to smelling, to be sure he cannot put on a nose-microscope, but if he waxes suspicious, he deftly sets traps for intruding smells, and gathers them in. If he thinks that the air is contaminated with things his nose takes no note of, he sets microbe traps, and catches the microbes if there are any.



The unaided senses tell us many things quickly and easily, and are indispensable, but when it comes to the pinch they need help. Steadily year by year man's resources are enlarged, and his organs improved and multiplied. New eyes and ears, fingers, tongues, and noses are added to his already large collection. What his powers may become in another century, provided his development goes on unchecked, any observer may guess, and the more the guesser knows of what is possible now, the less disposed he will be to set limits to his forecast.

THE BOXERS

A Complete Short Story by Morgan Robertson

WHEN a man of his word promises to carry more than half his crew across the Pacific in irons he is apt to make strong endeavor toward the keeping of his promise, even though unfortified by profane and intemperate language arising from below, and by the fact that the mild-mannered and well-behaved remnant of his crew proved their efficiency at shortening sail in a sharp squall which struck the ship before she was well off the Yangtse Bank. But the squall was followed by a greasy calm; and two large sea-going junks, blown nearer by the squall, and filled with yelling, chattering Chinamen, brought into the problem a factor not easily cancelled by a crew of twelve weaklings, trained only to fear and obedience, and Captain Jackson could not but have thought of those counter-irritants below. Both junks were being propelled by sweeps, and one was but a quarter-mile away, the other about as far astern of her.

"Pirates?" asked the mate, as he and the captain watched from the poop.

"No doubt of it," answered the captain. "There's a large anti-foreign society growing in China—Boxers, they're called—and some o' them have taken to the sea. They've killed a lot of missionaries up north, and I heard ashore of a little English bark they looted in the Pei Ho. We've got to fight. Call all hands aft, Mr. Becker, and we'll fit 'em out. Wish I could trust that gang below."

"We won't need them, sir," answered the mate. "Counting in the cook an' steward, Chips, and the two bo'suns, there are twenty of us—good for a hundred Chinks. An' there's wind coming yonder"—he pointed at another squall growing in the west—"an' we can keep 'em off till it comes. They won't face powder and shot."

"Perhaps not. We may have to kill a few, though."

But they changed their estimate of Chinese courage a little later, even though they killed more than a few. A frenzied mob of suicides swarmed up from the brown junk rasping alongside, and with yells and shrieks precipitated themselves upon the score of men mustered to receive them. They were armed only with knives and spears, and there was a steady death-rate among them as the rifles, pistols, and shotguns in the hands of the defenders sought targets and spoke; but they charged on, stumbling over the bodies of the fallen, flourishing their blades, and chattering their strange, minor-keyed war cries, until they had driven the defenders against the opposite rail. Here they closed, and now white men fell to the deck under the knife and spear thrusts. For a moment it was a *mêlée;* then one man broke, and fled for the cabin door. It was Sinful Peck, and the example was contagious: the steward, carpenter, and one of the bo'suns reached the poop steps and climbed them. Here they turned to defend their temporary refuge, firing point-blank into the densely packed mass of yelling humanity besieging the steps. The second mate was driven into the companionway. The first mate lay quiet in the scuppers. The captain and cook, both bleeding, mounted the hatch-house, and the other bo'sun, and what was left of the foremast hands, were harried forward by the fanatical Chinamen until they found safety behind the closed doors of the galley. Then the pursuers charged back to aid in the siege of the others, by which time the cook had sunk to his hands and knees, and the carpenter was prone upon his back in the alley on the poop. Piled half-way up the poop steps was a pile of dead and wounded Chinamen, over which others were frantically climbing, and it began to look hopeless for the defenders, even though the captain on the hatch-house, the steward and bo'sun in the alley, and the second mate in the companionway were bringing down a Chinaman with each bullet expended. But now a strange thing happened.

A brown hollow cone, nearly two feet in diameter at its base and fully five feet long, protruded over the break of the poop, its open mouth gaping menacingly at the struggling Chinamen; and from its cavernous interior belched a mighty volume of sound, uproarings, awful, and terrifying. The Chinamen fell back, but the horrid resonance followed them, blasting their ear-drums, paralyzing their nerves, threatening their souls. Bullets they understood, but not this—this massive and weighty weapon that hurled thunder at them. And what manner of foreign devil was behind it, squatting on his haunches, supporting the ponderous thing so easily with one hand gripped around the small end, which he held to his mouth, while he puffed out his cheeks and made frightful faces. They surged back; they turned and fled in wild panic, and as the leaders in the stampede scrambled over the rail, the powerful foreign devil, with his dreadful instrument of evil still aimed at them—still emitting the fearful sounds—sprang clear over the bodies to the main deck and pursued them.

It was Sinful Peck with the ship's papier-mâché megaphone, and he did not cease his objurgations until he had blown the last Celestial over the side.

Captain Jackson inspected his cook—badly hurt, but not fatally—then, being weak from loss of blood, lowered himself painfully to the deck and examined the others. Five of the foremast hands were wounded and more or less hopeless, and Mr. Becker was dead, with a knife sticking in his breast.

Assisted by the steward, he climbed to the poop, crossed over abaft the cabin, and looked down at the junk. Sinful Peck, perched on the rail, was still bombarding them with ear-splitting invective, and the Chinamen, having cast off, were frantically pushing their junk away with bamboo poles. Forward, Mr. Brown was hammering on the galley door, beseeching the inmates to "come out like men, and 'stand by' for more of it." For more of it was promised; the other junk was but a few lengths away, and the yells of her crew attested the fact that Sinful's noise was not affecting them.

"It needs to be sudden, and mysterious," muttered the captain. "It won't do again." He looked to the west, where the second squall was growing, and bearing down upon them—a black and ragged cloud, its lower edge dropping rain. It was a question which would arrive first—the wind or the Chinamen.

"Come here, Mr. Peck," he called, and as the smiling Sinful approached he tossed him the keys of the irons. "Unlock the prisoners," he said. "Those curs forward won't fight any more, and we'll need them to shorten down, if for nothing else."

The smile on Sinful's face gave way to a look of consternation; but he deposited the megaphone on the deck, picked up the keys, and, first reloading a few empty cylinders in his pistol, resolutely entered the hatch-house door and descended. Captain Jackson sat down on the edge of the poop with his feet on the steps and waited. He heard muffled words from below, then there was silence, broken only by the objurgations of Mr. Brown and the noise of the Chinamen. Soon a head appeared in the hatch-house door, and Bigpig Monahan's massive shoulders and powerful frame followed. He sprang out and faced the captain, with Sinful's pistol levelled at his head, Sinful's cartridge-belt strapped around him, and a stern look of indignation on his face. Seldom Helward came next, then Mocassey Gill, Gunner Meagher, Tosser Galvin, and the rest. They all looked angry and discontented, and they all procured belaying-pins from the rail and surrounded their leader.

"Don't shoot, Monahan," the captain had said, weakly raising his hand. "I am knifed in the side. You'll have enough to do in defending your lives. We have been attacked by pirates."

"So we surmised down there by the racket," answered Bigpig. "And rather than call on us you left us to be murdered in irons. What d'ye want of us now?"

"As I said, to defend yourselves. At first there seemed to be no need of you; then there was no time to think of you. Mr. Becker is dead. The crew have hidden in the galley. Mr. Brown is still with me, and Mr. Peck,—where is Mr. Peck?"

"Down below with the darbies on him. How d'ye s'pose I got this gun?"

"Well, well—all right. I am helpless. The situation is in your hands; but the Chinamen are coming back"—he arose and pointed to the masts of the junks showing over the rail—"and there is a squall coming which may blow us clear of them. You'd

better brace the yards to starboard, clew up the kites, and arm yourselves."

He sank down in his weakness, and they scrambled up the rail and looked; then they craned their necks and looked at the coming squall.

"All right, Skipper," said Bigpig as they stepped down. "You're a good fellow when you're scared. But just hand over that gun of yours." He climbed the steps, and boldly twisted the captain's pistol from his nerveless fingers. Handing it to Seldom Helward, he asked, "Now, where are those arms you spoke of?"

"On these wounded men, and on the men in the galley. Take them away from them; but brace the yards first, and you may not need them."

They gave no heed to the last advice; they relieved the stricken men on the deck of their arms and cartridges, and, meeting an anxious second mate hurrying aft, they even held him up, disarmed him, and tied him hand and foot in the scuppers. Then, with a heavy iron windlass brakes, they battered in the galley door and entered. Captain Jackson saw this with failing eyesight; also he heard a confused sound of oaths and protestations from within the galley which for a moment dominated the chattering yells from over the side. These were ominously near, however, and he could see through the quarter rail that the two junks had met, and side by side were now coming together. He endeavored to stand erect and look over the house at the squall, but the effort was too much for his strength, and he sank down in a faint.

He was roused by cold rain on his face, and a stentorian voice almost in his ear, roaring: "Bring her up a little and shake her, Moccassey. The topsails won't come down." Bigpig had partly climbed the poop steps, his huge head and shoulders outlined against a background of gray sky streaked with horizontal rain and spindrift. The ship was heeled, and her tautened weather rigging sang a dismal accompaniment to the sound of wind and washing sea. Aloft, skysails, royals, and one of the topgallant sails were in ribbons, and the upper topsails, with slackened halyards, supported the weight of their heavy yards by the pressure of the wind alone. This much the captain's mind could grasp in an instant. "The Chinamen, Monahan?" he gasped.

"Left 'em astern, Skipper—dismasted," said Bigpig, cheerily.

"And the second mate?"

"In the scuppers, d——n him. We're shortening down without him."

It was moderately good news under the circumstances, and with the formless, wordless calls of sailors at work ringing in his ears, Captain Jackson sank back into unconsciousness. When next he revived he was in his berth; his wound was dressed, and Bigpig, Seldom, Moccassey, Tosser, and Poopdeck were seated in the sacred precincts, calmly watching him. All wore revolvers and cartridge-belts. Standing up before them were Mr. Brown and Sinful Peck, unrestrained of movement, but evidently prisoners.

"Well, Capt'n," said Bigpig, serenely. "You've come to again, I see. Now, your ship's all right, and heading her course for 'Frisco. We've talked it over. There's no sense in putting back to Shanghai, or in touching at Honolulu, as we thought we'd do, at first. We'd be hanged, no doubt, for piracy; but we'll take our chance in the Lord's country. Understand? We don't mean to give up these guns, and we don't mean to let you have any; for our own safety—understand? That'll be our plea in court, if any plea is needed. And we give you back your second mate, and agree to take his orders and yours as lawfully signed seamen of this ship. We keep our hands clean of all mutiny and such things—except, as I said, retaining these guns for self-protection. But we want this little devil 'fore the mast with us again, and we want you to legally disrate him, right here."

"You want him," said the captain, "to maltreat him as you did before. Mr. Peck saved my life. I cannot deliver him to you."

"We saved your life, too, and we saved your ship. If we hadn't braced the yards she'd be a fire now, and you roasting with your throat cut."

"But you are under as heavy obligations to him. He remembered a well-known weakness of the Chinese character, and frightened them into their junk with the megaphone. Had he not done this, you would have been killed, too."

"Oh, he's smart enough—smart enough to shanghai his friends, and engineer things so that at no time can they quit the ship and get home. Well, you formally disrate him, or we'll head the ship south."

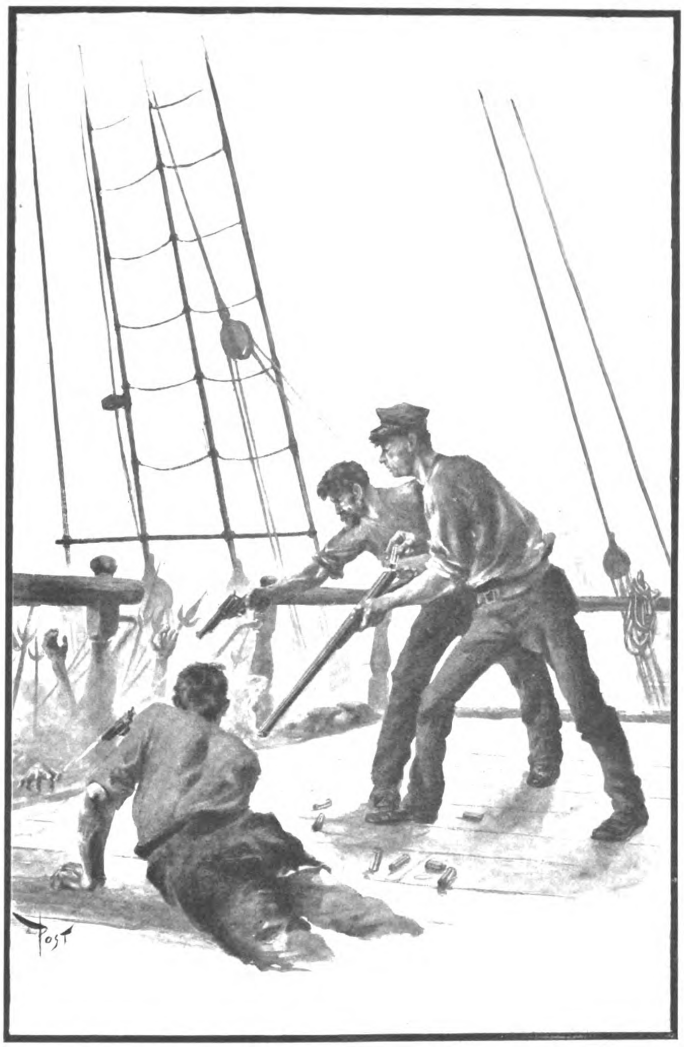
There were mutiny, murder, piracy, wrecking, and all the crimes in the nautical calendar inherent in this threat; and Bigpig spoke determinedly. The set faces of the others bore out this interpretation, and the captain remained silent for a few moments.

"I am laid up," he said. "I cannot be on deck. I have no navigator. Will you allow Mr. Peck to navigate and keep the log?"

"Most certainly not! We'll keep the fo'castle clean. Why, bless your soul, Capt'n. Are you looking for mates? This crowd don't need a boss, and if they did, Seldom and I have been shipmasters for twenty years or so; and as for navigation, Poopdeck, here, took a ship 'round the Horn thirty years back. Forgotten that? Poopdeck, old man, can you fetch 'Frisco?"

"Ought to," answered Poopdeck, confidently. "Once past the Loo Choo Islands, there isn't a rock or shoal this side of the Farallones."

The captain again waited, and thought.



"Mr. Peck," he said at last, to the silent and sullen-faced little man, "I can do no differently. You must go before the mast. And Mr. Brown," he added, to the second mate, "as you are not a navigator, I must promote a man over your head. Mr. Poopdeck Cahill, you may bring your dunnage aft to the mate's room and take his place."

"Thank you, sir," said Poopdeck. "Will you enter this in your official log?"

"Of course, of course—anything for peace. Get out of my cabin."

"Come, Sinful, my son," said Bigpig, gleefully, clapping him forcefully on the shoulder. "Come with the friends of your youth."

And with Sinful heading them at the end of Bigpig's long arm, they filed out of the cabin.

"Here they turned . . . firing point-blank into the densely packed mass of yelling humanity . . ."

"She went high and dry on the sands of a peninsula which separates the ocean from Bakers Bay"

No. 50's Voyage on Land

LIGHT-SHIP NO. 50 is a steel vessel, 112 feet long, and draws 13 feet. She was moored off the Columbia River to mark the channel. It is a bad place for navigators, on account of the bar and shoal water, where an ordinary gale of wind raises a heavy sea. Gales abound there too, and last year a worse gale than usual fetched No. 50 loose from her heavy moorings and set her adrift. She has sails and an engine to fall back on in emergencies of that sort, but could make no headway against the storm, and the best the captain could do was to choose where she should go ashore. He beached her near the mouth of the river, and she went high and dry on the sands of a peninsula which separates the ocean from Bakers Bay. Her crew were all saved, and it turned out that her hull was very little damaged. The next thing was to get back into the water. It was determined that because of shoals and currents she could not be launched back into the ocean, and the engineers of the Light-house Board concluded to attempt to carry her across the peninsula and put her into Bakers Bay. It is a journey of a mile, across beds of loose sand, through a forest, and over several elevations; a big job, for which there was hardly a precedent. But they got to work, jacked the vessel up out of the sand, put enormously heavy trucks under her, rigged windlasses to haul the trucks, and got stout teams of horses to turn the windlasses. At the same time they cut a road through the woods, and built a timber roadbed strong, and smooth enough for the trucks to travel on. Then they started her, and eventually she went. Cables broke, and had to be replaced with stronger ones. Some days she progressed only a few feet. It took months to cover the distance, but it was done, and finally No. 50 lay broadside to Bakers Bay. There they built an inclined plane of planking down into the water, greased it as the ways are greased for a launching at a shipyard, stretched lines from bow, stern, and masts to powerful tugs, steadied her with guy ropes, and presently a long pull, a strong pull, a pull altogether, and the land ship slid down the beach and was afloat in salt water once more. They took her to Astoria, where repairs were made, and now No. 50 is back in the service.

Archimedes said he could move the earth if he had a place to stand on. In Chicago they had, and doubtless still have, a habit of moving brick houses from one site to another. Major Eads planned and earnestly advocated a ship railway across the Panama Isthmus, on which ships should ride from ocean to ocean with their cargoes in them. Theoretically, anything can be moved to any place, and the only question is whether it is worth the trouble and will pay. But, after all, it is a long step from theory to practice, and No. 50's land voyage was a notable performance, novel, interesting, and conclusively successful.

"No. 50's land voyage was a notable performance, novel, interesting, and conclusively successful"

THE CHINESE PAY GERMANY FOR THE MURDER

In June, 1900, the German Minister to China was murdered by the Boxers. Germany demanded reparation in the form of a memorial of disgrace to China, which has just been completed. The ceremonies attending its dedication—the presence of the German troops drawn up before the memorial, and the speech of Prince Chun, the brother of the Emperor—are described in an article on page 505 by our correspondent Willard W. Straight, Inspector General of Customs.

Rottie (Peter F. Dailey) Specky (Lew M. Fields) Sarah Crude (Fay Templeton) Finnegan (Miriam Clifford) Miss Pinchin (C. A. Bigelow)

"The Little Princess" in Burlesque

HOWEVER high or low the Weber & Fields sort of entertainment may rank as dramatic literature, it is undoubtedly in the process of its manufacture an interesting product. As far as we have been able to observe, the method consists largely in turning a lot of frisky people loose upon the stage with instructions to go ahead and do pretty much as they please, so long as nothing that they do is quite sane. Mr. Edgar Smith's position of official librettist to this Court of Burlesque is very much like that which would be occupied by a Professor of the Drama in the land of the Houyhnhnms, made famous by Mr. Gulliver of satiric memory. Such a one in the Land of the Horse would have had some fifty or sixty unbroken colts committed to his charge, and their potentialities would be his to discover and develop. So Mr. Smith, with the shooting stars of comedy and farce that his managers gather together every year, seems to have only the problem of holding these playful creatures within the pasture-lot of the title he has chosen for his farce, and since these titles are sufficiently vague to cover almost everything that exists in the heavens above, in the earth beneath, and in the waters under the earth, the task is not a difficult one. There are those who say that the best fun is that which has serious thinking behind it, and in a sense this is true. But the best fun is not always the most uproarious fun, and it is uproarious fun that the Weber-Fieldians go in for exclusively. We fancy that if Mr. Smith were to put serious thinking back of his work for just a year, he would find himself doing other things than Fiddle-dy-Dees and Twirly Whirlies of past seasons.

Another interesting phase of this Weber-Fieldian style of play is its elusiveness to criticism. A critic who really cared to take the work seriously might in good faith publish on a Tuesday morning a truly significant article on the play as it was put on on Monday evening, but that Tuesday morning criticism would probably not do at all for publication on Wednesday morning as a review of Tuesday evening's performance, for the reason that we have no guarantee that Tuesday evening's performance bears any resemblance to that of Monday evening. There may be certain similarities in plot, and the scenic accessories may be the same, and the lyrics and choruses unchanging, but no man knows what lines the stars will speak or by what devious byways the complications to be unravelled attain to their full unravelment. When the main purpose of each individual star of a constellation of seven is to bait the other six, and once having got the centre of the stage to hang on to it, irrespective of the rights of anybody else, indefinitely postponing the cue word, there is no counting on the results. But it works well in the individual case of the Weber & Fields people, because they are for the most part past-masters in the art of repartee and practical joking. A dull-witted actor would find more pleasure in an examination in supplementary proceedings, than in a star position at Weber & Fields, however princely his salary. A man may not mind making a fool of himself before a thousand people, but to be made a fool of—that is another proposition altogether. Hence it is that many comedians of high rank in more legitimate fields of dramatic interpretation have fallen woefully short of the requirements of the Weber & Fields stage. Like the poet, the Weber-Fieldian is born and not made; lacking the temperamental requirements of the position, he would be happier as a grave-digger than in this Temple of Irresponsible Fun.

These comments do not apply to the clever series of burlesques upon current plays that have been presented by this aggregation as the climax to their evening's entertainment for several years past. In these is to be found the best evidence that the librettist can and does think when he is minded so to do. Here the erratic humorosity of the stars is held in some restraint, since, to be effective, they must satirize some salient feature of the play they are burlesquing. One extraordinary virtue of these little farcettes is, that, even to those who have not seen the originals, they are often very funny and wholly diverting. We have known persons to be inspired by the burlesque subsequently to seek the original, and in some instances to express the opinion that the burlesque was the better and more reasonable of the two. However this may be, the best work that is done by the Weber-Fieldians is along these lines. We would not for a moment willingly forego the delights of the preliminary antics of the company in their hodge-podge of sheer nonsense, but the burlesque plays linger longer and more pleasantly in the memory. It not infrequently happens that under the mask of fun in the burlesquers, we find criticism more searching than we get in the monumental columns of solemn dramatic disquisition by our more distinguished critics. In this particular we recall the excellent burlesques of "The Conquerors," "The Christian," and "Sapho" of past seasons, and this year of "The Stubbornness of Geraldine"—the very happy title of which was "The Stickiness of Gelatine." Mr. Fitch's *Geraldine* might be discussed in quarto-volumes and be no more thoroughly revealed than in Mr. Smith's happy use of the word "Stickiness," and, after all, the critic who can tell the whole story in a single word is quite as much to be envied as he who requires three columns of a newspaper for the effort—except, of course, when he is paid at space rates. In the current burlesque, that of "The Little Princess," there is not so abundant an opportunity as was presented by Mr. Fitch's play, but it is good wholesome fun, and suffices for its ostensible purpose.

Happiness? Sooth to say, it does not exist. Or rather, destiny serves it out to us in fractions, in small doses, homœopathically. Happiness is made up of halts. In the rough road-stage of life, so long and yet so short, there are furtive moments when we sit down by the wayside and would gladly stop there, go no farther, sleep a little on the good earth which will one day embrace us. And immediately the *March! March!* of Bossuet rings out and urges us on. A halt? Why? Up and on: quick: we must hark forward: life continues. We rise and take up our burden again. March! March!

Jules Claretie.

Hence nowadays the ruling classes, instead of devoting their time to war and the state, occupy themselves in putting accumulated capital to good use, directing work, perfecting and multiplying instruments and machinery—not from any noble sentiments of social duty, but for the same reasons the aristocracies of the past went to war so frequently—for the accumulation of great and superfluous wealth.

Guglielmo Ferrero.

What we like determines what we are, and to teach taste is inevitably to form character.—*Ruskin.*

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

AN ADAPTED FOOD

for infants is a scientifically prepared cow's milk—just the right percentage of fats and proteids. For forty-five years BORDEN'S EAGLE BRAND CONDENSED MILK has been the leading infant food of the world. Use it in tea and coffee.—[*Adv.*]

TELEPHONE Service is not used so often in the home as in the office, but its value in emergencies is great. Rates in Manhattan from $48 a year. N. Y. Telephone Co.—[*Adv.*]

E REFLECTIONS OF AMBROSINE

By ELINOR GLYN, Author of "The Visits of Elizabeth"

If Elinor Glyn charmed novel readers by her first work, she has certainly added to her popularity with this newly published story. The keenness of observation, the audacity, of "The Visits of Elizabeth" are here, but, in addition to this, she has given us a strong love story and a novel of real dramatic power. It is a love story pure and tender, and inimitably told.

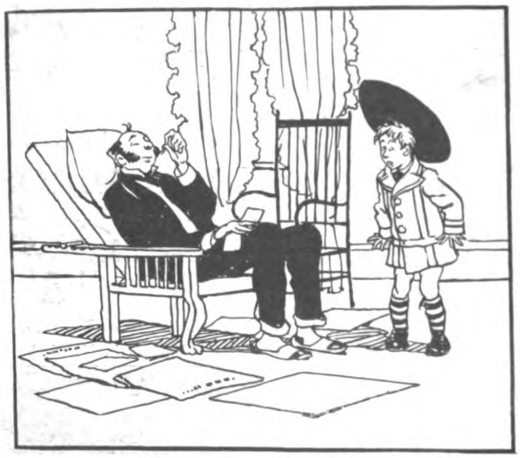
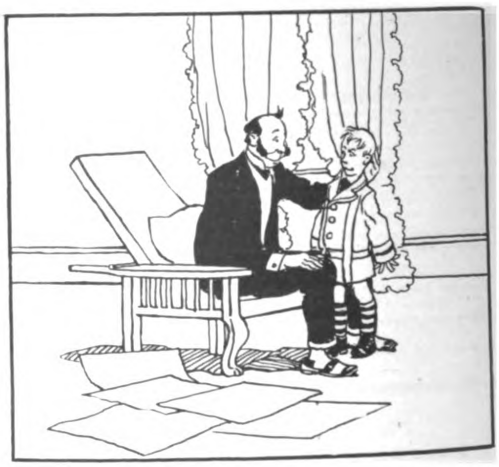
A CONSCIENTIOUS APRIL FOOL

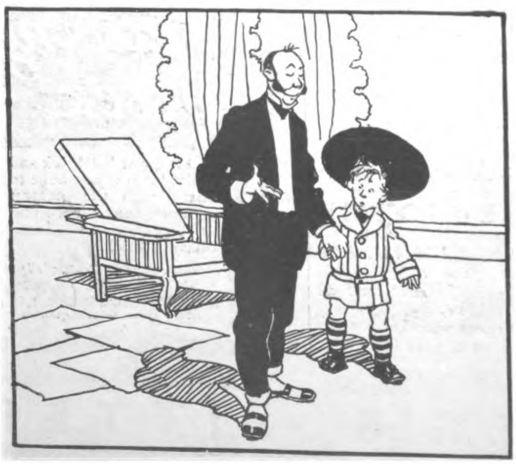
THE UNRIGHTING OF RIGHTEOUSNESS



BY ALBERT LEVERING



Georgie. "What is an April fool, Gramma?"
Gramma. "Why, if you should rush in to papa and shout the barn is on fire, and it wasn't, that would be an April fool."
Georgie. "But that is a lie, isn't it?"
Gramma. "Well—er—yes—but it's only a joke, you know."



Georgie. "I guess this will let me down on the lie part."

Georgie (with a mad rush). "Pop! the barn is on fire!"

Pop. "Well, well! Barn afire, eh? Son, you're the victim of a delusion quite prevalent on the 1st of April."

"*However, in order to dispel your bright hallucination, we will inspect the vicinity of its abiding-place together.*"

China pays her first Debt to the Powers

By Willard W. Straight
Inspector-General of Customs at Peking

See illustration on double page

AFTER two years of building and hammering and senseless delays, the Chinese have at last made formal reparation to Germany for the murder of her minister, Baron von Ketteler, in June, 1900. On Sunday, the 18th of January, in the presence of Baron von der Goltz, the German Chargé d'Affaires, the members of the diplomatic corps, and the officers of the legation guards, Prince Chün, younger brother of the Emperor of China, formally dedicated a memorial arch erected to the murdered man. A small altar covered with yellow silk had been placed some ten yards to the south of the "Pai-lou," and on this altar the Prince offered his libation. It was significant of apology, of contrition, of regret, to appease the spirit of the dead and the wrath of the "war lord." After bowing before the memorial tablet that crowned the altar, his Highness read a speech, which was then repeated in German by an interpreter from the "Wai Wu Pu." He spoke of the regret of his sovereign for the lamentable affair, and apologized on his behalf, promising that in the future such things should be avoided, and trusting that the two nations might be friendly hereafter. Baron von der Goltz, though a splendid Chinese scholar himself, read his reply in German, the translation being given by the Chinese secretary of the German legation. He thanked the Prince in the name of the Kaiser, and said that by the erection of this arch the conditions of the peace protocol had been fulfilled. He too hoped that the future would bring the two nations closer together, that they might understand one another more fully.

This interchange of speeches finished, the Prince and the German *chargé*, with the diplomatic corps, walked under the arch to the north between the lines of Chinese troops ranged on either side of the roadway, the bands of both detachments playing the German national air. Returning, the party passed down the avenue of German soldiers, who stood at the "present," and then dispersed to the several booths for refreshments. This was the signal for the setting off of great ropes of firecrackers, and to this rattling, crackling fusillade, and the shrill war-cry, and rubadub of their own fife-and-drum corps, the German soldiers marched through the archway. The Chinese, in the mean time, were firing petards and giant crackers and making a most tremendous uproar. After a short pause the Kaiser's "war wolves" marched back again, thudding along in their "goose-step," and making the archway sway to and fro as they passed underneath. With this march and countermarch the ceremony was over, and the immense crowds that had filled the streets for hundreds of yards north and south, and formed great masses of humanity on the shop roofs, began to disperse and go about their business.

The arch itself is constructed of great blocks of marble, and is, altogether, some seventy-five feet high. It is built entirely of stone, the bits of roof with their tile forms and lion-mouthed gargoyles being all cunningly hewn from the solid marble. The "Pai-lou," as structures of this kind are called in Chinese, is a great feature in the imperial palaces and tombs, in the hunting-parks, and in some of the great temples. They are erected, as a rule, to commemorate the glory and grandeur of an emperor or to immortalize a Buddhist saint. It is quite common also to find wooden ones erected by the Board of Works to the memory of some virtuous woman or honest official, though such people are really not as rare in China as one might be led to imagine. Over each of the side arches of the memorial is an inscription, one in German and one in Latin, and over the centre arch the same legend in Chinese. It states briefly that the monument is erected as a memorial to Baron von Ketteler, the German minister, foully murdered by the Boxers in June, 1900, and that it shall stand, for all time, as a warning to evil-doers. Above the centre inscrip-

OLD POINT COMFORT, RICHMOND, AND WASHINGTON.

Six-Day Tour via Pennsylvania Railroad.

The second personally conducted tour to Old Point Comfort, Richmond, and Washington via the Pennsylvania Railroad for the present season will leave New York and Philadelphia on Saturday, March 28.

Tickets, including transportation, meals *en route* in both directions, transfers of passengers and baggage, hotel accommodations at Old Point Comfort, Richmond, and Washington, and carriage ride about Richmond—in fact, every necessary expense for a period of six days—will be sold at rate of $36.00 from New York, Brooklyn, and Newark; $34.50 from Trenton; $33.00 from Philadelphia, and proportionate rates from other stations.

OLD POINT COMFORT ONLY.

Tickets to Old Point Comfort only, including luncheon on going trip, one and three-fourths days' board at Chamberlin Hotel, and good to return direct by regular trains within six days, will be sold in connection with this tour at rate of $17.00 from New York; $15.50 from Trenton; $14.50 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents; Tourist Agent, 263 Fifth Avenue, New York; 4 Court Street, Brooklyn; 789 Broad Street, Newark, N. J.; or Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.

Korn Krisp

Large, clean, crisp flakes. Malted and thoroughly cooked. Made from the finest Southern White Corn.

One taste convinces.

ing tendency of settlement in the South from the North and West is accompanied by a stronger inclination on the part of negroes to make their homes outside the South, in spite of many discouragements. Up to 1860 the great trend of negro migration, practically involuntary, was toward the fresh lands of the Southwest. This movement, which was slowly destroying slavery in the older States in response to the same economic laws that had removed the institution from the North, was checked by the war. It has been renewed by the negro's own initiative, but alongside of it is another, the results of which appear in the increases of the negro population during the past ten years of 49 per cent. in Illinois, 46 per cent. in New Jersey, 45 per cent. in Pennsylvania, 44 per cent. in Massachusetts, and 41 per cent. in New York, the average increase for the whole country being about 18 per cent. Here is diffusion of the negro to become, with the settlement of Northerners in the South, one of the most efficient means of solving the vexing problem, in that it acquaints the whole country with the negro and strengthens the conviction that he may be best guided for his own advantage, and for that of the country, by those people who have had the longest acquaintance with him.

In 1860 the entire country made 884,474 tons of pig iron; to-day the South alone is making over 3,000,000 tons, or more than three times as much. In 1860 the total output of bituminous coal in the United States was 5,775,077 tons; last year the South mined over 61,000,000 tons, Alabama alone having an output nearly double the total bituminous coal production of the whole country forty years ago. To-day the South has over 55,000 miles of railroads; the country had only 30,592 miles in 1860, and of this 9800 miles were in the Southern States. The value of the manufactured cotton goods of the South is now over $110,000,000 a year, while the output in 1860 for the United States was only $115,000,000. The value of the lumber products of the country in 1860 was $96,000,000, while to-day the South is annually marketing over $200,000,000 worth. The South's mineral and manufactured products in 1900 aggregated $1,620,000,000, against $1,900,000,000 for the whole country in 1860. Then the country had 402 miles of street railways; now the South has nearly 3000 miles. Then the petroleum output was only 500,000 barrels; now the South is marketing over 20,000,000 barrels a year, the output being limited only by transportation facilities, and it is, as lately expressed by a London expert, "the Gibraltar of the lights and fuels of the world." Even in banking capital we have nearly one-half as much as the United States had in 1860, viz., $205,000,000, against $420,000,000.

The trend of the world's economic development is toward the South, for, as Andrew Carnegie is credited with having recently well said, in the past capital could draw raw material to it, and thus industry centred where capital was most abundant, but now raw material draws the capital, and dominates the development of industrial centres. Nature has done more than her share for the South. She has covered its mountains and its valleys with timber; she has burdened its hillsides with mineral wealth beyond the power of imagination; she has given it coal and iron and cotton and oil, marbles and granites and clays; she has furnished it a variety of soils, which, according to their kind, need but to be "tickled with the plough to laugh with the harvest" of cotton or grain or sugar or rice or fruits.

Against the poverty, the inexperience, the discredit, and doubt at home and abroad of ourselves and our section of 1880, the South, thrilled with energy and hope, stands to-day recognized by the world as that section which of all others in this country or elsewhere has the greatest potentialities for the creation of wealth and the profitable employment of its people.

COMMENT

No amendment of the Senate's mode of procedure is expected at the present extra session, and it is by no means certain that any change will be made during the Fifty-eighth Congress. It is, of course, a monstrous state of things which is disclosed when a single Senator is able, by a resort to filibustering, to prevent legislation desired by two-thirds of his colleagues. On the other hand, it will be difficult to hit upon any practicable modification of the existing rules which will not seriously trammel the freedom of debate upon which the Senate prides itself, and which has often proved of immense benefit to the country. Many a foolish or iniquitous measure has been adopted by the House of Representatives, with scarcely a pretence of discussion, because it was known to have no chance of passing the Senate. The ideal reform would bring about a little less freedom of debate in the Senate, and a good deal more freedom in the House. Unquestionably, it is the duty of the Federal legislators in both Chambers to transact the public business, but this indisputable truth has been made in the Lower House a pretext for the creation of a despotism lodged in the Speaker and the Committee on Rules, and for degrading the Chamber from a deliberative body into a mere registration-machine. The power, dignity, and influence which have been of late years acquired by the Senate at the expense of the House are largely due, undoubtedly, to the individual independence possessed by members of the Upper Chamber. Nobody denies the desirability of such an alteration in the rules of the Senate as would permit a vote to be taken after ample time had been allowed for debate. The danger is that a regulation framed to that legitimate end might be so applied in practice as to shackle and stifle the minority. It is not inconceivable, however, that a *via media* may be found.

An interesting study in constitutional development is afforded by the fate of the Cuban reciprocity treaty. Since the defeat of the first Hay-Pauncefote canal treaty, which was hailed as a fine expression of civilization by some Senators who subsequently did what they could to cut its throat, it was seen by Mr. Hay that no treaty could probably ever again be ratified unless the latest claim of the Senate was accepted—unless the Executive surrendered to the demand of the ratifying power to share in the process of negotiation. Since then Senators have been consulted and treaties have been framed to meet their views and to command their votes. The negotiations between ninety-one powers on the one side and one on the other must always be up-hill work, but some treaties have been negotiated under these hard conditions, and among them is the Cuban reciprocity treaty. It now turns out that consultation with Senators in advance does not insure the ratification of the treaty. The amendment which the Senate Committee inserted in the treaty, providing that the treaty must be acted upon by the House of Representatives as well as by the Senate, is not only a postponement of the agreement, but endangers its ultimate adoption. Apparently the increase in the number of negotiators is not a remedy for treaty-making incapacity. There is still nothing more uncertain than the Senate's attitude toward a treaty, as there is nothing more humiliating than our attitude toward Cuba since the island became a republic.

It is not only for the sake of securing promptly the approval of the Cuban reciprocity treaty by the House of Representatives that it may be deemed expedient to convoke the Fifty-eighth Congress in extra session early in November, or even in October. The necessity of averting a stringency in the money-market by financial legislation is recognized all over the United States, and the demand for relief will become irresistible before the beginning of autumn. It will be remembered that, just before the close of the Fifty-seventh Congress, the Senate authorized the Committee on Finance to sit during the summer for the purpose of framing a financial bill to be presented when the new Congress convenes. It is said to be the purpose of the Republican members of the committee not to insist upon reviving the Aldrich bill, which failed at the last session, but to incorporate with that measure certain features of the Fowler currency bill, so as to make sure of the assent of the House of Representatives. There is an encouraging precedent for the method adopted by the Senate to secure prompt legislation. The present gold-standard law is based upon a bill constructed by a committee of the House which sat during a recess of Congress. When Congress reconvened, the bill was quickly introduced and reported, and was adopted without material amendment by both Chambers.

The cost of our colossal pension list was considerably increased by the Fifty-seventh Congress, and, but for the Senate, might have been greatly distended. Hitherto the widow of a soldier or sailor, whose name had been placed on the pension roll because of her husband's death as the result of injuries, wounds, or disease contracted in the service, has lost her pension irremediably in the event of her marriage to another person. Under the act approved February 28, 1903, her pension will be restored if her second husband dies or if she is divorced from him, provided she is without means of support other than her daily labor. By another act, approved March 2, 1903, the pensions allotted for the loss of limbs are materially augmented. Thus the loss of one hand or one foot, or the total disability of such members, entitles the sufferer to sixty dollars per month; and the loss of both feet, to one hundred dollars per month. This act, as it stands, is not expected to add more than $500,000 to the pension roll, but it would have added at least ten million dollars annually if the proposal of the House Committee on Pensions had been adopted.

The proposal was to give the Pension Office the authority to determine whether, from disease or otherwise, soldiers might not have suffered a disability *equivalent* to the loss of limbs. Fortunately, the Senate Committee on Pensions stopped this projected raid on the Treasury. There is, on the other hand, no objection to the bestowal of the small pension of eight dollars per month on the survivors of all Indian wars down to 1861, nor to the provision by which all veterans of the Mexican war are to receive twelve dollars a month. It is computed that the two last-named changes will cost rather less than a million dollars a year. We have no intention of rearguing at this late date the expediency of our stupendous expenditure for pensions. It is perfectly true that we devote more money to this purpose than suffices to maintain the largest of the European standing armies. On the other hand, there is no doubt that our pension system would immensely facilitate recruitment in time of war. As for the obligation to discharge in money the nation's debt to those who have lost life or limb in its defence, that, obviously, is no more binding on the United States than it is on Germany or France, where, from our point of view, it is most inadequately recognized.

It is a combination of infirmities, including partial blindness, which has caused Mr. George Graham Vest, of Missouri, to retire from public life at the age of seventy-three. Two of his contemporaries, also Kentuckians by birth, Justice John M. Harlan, of the United States Supreme Court, and Senator J. C. S. Blackburn, are believed to have many years of usefulness before them. Senator Vest has had a more varied career than either of them, for he moved from Kentucky to Missouri in early manhood for the purpose of practising law, and soon became a member of the Missouri Legislature. By the secession Legislature of that State he was made a delegate to the Confederate provisional Congress, and was a member of the Confederate House of Representatives from the autumn of 1861 till the latter part of 1864, when he was appointed to the Confederate Senate. Finding himself destitute at the close of the civil war, he went to Louisiana, but presently returned to Missouri, where he formed a law partnership with Mr. John L. Phillips, who is now a United States judge. Having been chosen a United States Senator from Missouri, he took his seat in 1879, and was thrice re-elected. He would undoubtedly have been returned to the Senate for six years more had he not refused to serve. Although unflinching in his adherence to Democratic principles, he was good-tempered and conciliatory in debate, was listened to with deference by his political opponents, and made some warm private friends among his Republican colleagues. Next to Senator Morgan of Alabama, he has been the most zealous and efficient advocate of an interoceanic canal. He was a sturdy champion of tariff revision, and he will be missed on the Democratic side when that subject next commands the attention of the Senate. How conscientious he was he showed when he opposed the seating of his intimate friend Senator Quay upon the appointment of the Governor of Pennsylvania while the Legislature of that State was in session. It is to be hoped that he will spend his leisure in dictating his recollections of the political history of the Confederacy. There is, we believe, only one other surviving Senator of the Confederacy, namely, Mr. Augustus Maxwell, of Pensacola, Florida. Senator Vest with Alexander H. Stephens and Benjamin H. Hill constituted a remarkable triumvirate of statesmen, who, after serving the Confederacy to the best of their ability, served the Union no less faithfully.

Sir Wilfrid Laurier, defending the Alaskan boundary treaty in the Ottawa House of Commons, described it as a victory for Canada, on the ground that Mr. Hay receded from the position previously maintained by the United States that territory now in our possession, such as Dyea and Skagway, must, in any event, be recognized as American. As things are now, if it should happen that four of the six commissioners decided in favor of the Canadian claim, Dyea and Skagway would have to be surrendered. That is true; but we deem it much more likely that one of the British commissioners will concur with the three representatives of the United States in sustaining our construction of the Anglo-Russian treaty on which our claim is based. Sir Wilfrid Laurier admitted that he had protested to the British government against the commissioners selected by Mr. Roosevelt, on the ground that they would not be impartial. The appointment of Secretary Root to a place on the commission was equivalent, he thought, to a demand on the part of a party to a suit that he should try his own case. The objection to ex-Senator Turner is that he is understood to be interested in enterprises the success of which depends on the validity of the American title to the disputed territory. Senator Lodge is also disqualified, according to Sir Wilfrid, because he has notoriously expressed an opinion adverse to the Canadian claim upon which he will be called to pass judgment. We do not see how it is possible for the British government to heed these objections. The treaty gives each of the parties absolute power to designate three commissioners, and it would be an impertinence for one of the parties to criticise the choice made by the other.

At the hour when we write, it is still uncertain whether the Combes cabinet will succeed in persuading the Chamber of Deputies to sanction the wholesale rejection of the requests for authorization made by fifty-four monastic orders. It will be remembered that the Jesuits and certain other religious associations, knowing that their requests would be refused, refrained from making any, and have withdrawn from France. There is but little doubt that, of the fifty-four requests now under discussion, some would be granted if they were presented separately. Even zealous Radicals, for instance, might hesitate to expel from France the order which manufactures the liqueur of world-wide fame known as chartreuse. The government insists, however, that the fifty-four requests shall be submitted in block, or, at all events, in three groups, and it has made the rejection of all the applicants without discrimination a cabinet question. Should Premier Combes chance to be beaten, there will merely be a reconstruction of the cabinet; for the Reactionists, avowed or disguised, the Nationalists, and the Moderates are not strong enough, taken together, to form a ministry. Should a new cabinet be organized, M. Waldeck-Rousseau could undoubtedly become Premier if he desired it, but should he persist in declining the post, there is no lack of good material among the Radicals —for instance, M. Brisson or M. Bourgeois. In no event is M. Delcassé, the head of the Foreign Office, likely to be disturbed. His only rival in his particular field, M. Hanotaux, must await the triumph of the Moderates, which seems likely to be long deferred.

The Acre controversy is to follow the Venezuelan dispute to the Hague Court of Arbitration, and one more element of danger is thus to be removed from the arena of world politics. In view of our present knowledge, it becomes evident that Brazil's objection to the Acre Concession did not rest wholly on her unwillingness to see conceded areas created on the continent of South America which would be practically colonies of European states. Brazil had a further reason for intervening: She herself claimed a large part of the territory which Bolivia intended to convey to the Acre Syndicate, and on this ownership Brazil's most strenuous objections were based. A few weeks ago it seemed certain that the matter would be decided by the clash of arms, with the menace of international action as a result, Germany and England, and in a less degree the United States, being involved in the concession dispute. But wiser counsels prevailed, and we cannot doubt that the Venezuelan situation proved a warning and a deterrent, Brazil having no wish to see her own coasts blockaded. This increasing tendency to bring national troubles to The Hague is one of the most hopeful signs of the times.

Germany and England are once more to be united in a matter which concerns this continent and this country very nearly: the reciprocity treaty between the United States and Cuba. We have already recorded and commented on the protests made against the treaty in England, where representatives of the various English chambers of commerce came in a body to the Marquis of Lansdowne and asserted that their interests in Cuba would be ruinously affected should the treaty become law. A like agitation has now arisen in Germany, where it is clearly perceived that German traders will be placed at a disadvantage; and officials in the Berlin Foreign Office have been sounding the other Continental powers on the subject of Cuba, to see whether common action may be undertaken. As it is certain that Cuba cannot afford to recede in any way from the terms of a treaty on which her commercial

life depends, and as this country will not consent to any modification of the reciprocity agreement, it is clear that Germany's action can only take the form of reprisals against the United States under the new German tariff law. Germany is said to fear that the United States may enter into similar treaties with Mexico and the South-American republics, thus monopolizing the trade of the New World.

Germany's apprehensions are by no means confined to the Latin-American field. They apply, with even greater force, to the competition of American commodities in the home market, within the bounds of the fatherland itself. And to protect the home market against the American invasion, Germany has already taken the most drastic steps, and contemplates others not less decisive. Within a week or two, the new meat-inspection law comes into force, and it will completely bar out the canned beef of the Chicago and Kansas City companies. This will be done, not by direct enactment, which might provoke diplomatic protest, but by a not less effective establishment of conditions with which our packers cannot conceivably comply, since these conditions are necessary to the successful packing and transport of canned meats. This will shortly be followed by the dissolution of the only commercial treaty under the favored-nation clause existing between Germany and the United States. The special amendment to the tariff bill, which shuts the door of Germany against the Standard Oil products, is a move in the same direction, and the special discrimination against American tobacco, while it will not absolutely prohibit the importation of our product, will yet cripple it in a very serious way. We must add to the list the Equitable Life Insurance Company, which, at this very moment, is being driven from the German field, and is liquidating its assets, preparatory to leaving. While these hostile moves against our trade with Germany have already had the gravest effects, and are likely to accomplish even more harm to our interests in the immediate future, it is alleged on the part of Germany that they are not in design hostile, but are rather means to an end—the arrangement of reciprocal treaties between the two countries, on a basis of mutual advantage. The struggle over the Cuban reciprocity treaty shows how difficult it will be to obtain any concessions from this country, in the face of the opposition of our home interests; but the loss of our German trade is a very strong argument, and we may look forward to a battle of tariffs, not merely between Germany and ourselves, but even more between contending sections and contending interests within our own borders.

It was a wise move on the part of President Castro to raise the blockade of the Orinoco River which he had previously proclaimed. No doubt the United States would have recognized the blockade, provided the Venezuelan war vessels should have been able to make it reasonably effective. What President Castro forgot was that, if a government proclaim a blockade, on the ground that an insurrection exists against its authority, the neutral powers who suffer from the blockade have the right on their part to recognize the insurgents as belligerents. That was what happened in our civil war. The blockade of the Confederate ports which we proclaimed was recognized, but, on the other hand, the Confederates were acknowledged as belligerents, and thus acquired the right to issue letters of marque. We succeeded in strangling the Confederacy, but meanwhile our sea-borne commerce was annihilated. There is no doubt that, if the insurgents against the Caracas government were once acknowledged as belligerents, they would commission privateers, and the last state of the Venezuelan seaports and of the customs revenue derivable therefrom would be worse than the first. It is of the utmost importance to President Castro that his customs revenue shall be adequate for the punctual payment of the sums promised to the allied powers which took part in the demonstration against him, for otherwise under the protocol Belgian officials could be called upon to take charge of the custom-houses at La Guayra and Puerto Cabello. If they once got there, pretexts would be found for keeping them there as long as possible.

Not for many years has the German Empire witnessed a more interesting or more hotly contested election for the Reichstag than that is certain to prove which will take place in June, and for which preparations are now making on the part of all the political parties. As the Reichstag contains 397 members, it is obvious that 199 are needed to constitute a bare majority. By no possibility can any single party obtain such a majority. With the exception of the first Reichstag that was organized after the North German Confederation was transformed into the German Empire, there has never been a homogeneous majority in the popular branch of the German Parliament. That is why British Parliamentary precedents are of so little value to German politicians. In the exceptional Reichstag mentioned—the first after the coronation of Emperor William I. at Versailles—the National Liberals possessed a working majority, and, had Bismarck assented to their demand that the imperial ministers should be responsible to the popular Assembly, Parliamentary government in the true sense of the word would have been established in Germany. Deprived of the stimulus imparted by the hope of controlling the Executive, the National Liberals were soon disrupted, and the faction that still bears their name is but an insignificant remnant of the once dominant party. Many of the early seceders from it coalesced with the Progressists to form the Freisinnige party, which itself in the course of time was split into two factions, one headed by the veteran Richter, and the other by Rickert.

From the disintegration of the National Liberals up to the election of the present Reichstag there have been but two great parties, to wit, first, the Conservatives (including the Conservatives proper and the so-called Free Conservatives), most of whom, from an economic, as distinguished from a political, view-point, may be fairly enough described by the popular term Agrarian; and, secondly, the Catholic party of the Centre, which, having rendered its aid indispensable to Bismarck, and thus beaten him in the Kulturkampf, secured the repeal of all the Falk laws, except the statute excluding the Jesuits, which is now on the verge of annulment. In the present Reichstag the Centrists constitute the largest single party, comprising about a hundred members. The Conservatives, including both sections, come next. The National Liberals, and each of the Radical, or Freisinnige sections, follow at a considerable distance. The third position in respect of numerical strength is occupied by the Socialists, who command nearly sixty seats, and, since their leaders have assumed an opportunist and conciliatory, instead of a dogmatic and uncompromising, attitude, seem destined to absorb all the genuine Liberals in Germany. The fundamental question which will be temporarily decided at the coming election is this, Can the Socialists obtain about a hundred seats? If they do, they will form the strongest single party in the Reichstag, because their gains will be made partly at the expense of the Centrists, as well as at the cost of the Radical factions. It would not be easy to exaggerate the effect of such a Socialist triumph upon German politics. That is why we say that the coming election for the Reichstag will be more interesting and important than any held since the formation of the German Empire.

Prince Bismarck, in his drastic and epigrammatic way, declared that the Monroe Doctrine was "a great piece of impudence." So we are reminded by that distinguished soldier General von Boguslawski, who is evidently of the same opinion. Reminding his German readers, in the *Tägliche Rundschau*, that the American continent is divided into many states, hardly second in varieties of race and language to Europe, he greatly marvels that one of these states should assert that it has the right of interference and protection over the entire continent, asserting that it will only under certain conditions tolerate any action, however just, of European nations against an American state. General von Boguslawski further wonders how it happens that this doctrine, set up eighty years ago by an American statesman, has been able to justify itself in fact, with absolutely no justification in the law of nations. When the United States feels itself threatened through any occupation of territory, of course she has the right, like any other nation, concedes the general, to raise a protest, and, if necessary, to employ force. But after admitting so much, he goes on to say that there must be no talk of even an apparent recognition of the Monroe Doctrine, as an international principle of law, on the part of European nations. If the latter act otherwise, they will soon

feel the thumb-screws which they put on thereby. Through the war against ill-equipped Spain, our critic kindly tells us, our self-importance has been infinitely increased, often showing a diseased character. The courtesies shown America by Germany have naturally not diminished our self-esteem. This gives the general a text for a sermon on the evils of excessive courtesy, in turning weak heads, and puffing up natural vanity into unnatural conceit. The allies, the general admits, cannot be blamed for sparing our sensitiveness as far as may be; the allies even went so far in their policy of concession as to offer the position of arbitrator to President Roosevelt. The President declined the responsibility "for the reason that the justice of the case of the allies was so self-evident that his decision could only have been unfavorable to Venezuela, thereby damaging the popularity of the United States among the Latin-American nations." This somewhat strenuous article is a straw in the wind. It shows us what is going on beneath the smooth surface of Berlin diplomacy.

Some recently published statistics bear witness to the wide distribution of American capital in foreign fields. Thus Americans are said to be interested in the construction of the proposed electric traction, lighting, and power system of Johannesburg, the cost of which is computed at eight million dollars. The electric road projected in connection with this system will be nearly thirty miles long. Machinery has also been sent by the Westinghouse Company to the De Beers Consolidated Diamond Mines at Kimberley, South Africa. Machine tools required by railroad-shops and other large industrial establishments in British India have been ordered from the Bullard Machine Tool Company of Bridgeport, Connecticut. A gas-engine needed for a dynamo which is to generate current for a plant about to be constructed for the purpose of lighting the imperial post and telegraph offices at Tokio, Japan, is to be supplied by a New York company. Car-couplers to be used on the Chinese imperial railways are being made in Pittsburg. Automobiles of American manufacture are to be shipped not only to England, but also to France. In Spain an electric plant which will cost about seven million dollars is to be installed by American capital on the river Douro for the transmission of electricity to the mining district of Guanajuato, more than one hundred miles away. Packing plants are to be erected at Uruapan and Cordova, in Mexico, by the North-American Beef Company, and a Pittsburg concern is about to erect coffee-cleaning, rice-cleaning, cotton and saw mill plants on a property comprising some twenty-five thousand acres in the State of Caxaca, Mexico. Between the town of the same name as that State and Mitla, which is twenty-six miles distant, an electric traction railway is to be built by Americans. Orders for two hundred freight-cars and a large number of passenger-cars have come from Yucatan to the American Car and Foundry Company. What is even more significant, three ship-building cranes, of great capacity, to be operated electrically, are to be mounted in the Harland and Wolff yards at Belfast, Ireland, by the Brown Hoisting Machinery Company of Cleveland. Not a week passes in which we do not find reported similar proofs of the estimation in which American manufactures are held all over the world. If the products of iron and steel sent abroad during the last few months have fallen short of the quantity expected, this is because the manufacturers, owing to the anthracite strike, have been unable to keep up with the home demand.

On February 4, 1901, the centenary of John Marshall's appointment to the Chief-Justiceship of the United States Supreme Court was commemorated by appropriate addresses and proceedings in thirty-seven States and Territories, as well as in the Federal Congress. It is now proposed that a similar tribute shall be paid to Chancellor James Kent by the erection of a statue to his memory, either in Albany, where he lived and labored for twenty-four years, or in the city of New York, where his famous commentaries were penned. The suggestion was made by ex-Judge John F. Dillon in a paper read at the recent annual meeting of the New York State Bar Association. It was pointed out that as Marshall's field was the exposition of the Constitution of the United States, so Kent's field was the development and adaptation of an American system of jurisprudence from English principles and models. The conditions under which the two men worked were similar in this respect, that each had but few precedents to aid him. When Marshall took his seat on the bench of the United States Supreme Court, fewer than one hundred cases had passed under the judgment of that tribunal. When James Kent was appointed Chancellor of New York in 1814, not a single decision, opinion, or dictum of either of his two predecessors in that office was cited to him, or even suggested. He took the court as if it had been a new institution. He had nothing to guide him, and was left at liberty to assume all such English chancery powers and jurisdiction as he thought applicable under our Constitution. The scope thus given to him was limited only by the revision of the Senate or Court of Errors of the State. So it came to pass that, just as Marshall opened the portals of the Constitution, and began thereon the construction of our constitutional law, Chancellor Kent opened the portals of chancery, and reared thereon a splendid system of equity jurisprudence which has been almost universally adopted throughout the United States. Kent's services to his profession and to his country did not cease, however, when he left the bench. When he retired from the post of Chancellor in 1823, having reached the constitutional limit of sixty years, he gave himself up to the preparation of his *Commentaries on American Law*, the fourth and concluding volume of which was published in 1830. Bar and bench in this country and in Europe have vied with each other in acclaiming the excellence and influence of this work. In accuracy and learning, in elegance, purity, and vigor of style, it rivals the achievement of Sir William Blackstone. In a word, the right of John Marshall to be entitled the Great Chief-Justice is no clearer and more undisputed than is that of James Kent to be known as the Great Chancellor and Great Commentator. There is reason to believe that the American Bar Association will heartily concur with the New York State Bar Association in sanctioning the proposal to erect a monument to Chancellor Kent.

A worthy movement is on foot for the purpose of raising funds for the erection of a monument to Thomas Jefferson at the national capital. Admiral Dewey is president of the Jefferson Memorial Association, and among the vice-presidents are President Woodrow Wilson, Jefferson M. Levy, ex-Governor Pattison, of Pennsylvania, and ex-Governor Lynde Harrison, of Connecticut. The appeal of the association for funds recites the fact that there is no monument to Jefferson at Washington. It might have added, that aside from a grotesque effigy of Lincoln, a tribute of soldiers to Garfield, a statue to Marshall, a statue to Franklin and another to Webster, the last two a gift of a private citizen, the statues in Washington are to soldiers, to sailors, to Frenchmen, and to Hahnemann. No great monument to a great American statesman, except those whom we have mentioned, is to be found outside of Statuary Hall. No signer; no father; no orator has been commemorated by Congress. The statues to the Frenchmen—Lafayette and Rochambeau—are the willing tributes of a grateful nation to those who were its friends in need, but there were Englishmen, too, who were most potent allies of our colonies in their struggle for independence. There ought to be statues at Washington to the elder Pitt, to Charles James Fox, and to Shelbourne, without whose friendship our good ally, France, would have cooped us up in the narrow strip along the Atlantic and east of the Alleghenies. It was Shelbourne who, against the wishes of Vergennes, drew England north of the Great Lakes, instead of down to the Ohio, as France desired. It was he, too, who gave us ground to the east bank of the Mississippi, although Vergennes insisted that Spain should come eastward to the Alleghenies. There ought to be room for Pitt and Fox and Shelbourne, and for Jefferson, Hamilton, John and John Quincy Adams, Henry Clay, and other statesmen. For a nation of civilians we have a strange leaning towards uniformed men mounted on war horses. Why not celebrate our intellectual achievements? Why, for example, do we not put up statues to the men to whom we owe the Monroe Doctrine?

Some recently published statistics attest the surprising growth of national banks and savings-banks in the United States. In 1864 there were fewer than 600 national banking associations, and their aggregate capital was considerably less than $100,000,000. At the end of 1865 the aggregate resources of the national banks, which then numbered 1513, amounted to less than $1,360,000,000. Now let us look at the returns

made to the Comptroller of the Currency on October 1, 1902. At that date the national banks numbered 4601; their total capital stock was over $714,000,000, and their aggregate circulation, $380,000,000. Their aggregate resources amounted to $6,114,000,000. The face value of the United States bonds now held by national banks is about $457,000,000, and the individual deposits exceed $3,209,000,000. The amount of money paid in to the Federal Treasury since 1863 by the national banks as taxes on circulation, capital, deposits, surplus, etc., reaches $170,000,000. We add that the number of shareholders in the national banks is 330,124, to which total the New England States and Middle States, including under the last-named term, New York, Pennsylvania, New Jersey, Delaware, Maryland, and the District of Columbia, contributed more than 226,000 individuals. Obviously, the national banks are organized and supported by the relatively rich. Turning to the savings banks, which are intended for the relatively poor, we observe that the aggregate deposits in these institutions increased in the five years preceding October 1, 1902, from $1,940,000,000 to $2,640,000,000. In the same period the number of depositors rose from 5,200,000 to 6,400,000. This is an astonishing exhibit when we consider that in many States the savings of the poor are invested in the stock of building associations. It should also be noted that the Federal government, through the money orders issued by its postal department in 1902, did a banking business of upwards of $313,550,000.

It is well known that most savings-banks fix a maximum sum beyond which they decline to receive deposits. It is also known that many depositors, having attained the maximum deposit, leave it in the savings-bank to draw interest for an indefinite period. The notion that such depositors or their personal representatives should be deprived by law of the right to appear at any time and claim their deposits will strike *most* persons as preposterous. Nevertheless, a bill has been introduced in the Pennsylvania Legislature which provides that mutual savings funds, building associations, and every financial institution under the supervision of the Banking Commissioner shall report forthwith to the commissioner the names of depositors, with the amount of their deposits, who have not claimed the payment of said deposits within twenty years. The bill proceeds to direct the commissioner to advertise for the depositors in question, and to summon them to appear and claim the money within a year. If at the expiration of a twelvemonth a deposit remains unclaimed, it is to escheat to the State, and the commissioner is to be allowed one per cent. of the amount escheated.

It is incredible that such a barefaced fraud as this should be perpetrated by the law-makers of an opulent commonwealth. The present law in Pennsylvania with respect to unclaimed savings-fund deposits provides that these shall be turned over to the State Treasurer when thirty years have elapsed since the last deposit, but the right is carefully reserved to the depositor or his personal representatives of proving identity at any time, and suing the State for the recovery of the money. Not only would the proposed statute be an iniquitous violation of the rights of property, but the publication of the dormant accounts in savings-banks would be an invasion of the privacy which many depositors desire. As no high-class savings-bank is known to have objected to remaining the custodian of deposits for more than twenty years, the inference seems unavoidable that the bill introduced at Harrisburg has no other purpose but to increase the emoluments of State officials.

In its decision in the lottery cases, the United States Supreme Court took the immorality and hurtfulness for granted. From this point of view we are about a hundred years ahead of the governments of Continental Europe. The Prussian Diet lately spent a week in discussing the addition of another class to the State Lottery, an institution that yields something like $2,500,000 a year. Of all the speakers, only one advocated the abolition of this mode of gambling. Lotteries play an important part in the finance systems of most of the German states, and the Finance Minister pointed out that if Prussia should abandon her scheme, the Prussians would spend just as much money on the lotteries of other countries belonging to the German Empire. It has been computed that the net sums annually accruing to the various states from this source amount in the aggregate to some $12,500,000. There is a current belief in Germany that it is not only morally proper for a man to buy a lottery ticket, but that it is his duty not to miss any such chance of providing for his family. Retired army officers consider the sale of lottery tickets a highly respectable business. Not only are there government lotteries, but private lotteries are authorized for such edifying purposes as building churches or defraying the expenses of charitable undertakings. Exactly the same view of lotteries prevailed on this side of the Atlantic during the Revolutionary war, and for considerably more than a generation afterwards. The Continental Congress authorized a lottery for the purpose of procuring supplies for the army. Many a church now standing in the Atlantic States was wholly or partly constructed with the proceeds of lottery tickets. Neither George Washington nor John Marshall would have deemed it immoral to invest money in lotteries, and Jefferson in the latter part of his life contemplated the organizing of a lottery as a means of repairing his dilapidated private fortune. If John Marshall, a hundred years ago, had written the decision of the United States Supreme Court in the lottery cases, his reference to such methods of procuring money would have been couched in terms very different from those which were actually used.

It is well known that Mr. Andrew Carnegie, and other accumulators of enormous fortunes have expressed the opinion that the kind of education normally acquired at universities, as distinguished from scientific or technical schools, is not conducive to success in life. When called upon to define their terms, they generally acknowledge that they have in view the form of success which they themselves exemplify. Professor Edwin G. Dexter, of the University of Illinois, has recently undertaken to prove in the *Popular Science Monthly*, that, even from the view-point of pecuniary success, a college education is not a handicap. He recognizes that, to prove his point, he must take the men who have most profited by their college opportunities according to the academic standard; that is to say, the men who, when they graduate, are accepted as the best exemplars of the outcome of university training. To that end he has investigated the careers of the members of the Phi Beta Kappa Society, which at Harvard, and, we presume, at some other universities, is made up of the sixteen or more men in each class who have attained the highest academic distinction. The result of Professor Dexter's inquiry is that the high-grade man of his college day remains a high-grade man still when put to the tests of active life. The statistics which he has collected indicate that the Phi Beta Kappa man's chances of even pecuniary success are nearly three times those of his classmates considered as a whole.

The result reached by Professor Dexter is to some extent borne out by similar but less extensive investigations in Great Britain with regard to the subsequent careers of Senior Wranglers—that is to say, the best men of their year in mathematics at Cambridge, and of Double Firsts at Oxford, by which used to be meant those who took a First Class in both *literæ humaniores* and in mathematics, though the term is now applied, we believe, to those who take a First Class in mathematics or Greats, and also one in a second school, such as that of physical science, or that of law and modern history. A large majority of the Senior Wranglers become distinguished in after life for achievements in pure or the applied sciences, and the Oxford Double Firsts are almost certain to attain to eminence in the state or in the church. Sir Robert Peel took a Double First, so did Gladstone, so did Lord Carnarvon, who was Colonial Secretary in the first Salisbury cabinet. The roll of Lord High Chancellors and of Archbishops of Canterbury during the present century is thickly strewn with the names of those who had taken a First Class in classics at one or the other of the universities. Whether a university education tends, as a matter of fact, to promote success in manufacturing or commerce is a question which, so far as we know, has not been carefully tested in Great Britain. According to Professor Dexter, it must be answered in the affirmative so far as the United States are concerned.

The new drink legislation in England is immediately directed to the repression of drunkenness. The English

get drunk, and getting drunk has been made unlawful. The new laws in England, of which mention has been made in the WEEKLY, attack excessive drinking by blacklisting the drunken and, if necessary, shutting them up. There is also going on in England a gradual and careful restriction of licenses to sell liquor. On the Continent, in France and Belgium, the intervention of government between the drinker and his stimulant takes a different form. In both these countries, observers report, the trouble is not so much that the patrons of alcohol get drunk, as that they manage to consume such an unconscionable amount of spirits in the course of the day without losing control of their faculties. The war in Belgium and in France is not against drunkenness but against alcoholism. The endeavor is to decrease the use of spirits; of Holland gin in Belgium; of brandy, liqueurs, and fortified wines in France. Accordingly the Belgian government has lately raised the tax on alcohol from 100 to 150 francs a hectolitre, hoping thereby to drive consumers from gin to beer. Belgium has undertaken to provide old-age pensions for its deserving poor, and is having an experience such as this country has had with pensions for military service. It finds that all the aged poor are certified as deserving, and that all the old men want pensions irrespective of poverty. Part of the expected increase of revenue from raising the tax on alcohol will be used to pay these new pensions. In France no new temperance legislation has yet been undertaken, but M. Mesureur, Director of Public Assistance, having the drink evil very much on his mind, has been waging war against it with placards, which set forth in large print the dangerous qualities of John Barleycorn, and the great damage sustained by Frenchmen who dally with him overmuch. But the liquor interests in France are enormously strong, and fight hard, putting out counter-statements and citing witnesses on their side. They have even placarded the merits of alcohol as food, setting forth the conclusions on that point reached by our Professor Atwater, endorsed by a notable chemist, M. Duclaux, Director of the Pasteur Institute. It is hard on Professor Atwater that his laborious conclusions should be thus misused, but all that is merely a passing phase. If alcohol is doing as much harm in France as is represented the consumption of it is bound to be checked by something more effective than placards.

The ambition that every typical American feels, to do better than every one else in everything, is one of the most splendidly audacious national characteristics to be found in history. It is very grand to think that, one day or another, we must, by native right, excel the English in commerce, the French in taste, the Germans in scholarship, the Italians in art, the Greeks in wisdom, and the Hebrews in the knowledge of God. With so much to accomplish, the American spirit cannot be like Goethe's star, *Ohne Hast aber ohne Rast*—it must be equally without leisure and without pause. Those in the front must leap into the trench and die, in order that those in the rear may pass over. Of this sort of sacrifice there has been no lack. It began when the first explorers touched our shores; and it has been ready, at all times since, for every emergency of commerce, religion, or war. It has made the country. It has built up every State and city and house of business and seat of learning. Those who have come after have profited by the unflagging spirit of those who have gone before—of those who worked hard and often died too early. But it may be reasonably asked if the day has not now come for a quieter pace, and a less feverish sense of duty. The country is colossally rich and prosperous, even if it be not rich and prosperous enough. May not the individual begin to put forth his claim? May he not ask for time to breathe a little, to think a little, to live a little? May he not be permitted to remember that in the Pantheon there are other gods besides the great idol *Hustle*? While doing his daily work and treading his common round, has he not a right to some measure of that tranquillity which now he can look for only in the tomb?—or in flinging a change of raiment into a valise and sailing out into that big, unsatisfactory void which we call Abroad? In these days of co-operating energies we might venture to suggest

A Society for Enabling Americans,
Who Want to do so,
To Stay Quietly at Home,
Without being Rushed to Death.

A hundred American citizens are to be sent to Siberia to work in the mines. As every well-informed reader of Russophobe melodrama knows, this is one of the most appalling fates that can overtake the most miserable sons of men—in novels. Yet, not only are the hundred American citizens ready to go, but the sole difficulty at present is to choose from more than a thousand applicants only the very best men. The scheme is this: Russia has, in Siberia, a country of great and varied resources and some six million square miles in extent, the population being about one person to the square mile—by far the smallest in the world for a habitable tract of like area. Russia herself is busy with the southern frontier of the Siberian territory, and the relations of that frontier to Mongolia, China, and Manchuria, a large part of which, probably three million square miles in all, is destined to come under Russian rule. Hence she has no spare energies to devote to the development of remote parts of Siberia, however rich or promising these may be. Siberia resembles the northern regions of our own continent, and the northeastern peninsula of Chukch, which runs up to Bering Strait, and at one point comes within forty miles of American territory, is in climate and character not unlike our own Alaska. This suggests the gold of the Klondike, and it is well known that Siberia is rich in gold deposits of much the same nature as those along the Yukon River and its tributaries; and this is especially true of the Chukch peninsula, which runs up to Bering Strait and the western point of Alaska. Not being able to develop her resources there, for the reasons we have given, Russia has turned to the United States, confident of finding here the help she needs, and recognizing our national gift as pioneers and settlers of new lands. She is willing to open an immense area of about two hundred thousand square miles—or twice the area of the Philippine Islands—to American miners, whose claims will become their absolute property in perpetuity, subject to a small land tax. In order to carry the scheme into operation, a company of transport and settlement has been formed, which will be paid by a royalty on all discoveries of gold, but the rights of which are only temporary, lapsing to the Russian government after twenty-five years. This precedent is likely to be greatly extended, to the benefit of all concerned.

Ellwood Bergey has written a little book explaining why soldiers desert from the United States army. He has been a soldier, he says, and he knows that improper feeding and inconsiderate treatment are the trouble. On the strength of experience gleaned in the Spanish war, he accuses the Commissary Department of "criminal incompetency infinitely more horrible than physical torture," and he declares that our army organization has not a single redeeming or commendable feature. But he has remedies for all the army's troubles. His list includes more pay; trained cooks; no rations, but all a soldier wants to eat; like food and quarters for officers and men; "recognition of the right of all soldiers of whatever position to engage in criticism and in free speech at all times and under all circumstances"; and "abolition of military salutes and all other imbecile and servile practices." These are interesting suggestions and show a fine democratic spirit, though it will be questioned whether Ellwood has in him quite the sort of timber that serviceable soldiers are made of.

Ponderous and pompous treatises have been written to prove the desirability of so-called compulsory arbitration of labor troubles out of the experiences of New Zealand with its Industrial Conciliation and Arbitration Act. The news columns of some of the New Zealand newspapers not infrequently contain argument calculated to shake faith in the scheme, all the more convincing because it is not intended as argument, but as every-day statement of the course of current events. Here is a case reported in the Otago *Daily Times*, printed at Dunedin early in February, in which the carpenters of Wellington applied to the arbitration court to settle a matter of wages. The court fixed the minimum wage at 1*s.* 4*d.* per hour, and the carpenters rebelled at once, voting that the court was unworthy the confidence of the workers, attacking the president with personal abuse, and going far in the consideration of a proposition to "pick up their tools" and leave their work rather than accept the award. It appears, according to an explanation in the *Times*, that while the

employer is bound by the terms of an award that covers an industry in which he is engaged, the individual worker is not personally bound in any sense. He approaches the court through the union, but the union is not responsible for what he may do after the award is made. When this condition is combined with the evident idea of many workers in New Zealand that the court should exist only for the purpose of raising wages and improving the conditions of labor, it is apparent that the true test of the whole system is coming when the court is compelled to reduce wages. "It is clear," comments the New Zealand newspaper, "that there is a section of unionists in Wellington, if not also in other parts of the colony, which, while accepting the principle of arbitration in industrial pursuits for what it is worth, has never ceased to contemplate the possibility of a strike being declared with a view of asserting demands that cannot otherwise be pressed." That is to say, on the spot, where state-managed industrial arbitration is an actual condition and not a nebulous theory, one party is disposed to view the whole scheme as a head-I-win-tail-you-lose operation—a view which tends to the blurring of all those beautiful visions which can be made to shine at the other end of an antipodal telescope.

It has been reported that the colossal Anglo-American combination which, besides other steamship companies, has taken over the White Star line, has determined to build no more ocean greyhounds of the size of the *Oceanic* until the channel in the harbor of New York has been so deepened and widened as materially to facilitate access to the docks. Whether the North German Lloyd and the Hamburg-American Company will adopt a similar policy is as yet unknown. It is certain that the latest addition to the fleet of the North German Lloyd, the new express steamer *Kaiser Wilhelm II.*, which is due at New York about April 20, will be the largest passenger-steamer afloat. Her dimensions are: length over all, 706 feet, 6 inches; beam, 72 feet; height from top of keelson to promenade deck, 52 feet, 6 inches; and draught, when loaded, 29 feet, 6 inches. Her displacement is 26,500 tons. The engines are 40,000 indicated horse-power, and it is expected that the two bronze screws will give the vessel a speed of 23½ knots an hour. It is possible, if not probable, that she may slightly reduce the present record for voyages between New York and Southampton, but the report is now revived in England that a British company contemplates a change of route by which the transatlantic voyage would be cut down by about a day. The route proposed is from Galway, Ireland, to St. John's, Newfoundland, a distance of rather more than eighteen hundred miles. Allowance being made for the time required to cross from Ireland to Great Britain, and from the island of Newfoundland to the American mainland, it is computed that at least twenty-four hours could be saved. Whether the Galway route would ever become popular is doubtful.

On March 10 the voters of New Hampshire recorded their will as to eight proposed amendments to their State Constitution. They accepted four amendments and rejected six. They agreed that voters and office-holders in their State must hereafter know how to read and write, but they rejected woman suffrage by a heavy majority. Being invited to permit the substitution of "Christian" for "Protestant" in that portion of their bill of rights which authorizes towns to appropriate money for religious societies, they failed to give the proposal the necessary two-thirds vote, though the majority of the votes were for it. New Hampshire is progressive, but its progress is not headlong. The steps it takes, however, are probably permanent. It shows Eastern conservatism about woman suffrage. All the Eastern States are ready to talk about woman suffrage, but they seem to be no nearer its adoption than they were twenty-five years ago. It will evidently be tested in the coeducational West before any Eastern State tries it.

The advocates of woman suffrage are able to record two recent triumphs, one in the Eastern and the other in the Western Hemisphere. In the next elections for members of both the Upper and the Lower Chambers of the Parliament of the Australian commonwealth women will be allowed to vote; they will also be eligible for seats in both Houses. They have had the full Parliamentary suffrage in New Zealand for ten years. In South Australia they have voted since 1896, and in West Australia since 1901. So far as New Zealand is concerned, the admission of women to the franchise had no distinguishable effect on the relative strength of parties. The outcome of the experiment in the Australian commonwealth will nevertheless be watched with interest, because there the great majority of women are said to be wage-earners, and it is possible that their votes may go *en masse* to the Labor party. In four American States women are already entitled to vote, and it seems probable that within a few years they will gain the full franchise in three other States, to wit, Oregon, Washington, and South Dakota. In Oregon the opposition to woman's rights has dwindled to a small fraction of what it was in 1884, and the majority against a constitutional amendment granting the franchise to women was diminished in the State of Washington from nearly 19,400 in 1889 to less than 9900 in 1898. In South Dakota the majority against woman suffrage, which in 1890 was nearly 24,000, sank in 1898 to less than 3300. Meanwhile, a partial suffrage has been conceded to women in many parts of the world. Thus in England both married and single women have the parish and district suffrage, and in Ireland women can vote for all office-holders except members of Parliament. In Norway also they have the municipal suffrage, and in France they can vote for judges of the tribunals of commerce. In Kansas women have the municipal franchise; in Iowa, a limited municipal suffrage; in Ohio, Connecticut, and Delaware, the school suffrage; in Minnesota, the right to vote for library trustees; and in Louisiana, the right to vote upon all questions submitted to taxpayers. On the other hand, it cannot be said that women are as near to acquiring the Parliamentary franchise in the United Kingdom as they seemed some years ago.

There was nothing surprising in the fact that Colonel William J. Bryan attracted very little attention in his recent visit to cities on the Atlantic seaboard. If that is the experience of ex-Presidents, what else can ex-candidates expect? At the same time, it would be imprudent for Eastern Democrats to exaggerate the significance of the indifference evinced to Mr. Bryan in their section of the country. In several Southern States, and especially in Texas, Mr. Bryan still has many friends, although it is doubtful whether he will be able to control the whole of any Southern delegation in the next Democratic national convention. In many of the Northwestern States, on the other hand, as we have formerly pointed out, Mr. Bryan and his followers retain a hold of the party machinery, and there is no doubt that the delegates willing to accept his advice will constitute a considerable minority in the convention, although, in our opinion, they will fall somewhat short of the one-third needed to veto a candidate. Confronted by such a state of things, it would be obviously unwise for the Democratic party to antagonize the Bryan element by insisting upon a candidate certain to provoke on its part violent resentment, if not secession. It becomes, therefore, a matter of some interest to learn what candidates Colonel Bryan and his intimate associates regard as totally unacceptable. So far we know of only two that have been denounced in unequivocal terms. We refer, of course, to ex-President Cleveland and ex-Governor Hill. The latter seems to be even more obnoxious to the Bryanites than the former. During the last week Colonel Bryan has declined to say whether he would or would not regard Chief-Judge Parker of New York as a candidate worthy of his support or acquiescence in the national convention. In the address which he delivered at the Georgetown Law School, on February 21, he declined to say anything about the different persons who have been mentioned for the Democratic nomination, and confined himself to asserting that the man selected will subscribe to the Kansas City platform in its every detail. In that assertion Colonel Bryan is unquestionably mistaken. Whoever may be the candidate, he will have to stand upon a platform much more acceptable to conservative Democrats of the Southern and Eastern States than was that framed at Kansas City.

A new local-option liquor law, which was submitted last week to the consideration of the New Hampshire Legislature, provides that licenses shall not be issued except to persons of exemplary character, and takes special precautions to prevent the sale of liquor to the unfit. Under this proposed law a licensee may be warned not to sell liquor to an habitual exceeder, by notice in writing from the mayor of the exceeder's

city, a selectman of his town, or his wife, parent, guardian, or employer. If after such warning the liquor-seller does sell him liquor or lets him loiter on his premises, the said publican becomes liable to pay damages, not less than $100, nor more than $500. This seems a pretty good provision, and well devised to make saloon-keepers wary. It is one thing to refuse to sell a man liquor because it seems not to agree with him, and another and much easier thing to refuse because it may cost from one hundred to five hundred dollars to indulge him. The prospect of a heavy fine is an excellent stiffener to a saloon-keeper's backbone.

Professor Edward H. Strobel, of the Harvard Law School, is going to Siam to be legal adviser to the King. His Majesty of Siam is to be congratulated, for Mr. Strobel is both an exceedingly accomplished diplomatist and international lawyer, and a very agreeable companion. He was born in Charleston, South Carolina, and was one of the first Southern men to graduate at Harvard after the civil war. He studied law, but in 1885 went as secretary of legation to Madrid. In 1893 he was Third Assistant Secretary of State under Secretary Gresham. A year later he went as our minister to Ecuador, and in 1895 became minister to Chile, where he made so good an impression that after his resignation in 1897 he acted as arbitrator in the Freraut claim between Chile and France, and later as counsel for Chile before the United States and Chilean Claims Commission in Washington. As a Democrat Mr. Strobel went out of office with the Cleveland administration, but he is a man who should have been kept in our diplomatic service, and the fact that he is now going into the service of the King of Siam is a reflection on our diplomatic system.

It is getting to be worth while for an ambitious man to be mayor of a city. If the city has been so flagrantly misgoverned that its need of a competent mayor is pressing and acute, the opportunity is by so much the greater. Second-rate men don't answer in these civic emergencies. A man who demonstrates that he is enough of a man to stand between quarter or half a million people and civic maladministration is apt to be recognized as a likely candidate for something better. Melville E. Ingalls, president of the "Big Four" Railroad, is candidate for Mayor of Cincinnati on the Citizens' municipal ticket. There are Republican and Socialist candidates in the field against him, but no Democratic candidate. Senator Foraker, who is, of course, an experienced observer of Democratic politics in Ohio, says that if Mr. Ingalls wins, he will be the Democratic candidate for Governor, and later an aspirant for the Democratic nomination for President. Well, a successful Mayor of Buffalo became Governor of New York, and did not stop there. In Indianapolis there is a prospect that Booth Tarkington will be candidate for Mayor on the Republican ticket; another case of an aspiring citizen who thinks that preferment should begin at home.

The President is again going West, partly to make the speeches which were interrupted in Indianapolis in the summer, and partly to enjoy the Yellowstone Park. He is to be gone two months, beginning April 1. When he returns to Washington on the 1st of June, he will leave behind him a train of speeches stretching from Chicago westward through Madison, Waukesha, Milwaukee, La Crosse, Minneapolis, St. Paul, and the Dakotas to the Park. Then turning eastward, the speeches will make their way through Nebraska, echoing in the streets of Hastings, Lincoln, Fremont, and Omaha; thence, by way of Iowa, to St. Louis. Then they will turn again to the west and resound across Missouri, Kansas, Colorado, to southern California. Then they will ring through California to Portland, Tacoma, Seattle, fly across the plains of the State of Washington, climb the Rockies, and come back to Washington city by way of Idaho and Wyoming, pausing for a reply on Decoration day in Wyoming after rattling round the temple in Salt Lake City. It is to be hoped that the President will have a pleasant trip and a good time, and that his accompanying throat specialist will have little or nothing to do. It is especially to be hoped that no trolley-car accident will occur, and that if the President should be slightly hurt, he will recall the anxiety of the people when his leg was operated upon at Indianapolis, and try to spare the country any new bulletins. Mr. Roosevelt owes the country a good deal, and one of the smallest payments he can make on account is a little consideration of its feelings. It has suffered of late quite enough from shocks, so that Mr. Roosevelt ought to be more careful of himself than we all know that he wants to be.

There is a passage in *Lady Rose's Daughter* in which Mrs. Ward says of her heroine, "She resembled one of the famous *amouresses* of the eighteenth century, who, in writing to the man she loved but could not marry, advises him to take a wife to mend his fortunes." Our neighbor the *Tribune* has discovered that the *amouresse* in question was Mlle. Julie de Lespinasse, whose *Life and Letters* is familiar to readers of French memoirs. It has discovered and disclosed a number of very interesting analogies between the characters and careers of Julie de Lespinasse and Julie Le Breton, and finding "the points of resemblance between fiction and history in this matter" to be of interest, has wondered "whether or not they have been noticed by a house with the traditions of the Harpers." These expressions came duly to Mrs. Ward's notice. She has written a letter to the editor of the *Tribune*, expressing her pleasure that the relation between the two Julies has been detected. "I have, of course," she said, "made it sufficiently plain, both by calling my heroine Julie and by several references and passages in the book itself. . . . I might have tried to revitalize the whole story, and if your readers had been able to trace my sources throughout, that, I submit, should only have been an additional pleasure to them and no discredit to me." But the *Tribune* is of a different mind. "The debt," it says, "is too great, too comprehensive, to be disposed of in this summary fashion, and a prefatory note containing the fullest explanation of the source of her plot and characters is the least which Mrs. Ward's readers have a right to expect."

This is a sweeping requisition, but one is glad that the *Tribune* makes no claim for damages. In a later notice of the book it says that from the title-page of Mrs. Ward's novel the assumption is that "*Lady Rose's Daughter* is to be taken as work proceeding solely from the author's brain," and that this assumption being erroneous, there should be prefixed "the explicit acknowledgment which we have indicated as being in order." Bluntly stated, our neighbor's position is that Mrs. Ward, having pilfered a good part of her story, and having been caught at it, will do well to make full confession. Neither the *Tribune's* manners nor its contention will commend itself to intelligent readers. No great novel ever proceeded solely from the author's brain. Human experience is the great treasure-house from which writers draw their materials, and whether they draw from observation or recorded history, or blend the two as Mrs. Ward has done, makes no ethical difference. If a living woman had suggested Julie Le Breton to Mrs. Ward, she could not with propriety have acknowledged her debt, nor is she under obligation to advertise that her heroine's prototype *was* a living woman two hundred years ago. She has put to a use entirely lawful materials of rare interest which she had the good fortune and discrimination to gather, and those materials, with design prepense, she has so used as to make it inevitable that their source should sooner or later be discovered. Scott, in the later editions of the Waverley Novels, was used to tell in prefaces and notes where he found some of his characters, and how far he had followed history in his use of them. Mrs. Ward may sometime choose to do the like with her Julie, but if not, it is no one's affair but her own.

Alderman McCall says Mayor Low is a cold man; "so cold that he wouldn't melt in the hottest day in July." Except at election-time it is as well that a mayor should be cold. Ames, the runaway Mayor of Minneapolis, was a good fellow for many years. Nothing cold about him. Butler, the boss of St. Louis, has been described as a good fellow, by nature at first, professionally afterwards. There is Scripture for the assertion that to keep cool is better than to take a city, and when a man has taken a city, to keep cool—or even cold—is more important than ever. Taxpayers may like a cold mayor. So may voters who want just government and no favors asked.

The Panama Canal Treaty Ratified

THERE need be no misgivings in the public mind regarding the value of the canal concession secured by the treaty with Colombia, which was ratified by our Federal Senate on Tuesday, March 17, but which has still to be sanctioned by the Colombian Congress, the elections for which are now taking place. It is certain that the treaty would never be sanctioned at Bogota if it provided for the perpetual alienation of sovereignty over the canal strip ceded, for such alienation is prohibited by the Constitution of 1886; or if it had been bereft of the self-denying ordinance by which we disclaim any desire of annexing any part of the territory of Colombia or of any other Latin-American republic. This being indisputably the case, it is evident that the treaty, so far as these features go, was the best that we could get. Neither would it have been judicious to excite the apprehensions of patriotic Colombians by insisting upon the concession, in so many words, of the privilege of fortifying the isthmus, inasmuch as such a privilege is implied in the recognized right to defend the canal.

As we have previously said, the treaty is by no means ideally perfect from our point of view, but, had it been, it would have no chance of securing the approval of the Colombian Congress. A hundred-year lease, with the option of renewal, is as near to perpetuity as we need to go, especially as possession is nine points in the law. When we are once planted on the isthmus, and have spent some two hundred millions of dollars in constructing a canal, we shall not be ousted by any quibbling of municipal or international lawyers. *J'y suis, j'y reste* is not a motto coined solely for the benefit of England in Egypt. It seems to us, then, that all of the objections arrayed against the treaty by Senator Morgan, although, no doubt, put forward in good faith, were effectually disposed of by Senator Spooner. From the view-point of international law, Mr. Spooner was unquestionably right in denying the necessity or propriety of inquiring at this late date into the credentials of Señor Herran, who, as Colombia's representative at Washington, negotiated the treaty. Having recognized the Marroquin administration at Bogota as the *de facto* government of Colombia, and having once recognized Señor Herran as the authorized agent of that government, our State Department was estopped from disputing the qualifications of either to conclude a treaty. Equally inadmissible is another of Senator Morgan's assertions that, if Colombian Liberals should one day succeed in overthrowing the present Bogota government, it might decline to be bound by the canal treaty.

Nothing is more certain than that a repudiation of the treaty would be an act of war, from which we should have nothing to fear, for it would relieve us from the self-denying ordinance embodied in the treaty, and would justify us in conquering the whole of the isthmus. The Colombian Liberals are too sagacious to commit such an astounding blunder. Equally ill-founded is another apprehension expressed by Senator Morgan that, under the treaty, the Colombian authorities might interfere with the religious observances of Americans in the canal zone, inasmuch as the existing Bogota government represents the Conservative and Clerical party, and has entered into a concordat with the Pope. How long does Mr. Morgan imagine that we should brook an attempt at interference of the sort, and what evidence of stupidity has ever been discerned in Leo XIII. that would justify the imputation to him of a wish to interfere? France, also, has a concordat with the Pope, but are not Americans residing in that country at liberty to worship God as they choose? Why should we assume that the Vatican or the Colombian civil power would wantonly provoke a quarrel in which defeat would be inevitable?

Not content with impeaching the qualifications of the Bogota government to conclude a treaty, Senator Morgan denied the validity of the title which the French Panama Canal Company purposes to convey to the United States for forty million dollars. Senator Spooner defended the conclusion reached by Attorney-General Knox in his report upon the subject, and recited the whole history of the proceedings by which the title formerly vested in the Lesseps corporation passed to the present company. There seems to be no doubt that this company has come legitimately into possession of the canal concession and of all the other property belonging to the old corporation, and has thus acquired an undoubted right to transfer it to any purchaser. Every link in the chain of the title has been tested and pronounced sound by the most eminent French lawyers. Besides, from the view-point of common sense, it is incredible that the French republic, after permitting the transfer to be made without a word of protest, should, after the purchase money has been paid, confront the imminent risk of war by impugning the title of the United States in the interest of pretended creditors of the old company. Did Senator Morgan mean to assert that the French government would connive at an attempt to cheat a friendly power? The hypothesis is a wild one.

That the canal treaty ratified by our Senate will be sanctioned by the Colombian Congress is practically certain, because it is well understood at Bogota that any attempt to amend the document would result in postponing indefinitely the conclusion of an agreement. Moreover, the Marroquin government is in desperate need of cash, its paper currency being almost worthless, and the prospect of touching ten million dollars in gold will prove almost irresistible. It is also well understood at Panama, and among all intelligent Colombians, that the construction of an interoceanic canal will immeasurably conduce to the prosperity of their country, to say nothing of the large sum receivable annually by way of rental. We think that we are justified, therefore, in regarding the acquisition of the canal concession by the United States as a fact.

Closure in the Senate

THE fact that Mr. Allison was the mover of the resolution looking to a change in the Senate rules involving the adoption of a method of limiting debate is suggestive of a disturbance of the Senatorial mind. Mr. Allison's service in the Senate antedates that of any other Senator with the exception of Mr. Stewart of Nevada, and is the longest service, for Mr. Stewart was out of the Senate for a time. It is also well known, too, that Mr. Allison is probably the most conventional Senator of the body. He clings to its traditions, believes in its rules and in its methods, and is as ready as any other to defend them against the assaults and criticisms of outsiders. Indeed, Mr. Allison has rarely, if ever, shown more passion than in his resentment of the speech made by Mr. Cannon on the last night of the last session. When Mr. Allison introduces a resolution contemplating the adoption of closure, it may be true that the change, if any, will be moderate, if he continues to have anything to say about it, as he will, but it is also true that, before Mr. Allison moved, the somewhat angry attitude of the country toward the Senate must have been recognized by every Senator. That Mr. Allison was the spokesman indicates a consciousness on the part of the Senate that the time has come when public opinion must be respected.

The fact that the Senate does sometimes actually debate, is, at present, its chief virtue, or it would be if its debates were always reasonable and in defence or in aid of the general welfare. Even with its abuse of the right and duty of debating, the Senate stands in striking and honorable contrast with the other branch of Congress. In the House of Representatives, the adoption of closure has resulted in a tyranny which is unknown in any other country in which parliamentary proceedings exist. The House is now a silent body registering or voting down the edicts of a small oligarchy which refuses to permit to the representatives of the people the right to express their reasons for their votes, or to discuss the questions before them with the view of reaching intelligent conclusions. No practice can be so bad as that of the House of Representatives, for it is a denial of freedom of speech, and of the individual freedom of the members. The license of the Senate is less dangerous than the destruction of liberty in the House; and this is shown clearly by the rising storm of popular indignation against the evils obtaining in the Senate, and, by the silence, indicative that it is not recognized, as to the more serious evil which has absolutely destroyed the deliberative character of the House of Representatives.

It is clear, however, that the Senate should possess the power to prevent the parliamentary offence of obstruction. During the session which has just closed we have seen some of the most important measures before Congress fall before the obstructive powers, including the strength of lungs, of Mr. Morgan, Mr. Quay, and some of their accomplices. Freedom of debate does not imply license to talk to death measures which the talkers do not like. The country and the Senate have the right to a vote on the subject. It ought to be impossible for a single Senator, or for a minority, to destroy for practical purposes a session of Congress. As matters stand today, however, a single Senator, with an especially strong pair of lungs, can prevent the enactment of legislation. It is this power to which Mr. Cannon alluded when he said that legislation in Congress depended upon the unanimous consent of the Senate. By reason of the Senate's lack of power to curb and prevent merely obstructive speech, and by reason also of the "rule of courtesy," which gives to each Senator a power so great that no man is wise enough to be intrusted with it, a single member of this body of ambassadors is able to hold the floor against all comers and to defeat the purposes of the session, to disappoint the country, and to deny it remedial legislation such as the Aldrich bill of the last session, for example, which may be necessary to avert financial disaster.

In the English House of Commons the sort of license to which the Senate has just treated the country is called "the offence of obstruction." It is an offence of very grave character, and one which ought not to be permitted absolutely to destroy all legislative proceedings. But it is to this point that the practice has brought the Senate, and the country is demanding a remedy so loudly that even Mr. Allison has heard it. Closure is a method which is not popular among people bred in the atmosphere of free institutions. It ought not to be necessary. It is, in fact, never necessary until legislative institutions are breaking down. When the Reed rules were adopt-

ed, for example, the House had become incapable of transacting public business. The minority held it by the throat. It was as badly off as the Senate is to-day. The remedy adopted, however, is as bad as the disease. Absolute prevention of all debate, as is permitted by the rules of the House, is an evil of the same kind as prevention of debate by obstructive speech. Mr. Morgan's performance on the Panama Canal treaty was not debate; it was no more debate than is a rule of the House hierarchy actually forbidding speech. Senate obstruction is, as House obstruction formally was, merely a method of reaching the end now accomplished in the popular branch by a special rule, the difference being that the killing of debate by obstruction is done by the minority, or by a single Senator, while the killing of debate by a rule is done by the majority. The end is precisely the same up to a certain point, deliberation and discussion are ended, but in the House business is done by an irresponsible oligarchy, which, refusing to make public the reasons for and the purport of its actions, may undermine our institutions without our knowledge.

What the Senate ought to do is apparent. It ought to restore real freedom of debate, to which, as we have said, it still clings in a measure, by putting an end to obstruction. It would do itself and the country a great wrong if it followed the example of the House, and it is to be hoped that there is one branch of our government which may be depended on to preserve what the freemen of our race have always called "our ancient liberties." Among these is freedom of debate, which, with the power to act, is at the mercy of the minority in the Senate, while in the House free speech has been killed by the majority. The most deplorable feature of the conduct of the House, and of the so-called Reed rules, is the evidence afforded by them of the loss of the instincts of freedom by the representatives of the people. A body which possesses these instincts can prevent the commission of the offence of obstruction in such a way that real debate will be more free. It is true that every legislative body to which closure is necessary has lost, to some degree, the traditions which marked the progress of the English Commons to the headship of the English government. Closure, as we have said, is necessary to retard and prevent decadence, but if decadence be a fact, as it seems to be, it is a fact which, like others, must be reckoned with. A high-minded legislative assembly, as our Congress and the English Commons were until the present generation, will not need closure, will be above it; but when closure is needed, the need is absolute and must be met. That the need is present in the Senate no well-informed person not a Senator will deny.

In adopting a rule of closure the Senate should follow the example of the Commons and not that of our own House of Representatives. The House of Commons adopted closure in 1882, but its rule differs materially from that of the House of Representatives. In England, some debate is assumed, and must actually have taken place before further debate is shut off. Even in the application of what the Commons calls the "guillotine," which has been enforced only three times—in 1887, in 1893, and in 1894—debate must have been proposed and mere obstinate opposition must have been revealed. Milder methods even than these the Senate, it is to be hoped, will find effective. It must put down the offence; in doing so it ought to preserve the essential spirit of free debate. Closure is now essential; if it is ever again to become non-essential it must be by a reform in the spirit of our lawmakers. As Leonard Courtney, speaking of closure in "The Working Constitution of the United Kingdom," says: "It may be said with some truth that it is an odious necessity provoked by reiterated discussions from which the parliamentary spirit had already vanished. Those who desire to see it fall into disuse must be zealous to co-operate in restraining the abuse of opposition on the one side and of impatience on the other." In other words, when the Senate comes again to that sweet reasonableness which is the gracious spirit bred of perfect knowledge of the sanctity of free speech, and of the diabolism of disordered talk for opposition's sake, it may get along without closure. At present it cannot perform its duties except under a rule of closure, rational and wisely administered, and the country has the right to demand that it shall adopt all measures that will put an end to its present insolent inefficiency.

The Cuban Treaty

At the hour when we write it seems to be settled that the Cuban Reciprocity treaty will be ratified by the Senate, but that the ratification will be coupled with a provision that the treaty shall not be operative until it is approved by the House of Representatives. There is no doubt that, had not the Republicans consented to this compromise, the Democratic Senators, under the leadership of Mr. Gorman, could by filibustering have prevented ratification. Neither can it be denied that, from the view-point of constitutional law, there is a good deal of foundation for the claim of the House that its approval is required for the validity of a treaty which affects the revenue, or the power of Congress to regulate commerce. The discussion of the point involved is a hundred and seven years old. It is now well known that certain provisions touching the regulation of commerce were inserted in the Jay Treaty concluded with Great Britain in 1796 by Alexander Hamilton, with the express design of establishing a precedent for making laws by the convenient combination of President and Senate, instead of President and the whole Congress. When the Jay Treaty was proclaimed by President Washington the law of the land, a resolution was offered in the House, and adopted, calling on the Executive for the papers relating to the convention. Washington refused to submit the papers, and, after a time, the House receded from its position in this particular case, but, nevertheless, put on record its claim of a right to deliver it upon the expediency of carrying into effect any treaty which must depend for its execution on laws to be passed by Congress, or that deals with subjects given by the Constitution to the control of Congress. Gallatin made at the time a speech which Jefferson pronounced the best commentary ever published on the treaty-making clauses of the Constitution, and Jefferson himself, in a letter to Monroe, expressed the opinion that an act of legislation is needed to confirm treaties that include matter confided by the Constitution to the three branches of the Legislature. Jefferson acted on this principle in the Louisiana Treaty of 1803, seeking and obtaining the judgment of the House before the treaty was made. In 1868, although the House receded from the larger claim which it first put forth with regard to the Alaska Treaty, it succeeded in securing the assent of the Senate substantially to the treaty doctrine announced by Jefferson. A conference committee evolved a compromise declaration that, whereas the President had entered into a treaty with the Emperor of Russia, and the Senate had thereafter given its advice and consent to said treaty, and, whereas the stipulations thereof could not be carried into full force and effect, except by legislation to which the consent of both Houses of Congress would be necessary, therefore it should be enacted that the sum required should be appropriated. It is further to be noted that the Dingley act, which permitted a reduction of customs duties in the case of countries that should conclude reciprocity treaties with the United States, was careful to provide that such treaties should be approved by the House of Representatives. The fact, however, that the Cuban Reciprocity treaty is not to become operative until it obtains the assent of the House renders it the more necessary for the President to convoke Congress in special session at a date considerably earlier than that at which it would normally assemble. It is a great pity that the Cuban treaty was not ratified during the last session, so that it might then have secured the approval of the House. The delay may be detrimental to our interests, for, after the agreement against sugar bounties reached at the Brussels conference goes into effect, as it will early in October, the sugar industry in Cuba may receive so great a stimulus from that source that the insular government will withdraw some of the large concessions offered to the United States. It is an ominous fact that on March 14 some three thousand tons of raw sugar were purchased in Havana for the English market. This was the first transaction of the kind in a quarter of a century.

Germany's Mistake

According to the latest news from Berlin, it is now recognized by intelligent Germans that the browbeating of Venezuela, while ostensibly a success, has proved a blunder from the view-point of Germany's naval interests, and has undone all that had been sagaciously attempted and partially accomplished by Dr. von Holleben in the way of conciliating American good-will. There is reason to believe that Dr. von Holleben was not personally responsible for the visit of Prince Henry of Prussia, much less for the offer of a statue of Frederick the Great. These foolish and futile overtures are chargeable to the Kaiser alone. The late German ambassador, who was not only a highly educated man, but a keen observer, had the advantage of a long acquaintance with the United States, and almost from the outset he discerned that the true sovereign of this country is public opinion, to which not only Senators and Representatives, but also the wisest Presidents turn ever an attentive ear. He devoted himself to gaining the respect and sympathy of the real shapers of public opinion, who, we need not say, are not Federal officials, but the great jurists, lawyers, educators, editors, and financiers. How well he succeeded was attested by the unsought bestowal of an LL.D. degree by Harvard University, an almost unique honor, the significance of which seems to have been totally unappreciated by his imperial master. Although a studious attempt has been made at Washington and by administration organs to suppress the truth, there is not a shadow of doubt among well-informed persons that in April, 1898, Dr. von Holleben opposed, while Lord Pauncefote favored, a joint protest on the part of the European governments against our interposition on behalf of Cuba. This we could easily prove by a marshalling of dates and facts, but we have no desire to revive dead issues or to preach to the converted. It concerns us, however, to know that Dr. von Holleben was too thoroughly in touch with the deeper currents of American opinion to

suggest, or even approve, of the armed demonstration against Venezuela, which culminated, and was intended to culminate, in the sequestration of a considerable fraction of the customs revenue of an American republic. From the view-point of German interests, it matters little whether the demonstration was first mooted in London or in Berlin; the fact remains that it was eagerly adopted by Kaiser William II., and that in the application of force to Venezuela the German war-vessels, acting of course under orders, made themselves particularly odious.

Now what has been the outcome of the Venezuela business, so far as Germany is concerned? In the first place, the German Emperor has been politely informed by our State Department that it would be judicious to postpone the execution of the silly project of presenting us with a statue of Frederick the Great, who, during our Revolutionary war, repeatedly refused to recognize the independence of the United States. In the second place, the American Congress, which, but for the Anglo-German expedition against Venezuela, would almost certainly have contented itself with a modest appropriation for the navy, ordered the building of five battle-ships, besides providing for a large increase in the number of officers and men. This sudden and notable expansion of our expenditure upon the navy coincided with the inflexible refusal of the Reichstag to carry out the programme of the German naval authorities, the appropriations demanded being cut down by several million dollars. What makes the situation worse in German eyes is the knowledge that the course taken by the Reichstag was entirely justified, in view of the depletion of the fatherland's pecuniary resources, whereas the American Congress might have ordered the construction of fifteen battle-ships instead of five without subjecting the Federal Treasury to any excessive strain. Under the circumstances, we are not surprised to hear that undisguised displeasure has been provoked in German naval circles by the new naval programme of the United States. The reflection that the mighty increase of the American fleet is mainly due to the Venezuela demonstration is not, we can well believe, a pleasant one. There would be some consolation for Germany if the acquisition of England's friendship could be set against the loss of American good-will. This is so far from being the case that it is precisely since Lord Lansdowne and Chancellor von Bülow agreed upon a joint coercion of Venezuela that British public opinion has forced the Admiralty to establish a naval station on the coast of Scotland, which, in the event of war, would be a serious menace to the conveyance of food supplies to Germany, inasmuch as a blockade could be established of the Channel and the North Sea.

Having failed to secure England's friendship, and having lost that of the United States, what can Germany be said to have gained by the Venezuela affair? She has not even gained the establishment of a precedent which, applied hereafter to Latin-American republics, might enable her to control them through the confiscation of their customs revenue. She has not established a precedent, because a President and a Secretary of State have no power to bind the American people. As was shown in the case of the absurd Clayton-Bulwer convention, the national will cannot be constrained even when the folly of the State Department is embodied in a treaty sanctioned by the Senate and perpetual on its face. The American people have never authorized the interpretation of the Monroe Doctrine which Mr. Roosevelt gave to it in his second annual message, nor have they authorized Mr. Hay to countenance the Anglo-German expedition against Venezuela which was undertaken for the express purpose of confiscating a part of that republic's customs revenue. Until the American people have maturely considered the question, and announced a definite decision thereon, the precedent which, for a time, the Berlin Foreign Office supposed itself to have acquired, is absolutely worthless. This truth seems already to have penetrated the minds of some intelligent Germans. Thus the other day an eminent naval expert, in close touch with official opinion at Berlin, said in an interview that the danger to Germany from the United States lay not so much in the expansion of the American fleet as in the popular sentiment which had compelled the action of Congress. He admitted that the expansion of the American navy was to be contemplated with alarm by Germany, because popular feeling might at any time require the fleet to be used. Especially significant was his final declaration that recent history had convinced the German government that, no matter how cordial might be the relations between our State Department and the Berlin Foreign Office, the real factor in the situation is now, and always will be, American public opinion. If this fundamental fact has been driven home to the consciousness of German officials, the expedition against Venezuela will not have been entirely useless. Otherwise it was a grave mistake: the sums of money extorted from the South-American debtor will prove but a meagre compensation for the distrust and dislike aroused in the people of the United States.

But a few months will elapse before the divergent interests of Germany and the United States on this side of the Atlantic will again be sharply emphasized. According to another telegram from Berlin, the German Foreign Office has decided that, as soon as the reciprocity treaty between Cuba and the United States is ratified, it will ask both the Cuban and the United States governments for identical privileges, on the ground that its treaties with those governments contain the "most-favored-nation" clause. There is no doubt that the reciprocity treaty, when it becomes operative, will enable American exporters so to undersell their German competitors as practically to drive them out of the island. There is not the slightest chance, however, that American public opinion will permit our State Department to pay any heed to the protest from Berlin. The threat to deprive us of the benefit of the "most-favored-nation" clause in our treaty with Germany has no terrors for us. It is Germany's fault that we are no longer in a frame of mind to care what Germany may do or refrain from doing.

Argentina's Overtures

ALTHOUGH an attempt has been made to minimize the significance of the communication addressed to our State Department by the Argentine Minister for Foreign Affairs, it is undoubtedly an incident of great international importance. Admitting that Argentina did not formally propose to conclude an offensive and defensive alliance with the United States, for the support of the Monroe Doctrine, as it was originally propounded in 1823, we must still recognize that she indicated a willingness to enter into such a coalition by signifying a frank and full acceptance of that doctrine. Powers that heartily desire the same result can be relied upon to co-operate in furtherance thereof whenever co-operation shall be needed. So far as we know, Argentina is the third Latin-American power of any considerable magnitude which has officially acknowledged the Monroe Doctrine to be a principle binding on the whole of the New World. There is no doubt that the Juarez government repeatedly appealed to that doctrine when it sought the good offices, if not the active aid, of the United States for the purpose of repelling the French invasion of Mexico. No less undeniable is it that the same doctrine was invoked by Venezuela when that republic requested the United States to support her demand for the submission of the boundary dispute between herself and British Guiana to arbitration, a demand which Great Britain had persistently rejected. Whether on the same ground Nicaragua requested our intervention when Corinto was seized by Great Britain we are not now able to say, for, so far as we know, the fact, if it be one, has not been divulged by our State Department. That Peru during her war with Chile would gladly have recognized the Monroe Doctrine, or even consented to our assumption of a protectorate, in return for our interposition on her behalf, we have no doubt whatever. As yet, however, none of the three populous and powerful South-American States, to wit, Brazil, Argentina, and Chile, has officially adopted the doctrine formulated by Monroe, much less expressed a readiness to co-operate with us in its defence. That is why the position taken by the Buenos Ayres government may well be regarded on both sides of the Atlantic as the beginning of an epoch. Henceforth, whenever the territorial integrity of a Latin-American republic is threatened by a European power, not only will it be our own duty to interpose, but we can have for the asking Argentina's help in the intervention. That is to say, we should have at our disposal, if we needed them, not only coaling and repair stations in the south Atlantic, but also the military, naval, and fiscal resources of one of the most prosperous of Latin-American commonwealths.

There is no doubt that this overture on the part of Argentina is a death-blow to any hopes of annexation that may have been more or less secretly entertained in Italy and Germany. For every German settler in Brazil, there are ten Italian settlers in the territory of the Argentine Confederation. An incomparably stronger case could be made by Italy for interference in Argentina than could be put forward by Germany for interference with the southern provinces of Brazil. So long as the Buenos Ayres government refrained from planting itself squarely on the Monroe Doctrine, it was always conceivable that intimate racial and commercial relations between Argentina and Italy might eventually lead to a close political connection. As lately as the close of our war against Spain there were signs in Buenos Ayres itself of a sentiment favorable to the formation of political ties between the Latin-American republics of the New World and the Latin powers of Europe. Strange to say, a great many, if not the majority, of Latin-Americans sympathized with Spain rather than with the Cuban insurgents and with the United States. That feeling, if shrewdly encouraged, and not extinguished by a premature exposure of European designs of financial, if not territorial, conquest, might have brought about an alienation of South America from the conqueror of Porto Rico and the Philippines. That no such result has followed the first outburst of sympathy with Spain on the part of Spanish-Americans is due to two causes,—first, our faithful compliance with the self-denying ordinance by which our Congress pledged itself to give Cuba political independence, and, secondly, our refusal to take part, although we also had unliquidated claims, in the acts of war by which Great Britain, Germany, and Italy undertook to enforce the payment

of debts alleged to be due by Venezuela. The British-German-Italian demonstration, coupled with the disapproval of it expressed in the United States, proved two things to Latin-Americans,—first, that they have nothing to fear from us, and, secondly, that they have everything to fear from Europe. That is why Argentina, after hesitating for three-quarters of a century, definitely made up her mind to throw in her lot with the United States, and we may be certain that her example will, soon or late, be followed by Urugnay, by Chile, by Brazil, by Peru, and by Ecuador. As for Bolivia and Paraguay, they are protected against foreign aggression by their interior position, while the proximity of Colombia and Venezuela to the projected Panama Canal constitutes an inviolable safeguard.

It is the fault of President Roosevelt and of his Secretary of State that the second suggestion made by Argentina proved unwelcome and perplexing. That the suggestion, when its purport and consequences shall be thoroughly understood, will be approved by the American people, there is no doubt whatever. It was pointed out by the Argentine Minister for Foreign Affairs that the permanent occupation of the territory of an American republic was by no means the only way in which the Monroe Doctrine, as originally defined by its propounder, could be violated by a European power. For what said President Monroe? He said that this country could not view with approval any attempt of a European power to *oppress* or *in any way to control the destiny of* a Latin-American republic. As the Argentine Minister for Foreign Affairs points out, it would be absurd to pretend that the destiny of an American republic was in no way controlled if its customs revenue, on which mainly it depends for the support of its civil and military administration, were confiscated for the benefit of European creditors. Nobody in his senses would deny that, under precisely similar circumstances, the destiny of Egypt is controlled absolutely by Great Britain. Just now Argentina punctually meets her obligations to foreign creditors, but, as her foreign debt exceeds a billion dollars, we must recognize that, should she default in the payment of interest and sinking fund, and should she thereupon be subjected to the treatment which Venezuela has received, the whole of her customs revenue might be sequestrated in the interest of creditors. That is why Argentina proposes that the Monroe Doctrine shall be defined more explicitly as regards the letter, without departing from the spirit, of the principle. She asks us to join with her in announcing that henceforth ordinary debts, arising out of contract, to which the maxim *caveat emptor* is fairly applicable, shall not be collectable in the Western Hemisphere by force. That is to say, the penalty incurred by an American republic for the failure to pay ordinary debts shall simply be the loss of credit on the stock-exchanges of the world, which is a sufficiently grievous punishment. Or, to put the matter in a nutshell, neither now or hereafter shall any American commonwealth be exposed to the fate of Egypt. Of course the Argentine Minister for Foreign Affairs is careful to draw the obvious distinction—a distinction only overlooked by those who desire to confuse the public mind—between a demand for the redress of grievances or reparation for wrongs, and a demand for the payment of loans and advances which European lenders and investors have made with their eyes open. As a matter of fact, at the time of the English-French-Spanish expedition against Mexico, and, again, in the Corinto affair, our State Department was careful to distinguish between damages exacted for wrongs or grievances, and ordinary debts. Those widely different classes of claims were confounded, however, by Mr. Roosevelt in his second annual message under the vague and elastic term "just obligations," and the demonstration against Venezuela was the almost immediate result. It should be remembered that damages for wrongs constitute but a very small fraction of the sum for which Venezuela has, with the connivance of our State Department, been compelled to pledge for an indefinite period a third of the customs revenue of La Guayra and Puerto Cabello. By far the greater part of the sum consists of ordinary debts, including bonds on which the Caracas government has failed to pay the stipulated interest.

We have no doubt that, when the true inwardness of the Venezuela business, and of the precedent sought to be established by the blockading powers, becomes thoroughly known to the American people, they will compel their Federal government to adopt the definition of the Monroe Doctrine suggested by Argentina.

The Czar's Reforms

THE favorable impression produced by the ukase in which Nicholas II. promised religious toleration and local economical and political reforms was quickly dulled by the announcement that the practical methods of carrying out the Czar's intentions are to be planned by a commission presided over by Mr. von Plehwe, the Minister of the Interior, one of the most inflexible reactionists in Russia. He is no more likely to be credited with any honest desire to improve the civil administration than would be Mr. Pobiedonostzeff, lately the Procurator of the Holy Synod, with a wish to relieve dissenters and Jews from persecution.

It is true that Mr. von Plehwe may be outvoted in the commission, and that he may be only permitted to retain his post on the understanding that he will make no attempt to thwart the designs of more progressive colleagues. There is no doubt, however, that, as the Czar evidently wants to conciliate the Russian Liberals, he would have done well to assign the framing of the projected measures to men who enjoy the public confidence. Unless the provincial and district assemblies are to be allowed to raise more money for local purposes and to exercise a larger measure of control over the money when raised than they have lately possessed, the proposed political reforms will prove farcical from the view-point of local autonomy. The representatives of the Ministry of the Interior have steadily encroached upon the functions originally delegated to the zemstvos, and nobody has been a worse sinner in this respect than Mr. von Plehwe. To expect such a man to aid in a revival of local self-government is like employing a wolf to reorganize a sheepfold. We repeat that, as it is of vital moment to Nicholas II. that the Russian people shall be convinced of his sincerity, it would have been expedient to put none but well-known Liberals on the reform commission.

By whom the precise extent of the religious toleration proclaimed is to be defined is as yet undivulged. It is scarcely credible that all of the multitudinous sects of the Raskolniks, or dissenters from the orthodox Greek Church, will be suffered to propagate their peculiar views and practices, for some of these, such as the refusal to serve in the army, have been deemed incompatible with the safety of the state.

That something will be done for the relief of the village communities, which comprise about four-fifths of the Russian population, and which are suffering, not only from inordinate taxation, but also from the galling necessity of performing forced labor at the bidding of government officials, we may unquestionably assume. Unless measures are taken to allay the widespread discontent of the Moujiks, who, for the first time, are beginning to doubt the beneficent intentions of their Little Father, the whole autocratic system of Russia may collapse. It will be observed that not a word is said in the ukase about the imperial Parliament, which it was once hoped would crown the constitutional edifice, of which the middle and lower stages were to be provided by the provincial and district assemblies or zemstvos. Never has Russia been so near representative government, in something like the Western sense of the word, as she was on that fatal day in 1881 when Alexander II., having just signed a proclamation convoking a species of Parliament, was done to death by Nihilist assassins. It is no secret that his son and successor, Alexander III., suppressed the document and embarked upon a policy of violent reaction.

Will England Renounce Free Trade?

THE recent reimposition of a registration duty on importations of grain and flour is only one of many indications that the United Kingdom is tending toward an abjuration of free-trade doctrines. The London *National Review*, since it passed into the hands of the present editor, has been a persistent and vigorous advocate of a reversion to a protectionist policy, and it has gradually acquired a great deal of support among newspapers representing Conservative opinion and Imperialist aspirations. At the recent conference of colonial premiers in the British metropolis, the fact was brought out clearly that for the desired consolidation of the empire an economic basis was indispensable—that is to say, the mother-country would have to impose so considerable a duty on food products imported from foreign countries as would enable her to give a substantial preference to similar commodities coming from the colonies. It has since been pointed out that, even if Australia should follow Canada's example, and grant a preference of 33 1-3 per cent. to British manufactures, the concession would prove fruitless unless Great Britain should impose a corresponding duty on foreign manufactures of a similar kind, for, otherwise, it would prove practically impossible to prevent the latter from being shipped to Great Britain, and thence transshipped to the colonial markets. It is also no secret that the one inflexible upholder of free-trade principles in the Balfour cabinet, Sir Michael Hicks-Beach, was virtually forced to resign the post of Chancellor of the Exchequer, and that Mr. Joseph Chamberlain, who now dominates the ministry, is by no means opposed to such moderate measures of protection as would render it possible to form closer ties with the great colonial dependencies. It is this combination of circumstances which gives great importance to the volume just published in London by John Milne, and entitled *The Coming Reaction*, by "Legislator." The author, who writes, not like a theorist, but like a statesman, has undertaken a brief survey and criticism of what he believes to be the vices of England's present economic system. He declines to accept the orthodox economy of the Manchester school as a deductive science the outcome of which is absolute truth, but pursues the historical method of inquiry, and arrives at the conclusion that it is to a protectionist policy unswervingly applied

for many generations that England owes the supremacy which she has enjoyed in the nineteenth century as regards the ocean-carrying trade and the purveyorship of manufactures to the world. One of the most interesting sections of the work is devoted to a demonstration that only by the enforcement of a protectionist system were Englishmen enabled to oust the Dutch from the position of maritime ascendency which the latter undoubtedly enjoyed throughout the seventeenth century. Finally, the argument is clinched in a section which traces the extraordinary prosperity of the iron and cotton industries of the United States directly to our inflexible acceptance of a protectionist policy.

It is well known that, for many centuries after the Norman conquest, England was a wool-growing and wool-exporting country. The raw wool was sent to the Netherlands, and part of it came back in the shape of cloth. It was Edward IV. who, in 1463, inaugurated the protection of the woollen manufactures of his country by forbidding the importation of woollen cloths and woollen caps. With the exception of a very short period in the days of the commonwealth, the prohibition of the importation of foreign woollen cloth was thenceforth absolute. On the other hand, the small export duty on woollen cloth was swept away under William III., after which all British manufactures of wool could be exported duty free. In a word, the fostering of the native woollen industry was, for nearly four centuries, the keystone of the trade policy of England. What was the result? In the reign of Elizabeth the export of woollen goods represented approximately one-half of the total export trade of the country, and in the eighteenth century the proportion was even higher. Not only did the protectionist policy call into being and perpetuate in England an hereditary textile skill as the basis of the woollen industry, but it fostered invention. All the mechanical inventions which have revolutionized the industry were made before the days of free trade. It has been loosely asserted that England was bound to develop a textile trade in wool because she was a wool-growing country. If so, why did not the same result come about in Spain? For five centuries Spain has been a wool-growing country, producing the finest wools in the world, yet she possesses no textile industry.

England's cotton industry owes even more to a protective policy than does her woollen industry. Cotton is not indigenous in the United Kingdom, as wool is, and it is little short of a marvel that such an industry should have been built up in a country which does not grow an ounce of the raw material, and does not consume more than a fraction of the total output. Lancashire manufactures cotton which is grown in the United States, and sells it as cloth to India and China. In a sense, therefore, the industry is entirely exotic, and nothing but the powerful engine of government support could have localized and specialized the trade in England. At the first glance England's iron industry may be thought to owe less to protective action than do her textile trades. The author of this book shows, however, that the protection which it enjoyed during the critical period of its early growth was efficient and sufficient. We should bear in mind that it was not until 1738 that the process of smelting iron in a blast furnace by means of pit coal instead of charcoal was perfected. From the moment this process was invented the obstacles which had been thrown in the way of the iron industry by the laws against destroying timber vanished, and the government lent itself zealously to the support and protection of the manufacturers of iron and steel products. From the middle of the eighteenth to the days of free trade in the nineteenth century, the tariff was arranged with the double object of discouraging the import of manufactured articles of iron and steel, and, at the same time, of encouraging the importation of raw iron—that is to say, iron in the form of pig or bar.

Passing to the effect of protection upon the American cotton industry, the author notes that in 1807, when the embargo was imposed on imports from England, the number of spindles existing in the United States was only 8000. By the close of the War of 1812-15, the number was 500,000. The tariff of 1816, with its 25-per-cent. duty on cotton goods saved the native trade from extinction at the hands of its British competitors. In all the subsequent tariff legislation of the United States the protection of the cotton industry has been maintained, with the result that in 1895 the number of spindles had reached the total of 15,831,823, and the exports of cotton goods amounted to $30,000,000. Such an export would be an utter impossibility, and American competition with Lancashire in the China market would be entirely impracticable, if the American industry had gone to sleep and become demoralized under protection, which, the advocates of free trade assert, is the inevitable effect of a protective policy.

The American iron industry was protected to a certain extent by the tariff of 1816, and the duties on pig iron and rolled bar iron were considerably raised at various subsequent dates, but it was not until after 1840, when the process of smelting by anthracite was applied, that the enormous growth of the industry began. It was not, however, until very high duties on iron and steel products were imposed during and after the civil war that the industry advanced by leaps and bounds. Between 1870 and 1890 the imports of steel rails from England sank from between one and two hundred thousand tons to nothing at all. Within the same twenty years the total production of raw iron in the United States expanded until it excelled that of Great Britain. In 1870 England produced nearly four times as much; in 1890, the United States completely outdistanced her. No longer, moreover, do we hear of the demoralizing and retarding influences of protection in connection with this industry. On the contrary, if American iron and steel manufacturers are able to beat their British competitors, not only in foreign, but in colonial markets, and even in Great Britain itself, the result is at least partly attributable to the superiority of American methods, to economy of labor, the higher specialization of machinery and processes, and even the higher individual intelligence of the workman himself. In a word, free-trade England is sending deputations to study the industrial methods of a protectionist country.

His appeal to history has convinced the author that the free-trade theory has broken down, and that common sense and patriotism alike demand that British statesmen should repossess themselves of that valuable weapon of a tariff which they flung away two generations since. He does not hesitate to say that, were he the Chancellor of the Exchequer, he would transfer bodily the aniline industry which Germany has filched from England back to the latter country by a stroke of the pen. He would do the same with the metal smallware trade, for the simple reason that he prefers the prosperity of Birmingham before that of Bremen. Evidently he would also put a duty on food products coming from the United States, in order that he might give a substantial preference to colonial commodities.

A Tunnel to Staten Island

WE have the highest respect for the professional qualifications of the consulting engineer employed by the Rapid Transit Commission of the city of New York. With a single exception, all his plans for promoting intercommunication between the five boroughs that make up the American commercial metropolis seem worthy of hearty commendation. Especially admirable are the methods proposed for connecting by means of bridges and tunnels the overcrowded Borough of Manhattan with the Borough of Brooklyn and the Borough of Queens. We think, however, that he approaches from a wrong point of view one feature of the rapid-transit problem, that, namely, which contemplates the placing of Richmond borough, or Staten Island, within easy reach under all weather conditions of the swarming tenement districts of Manhattan. He says that in devising a programme of interborough communications, he has postponed the consideration of a tunnel under the Narrows between Brooklyn and Richmond boroughs because the population of Staten Island is for the moment relatively small. We hold that mature reflection should convince him that it is not the islanders, but the teeming millions of Manhattan who are mainly interested in the attainment of rapid transit to the fields and hills of Richmond borough. The area of Staten Island is many times greater than that of the island of Manhattan, and the very fact that, for the moment, it is thinly peopled, and that, consequently, land is extraordinarily cheap, constitutes the strongest reason for rendering it quickly and regularly accessible to the middle and poorer classes of Manhattan's vast and growing population. The present means of communication by ferry is not only slow and infrequent, but it is liable to interruption from ice in winter and from fog at every season of the year except midsummer. Under present conditions working-men and business men, for whom punctual arrival at their places of occupation is indispensable, are practically debarred from acquiring homes on Staten Island. If, on the other hand, a tunnel under the Narrows were used in conjunction with the proposed tunnel from the Battery to South Brooklyn, it would be entirely feasible to reach Staten Island from the tenement district of Manhattan in about fifteen minutes, and trains could be relied upon to run with absolute regularity. There is good reason to believe that, within five years after the completion of such means of intercommunication, upwards of a million persons who are now packed together in the flats and tenements of Manhattan, would be the occupants of homes in Richmond borough. It is now, and is likely to be for a long time to come, positively cheaper to own a house and lot on Staten Island than it is to rent rooms in a Manhattan tenement. We do not hesitate to say that it is the duty of the Rapid Transit Commission to relieve the congestion of the tenement districts of Manhattan, and to give their denizens an opportunity of securing light and air. This could be done in no way so effectually as by a tunnel under the Narrows, which, from an engineering point of view, would be neither impracticable nor costly. It is also manifest that the emigrants from southern and eastern Europe would be transformed into American citizens much more rapidly were they distributed in separate and roomy habitations.

An idea of peace, as well as of intelligence, is associated with study, which makes uncultivated people respect it, and almost envy it as a happiness.—*Joubert.*

Hysterical Criminology

WHATEVER the errors of the Buffalo police have been or shall be with regard to the mysterious Burdick murder which they are still dealing with, they will not be able to excuse themselves on the ground that they have failed of the public co-operation in their efforts for the public security. Every sort of advice, criticism, and suggestion has been offered them from every sort of thinker, and the dim realms of emotional insanity have apparently been searched for their advantage. They have been helped night and day by amateurs and professionals in their lurid science, and if it is not their fault that they have not profited by the aid of these volunteers, they are clearly to blame for not opening their hearts to the reporters, and assuring them that they know just who the murderer or murderess is, and that at the right moment—say, at the climax of the third act, when the whole house has been wrought up to an anguish of expectation—they will produce him or her. Throughout, we must say that the whole department of justice in Buffalo has been actuated by motives which seem to us, here in the metropolis, as entirely provincial. If the murder in question had been done in this city, we need not tell the reader how the department of justice would have behaved. Every officer of it would have been hand in glove with the reporters, and hourly editions of the public prints would have been issued to keep the metropolis *au courant* with the advance of doom toward the detection and conviction of the secret assassin, who would not from the first have been a secret to the authorities, but only the material of a magnificent *coup de théâtre*. The curtain might, indeed, fall at last upon the comedy *dénoûment* of a second or third trial, with the acquittal of the accused, but in the mean time the popular interest would have been continually appeased, and the course of justice would again have revealed the intimate relation between nature and art, in which fact would have worn at every step the guise of melodramatic fiction.

The Buffalo police, indeed, have thrown away the most stupendous opportunity for sensation that was ever wasted upon rustic incompetence. They have, of course, interrogated all the imaginable and unimaginable accomplices of the unknown homicide; they have kept several persons under distressing surveillance; they have steadfastly contended that they expected to find out the murderer; but they have done all this without that eye to the audience which metropolitan justice would have addressed to it. We beg the reader to consider what cries of dramatic joy would have gone up from justice here if, after a man had been murdered, the man who stood first among his enemies should have met with an accident in his automobile, and been killed, with his wife, at a most crucial instant of the performance. The Buffalo police have apparently accepted at once the theory that the accident was an accident, and not a most ingenious and complicated suicide and wife-murder; but metropolitan justice would never have resigned itself to such a tame conclusion, or it would only have accepted it after months of unavailing belief to the contrary.

We are not now accusing the Buffalo community, at least not the whole of it, of the provincial inadequacy shown by the Buffalo police. There are doubtless many men, and many more women, in Buffalo, who just simply *know* that the victim of the automobile accident was the murderer, and that the accident was really a suicide, double or single, or perhaps both. Such inspired persons are not confined to the city of Buffalo; they abound throughout the country, and we shall owe it to them, if to anybody, that the memory of an unhappy man, most miserably mixed up with the shame of the affair, shall be handed down to lasting abhorrence as the author of the crime. When we think of the indefinite number of clubs at which condemnation has been already pronounced on his memory, and the infinite number of breakfast tables at which it has been devoted to infamy between the coffee and the griddle-cakes, and then consider the supine indifference of the Buffalo police in the matter, we are really at a loss what to say. But it is clear that the case ought to be taken out of their hands at once, and given over to a national committee hysterically equal to the occasion.

The Observance of Lent

WE certainly do better in our day. The social critic who judges his generation to be decadent in religion is in the sad embrace of error. He is confusing outward manifestation with inward and spiritual grace. He is mistaking outward observance for spiritual achievement. He cannot understand spiritual activity without noise or persecution. He has failed to see below the surface of modern society, and he therefore does not realize that the Christians of to-day are better men and women, men and women of a higher type, than the persecuted Christians of the second century; that they are nobler and nearer to the divine ideal; while he fails to comprehend that the time for symbols and authority long since passed away, to be succeeded by the willing sacrifice and service which have been rendered since the time when the hard old law had at last moulded character to conform to a new spiritual development.

It is the fashion to smile at the modern observance of Lent as if it were non-observance; but, say what we will about the putting on or the putting off of religious or church practice as a fashionable garment, our manner of keep church fasts and feasts, like this fast of Quadragesima, is at least as wholesome as was the manner of our ancestors, and denotes the attainment of a higher range, of a better civilization, and of a more spiritualized Christianity. In the Middle Ages, when religion was used as the stimulant of hatred, observance of a church festival or a church fast held the rank of an essential article of faith. Then, although there were many disputes as to the length of Lent, and as to the manner in which the fast should be kept, all who differed with any one of the many orthodox views of the matter were condemned, in each instance, to an eternity of suffering.

In this matter of keeping Lent, for example, there was a great diversity of practice. Irenæus says that in his day there were great differences of opinion. Some thought that they ought to fast one day before Easter, and some two days, and some had other views. In the early days of Christianity, the custom in Rome was to fast three weeks before Easter, Saturdays and Sundays excepted. In Illyria, Greece, and Alexandria, the fast used to extend over six weeks. Some Christians fasted seven complete weeks, while others, setting aside seven weeks, divided the time for fasting purposes into three periods of five days each. Leo I. insisted on the traditional forty days, the forty days of the wilderness, while Gregory the Great fixed the number at thirty-six. The rule and the practice also differed as to observances, but, speaking generally, the church has always required, or at least desired, that its communicants shall, during this pleasant season, abstain from worldly pleasures, from the combats of the arena, from theatres and the opera, from dancing and other routs; that they shall fast on fast days, not on every day, and not all day then, but until the evening; that they shall attend divine service, and listen to a sermon every day; and that their diligence in almsgiving shall be increased.

Perhaps the modern world does not conform strictly even to the modified rules of the modern church; but let us pause for a moment to consider how wicked in these days would be conformity to the rules of the ancient church, the rules of the church in those bad old days at the birth of Christianity, when the question of the proper time for observing Easter, according to Mr. Lecky, "involved an issue of salvation or damnation." In those days a Christian was a Christian, in the language of our own time, for "what there was in it for him." Why be a Christian at all, it used to be argued, if we are to fail of gaining eternal bliss by reason of a slight mistake as to when Easter should be celebrated? To cite Bede, the first English historian of the church: "Eadmer says there was a sharp controversy about the observing of Easter, and other rules of life for churchmen; therefore, this question deservedly excited the minds and feelings of many people, fearing lest, perhaps, after having received the name of Christians, they should run or had run in vain." In other words, if they were to fail of heaven by a slight mistake as to Eastertide, why take the trouble to be a Christian at all? And we must confess that there is something in this view, and something especially impressive when we consider that a mistake as to date was heterodoxy, and that too in a time when heterodoxy meant not only eternal punishment and suffering in the world to come, but that in this world it meant being beaten to death with clubs, blinded by anointing the eyes with lime, flogged with the prickly branches of palm-trees, and other like experiences.

Yes, we are much better in our day. We do not quarrel about when Easter comes; and while the church has its preferences as to the proper observance of the great Christian fast, it is not rigid, and is certainly not cruel or murderous. The fast, on the whole, is celebrated by a more wholesome social regimen than is the custom of the fashionable world. We speak necessarily of the world of fashion, because it is that world which doubtless, of all the elements of our social state, needs the most improvement. Besides, it is that world of which we think when we ask ourselves is Lent kept in these busy and splendid days? We do not, of course, refer to the criminal and other classes who have no religion, nor to the devout, with whom religion is everything, nor to the intellectual people who are too likely to be indifferent. Those who are in our mind are the people who maintain a connection with fashionable churches, who, in truth, maintain the churches themselves, and who are, therefore, within the pale of the church. Do these people observe Lent?

In very truth they do. It may be that to many of them this observance means very little, but to some of them it is of great spiritual importance. Their slower pace, their partial withdrawal from gayety, the sanity of the forty days apart from the crushing labor of fashionable amusement,—all this must make for the health of the mind and the soul, even if the bettered mind and soul are unconscious of the reason for the refreshing peacefulness of the life which Lent brings to them. Naturally, people who usually do not think of religion at all will not think of it as pertaining to them in Lent or in any other season, but it is well for them as anything can be if they are

compelled once a year by the church and its fast to think of religion as still existing, and as something of which, some day, they may be glad to take advantage. In their case the benefit of the modern Lent is the gain of the church, which demonstrates its growth in grace by its kindly treatment not only of heretics who deny its ceremonies, but also of its careless and its almost useless children.

To thousands upon thousands who are not fashionable, or worldly, or indifferent, and chiefly to women, Lent is now a refreshing season, graciously uplifting their hearts, elevating their minds, assuaging their griefs, softening or ennobling their lives. It is the ever-recurring presence of a divine reality in the middle of a year given over mostly to greed and pleasure. It is best observed quietly, and so, perhaps, most of us who are too busy to comprehend the subtler and finer activities of life do not often realize that there is a time in every year, apart from Sunday, when religious life is quicker among many of our fellow-beings than it is at other times; but so it is, and the thought of thousands cannot be regularly and persistently elevated to loftier planes without, in some measure, at least now and then, lifting up a careless, occasionally a rebellious, neighbor.

Prof. Delitzsch and the Kaiser

IN justice to the Kaiser it should be understood that his recent incursion into the field of theology was not quite a voluntary outbreak, but was induced by circumstances of much coercive force. Professor Friedrich Delitzsch, whose lecture on the Bible was the immediate cause of the Kaiser's letter, is the most learned of German Assyriologists, as his father, Professor Franz Delitzsch, was before him. Stirred by the remarkable discoveries made by French, English, and American searchers in the ruined mounds of the Tigris and Euphrates region, he issued an appeal about four years ago to the German people, begging them to supply means to German investigators to take part in the excavations and discoveries that were going on. The Germans responded. The German Orient Society was formed, with the Kaiser as an enthusiastic member and its largest subscriber. Thanks largely to the Kaiser's zeal, and to his influence with the Sultan, the German society has had excellent opportunities to search, and it has improved them with the utmost zeal. About a year ago the Kaiser sent Professor Delitzsch himself to the Orient. His recent lecture, delivered about Christmas time, was, in a way, a report of the impressions resulting from his journey. The Kaiser was one of his audience, and having aided the professor very substantially, and countenanced his discourse by his presence, he was tacitly held to some responsibility for the professor's views. A full report of this lecture has been published in the *Sun*. The lecturer told how wonderfully the cuneiform inscriptions found in the ruins of Nineveh, Babylon, and other ancient cities had identified Bible places, and verified Bible history. Assyriology, he said, has restored confidence again to the Old Testament text. But it has also thrown light on the origin of some Bible stories, and corrected others. He told of the discovery of the story of Nebuchadnezzar, written on Babylonian tiles, and of the origin of the tale that he was turned out to grass for seven years. The original documents being discovered, the deviation of the Jewish writer from the original record was disclosed. He found the book of Jonah a moral tale of high interest, but the form in which its truths were conveyed was human and full of the fancy of the Orient. Hardly a greater error of the human mind can be imagined, he said, than to have looked for centuries upon the priceless remnants of old Hebrew writings collected in the Old Testament as a religious canon, a revealed book of religion. When such books as Job, Solomon's Song, and some of the Psalms are explained from a theological and Messianic standpoint, the result, he felt, could only be stupefying. All scientifically educated theologians, he declared, had now given up the idea of verbal inspiration. He went on to discuss at length the story that God wrote the ten commandments with his finger on tables of stone, pointing out what seemed to him the objections to its acceptance as literal history. He spoke handsomely of the Babylonians, their laws, religion, and civilization, and deprecated the scorn in which they were held by the Hebrew prophets. The great Babylonian law-giver, Hammurabi, whose code was dug up in 1901, he held in the highest estimation. The sense of an exclusive right to God's care which permeates the Old Testament, and which left all other nations for thousands of years "without hope," and "without God in the world," he found it difficult to consider as "revealed by the righteous God." But he said we are so hypnotized from childhood, by this dogma of the sole commonwealth of Israel, that we look at the whole history of the ancient world from a wholly distorted angle.

"Personally," he said, finally, "my belief is that the ancient Hebrew writings, even if they lose their character of 'revealed' writings, will always preserve their great importance." But he deprecated blind adherence to antiquated dogmas from the fear that our belief in God, and our real religion may be harmed. Let us remember, he said, that everything earthly is in living motion; that to stand still is equivalent to death. Let us strive humbly towards the goal of truth placed in us by God, "joyfully holding to the task of the further development of religion that has been seen from the high watch-tower by an eagle glance, and proudly heralded to the world."

This last allusion, which ended the lecture, was understood to refer to the Kaiser, and made him appear more conspicuously than ever as the sharer of the learned professor's views. Germany, in consequence, was so much disturbed that on February 15 the Kaiser addressed to Admiral Hollman his letter declining to stand on the platform his friend, the professor, had constructed. He did not accept, he said, the professor's conclusions and hypotheses. He dissented from his suggestion that the Old Testament contains no revelation referring to Christ as the Messiah, and from his more or less qualified denial of revelation. "I distinguish," said the Kaiser, "between two different kinds of revelation, one continuous, and to some extent historical; the other purely religious, a preparation for the later appearance of the Messiah. The first kind was experienced by great sages, such as Hammurabi, Homer, Charlemagne, Luther, Shakespeare, Goethe, Kant, and Kaiser Wilhelm I. The second kind, more strictly religious "is that that leads up to the appearance of our Lord." It is self-evident, the Kaiser thinks, that the Old Testament contains passages that are human history, and not God's revealed words. He sustains the view of Delitzsch that "the act of the giving of the law on Mount Sinai can only symbolically be regarded as inspired by God," but he holds that God prompted Moses, and to that extent revealed himself to the people of Israel. The greatest revelation of God in the world he found to be that which continued from Abraham's time through the centuries "until the Messiah, foretold and announced by prophets and psalmists, at last appeared. "This," he said, "was God's greatest revelation, for He appeared in the Son Himself. Christ is God in human form."

An Incorporated Family

THE scale business being prosperous and leaf-lard in brisk demand, the tribe of Fairbanks thought itself warranted in holding a reunion last August at the Fairbanks homestead in Dedham, Massachusetts. Jonathan Fairbanks was the original American ancestor, and from him are descended 4000 American families. The reunion turned out to be interesting and successful, and one of its results is the recent filing of articles of incorporation of the Fairbanks Family in America, as a society for historical purposes, to hold property, preserve records and objects of family interest, and promote the education of its members in subjects relating to their family history. The society will buy the Dedham homestead, and make that its headquarters, and will doubtless raise as large a fund as is necessary to provide a sufficient annual income to carry on its work. The project seems adapted to furnish a good deal of lawful and innocent entertainment at small cost, and is likely to commend itself to other families that are scattered over the United States.

Prosperous people, as a rule, do not want too much intimate knowledge about their distant relations, but a fair degree of success in the world is almost sure to beget some inquisitiveness about genealogy. If a man does no more than make a million dollars in a stock speculation, or marry the heiress of a miner or a patent-medicine millionaire, he is pretty sure to realize, when he has leisure, that he is a person of more than ordinary force and sagacity, and to wonder how he came by his talent. He usually knows who his grandparents were, and he is quite willing to trace his line back further if it is not too much trouble. If his family has a headquarters somewhere, where its records and relics are preserved, he will be ready to contribute his share towards its maintenance.

Such an organization as this of the Fairbanks family forms a tie, slight but appreciable, between families scattered all over the United States. It makes, in its way, for cohesion, and will do its modest part in welding together the American people. It will give a good many people the sensation of having a family home, and that sensation is valuable, even though it only exists in a very limited degree. The record of most of the older American families is a record of successive migrations, beginning somewhere on the Atlantic seaboard and progressing westward by jumps of from fifty to a thousand miles, in successive generations, leaving some representatives behind at each stopping-place. The result is a scatteration of kindred over an extraordinarily wide surface of country, and the existence of great numbers of families in the old Middle States, the Middle West, the trans-Mississippi States, the Northwest, the Far West, and the Pacific slope, who trace their derivation to New England or New York. These families like to remember where they came from, and many of them need nothing more than a timely suggestion to make them join in such an organization as the Fairbanks families have contrived.

The world will turn round still. Industry is produced by Want, Wealth is produced by Industry, Idleness is produced by Wealth, Poverty is produced by Idleness.—*Landor.*

Lord Rosebery

By Sydney Brooks

LONDON, *March 11, 1905.*

IT is one of the commonplaces of public life in England that people who never read speeches read Lord Rosebery's. And the commonplace is a perfectly true one. Two evenings ago there was a debate in the House of Lords on the Venezuelan affair. Lord Lansdowne spoke, the Duke of Devonshire spoke, the Earl of Selborne and Earl Spencer also spoke. Yet the only speech that made the slightest impression on the populace, the only one you even heard mentioned in the club smoking-room, at the dinner table, or on the Twopenny Tube, was Lord Rosebery's. It was not a particularly good speech, though there were flashes in it of which only Lord Rosebery is capable.

People read it because it was Lord Rosebery who delivered it; they talked of it because Lord Rosebery is one of those men, President Roosevelt is another, and the Kaiser is a third, who cannot do or say anything that is not interesting. He has an abundant share of what Americans are accused of prizing altogether too highly in their public men—he has "personal magnetism." If he were to start in at a public meeting to read the Century Dictionary out loud, or the Kaiser's views on the Higher Criticism, or one of Alfred Austin's poems, he would do it in such a way that in five minutes the whole audience would be rapturously cheering. I don't suppose he could write even a dinner invitation as another man would write it, and I know from personal experience that a journalist who applies to him for an item of information that has to be withheld, will find consolation for his refusal in the distinctive comments and asides that accompany it. It is this kind of unexpectedness that makes up the chief charm of his oratory. There are many excellent speakers in England, but Lord Rosebery alone deserves the adjective *refreshing*. From Lord Salisbury one may get, or rather one used to get, the easy, semi-conversational outpourings of a wide experience and a comprehensive, rather cynical, mind; and they were often delightful. But there was always a gulf between Lord Salisbury and the average member of any audience he might be addressing that neither cared to bridge over. His heart so clearly was not in his work, and his relief when the whole affair was over was so evident, that the gray masses did not, and indeed could not, warm to him. He had the pride of intellect, and always seemed to be in a state of inward revolt against the necessity of talking "shop" to the uninstructed. Then there is Mr. Balfour, but Mr. Balfour is altogether a House of Commons orator. He needs a picked audience that will appreciate the most delicate turns and catch the lightest shades to bring out all his powers. Then he is admirable—in his own way, perhaps unexcelled—but on a platform, before a popular audience, he seems to feel himself out of place; he cannot let himself go; the sense of incongruity is strong upon him; the horrible consciousness cannot be got rid of that there is but scant intellectual common ground between himself and those in front of him; and so he fails. This embarrassment does not, at any rate, affect Mr. Chamberlain, who always feels the pulse of his audience, cannot help being clear, and is a past master at scoring the petty points that count for so much with the populace. But Chamberlain is a man who jars and offends about as often as he stimulates. No one ever thought of reading one of his speeches for the mere pleasure of the thing. On another and higher plane of oratory there are the rush and swing and trenchant liveliness of Sir William Harcourt; Mr. Morley's strong and patient reasonings, admirably expressed; and Mr. Asquith's compact lucidity. Yet of all these speakers, with their varying styles and gifts, Lord Rosebery is easily and beyond dispute the national favorite.

The truth seems to be that Lord Rosebery unites in himself all the excellencies of his rivals, and few, if any, of their defects. Being a born *littérateur*, he has all of Lord Salisbury's and Mr. Morley's instinct for words and expressions, and he surpasses them both in the terseness of his phrases. He can be as unambiguous as Mr. Chamberlain, as graceful as Mr. Balfour, and more amusing even than Sir William.

Listening to Lord Rosebery, one feels it would be difficult for him to have a commonplace thought, and impossible for him to express it in a commonplace way. It is an intellectual luxury to follow the sly, incisive turns, the agility and the surprises of the diction. You are never able to foresee how one of Lord Rosebery's sentences will end; you can only be sure it will not end in the humdrum, obvious fashion you expect. And this is not because the speaker is deliberately given to literary pirouetting; it is that the workings of his nimble mind make such ambushes inevitable. He is one of the few speakers who are just as good to read as to listen to. Indeed, the workmanship is often so fine and telling that only by studying it at leisure can one really gauge its worth. At the same time, one misses much by not being actually in the audience. One misses the round and resonant voice which, if it has not the mellowness of John Bright's or the vibrating spell of Gladstone's, is at least an organ of astonishing carrying power and clarity. Above all, one misses the atmosphere that Lord Rosebery diffuses, the sense partly of authority, but chiefly of sympathy, that he creates. He dominates an audience, and yet at the same time gives an impression of essential comradeship. You feel at once, when he gets up to speak, that it will be a pleasure to hear him; his mere presence somehow conquers; and the completeness of his democratic spirit, the many cordial links that seem immediately to bind him with the audience, put the last touch on the victory. Pascal gave the secret of his and every other orator's success. You expected to hear a mere speech; you are astonished and delighted to find yourself listening to a man.

And then there is the wonderful record of the man to serve as a further bait. What is there that he has not done? He seems to have touched life at all possible points. He has held the two greatest of English offices—he has been both Prime Minister and Foreign Secretary. He was the first chairman of the London County Council. He has written brilliant books. He has won the Derby; he ended the great coal strike; he captures prizes by the dozen in all the leading agricultural shows; he is a conspicuous, welcomed, dazzling figure in society; and there is hardly a subject, from street advertisements up to imperial politics, on which he has not spoken. Windsor knows him no better than Whitechapel, and Whitechapel no better than Windsor—in both he is equally at home, equally popular, and equally puzzling. Queen Victoria declared him a heaven-born Foreign Minister; Bismarck was open in his admiration for a man with a will equal to his own. He is apparently supreme in everything he cares to do or to attempt. Praise, honors, splendid triumphs, have come to him almost, one might think, without his making an effort to meet them. Besides this, he is a lord, and a wealthy one, with three or four large estates in England and Scotland, each a centre of brilliant hospitality. Small wonder Englishmen flock to listen to him or prize him as the most gorgeous and fascinating nobleman of the day, a reincarnation, it would seem, of those glittering beings who sauntered so carelessly and so magnificently across the stage of eighteenth-century politics. And then apart from his personality and his achievements and his superb gift of eloquence, he has this extra attraction that people can hear from him what they can hear from no one else. There is never anything querulous or petty about Lord Rosebery. It is astonishing to reflect that in all his speeches he has never once given away to that passion for small faultfinding which is the bane of Mr. Chamberlain's harangues. He never distorts the truth of things to serve a merely partisan end; he is not eternally preoccupied with praising this faction and running down that, with attacking an opponent and defending himself. He has won his title of "Public Orator" as much through his knack of giving expression to the midway convictions that are too sensible to be the property of either party, as through the inimitable style in which he is able to present them.

Is this a merit or a defect? Is there any firm and lasting place under the party system for a man of Lord Rosebery's dispassionateness, for a man whose intellectual honesty recoils from the extremes that a party demands? Are not politics for the one-ideaed men, or at least for the men with one idea at a time, like John Bright and McKinley? The great trouble with Lord Rosebery is that he cannot be a thoroughgoing partisan. He sees both sides too clearly; all his mental instincts are at war with fanaticism, exaggeration, bias of whatever kind. Of course there are moments when a man with these instincts is of the utmost service to a nation. Many such moments occurred during the Fashoda crisis and the first few months of the Boer war, and Lord Rosebery turned them to memorable use. He alone seemed able to seize on the secret wishes of the nation, to lift himself free from party prejudice, and speak for the people as a whole. It was a real public service that he rendered then, just as effective and needed in its way as Lord Roberts's victories. But can a position such as this be held permanently? Lord Rosebery seems to think it can. He looks forward, apparently, to playing the part of an intermediary between the two parties, of a man concerned only with the national views of the matter, and so voicing the opinions of the bulk of his countrymen. To an outsider that looks too much like giving up to mankind what was meant for one's party.

After all, there never has been, and there is never likely to be, a great political leader who was not on occasion a ferocious partisan; and until Lord Rosebery is able to simplify himself, and nail his colors to some inspiring prejudice, instead of perpetually talking common sense, he must always be in conflict with the root principles of the party system. Moreover, he has another failing—he lacks imperiousness, the last touch of nerve and insistence. He can only lead when others are ready and even anxious to follow; he cannot coerce a mutinous or discontented group into accepting his *ipse dixit*. His training and temperament have made him a statesman, but not a politician. To be a successful party leader one should be both; at any rate, one has to be the latter. That is why so many Englishmen meet any question as to Lord Rosebery's future with a shrug of the shoulders.

Correspondence

THE SALARY OF THE PRESIDENT.

CAMBRIDGE, MASSACHUSETTS.

To the Editor of Harper's Weekly:

SIR,—In your late issues of HARPER'S WEEKLY you have on several occasions expressed your opinion that the salary of the President of the United States should be raised. In your several articles you have practically said nothing more than express an opinion. I hope in the future you will give us some facts in detail from which we can form an opinion.

It is true you have attempted to support your opinion; but you certainly will not contend that the facts and reasons you have given warrant your conclusions. You say, in the first place, that our President should receive a larger salary because his salary is small when compared "with the sums paid in much poorer countries for minor services."

You mention the fact that the Governor-General of Canada, a mere figure-head gets $50,000; and that President Loubet, a mere dummy, gets $250,000. From these facts you argue that we should pay our President more. I need only state the facts and the conclusion, and let any one judge whether your conclusion follows. To say that, since other countries are so foolish as to pay figure-heads large salaries, we should pay our President a larger salary, is certainly not the kind of logic that appeals to the average American. Secondly, you say, $50,000 is "unreasonably *small* when compared with the dignity and importance of the office." To measure "dignity and importance" in terms of money is adopting a standard which no high-minded person can conscientiously accept. We certainly hope no man will ever be President because he feels he is getting his money's worth.

The greatest people do not work for pay. They work because they love to work, —to do their duty. It is such people we need; and let us not make the office of President an example of that which we do not approve.

What considerations, then, should determine the salary of the President? Let him be so placed that he may serve the nation, and represent the kind of citizen we are proud of. The Americans rely on the intelligent middle class. It expects little from the aristocracy with its sumptuous living, nor from the extreme poor with its injurious habits. Let our President, then, represent the middle class. Let his state dinners be such that all who eat them become stronger in body and mind. Let everything be so arranged that he may better serve the people. To decide this we must know the facts in detail. We should know the expenditures he makes, and for what the money is expended. From these facts we should preserve those that help along the good; we should destroy those that tend to the bad. It is these *facts* we ask for. And will HARPER'S WEEKLY kindly supply these for its readers; or tell us where we can find them?

I, am sir,

S.

"LADY ROSE'S DAUGHTER."

LAKEWOOD, NEW JERSEY, *March 13, 1903.*

To the Editor of Harper's Weekly:

SIR,—I suppose the majority of casual novel-readers skip through a story quickly; get an hour or two's pleasure or emotional satisfaction out of it; sum up their impressions of it in some such word or words as "delightful," "charming," "most interesting," "dull," "stupid," "wretched stuff"; and then forget it. I confess that this has often been my own unintelligent way of reading; and it was in this spirit that I began to read Mrs. Humphry Ward's latest book, *Lady Rose's Daughter*. But the narrative took such possession of me that when I had finished it, I could not put it aside and forget it. I turned the leaves over again and again, seeking to analyze the power in the book and discover the secret of its effect on my mind. I wonder whether you and your readers would be interested in these amateur efforts at criticism. Here are the notes I made:

To me, Mrs. Humphry Ward is one of the greatest of living authors and in the vanguard of women writers of all time. I thought I had forgotten other books of hers which I read when I was too young to appreciate them. But I find I still have a vivid impression of the power and greatness of *Robert Elsmere* and *The History of David Grieve*. Looking back at these and at the book before me, I am struck by the following qualities in the novelist: her wide range of sympathy and understanding; her ability to deal with any *milieu*, high or low; the richness of her mind; her profound knowledge of life and the human soul; her extraordinary culture and urbanity; her rare combination of great intellect, great heart, and great constructive imagination; her unerring artistry; her steadfast sincerity; her dramatic force, precision, and intensity (the drama always seems to come directly and inevitably out of the circumstances); her faculty for character delineation; her subtlety without obscurity; her frankness, integrity, courage, and ability to handle delicate situations; her firm, strong, supple style; and, in general, her masculine power and feminine sensibility. What could be more subtle than her way of showing how Julie Le Breton's delinquencies were the outcome of her circumstances, how the false conditions of her life exacted false little actions in defence—"the doublings and ruses of the persecuted"? And what more satisfying than the manner of the fulfilment of the hope that "poor Rose's tragedy would at last work itself out for good"? In the author's words, "How strange, romantic, and providential!" I think I understand something of the secret of the fascination of one book, at any rate.

I am, sir,

A. R.

READING FOR CHILDREN.

MT. VERNON, INDIANA, *February 14, 1903.*

To the Editor of Harper's Weekly:

SIR,—In regard to the reading of fairy tales by children, will say the mind grows by what it feeds upon. Take a bright imaginative child, feed it up on fairy lore, and you produce an abnormal condition of the brain. Give the child plain history, practical facts, geographical studies, the multiplication table, and you safeguard the young mind, and open to it possibilities of usefulness.

Many children of the present generation have drifted into useless lives from the reading of impossible stories. Thirty years of my life I have been associated with school and library work. The children who devote their early years to useful studies are the men and women who are filling useful and honored places in life, while those who read fairy tales are still expecting the impossible. The Good Book says, as the twig is bent the tree is inclined.

I am, sir,

MRS. M. ALEXANDER.

THE TRUTH ABOUT ART.

METROPOLITAN MUSEUM OF ART,
NEW YORK, *February 8, 1903.*

To the Editor of Harper's Weekly:

SIR,—At last something has been said about art that is worth while. No greater favor could be bestowed on the American public than this article, in HARPER'S MONTHLY for February, by Jean Léon Gérôme.

The two great words, Truth and Work, are sadly needed in the life of the New York artists to-day, who have followed too much the devices of the labor organizer, and have banded themselves together to escape both truth and work. Few have withstood this unfortunate present tendency, but the few who have are the great sons of art in America.

Many painters and sculptors are considered great when they are only clever copyists, who with considerable ability appropriate the ideas of other to their own advantage, not caring to make the vigorous personal effort to see truth and to work honestly.

The art critic is very often a man who has failed in being recognized as a literary man, so he enters the new effort with clouded mind, determined to make himself felt, because it is so easy to write in a sarcastic vein about a picture or work of sculpture when one really knows very little about either.

The editors of magazines and great dailies are men of rare intellectual ability, but short on knowledge or appreciation of good art,—too often their measure of an art critic is whether he can amuse the public. The idea of instructing or calling attention to good works of art has not yet reached the editorial rooms.

The public who are willing to learn about art are fed, in the newspapers and sometimes in the magazines, by opinions, not knowledge, of this important branch of human effort. The fault-finding critic rarely points out beautiful, well conceived, well executed works of art, but calls attention to trivial faults, and indulges in useless comments.

Much of the wealth of this country is diverted from art because of the constant foes' attitude of the modern art critic and his tool, the press, who degrade art in the eyes of the public. If some one with a mind like Pericles would show the robber politician how he could redeem himself somewhat by spending a part of the public funds for great art and encourage individual men of genius, it would not be long before American art would take on its true color.

No one who has not devoted his life to American art can conceive in the slightest degree the almost eternal discouragement set up by the newspaper art critic of to-day, who, in a most thoughtless manner, assails without due consideration the sacred work of men of genius. Without any creative ability himself, with little or no knowledge of art, he proceeds to demolish at one stroke the work of the artist, who may have spent years in training to produce art that finally becomes recognized by the public, held back too often by the ignorance of men who write.

The American artist is a great artist. All he needs is continual encouragement and public belief in him, and to be let alone to do his work unhindered by art-reform organizations and the meddlesome art critic. Even he cannot prevent the strong vigorous march of our great men of genius: for art is greater than men—it is the life of man.

I am, sir,

F. EDWIN ELWELL.

The Canterbury Club Tales

By James MacArthur

THE Canterbury Club owed its existence to a revolt on the part of certain members of the Fortnightly Jaunts. It was all very well, they said, to study Chaucer and Shakespeare and Homer and Dante, but how were they ever going to understand their own times or follow the trend of thought to-day if they neglected the books of the hour?

"It's like burrowing among the fossils and fungi in the heart of an ancient wood," said the Sentimentalist—who had a weakness for pretty similes—"while the sunlight beckons just beyond where the meadows are sweet and bright with Nature's fresh gift of flowers."

"For my part," quoth the Humorist, "I vow never to read another book that is more than a year old."

The Scholar smiled a wise smile, the Matron frowned, the Cantankerous Critic growled, and cries of indignant protest arose from several members. But the alluring metaphor of the Sentimentalist had done its work. She was a sweet girl graduate, fond of talking of the joy of life, the light that never was on sea or land, and of quoting poetry and Stevenson. It was she who suggested the name of the new club as a concession to the old one—they were then deep in Chaucer. It caught the fancy of the Humorist. "Agreed," said he, "and we shall call our studies the Canterbury Club Tales."

It was also agreed that they should meet once a fortnight, like the Jaunts, and a list of the latest books was drawn up for consideration at their first meeting, as follows:

The Star Dreamer. By Alice and Egerton Castle (Stokes).

The Circle. By Katherine Cecil Thurston (Dodd, Mead).

Calvert of Strathore. By Carter Goodloe (Scribner).

The Turquoise Cup. By Arthur Cosslett Smith (Scribner).

The Light Behind. By Mrs. Wilfred Ward (John Lane).

In the Garden of Charity. By Basil King (Harper).

Lady Rose's Daughter. By Mrs. Humphry Ward (Harper).

Veronica. By Martha W. Austin (Doubleday, Page).

Youth. By Joseph Conrad (McClure, Phillips).

Lees and Leaven. By E. W. Townsend (McClure, Phillips).

The eventful night arrived, and the Sentimentalist was called upon to lead the discussion with

"The Star Dreamer"

"It is some years now," began the Sentimentalist, "since Alice and Egerton Castle, wedded in genius as in their lives, made us their debtors by that spirited romance, *The Pride of Jennico.* Since then they have added to our indebtedness by some half-dozen books of thrilling adventure and romantic interest. *The Pride of Jennico* found its way inevitably to the stage, and, if rumor be true, *The Bath Comedy* will soon follow with a celebrated actress as the stellar attraction. The title of the new book is characteristic—*The Star Dreamer.* Like the lightkeeper in *The Light of Scarthey,* these modern romancers may be called 'Dreamers of Beautiful Things.' *The Star Dreamer* is a tale of well-nigh a century ago, when George III. lay dying; a strange tale of star-gazing and alchemy, of sinister schemes and evil plotting; and in the midst of it all, there stands the Garden of Herbs with its ancient gateway, locked against all comers except Love and its haunting secrets. Into the dark shadows of Bindon and the ghostly fancies of its young master, Sir David, enters Mistress Ellinor Marvel, daughter of Simon Rickart, simpler and alchemist, who, in his underground chamber, lives as silent and solitary as the star dreamer in the tower. 'Do you not see,' cries Ellinor to Sir David, as they explore the dim old house, 'that all shadows give way before my hand?' And the passage of Ellinor—Euphrosine, as David learned to call her, meaning 'Star-of-Comfort'—through these pages is like unto her passing along the shrouded corridors and long desolate rooms of Bindon. Everywhere light and freshness break through the darkness and oppression; mirth and music, and love at last, breathe new life and brilliance into the faded splendor and silent, weighted atmosphere. 'Ghosts!' repeats Ellinor, answering the disordered fancies of David's troubled mind, 'the ghosts of Bindon are rust and dust and emptiness and silence and neglect. God's light, dear cousin, and the wood airs, the birds' songs, soap and water, stout hearts and true, and good company—give me but these, and I'll warrant you I'll lay your ghosts.' But it was not only the House of Bindon that had to be cleared of ghosts—that was an easy task as compared with the ghosts in David's House of Life which it was Ellinor's long and sorrowful task to exorcise. At last the hour struck when her lord and lover emerged from the blackness, and she was able to say: 'The dream-life is over, David. We stand upon the threshold of the golden chamber. Shall we not enter?'"

The Sentimentalist seemed pleased with herself; not so the Cantankerous Critic. "Humph!" he growled, as she finished. "I am bound to say that *The Star Dreamer* inspired in me no such feelings. That our young friend is sincere in her enthusiasm I do not doubt; the secret of it is to be found, I suppose, in that freshness and simplicity of mind and sentiment characteristic of her ebullient youth. She is unconscious of any trick, any charlatanry of letters on the part of these authors. In point of fact, the story is unreal and hysterical, a thing of sentimental shreds and patches. What respect could a lover of letters have for the writer of such a sentence as this, for instance: 'Upon her moonless brow this autumnal night wore a coronal of stars that might have shamed her later glories'! And this is a fair sample of the whole fabric. As for the gruesome ingredients that make up the story—I could almost believe I was back in the days of *The Mysteries of Udolpho.*"

"In defence of my cloth, you will permit me to say," exclaimed the Young Clergyman, somewhat hotly, "that it is always in questionable taste, to say the least, to make a minister of the gospel a butt of ridicule and to cast discredit on his mission, unless by so doing it is intended to stigmatize evil characteristics unworthy of his calling. The purpose of the authors of *The Star Dreamer* in putting forward Parson Tutterville and his canting wife seems to have been a humorous one, but it only succeeds in becoming offensive. No person, however crazy and eccentric—and the parson's wife was neither—would be capable in all seriousness of making such a gross travesty of scriptural quotations as 'All flesh is hay,' or 'Him whom He loveth, He blasteth.'"

"For my part," said the Scholar, "a book like *The Star Dreamer* causes me to wonder at the folly that creates a demand for such literature. Literature, did I say? There is no semblance of literature in it."

"You forget the poetical quotations," quoth the Humorist. "They adorn every page almost."

"Oh, I don't know," mildly protested the Merchant. "*The Star Dreamer* may be moonshine and mel'drama, but it helps to lighten a humdrum existence—"

"Makes it harder to bear, you mean," interrupted the Matron, severely. "Especially when a riotous sentimentalism is made to take the place of pure love, and girls are told that 'the real lover is a genius,' and in italics, too! None of my daughters shall read it."

The Humorist smiled tolerantly. "Suppose we go on to the next book," quoth he.

"The Circle"

"*The Circle,* as a story," resumed the Sentimentalist, "has the distinctive novelty of being unlike any novel I have ever read. And yet its interest is not confined to the working out of its plot: it has, at least, two characters of striking personality: Anna Solny, the little witchlike daughter of an exiled Russian Jew living in a London slum, who becomes a great actress; and Mrs. Maxtead, who has a 'capacity for exploiting clever people, while never claiming cleverness for herself.' Mrs. Maxtead recognizes Anna's great gift, and persuades the girl, through fear of exposing a poor hunted Austrian who has taken shelter in her father's house, to turn her back on her home and give herself up to Mrs. Maxtead's plans for her education and training for the stage, from which the clever woman looks to reap a rich reward ultimately. Anna becomes famous. She returns to England, and retires to a sheltered spot on the Cornish coast with Mrs. Maxtead for a brief rest before making her début in London. Here she meets Maurice Strode, and a whim seizes her to keep him in ignorance of her identity. They become betrothed, and she is on the point of revealing her secret, when her lover relates to her with withering scorn and contempt the story of Anna Solny's desertion of her father and the friend who loved her, as he had heard it by chance. She goes away without telling him. He recognizes her a few weeks later on a London stage; she disappears, but eventually he tracks her to her old home. The circle is complete, but love guides Anna to a new trial of life."

"Anna Solny, in my opinion," curtly rejoined the Cantankerous Critic, "is an impossible character. In fact, she corresponds with the book itself, which is artifice, not art, but very clever artifice. Mrs. Maxtead is more natural; she is a clever satire on the woman who soars on others' wings. Much has been made of the author's sage remark: 'In youth we dream that life is a straight line; later we know it to be a circle in which the present presses on the future, the future on the past.' Very prettily put, and somehow there's a bit of truth awry in it. But *The Circle* is, as the result of such a proposition, an arbitrary circle. The book left me cold, chiefly, I think, because the heroine is unconvincing."

"Now, I think she was just splendid," said the Matron. "And Mrs. Maxtead was a heartless, worldly woman, and it was all her fault that trouble came to Anna. The only good thing she did was to introduce Anna to

Maurice Strode, a fine example of the stolid, English gentleman, who is a man of feeling when his heart is moved. All I have to say to the Cantankerous Critic is that if he doesn't like *The Circle*, I'm sorry for him. It was quite exciting at times, and one did feel so sorry for the poor Austrian Johann, who loved Anna with doglike devotion, coward though he was. I shall certainly tell my daughters to read the book."

"In the Garden of Charity"

"I didn't care much for *The Circle*," said the Merchant. "I found the heroine rather trying. I suppose the book is clever, and I'm a fool not to see it, but it didn't take hold of me. Now *In the Garden of Charity* affected me so that I forgot it was only a novel, and I felt as badly for those two women as if they had been my own kin. I think it will always make me more tender toward women. One sees how much they suffer in their blundering devotion and misplaced affection."

The Sentimentalist gave him a look of gratitude, and the Matron blinked.

"The Merchant is right," said the Young Clergyman. "*In the Garden of Charity* is a book that teaches a grave and necessary lesson without obtruding it as a message. To me it is a matter of gratification that fiction should be used to such noble ends. Charity is a word that is often on our lips, but seldom in our hearts. We do not begin to realize the depth of its meaning, the beauty of its virtue, until a story such as this presses home the reality and beauty of its truth. The experience revealed in this book is as real as if it had actually happened; it has happened, it is always happening, had we but eyes to see and ears to hear. I should like to commend the touching conclusion of this most human story to the Matron; she will appreciate it, I am sure. Charity was the wife of William Pennland years before he deceived Hagar Levanti into marriage with him. The man dies. The two women come together, and for some time Charity shelters Hagar until her baby is born. As the baby grows Hagar becomes jealous, and steals away. Charity overtakes her, and completes her conquest of Hagar by an exchange of wedding rings. 'In the kingdom of Heaven,' said Charity, 'there's no more marriage, nor giving in marriage; but we'll all be—you and me and William and the baby, and all of us—we'll all be as the angels of God.' 'Take the baby,' Hagar whispered. 'No,' said Charity. 'You take him. We'll carry him home together.'"

The Matron furtively wiped away a tear.

"It is one of those books," remarked the Scholar, after a pause, "like *Silas Marner*, which make a direct appeal to mind and heart by their very simplicity and elemental humanity—books which we read again and again when the mood they command returns."

"That is so true," exclaimed the Sentimentalist; "for although the scene of action is confined to a remote spot on the Nova Scotia coast, and the characters are few and far removed from civilization, yet the book makes a lasting impression, and clings to one's memory like an actual experience. Every page is warm with feeling that stirs the heart, and calls forth the deepest sympathy. The two women, Charity and Hagar—symbolic names!—deceived by the same weak, fickle man—how they appeal to the old fundamental instincts of human nature! Yet how opposite each is by nature and character. One pities Hagar, but Charity calls for love and admiration. It is all so human and true; yet so finely wrought and finished by the unerring artistry of a cunning craftsman. *In the Garden of Charity* is a book that will live."

"The Sentimentalist comes nearer the truth when she praises *In the Garden of Charity*," conceded the Cantankerous Critic. "It deserves her commendation. It is not a second *Silas Marner*, but if it does not live, as she says it will, I see no reason why it should die. I grant that it has that something in it which keeps a book alive in the recollection of successive minds. But what has she to say to *Veronica*, I wonder?"

"Veronica"

"I found the story of *Veronica* a little slow," replied the Sentimentalist, "but what it lacks in action it possesses in feeling. There is the feeling for nature in the beautiful land of Louisiana, and also the feeling for beauty. It is the sad story of a girl whose passion for perfect beauty and love brings disillusion and trailing banners in its wake when she finds her lover wanting. She is an idealist who is brought to earth, broken-winged. The solitude of her heart as it is laid bare in these pages will find an echo in many a woman's empty life. The process is almost too intimate and delicate; it hurts with the pain of a personal revelation. But in the end 'some spirit of nameless beauty and sadness and fine unfading truth' descended upon her, and her heart became strangely still with a new-found peace.'"

"I have no patience with Veronica," broke in the Matron, hastily. "She was a spoiled darling, and little wonder that Haven grew tired of her airs and high-falutin fancies about the 'passion of beauty.' Veronica, we read, 'was secretly pained that Haven should not distinguish between the semblance and the spirit, that he should not realize that at heart her own life was deeply and truly religious; that it should be the artistic and not the spiritual side which appealed to him.' Haven was too busy doing an honest man's work in the world to split hairs over the artistic and the spiritual, or to douche his common sense in the vapors of a girl's idle dreams of ideals and the perfect man. It's the old story of Sense and Sensibility. Anna Solny was a far different type of girl. She did things, while Veronica sat with folded hands and dreamt them."

The Cantankerous Critic smiled grimly. "The Matron is quite right," said he. "*Veronica* is not only slow, as the Sentimentalist admits, but footless. It gets nowhere, accomplishes nothing except to expose a sentimental feminine egotist. And the style—well, it has none. 'Bayou, that is what you call them down here, isn't it?' remarks Haven to Veronica. 'It's such a nice word, *by-you*.' 'How silly you can be,' she said. I echo the sentiment."

"Lady Rose's Daughter"

"When I come to speak of *Lady Rose's Daughter*," resumed the Sentimentalist, consulting her notes, "words seem to fail me with which to express the joy, the delight, the deep satisfaction it has imparted. There is a quality in its thought and style which at once uplifts the mind, and raises appreciation to an unwonted intellectual level. This is what, I suppose, the Scholar would call Distinction. It is like getting away from the books one has been reading as they fly from the press, and taking shelter for a while with, say, *Middlemarch* or *Daniel Deronda*. Yet, even *Lady Rose's Daughter*, despite its intellectual elevation, is less weighted with ponderous thought than these later novels of George Eliot. And Julie Le Breton — what woman is there who does not feel she is alive! Every heart-beat of emotion, every throb of moral conflict, every thrill of fear, of courage, of hesitation, of daring, must find a quick response in the breast of the woman who has lived and dreamed and hoped and loved. All that Julie was, other women are, if not actually, then potentially. It is not the experience that counts, but the temper of the soul behind the experience. Julie might stand alone, isolated, so far as externals go, or as her career is concerned, from all other women; but in heart and soul she touches universal womankind. It has been said that women will condemn her, men condone her. It is not so. Men will admire and condone, perhaps, even when moved to criticism; but women will understand—and love her."

"Mrs. Ward, I admit, has taken my breath away," observed the Cantankerous Critic. "Truth to tell, I have never had any great liking for that lady's fiction, though I have admired her earnestness of purpose, for the reason that I deprecate the special pleader in fiction. I opine that the propaganda of theology or social amelioration has as much right in the novel as preaching has on the stage, or acting in the pulpit — a by no means rare exploit. The novel is for pure uses of the imagination, and this is what Mrs. Ward has acknowledged at last in *Lady Rose's Daughter*. We have been impatient with her, but this was worth waiting for. It is a great novel, and by that I mean that it has nothing in common with the ragtag and bobtail of ephemeral fiction of which some of you seem so fond; it belongs to the aristocracy of letters: Julie Le Breton is one of the great ladies—that is why we all bow down to her. It is very simple, this accounting for the unanimous homage paid to her. A great lady commands the earth. I have a sneaking regard for Captain Warkworth. That may surprise you, but he wasn't such a bad fellow, come to think of it. He was meant to be a smiling, sentimental villain; Mrs. Ward tried to make everybody tell you so, but she herself, dear lady, was by temperament incapable of creating the part. I am not quite certain that Julie didn't fall when she tripped over the line, but Mrs. Ward took care she shouldn't."

"I must confess," said the Matron, "that my confidence in Mrs. Ward was shaken for a moment when I reached that point in *Lady Rose's Daughter* (I read it in the Magazine first) where Julie made an appointment with Captain Warkworth, and was on the eve of yielding to temptation. I told my daughters they were not to read the next instalment until I myself had first examined it."

"I'll bet they read it, just the same," murmured the Humorist.

"But I need have had no fear; Mrs. Ward knows what is due to a self-respecting family. Julie is a dear, lovable girl, but there were times when I'd like to have shaken her. I think she tried Lady Henry sorely, and I simply don't understand how she could ever tolerate that scamp Warkworth. But she suffered for her heroworship, poor thing! and I'd like to believe that Jacob Delafield made it up to her after they were married; but I'm not so sure that she was always happy. Julie had a strong maternal instinct in her nature, and her deepest joy in life would come from the mother-love. Her hope for happiness, I should say, lay in her having a large family of sons and daughters."

"I don't know what you call a great novel," blurted the Merchant, "or great literature and all that sort of thing—I leave that to the Cantankerous Critic—but I tell you *Lady Rose's Daughter* is the greatest story I have read since in my young days we were all reading George Eliot's novels. Julie is a brick of a woman, and no mistake. She's the right sort. Even if she had gone off to that little French place with Warkworth, I could find it in my heart to forgive her, notwithstand-

ing our dear Matron's fear of impropriety. I don't know much about these things, but it seems to me that Julie wouldn't be the woman she is to all of us if Mrs. Ward hadn't shown us that she was capable of supreme sacrifice and surrender as well as of superb self-control and self-mastery. You may talk about woman being the weaker vessel, but a woman like Julie shows that her very strength lies in her weakness, and that it is the woman who has to fight and struggle, and that the issues of right or wrong are in her hands. I suppose I am getting a bit serious about this, but I tell you, when a book takes hold of a well-seasoned old fellow as if it were a living thing, there must be something big and strong and noble in it."

"If it is the function of the critic to separate the letter from the spirit," observed the Young Clergyman, with fine unction, "it is the function of the moral and spiritual guide to try the spirits, whether they be good or evil."

The Humorist took a sip from his long glass, and winked slyly at the C. C.

"Our good friend, the Merchant," continued the Young Clergyman, "need not be ashamed of his seriousness. His sentiments do him honor. No one could come under the noble elevation of Mrs. Ward's thought without being impressed with that high-minded seriousness which is characteristic of one of the most sincere and thoughtful writers of our day and generation. The influence of Mrs. Ward's work is incalculable for good; there is always a lofty purpose, a high ideal, a spiritual ecstasy in her view of life. That influence is not less, but greater, because she has preached less, so to speak, in *Lady Rose's Daughter*. She has been content to set her characters in motion without commentary or reflection upon their acts; and by their conduct of life we learn life also, its temptations, its struggles, its purposes, its true aims and aspirations. In *Lady Rose's Daughter* there is no question of creed, no problem of social amelioration, no specialization of mission or purpose; it is a drama of the individual, a life history of a woman's soul, a book of life."

"The Light Behind"

"Why is it," inquired the Cantankerous Critic at this point, "that English novelists always repair to Italy with their heroes and heroines, when they want to play to soft music and low lights? *The Light Behind*, by Mrs. Wilfred Ward — another Ward, I see — carries us to Italy, as does *Lady Rose's Daughter*, to help unravel the tangled lives. And in both cases the problem as it would face us in life is dodged; death is made to cut the knot. Henry Daere loses Lady Cheriton, the woman nature chose for him, and marries the wrong one for sentimental reasons. We know what happened to Julie. Who will dare to say that Jacob Delafield was the right man? *The Light Behind* is a good novel of the English sort; it has finish and style and firmness of thought and feeling. It reflects a section of English Roman Catholic life and culture which exists in and about London to-day, but it belongs to the same school of fiction as *John Inglesant*, and I have little patience with the cult."

"Nevertheless," rejoined the Scholar, "as a critic you must acknowledge that *The Light Behind* has an intellectual ease and charm which one seldom meets with in an American novel of manners. The conversations are so natural, yet distinguished, so lightly handled with a familiar touch-and-go, yet pregnant with the utterance of deep thought and conviction. It rests on a high level of aspiration and worthy idealism; the consciousness of power to uplift and regenerate resides in the mind that impels and projects its imaginary characters and conditions of life and thought. The strong, rugged figure of Biddulph suggests, I may say, the late Mr. R. H. Hutton of the London *Spectator*. The description fits him: 'The unwieldly, bulky form, in untidy, ink-stained clothes, and collar of uncertain form, shaggy beard and rough hair, with dim eyes almost lost under heavy brows.' And those who knew his personality will recognize the truth of this revealing picture:"

The Scholar opened the book at page 274, and read: "'Mr. Biddulph hurried down to the Stanleys at Folkestone, and gave up his holiday in their service. He had his reward in his admiration for the dying man, in whom he divined a sanctity and a spirituality that others might not have seen. It was not patience, but joy, that shone from the ordinary features and dull eyes of the suffering old man of business. And as Mr. Biddulph sat by the bedside, with an awkward tenderness in his dim eyes, peering at the bottles, and the fan, and the fruit with which he was unequal to dealing, he felt that strange glow of triumph which is infectious in the near neighborhood of martyrs. Pursuing his dim and perilous way amid the unbeliefs, and the foolish beliefs of his day, and of his society, Biddulph had passed on undaunted; but simplicity of faith had not been possible to him. His feet were on a rock of confidence in God, and his mind was infinitely reverent and patient of apparent mystery. But he had known few moments of such soul sunshine as these.'"

Closing the book, the Scholar continued: "There you get a spiritual glimpse, as it were, of the able editor and critic who wrote *Aspects of Religious and Scientific Thought* and *Contemporary Thought and Thinkers*. For this one portrait alone *The Light Behind* would be a precious book to me."

"Calvert of Strathore"

There was silence when the speaker concluded, like one who had struck out on a lonely path where none else walked. As if seeking to regain his companions, he reached out his hand for another book, and went on in his shy manner.

"I am delighted to find in the list of books that have come under our consideration even so many that possess more than passing charm and power. Now here is one — *Calvert of Strathore*, it is called — a story of the American legation in Paris when Thomas Jefferson was our ambassador at the French court, and the names of many famous personages occur as well as several of these memorable persons themselves. The book is written with fine restraint and scholarship, and a sensitive appreciation of the gay life and momentous issues of that fateful hour in France's history. The aftermath of the American Revolution reverberates in the revolt of Paris with an historic value and sense of proportion that give distinctive power to the work as history as well as fiction. One is thankful for the natural march of events through which the story is construed without recourse to cheap bombast and sensational episodes."

The Cantankerous Critic nodded approval. "No doubt of it," said he, "*Calvert of Strathore* is an excellent piece of literary workmanship. The book interested me because of the period—the France of 1789—and the portrait of Mr. Jefferson which it presents. It is not a novel properly, but what might be called an historical biograph. I say I enjoyed it; the workmanship is fine and true, amazingly so for a first book—I have not encountered Mr. Goodloe's name before—but I wish there was some way of distinguishing a work of this sort from fiction proper, which it is not. I don't like being taken in, even when compelled to rejoice in the result."

"I am afraid I found *Calvert of Strathore* rather dry and uneventful," remarked the Sentimentalist, apologetically, "and *The Light Behind* seemed a bit tiresome. There was no love story to speak of in either book."

The Matron regarded the Sentimentalist with a severe eye as she replied in a tone of reprimand.

"*The Light Behind* and *Calvert of Strathore* were difficult reading, I admit, but I felt it my duty to acquaint myself with the state of society they depicted. What I say is that if one must read history one may as well get a knowledge of it in the pleasantest form, and a novel like *Calvert of Strathore* does make you feel so well informed after you have read it. And after reading *The Light Behind* I feel as if I had mingled in the best London society, and hobnobbed with prime ministers, and been behind the scenes of high life in ecclesiastical and political circles. I owe the author of *Calvert of Strathore* a grudge for one rash statement: 'It is so with all women,' he says; 'they hate to be put in the wrong, even when the doing so means protection to themselves.'"

"The Matron must concede, however," observed the Merchant, rubbing his hands complacently, "that the author proved his point. I liked it, and Madame de St. André certainly deserved it for the way she treated her cavalier. It was the frontispiece showing this same gallant young American's rescue of the fair lady from the dastardly attack of a French *roué* that caught my fancy and led me to read the book. I tell you, a good, strong, picturesque cover and a dashing frontispiece are the best bait for a tired man when he picks up a book to read of an evening. The story in *Calvert of Strathore* is all right, and I was pleased to follow the fine figure of our eminent statesman, Thomas Jefferson, in its pages. It is like meeting an old friend, this rubbing shoulders with a real personage."

"Lees and Leaven"

"By the way, I see that Mr. Edward W. Townsend," the Cantankerous Critic cut in, "not content with his failure to realize New York life in *Days Like These*, has made another futile attempt in *Lees and Leaven*. He hasn't done it, because it won't be done for a hundred years yet. The life of New York city is far too heterogeneous to cohere in a novel; it is a jumbled mosaic of many patterns, and no man living can make a clear design out of it. But Mr. Townsend is always vivid in touch when he describes some familiar bit of metropolitan life, or sketches in with a touch of caricature the side-tracked characters of the great city, such as the "sea-food man." He isn't a novelist, as he probably knows, but he can tell a good fairy-tale which is calculated to make the shop girl cease from troubling, and to give the typewriter a rest — for the time being."

"Well," responded the Merchant, "I liked Mr. Townsend's *Lees and Leaven*. I was interested in the machinations of the land grab for mining purposes, and rejoiced when that old skinflint, Bunton, got his deserts. I was sorry for his wife, though; she was a decent sort, and deserved a better husband and daughter. Mr. Townsend has a way of making you see things in New York that you have missed, although you have been familiar with them for years. I don't know whether it's a fairy-tale or a novel, but I do know that much of it is true, and you can't get away from it. The story of the lost deed and the runaway marriage and the mismated lovers finally matched in fine style may be more in the

Sentimentalist's line, but there are things more peculiar to New York concerning the various ways of getting a living that will interest those who know the life, and those who don't, but want to know."

The Matron was frowning at the Merchant in evident disapproval. "I'm not so sure of that," she retorted.

"I read Mr. Townsend's *Lees and Leaven* and finished it, because I had to find out how the story ended. But I'm not quite sure that I shall let my daughters read it. One has to make the acquaintance of such low people, and Mr. Townsend seems to accept with equanimity a deplorable state of irregularity not only among his low characters, but in society. One doesn't want to know these things nor to believe them, even if they are true. All I have to say is, if this is what New York life is like, the less we know of it the better, and I shall continue to keep my daughters in the country."

"But, my dear Matron," quoth the Humorist, "did you not say that you felt it was your duty to read these novels in order to acquaint yourself with the state of society they depicted?"

"It depends, sir," replied the Matron, tartly, "on the kind of society one is introduced to."

"Oh," quoth the Humorist, innocently, "then you define the 'proper study of mankind is man' to mean the best-regulated families?"

"Shall we proceed with the next book?" asked the Matron, ignoring the Humorist.

"Youth"

"Willingly," replied the Cantankerous Critic. "And I want to say that the book I enjoyed most of all was Mr. Conrad's *Youth*. 'Youth,' the first of the three stories that make up the volume, is one of the best short stories in any language. I would not have one word omitted. 'Heart of Darkness' is a little tantalizing at times, as the author keeps us on a still hunt trailing through the analytical processes of his mind, but the end crowns the effort. 'The End of the Tether' has more emotion at the heart of it than Mr. Conrad's stories usually have—I recommend it to the Sentimentalist, who seems to have skipped this book. One thing is certain: Mr. Conrad is the most vivid realist and the finest literary artist now writing in the English tongue. 'The august light of abiding memories'—what a spell of haunting revery the imagery of the phrase casts upon the mind!"

"Do you know," exclaimed the Merchant, "I haven't read anything in a long time that excited me so much as Mr. Conrad's story, 'Youth.' It was absurd the way it made me feel young again, and I saw all the world before me. Listen to this passage: 'And there was somewhere in me the thought: By Jove! this is the deuce of an adventure—something you read about; and it is my first voyage as second mate—and I am only twenty—and here I am lasting it out as well as any of these men, and keeping my chaps up to the mark. I was pleased. I would not have given up the experience for worlds. I had moments of exultation. . . . Oh, youth! The strength of it, the faith of it, the imagination of it!' That's the right stuff, I tell you. I'd like to have been young again, and in that youth's place at the pumps—pumping in that old tank of a boat for dear life."

"Speaking of Mr. Conrad," observed the Matron, "there is one thing I have to say, and that is he doesn't understand women, and perhaps he is wise in keeping his hands off the sex. He seems to have some old-fashioned notion that they are angels, and all that sort of thing, and altogether too good for human nature's daily food. In 'Heart of Darkness' he observes: 'It's queer how out of touch with truth women are. They live in a world of their own, and there has never been anything like it, and never can be. It is too beautiful altogether, and if they were to set it up it would go to pieces before the first sunset. Some confounded fact we men have been living contentedly with ever since the day of creation would start up and knock the whole thing over.' Now what I say is that if it wasn't for the practical genius of womankind the men would be nowhere. The first sunset, indeed! And it's queer, is it, how out of touch with truth women are? It's a gross libel, that's what I say. Why, it is her love of truth, her loyalty to the ideal, that keeps the world from going to pieces, as Mr. Conrad demonstrates, to his own utter confusion, at the end of this very story when he tells of the 'inconceivable triumph' of the woman's faith in the man who was unworthy of her belief in him. That is the tragic note in woman's history. But as Mr. Conrad remarks, the heavens do not fall for such a trifle."

"I concede the point to the Cantankerous Critic," suavely remarked the Young Clergyman, "that Mr. Conrad is a powerful literary artist, and a wonderful analyst of human motives and the dim, bewildering processes of moral deterioration. But I deplore the fact that a pall of pessimism lies on his work, and leaves a sad depression behind it. In fathoming the human soul, he has missed the truth recognized by George Meredith, that 'Somehow the light of every soul burns upward.' Browning, too, grasped this spiritual factor in life, and thereby breathed into his poetry a sane and lofty inspiration. 'Droll thing life is,' observes the narrator in 'Hearts of Darkness'—'that mysterious arrangement of merciless logic for a futile purpose. The most you can hope from it is some knowledge of yourself—that comes too late—a crop of unextinguishable regrets.' It is this spirit of submission to an inexorable fate that gives to his writing 'an impalpable grayness,' to quote his own phrase, 'a sickly atmosphere of tepid scepticism.' In the third tale, 'The End of the Tether,' it appeared as if the author were about to vindicate himself. The portrait of the fearless, enduring, loving old Captain Whalley is a noble one. 'He trusted his Maker with a still greater fearlessness—his Maker who knew his thoughts, his human affections, and his motives.' But that very simplicity and trust which was like a delicate refinement of an upright character, and which in such a nature would have upheld his faith in the inscrutable ways of Providence, is traduced in his dark and bitter hour when all his life seems fallen into the abyss, and for no purpose except to justify the theories of the pessimist. 'God had not listened to his prayers. The light had finished ebbing out of the world; not a glimmer. It was a dark waste.' A waste! Not so, as the Apostle says, have we learned Christ."

The Cantankerous Critic sniffed scepticallly, but the Scholar let his hand rest on the Young Clergyman's shoulder. It was a frequent assertion of his, quietly affirmed, that what the world needed most of all in its young men was a passion for earnestness.

"It may be that Mr. Conrad is a pessimist," the Scholar began, with that winning voice which carried persuasion, "but I submit that our young friend is inclined to take too gloomy and despondent a view of his pessimism. Besides, Mr. Conrad is frankly an artist, and we have scarcely the right to read into the life and words of his characters, the author's own creed. He has been a sailor himself; something of the sea has entered into his soul—'the vastness, the loneliness surrounding their dark stolid souls.' This something—call it what you will, if you can find a name for so subtle a quality as soul stuff—he has breathed into his pages through his sailors, as no one else has ever done in the literature of the sea. As for Captain Whalley, he was doomed to believe that all his spotless life had gone for naught when faced with the inevitable, but God knows, the author knows, and we know that his life was not a waste. We are richer for this very record of what he endured and passed through at the dark end, before the illuminating light of Eternity shone into his soul and flashed the truth upon him."

"Perhaps you are right," murmured the Young Clergyman. Be it said to his credit that his zeal was always tempered with a spirit of forbearance and tolerance.

"The Turquoise Cup"

"There is a little book in this list," continued the Scholar, "containing two exquisite stories which seems to have escaped your notice; I do not remember that any one mentioned it. The book itself is a thing of beauty to handle, but the tales are like gems, classic in taste and lustre, in their beautiful setting. The first story is called 'The Turquoise Cup,' and gives the title to the volume. The second is called 'The Desert.' I could not give you any idea of their rare charm, the stories must be read before they give up their fine secret, so imbedded is the charm in the style of the writer, like the subtle perfume and delicate coloring of a flower. The Clergyman might not quite approve of the Cardinal in 'The Turquoise Cup,' or of Abdullah and his Moslem bride in 'The Desert,' but I have faith in his humanity to discern and, at least, apprehend, if not approve, the stuff in them of which our creeds are made."

The Humorist moved that the club adjourn, and it was so ordered.

The Age of Display

["We are a nation of shopkeepers, but so are the other nations, and we have to put everything into the shop windows like our Western cousins or we shall lose our trade."]—The Tatler.

THIS is the age of display,
Every one turns advertiser;
Posters are needed to-day
Even by King and by Kaiser.
Do not be frigid and proud,
Act as your cousins and kin do;
Capture the eye of the crowd—
Everything into the window.

Have a procession a week
Stopping the workaday traffic;
Victories, won by a squeak,
Give you excuses to maffick.
Get up a gorgeous durbar,
Greatly impressing the Hindu,
Showing how splendid you are—
Everything into the window.

Live in the front of your shop,
That is the aim to arrive at;
Traders will come to the top
When they have nothing that's private.
Write to the papers, of course,
Put all your history in, do—
Marriage and death and divorce—
Everything into the window. '

Books and Bookmen

ONE never grows weary of gleaning fresh reminiscences of Charles Dickens. The broad humanity of the man in his books brings him very close to every one of us, and it is always with keen interest we alight on some fresh scrap of information or recollection that interprets anew his personality or explains the relationship existing between certain of his characters and their prototypes in real life. It will astonish many readers of *Little Dorrit*, to whom the "child of the Marshalsea" has remained in imagination as Dickens portrayed her, the sweet and lovable child of a bygone age, to learn that "Little Dorrit" still lives, hearty and well, at Southgate, in England. Mrs. Mary Ann Cooper, now in her ninetieth year, was the original of Dickens's famous character, although there is no correspondence between the life depicted in the novel and Mrs. Cooper's, for she was never inside the dreary walls of the debtors' prison. Her father was a well-to-do farmer named Mitton, who lived in Hatton Garden, but who also had a place at Sunbury, where Dickens in his early youth was a frequent visitor. Mrs. Cooper points with pride to the bed on which she now sleeps as the one that young Dickens slept on when he used to visit her father in those days. She remembers him as a youth of high spirits up to all sorts of mischievous pranks. On one occasion, when staying with them at Sunbury, "Charles," as the old lady fondly calls him, borrowed some old clothes, disguised himself as a farm laborer in search of work, and so clever was his make-up that he completely deceived her father, a shrewd, keen man, who, not having employment for him, was persuaded to allow him a corner and some straw in one of his barns where he might pass the night!

A few years later the Mittons were living in Johnson Street, Clarendon Square, and the Dickens family occupied a house directly opposite. It was there that the acquaintance with "My Charles" ripened into the closest friendship between the young people. Mrs. Cooper's brother had been a schoolfellow of Dickens, and often assisted him in later years in law matters and in correcting manuscripts. They were at this period in the heyday of youth, and the garrulous old lady will tell you with glee how they used to call at a little place in the Hampstead Road, where the grandfather of the late Cecil Rhodes, "a grumpy old man," served them with milk; how after church Dickens would take her for a walk to "New St. Pancras Church," for the fun of staring at and "taking off" the pompous beadle who used to strut about its precincts. Dickens was a very clever mimic, and his imitation of the walk and bearing of the beadle always sent his companions into fits of laughter, much to the great indignation of this prototype of Bumble. "Once when we were out walking," she says, "I remember we met a procession of schoolgirls from a sedate boarding-school, headed by a very prim and severe-looking principal. Seeing an old apple woman near by, Charles bought up her stock, and slyly slipped two apples into the hands of each girl, and then stood innocently by when the horrified principal discovered her *very select* establishment munching apples in the street!"

Dickens had a habit of giving nicknames to his friends, as he had a way of bestowing literary names on his sons. His name for Miss Mitton was Little Dorrit. She cannot remember how he came to give her this name. "I only recollect that somehow I was always Dorrit with Charles. How did I come to get into the Marshalsea?" she repeats with pleasure. "Well, I cannot exactly say, but, as I have told you, Charles and I were, I think I may say, very fond of each other, and one day at home he told me: 'The next book I write I shall put you in it, and I shall call it *Little Dorrit*.' And, sure enough, he did." Mrs. Cooper has been a widow for over twenty years, and now lives alone in a little room full of flowers and knick-knacks and photographs, with one notable portrait of "My Charles." She is always pleasant to visitors, and delights in recalling the happy memories which cluster about her intimate friendship with the great novelist.

Mr. Henry James is very much with us these days. He is a most indefatigable writer and spinner of tales. It is only the other day that we had from him *The Sacred Fount* and *The Wings of the Dove*. And now comes a volume of stories, *The Better Sort*, while in the pages of the *North American Review* he continues to weave the web of

Henry James as Max Beerbohm sees him

The Ambassadors. "If what your Majesty commands be possible, your Majesty may count it as already done. If it be impossible, your Majesty may rest assured that it shall be done." This historic answer of the French courtier was quoted once by Mr. Henry Harland as symbolizing, in a way, the attitude, or at least, one of the attitudes of Mr. James toward his art. He is constantly undertaking the impossible, and constantly achieving it. As a critic, Mr. James more than once has reminded us that the writer of stories is, after all, first a painter of pictures. Most painters of pictures prudently confine their efforts to the representation of the wholly obvious; a few more intrepid spirits — Childe Rolands approaching the Dark Tower—dare the half obvious, the clear obscure. But Mr. James boldly attacks visions to the common eye invisible, and paints them, and makes them visible and lovely. A past master in the art of shadow painting, he has been styled. "The story that can be told is not worth telling," he seems to say, and, as Mr. Harland declares, "rigorously, invariably he sets himself to tell the story that cannot be told and tells it."

One of the most startling things about *Lady Rose's Daughter*, which is now enjoying an enviable popularity, is the complete metamorphosis of the author. As the work of a literary artist, it starts a new formula in the criticism of her art as a novelist; no conclusion reached from the premises of her former novels will fit her latest piece of fiction. For example, half a dozen years ago, the following statement was made by an acute critic, and though at that time it was stamped with truth, it fails in every respect to characterize the author of *Lady Rose's Daughter*. Of Mrs. Ward, the critic had this to say: "She is pagan rather than positivist, a rather conventional pagan, studying in the breakfast-cap of the British matron the sports of the arena. She could have taught Marcus Aurelius much that would have opened his eyes. One is sure, however, that her head would have been cut off early in the week if she had pre-existed as the story-telling princess of *The Arabian Nights*." When this critic comes to read *Lady Rose's Daughter* we foresee that he will have to record another "corrected impression."

The most sensible word on a recent discussion of the topic "The Decay of the Novel," by certain well-known novelists in the *Critic*, was uttered in conclusion by Mr. Joseph Conrad, who thus summed up the whole matter: "No doubt Mr. Swift" (who set the ball rolling with a denunciatory article) "is perfectly right in his survey of the so-called literary production of to-day. I dare say it's jolly bad. For myself I have really nothing to say on the subject from that point of view, being too worried with my own imperfections to worry about the ineptitude of other people, who, after all, may be—probably are—as conscientious in their way as I am trying to be in mine."

It would never occur to the reader of *The Circle* that the author was a daughter of Erin. The scenes of the story are laid in London, and the characters are English with the exception of the heroine, Anna Solny and her father, who are Russian Jews, and the Austrian fugitive, Johann. Not only so, but the restrained and repressed tone of the work is characteristically English. Yet Mrs. Katherine Cecil Thurston was born in the south of Ireland, and spent most of her life there up to the time of her marriage. It was only three years ago that Mrs. Thurston first thought of literary work, and then it was at the instigation of her husband. For a year thereafter she plodded away laboriously, and at last sent out her first finished story, which had the good luck to be accepted. This was in April, 1901, and since then she has contributed stories to a number of English magazines and periodicals. *The Circle* was begun in September of 1901, and completed in the following spring, when it was at once accepted by the old-established firm of Blackwood. It is a remarkable first novel, and is deserving of the unusual attention it is commanding.

Ian Maclaren recently preached a sermon to young men on the subject of "Imagination." He warned his hearers that imagination did not mean merely a taste for poetry, but insight into events and characters, whether real or imaginary. No great practical enterprise could be achieved in any domain of the world's work without imagination. This recalls a closing sentence in Ian Maclaren's story *Afterwards*, which made a deep impression at the time it was written. "For we sin against our dearest, not because we do not love, but because we do not imagine." Many years previous Mrs. Oliphant embodied the same truth in her charming story, *Innocent*. "I believe," she observed, "for my own part, that imagination is the first faculty wanting in those that do harm to their kind, great or small."

Finance

THE course of the speculative markets during the past few days has reflected merely the transient changes in technical conditions. The situation at large has remained without new developments of importance. The bears have discovered that the public and for that matter, the strong interests of the Street evince no desire to purchase securities, and this obviously encourages the man who would "sell what isn't his'n." But at the same time, liquidation of speculative accounts is over for the time being, and neither the public nor any one else is selling stocks, which is not encouraging to the short who must "buy it back or go to prison," according to the rhyming couplet attributed to the late Daniel Drew. Therefore, the stock-market from time to time shows weakness, but it is distinctly traceable to the operations of the professional speculators; and on the next day it displays strength, because the same professionals are buying back stocks sold on the day previous. And as always happens when the trading is of this "professional" character, "sentiment" changes with the fluctuations in prices, being depressed when stocks are falling, and hopeful when they are rising. On the whole it would seem fair to assume that there is a more hopeful feeling abroad, which, however, is not yet positive enough to mean greater speculative activity or purchaser for the rise.

It is money rates and possibilities of flurries which has acted and continues to act as the chief deterrent to stock-market ventures. The cash rate has not indeed risen above seven per cent., but the very low surplus reserves held at this writing by the New York banks make it perfectly plain that there are disagreeable possibilities in the way of calling of stock-market loans and the liquidation which always follows such drastic measures. The last bank statement showed such slight improvement that the condition of affairs cannot be said to have changed. At this writing the drain on the banks' cash holdings from Sub-Treasury operations is less than last week's, and before long the evils resulting from the antiquated fiscal system of the Federal government should be more than offset by the return movement of currency from the interior to this centre. Foreign exchange has risen considerably from the low rates of last week, reflecting the stiffening money-markets abroad, and possibly the buying of bills by our bankers at the low and inviting figures. It is quite likely, moreover, that bankers here have had in mind the future operations, which the payment of $40,000,000 by the United States to the French owners of the Panama Canal property will necessitate.

In connection with the future course of the foreign-exchange market, great interest attaches to our foregn-trade statistics for February. The most noteworthy feature of the statement was the increase in the exports of manufactures. Considering that prices of our manufactured products are high by reason of the great domestic demand reported in all branches of industry, the volume of our export trade is significant in its bearing upon the times, yet to come, when the domestic consumption shall have become lighter. The huge volume of traffic being piled upon the railroads, taxes their capacity to their utmost. The indications, based upon the assertions of people in a position to know the facts, are that the net earnings of the United States Steel Corporation for the current year will be in excess of $135,000,000; truly, a stupendous achievement. It will be recalled that Mr. Schwab predicted they would be $140,000,000; but at that time, the figures seemed extravagant. And it is so in nearly all lines of industry.

IN HARPER'S WEEKLY for next week there will be, among other features, a complete short story by Hamlin Garland, author of "The Captain of the Gray-Horse Troop"

Famous Wood Engravings

INTEREST in the portraits of the great men of America was never so acute as at present. No private library is complete without these inspiring faces, and to every public library, school, and college they are necessities.

During the last fifty years the portraits of nearly all the men who impressed their personality upon their time and made the history of their generation and ours were engraved for Harpers.

The art of engraving portraits on wood in this country was largely developed in the art department of Harper & Brothers. The quality of these large portraits has never been equalled. They are works of art by famous men like Staudenbaur, Butler, Kruell, Goetze, Johnson, Baude, Wolf, etc.

Weeks and months were spent by the artist on one of these portraits; and in the direction and the quality of line for form, color, and modelling they may be said to fairly equal the best work ever done. The sympathetic quality of the medium used for the portraits lends itself to textures and delicate tones, and places them absolutely in the front rank of the art of engraving.

We have printed a very limited edition of eight of these portraits on the best heavy coated paper, with wide margins for framing or for a portfolio (size 12 1-2 x 17 inches).

We have ready now for delivery the portraits of

RALPH WALDO EMERSON
SAMUEL L. CLEMENS (MARK TWAIN)
JAMES RUSSELL LOWELL
HENRY WADSWORTH LONGFELLOW
WALT WHITMAN
WILLIAM DEAN HOWELLS
JOHN GREENLEAF WHITTIER
OLIVER WENDELL HOLMES

These portraits are sold only in sets of four (any four) for $1.00 a set, or the entire eight portraits will be sent, postpaid, on receipt of $2.00.

Official Legal Notice

THE CITY OF NEW YORK
DEPARTMENT OF TAXES AND ASSESSMENTS, MAIN OFFICE, BOROUGH OF MANHATTAN.
NO. 280 BROADWAY, STEWART BUILDING.

January 12, 1903.

NOTICE IS HEREBY GIVEN, AS REQUIRED BY THE Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens, and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903.

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturday, when all applications must be made between 10 A. M. and 12 noon.

Harper's Magazine
for APRIL

A COMPLETE NOVELETTE BY William Dean Howells

A strong story of deep psychological interest.

NEW LONGFELLOW LETTERS

A number of hitherto unpublished letters written by the poet between 1831 and 1835, throwing new light on his personality, together with many letters of the first Mrs. Longfellow, sketches by the poet, etc.

ENGLISH

Professor **Brander Matthews,** of Columbia, has written a most interesting article on "Briticisms of All Sorts," in which he contrasts some English and American usages of words and discusses some new Briticisms.

TRAVEL

In the few months before his death **Julian Ralph** wrote for HARPER'S MAGAZINE a number of studies of people in various parts of our country. One of these, called "A Trip with a Tin-Peddler," appears in the April Magazine. **William Sharp,** the well-known English critic, writes poetically of "The Country of Theocritus."

PICTURES IN COLOR

There are fifteen pages of pictures in color and tint in the April Magazine, including paintings by **Louis Loeb, W. T. Smedley,** and **Charles King Wood.**

ECONOMIC MORMONISM

Professor **Richard T. Ely,** of the University of Wisconsin, who has been making a study of various communities for HARPER'S MAGAZINE, writes of the social and economic side of Mormonism as seen to-day in Salt Lake City.

SCIENCE

Carl Snyder, in his article on "Physiological Immunity," gives the latest scientific views on how the human body fights disease—a paper of intense practical interest to every one.

HISTORY

Thomas A. Janvier's story of "The Dutch Founding of New York" comes to a conclusion in the April number. It is a delightful study of the end of the Dutch regime.

SHORT STORIES

In addition to **Mr. Howells'** story, there are short stories by **Robert W. Chambers, Alice Caldwell Hegan, Mrs. Stepney Rawson, Candace Wheeler, Lily A. Long,** and **H. C. Troutman** in the April number—eight complete short stories in all.

"A penny saved is a penny made."

Your savings will be counted by dollars if you use

BEN-HUR FLOUR

BUY A SACK OF BEN-HUR FLOUR AND SEE HOW MUCH LONGER IT LASTS THAN THE FLOUR YOU HAVE BEEN USING. THEN FIGURE OUT HOW MANY SACKS LESS BEN-HUR WOULD BE REQUIRED TO SUPPLY YOUR FAMILY FOR A YEAR AND YOU WILL SEE WHAT BEN-HUR CAN DO FOR YOU AS A MONEY SAVER.

ECONOMY IS ONLY ONE OF THE GOOD THINGS WHICH BEN-HUR FLOUR WILL BRING TO YOUR HOME. LIGHT BREAD WHICH KEEPS FRESH AND MOIST FOR A LONG PERIOD, DAINTY ROLLS THAT YOU NEVER SAW THE EQUAL OF BEFORE, AND THE CHOICEST CAKE AND PIES ARE THE RESULTS OF ITS USE. A POOR COOK DOES BETTER WITH BEN-HUR THAN WITH ANY OTHER FLOUR. A GOOD COOK WHO HAS WORKED HARD TO MAKE LIGHT BREAD AND TEMPTING DAINTIES FROM FLOUR WHICH DID NOT HAVE THE GOODNESS IN IT, WILL BE DELIGHTED WITH THE MAGICAL RESULTS OBTAINED BY BEN-HUR.

ALL GROCERS SELL IT

MADE BY

-ROYAL MILLING CO.,

Minneapolis, Minn.

FREE

The adventures of the "BEN-HUR DOUGH BOYS" in full bright colors with rhymes and pictures arranged to entertain and delight the children, will be sent to any address upon receipt of 8¢ in stamps, (to pay cost of mailing) and the card or bill-head of one grocer who does not sell BEN-HUR FLOUR. Address

The Story of the Alaskan Boundary

The true status of the question to be decided by the Alaskan Boundary Commission

THE United States bought Alaska from Russia in March, 1867, for the sum of seven million two hundred thousand dollars, gold. There was no precise description of the territory sold, nor was there any survey, with a determination of boundary lines. What the high contracting parties did, instead of settling their boundaries, was to refer to a settlement made more than forty years before, or rather to a series of settlements, one between Russia and the United States, and another between Russia and England. There was a third settlement between the United States and England, but it did not directly touch the territory now under discussion. What the first of these three settlements decided was that Russia should not lay claim, as against the United States, to any territory south of fifty-four degrees forty minutes. This arrangement was made in 1824. In the next year an agreement was reached between Russia and England, the vital part of which is as follows: The boundary of Russia's territory was to run from the south point of Prince of Wales Island, up Portland Channel, to the point where that channel cuts the fifty-sixth parallel of north latitude; thence along the summit of the mountains parallel with the coast, up to the point where it cut the one hundred and forty-first meridian of west longitude, and thence straight toward the north pole. It was further provided that if the said mountains were found to recede from the ocean more than thirty nautical miles (ten marine leagues), then the boundary should run parallel with the coast, and thirty nautical miles inland.

Two points have been validly disputed: which of several fjords is the Portland Channel meant; and, secondly, whether the summits of the mountains may not in some cases be less than thirty miles from the coast; in which case, according to the wording of the treaty, their summits would be the boundary. But outside of these two points, it is as plain as daylight that Russia owned a strip of territory which followed all the sinuosities or windings of the fjords, well inland of them all, and that the purpose was to avoid the possibility of any dispute about actual shore-line, which was everywhere to be kept in Russia's hands.

So plain and self-evident is this that not only do all the American maps show the boundary of Alaska according to this interpretation of the perfectly plain wording of the treaty, not only do all the Russian maps show it, but all the English maps also show it, up to and including "The Times" Atlas of 1895. The one point of difference is that the English maps attach the name Portland Channel to an arm of the sea slightly to the north of that which bears this name in the American maps.

Ten-mile Marine League Boundary. — — — — Boundary Claimed on British Map of 1895. • • • • • • Undisputed Boundary. ═══

Pope Leo XIII. and American Education

With a Photograph of the Pope's last Public Appearance in the Sistine Chapel, taken by Special Permission

LEO XIII. has laid at Washington the foundations of the Catholic educational centre of the New World. To Cardinal Gibbons, to Monsignor Keane when Bishop of Richmond, and to heads of Franciscan, Holy Cross, Marist, and other organizations which have since grouped their commissariats and houses of study about the university at Brookland, the Pope outlined his educational policy. Later, he sent Archbishop Keane to increase the university's endowment, and approved Bishop Conaty's successful efforts to bring Catholic secondary schools of America into co-operative uniformity. In naming the Biblical Commission of twelve members, whose labors may perhaps supersede and will certainly add to the work of St. Jerome, an American's name appeared. Recently the commission was reorganized and its membership increased to forty, the Rev. Dr. Charles P. Grannan, Professor of Pastoral Theology at the Catholic University, Washington, again being included. Not long since the university was taken from the control of the Propaganda, the missionary agency, and put under the Congregation of Studies, and a new rector, the Rev. D. F. O'Connell, late president of the American College in Rome, is now on his way to New York, to be inducted into the rectorate, probably on April 22, after the trustees shall have held their annual meeting and the retiring rector, who becomes Bishop of Los Angeles, shall have made his report.

Leo XIII. has brought the Roman Catholic Church into a world-acquaintance with itself. For America he has always shown special interest. The late Archbishop Corrigan of New York, on his last visit *ad limina*, in 1900, told the Pope that for every week since he had been in Rome before, in 1890, he had built two churches, schools, hospitals, or asylums, whereupon the Pontiff exclaimed: "What may not be done where the individual and not the commonwealth is relied on!" And a few months ago, when Archbishop Farley of New York bade his Holiness good-by, the latter said, "Amid our many perplexities near at hand, we are ever encouraged by conditions in your splendid country."

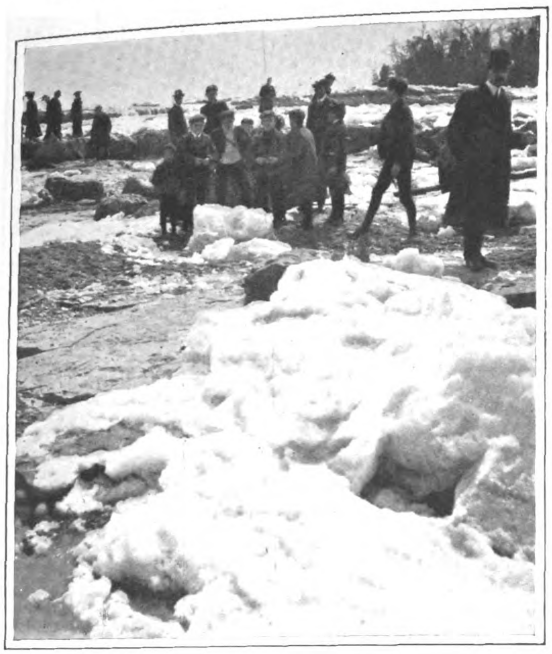
Chart showing the Evolution of the Horse from the Earliest Times to the Present

The Newly Discovered Hipparion

THANKS to the results of an expedition sent out last year at the cost of Mr. William C. Whitney, the story of the evolution of the horse is now complete. This expedition, planned by Professor Henry Fairfield Osborn, of the American Museum of Natural History, and led by Mr. J. W. Gidley, went exploring in the Niobrara beds in the southern part of South Dakota. Nothing was found until the very end of the season, when a herd of three-toed hipparions was uncovered. Bones enough in perfect preservation were found to make one complete skeleton, with many fragments for exhibition and study. The ancestor of the horse had three toes. The picture here given illustrates the progress of the beast from that condition to his present state, when his weight rests on hoofs which represent the enlarged and thickened nail of the middle toe. The second and third toes are represented by splint bones, one on each side in the rear of the cannon-bone, not visible on the surface, but well known for their tendency to go wrong and make horses lame.

In the earliest ages of man there were wild horses on all the continents, but probably on none of the islands, such as Australia. They differed from modern horses in having shorter skulls and deeper jaws. Their legs also were shorter, and their feet smaller in proportion to their bodies. They resembled overgrown zebras. The quarries containing their remains are so common in river and lake beds of the latest geological epoch that the name of *Equus* beds has been applied to them. In South America has been found an ancestor of the horse of the same epoch called *Hippidium*, with many of the peculiarities of the hipparions, but with a head as large as that of the modern horse. Neolithic men left pictures of the early horses of Europe on their monuments of polished stones.

As shown in the chart at the top of the page, the evolution of the horse may be traced in unbroken line from the Cretacic period down to the present time. From an original ancestor the size of a cat, the horse, through the changes outlined in the chart, gradually came to be as we know him to-day.



The Three-toed Hipparion, just discovered, up to now the missing Link in the Ancestry of the Horse

NISTINA

A Complete Short Story by Hamlin Garland

Author of "The Captain of the Gray-Horse Troop"

THERE was lamentation in the lodges of Sunmaker's people, for the white soldiers had taken away the guns of Hawk's young warriors, and now they were to be sent away into lands of captivity. Huddled in big wagons, the young men sat, downcast and sullen, ashamed to weep, yet choking with grief and despair.

"Had I known this," said Hawk to the captain of the escort, "I would have died fighting," and this defiant word he uttered in the harsh, booming tone of a village crier. It was heard by every one in the camp, and the old women broke forth into wailing war-songs, which made the fingers of sedate old sages clinch.

But the blue-coated soldiers, ranked and ready, stood with loaded guns in their hands, calmly observant, and the colonel sat his horse, not far away, ready to give the signal for departure.

Hawk, young, handsome, and reckless, for some indignities put upon him by a band of cattle men, had organized a raid of retaliation, and for this outbreak the government was sending him and his band to Florida—a hot, strange land, far in the South. He, as its unconquered leader, sat bound and helpless in one of the head wagons, his feet chained to a rod, his hands ironed, and working like the talons of an eagle.

It was hard to sit thus in the face of his father and mother, but it was harder yet to know that Nistina, the daughter of Sunmaker, with her blanket over her face, sat weeping at the door of her father's lodge. All the girls were moaning, and no one knew that Nistina loved Hawk—no one but her inseparable friend, Macosa, the daughter of Crane.

Hawk knew it, for they had often met at the river's edge of a morning, when she came for water.

Now they were to part without one word of love, with no touch of hands, never to see each other again, for it was well known that those who went into that *far* country never returned—the breath of the great salt water poisoned them.

At last the colonel uttered a word of command. A bugle rang out. The piercing cries of the bereaved women broke forth again, wild and heart-breaking; the whips cracked like pistol-shots, the mules set their shoulders to the collars, and the blue chariots and their hopeless captives moved slowly out across the prairie.

Hawk turned his head and caught one last glance from Nistina as she lifted her face to him, flung her robe over her head, and fell face downward on the earth, crushed, broken, and despairing.

With teeth set like those of a grizzly bear, the young chief strained at his cords, eager to fight and die in the face of his tribe, but the white man's cruel chains were too strong. He fell back exhausted, too numb with despair to heed the taunt of the white soldier riding beside the wheel, cynical, profane, and derisive.

And while the young prisoner sat thus, with bowed head and low-hanging lax hands, the little village of his people was lost to view—hidden by the willows on the river's bank.

In the months which followed, the camp of Sunmaker resumed its accustomed round of duties and pleasure. The babes rollicked on the grass, the old men smoked placidly in their council-lodges, and planned their next buffalo hunt; the children went reluctantly to the agency school of a morning, and came home with flying feet at night. All seemed as placid as a pool into which a suicide has sunk.

But no word came to Nistina, on whose face the shadow never lifted. She had never been a merry girl like Macosa. She had been shy and silent and wistful even as a child, and as the months passed without a message from Hawk, she moved to her duties as silent as a shadow. Macosa, when the spring came again, took another lover, and laughed and said, "They have forgotten us, that Elk and Hawk."

Nistina had many suitors, for was she not Sunmaker's daughter, and tall and handsome besides? Mischievous Macosa, even after her marriage, kept her friend's secret, but she could not forbear to tease her when they were alone together. "Hawk is a bad young man," she said. "He has found another girl by this time. Why don't you listen to Kias?" To such questions Nistina made no answer.

At the end of a year even Sunmaker, introspective as he was, could not fail to remark upon her loneliness. "My daughter, why do you seem so sad. There are many young men singing sweet songs for you to hear, yet you will not listen. It is time you took thought of these things."

"I do not wish to marry," she replied.

Then the old father became sorrowful, for he feared his loved one had placed her heart on some white soldier, and one day he called her to him and said: "My daughter, the Great Spirit decreed that there should be people of many colors on the earth. He called each good in his place, but it is not good that they mate one with the other. If a white man comes to speak soft words into your ears, turn away. He will work evil, and not good. Why do you not take a husband among your own people, as others do, and be content? You are of the age when girls marry."

To this she replied: "My heart is not set on any white man, and I do not wish to marry. Let me stay with you, and help to keep your lodge."

The old man's voice trembled as he said: "My daughter, since my son is gone, you are my staff. It is good to see you in our lodge, but I do not like to see you sad."

Then she pretended to laugh, and said, "I am not sad," and ran away.

When she was gone Sunmaker called Vetcora and told her what had happened. She smoked the pipe he handed to her and listened patiently. When he had finished speaking, she said:

"She will come round all right. All girls are not alike. By and by the true one will come, and then you'll see her change her song. She will be keeping her own lodge soon."

But Sunmaker was troubled by his daughter's frequent visits to the agency across the river, and by her intimacy with Neeta, the daughter of Habko, who had been away to school, and who had returned much changed, being neither white woman nor red.

She was living alone in a small hut on the river-bank, and was not a good woman for Nistina to visit.

He could not know that his daughter went there because Neeta could read the white man's papers, and would know if anything had happened to Hawk. No one knew, either, that Nistina slyly asked about learning to read. She laughed when she asked these questions, as though the matter were of no consequence. "How long did it take you to learn to read? Is it very hard to learn to write?"

"Oh no, it is very easy," Neeta replied boastingly, and when Nistina went away her eyes were very thoughtful.

Again and again she called before she could bring herself to the point of asking Neeta to go with her to the head of the school.

Neeta laughed. "Ho! Are you going to school? You will need to bump low over your toes, for you will go among the smallest girls."

Nistina did not waver. "Come, go with me."

With a smile on her face Neeta led the way to the office of the superintendent. "Professor Morten, I bring you a new scholar."

Morten, a tall, grave-faced man, looked up from his desk, and said: "Why, it's Nistina! Good morning, Nistina."

"Mornin'," said she, as well as she could.

"She wants to go to school, eh? Well, better late than never," he added, with a smile.

"Tell him I want to work and earn money," said Nistina.

When Neeta interpreted this, the teacher exclaimed: "Well, well! This is most astonishing! Why, I thought she hated the white man's ways!"

"I think she want to marry white man," remarked Neeta.

Mr. Morten looked at her coldly. "I *hope* not. You're a mighty smart girl, Neeta, but I don't like the way you carry on."

Neeta smiled broadly, quite unabashed. "I'm all settled down now—no more skylarking round. I'm keeping house."

"Well, see that you keep settled. I don't understand this change in Nistina, but you tell her I'll put her in charge of Mrs. Morten, and we'll do the best we can for her. But tell her to send all these white men away; tell her not to listen to them."

To Nistina Neeta said, "He says he will let you help his squaw, and she will teach you how to read and write."

Nistina's heart failed her when she heard this, for she had seen Mrs. Morten many times, and had heard many disturbing stories of her harshness. She was a tall, broad shouldered woman, with keen gray eyes and a loud voice.

At last Mr. Morten turned, and said: "Nistina, you may come this afternoon after four o'clock, and we will arrange the whole matter. I am glad you are going to forsake Indian ways, which are very bad. Be a good girl, and you will be happy."

When Neeta had explained what he said Nistina burst into a low cry, and, covering her face with her blanket, rushed away.

"That's the last you'll see of her," said Neeta, maliciously. "She likes the Indian ways best."

But Nistina was moved by a deeper impulse than fickle-hearted Neeta could comprehend. A sick boy had returned from Florida a few days before—a poor dying lad—and to Nistina he had brought word from young Hawk. "I am studying so that I can send words on paper, like the white man," the message ran. "By and by I will send a white word to you."

This message instantly sank deep, although Nistina gave no sign. She had more than the usual shyness of the maidens of her tribe, and it was painful to her to have even this vague message transmitted by another.

The girl thought long. She longed to send a message to her lover, but for some days could not bring herself to confide in Neeta. Days went by, and her resolution remained unformed. Nearly every evening she had been going to see Neeta, but always her courage had failed her, and then came the thought: "I, too, will learn to write and to read, and then I can tell him how much I love him, and that I will wait till I am old and I will love no one else."

There was a great deal of gossip among the red women. "She is going to marry a white soldier, that Nistina," they said. "She is working for money to buy fine beads and cloth."

"It may be," said her step-mother. "She does not open her heart to me. She talks no more than an owl."

The teachers marvelled at Tina's dulness in arithmetic and her amazing progress in writing. In an incredibly short time she was able to scrawl a note to her lover. It was a queer little letter, written with painful exactness, in imitation of the copybooks:

"She hurried with beating heart to the store in which the post-office occupied a corner"

"I heard your words what you sent. They was good words. It made my heart glad that words Black Fox which he brought. I am wait all time for you. No one else is in my thoughts. This letter I am written me myself all lone—no one is help me. No one knows that I put it in puss-tofis. I send mogasuns

NISTINA."

With this letter all stamped and directed, and the package of moccasins, she hurried with beating heart to the store in which the post-office occupied a corner. There she hovered like a mother partridge about its nest, coming and going, till a favorable moment offered. She knew just what to do. She had rehearsed it all in her mind a hundred times, and when she had slipped the letter into the slit she laid the package on the window, and fled away to watch and to wait for a word from the far-away land.

Weeks passed, and her heart grew sad and heavy. She dared not ask for a letter, but lingered at the store till the clerks grew jocose and at last familiar, and her heart was bitter toward all white men.

In her extremity she went to Macosa, who was now a matronly wife, mother of a sturdy son, and asked her to go to the post-office and inquire for a letter.

"A letter!" exclaimed she. "Who is going to write you a letter?"

After much persuasion she consented to go, but returned empty-handed. She had only half regarded Nistina's request, but as the tears came to her friend's eyes, she believed, and all of the goodness of her heart arose, and she said:

"Don't cry. I will go every day and ask, if you wish me to."

It is hard to wait for a letter when that letter is the one thing in life worth waiting for, and Nistina was very silent and very sad all the time, and her mistress wondered at this; but her questions brought no reply from the girl, who kept at her writing diligently, steadily refusing to confuse her mind with other things. She did not seem to wish to talk—only to write, write at every spare moment, and each day her writing grew in beauty of line till it was almost as beautiful as the printed copy.

At last she composed another letter:

"HAWK. My friend. I not hearing from you. If you are sick you don't write. My heart is now very sad. May be you die by this time. Long time I am here waiting. Listening for your words I am standing each day. No one my loving but you. Come home you get away quick, for I all time waiting. NISTINA."

After she had mailed this Nistina suddenly lost all interest in her studies, and went back to the lodge of her father. In her heart she said: "If he does not answer me I will go out on the hill and cry till I die. I do not care to live if he is not coming to me."

She took her place in her father's lodge as before, giving no explanation of her going nor the reason for her return. The kindly old chief smoked and gazed upon her sadly, and at last said, gently:

"My daughter, you are sad and silent. Once you laughed and sang at your sewing. What has happened to you? My child has a dark face."

"I am older. I am no longer a child," she said, unsmilingly.

And at last, in the middle of the third winter, when the white people were giving presents to each other, a letter and a little package came for Nistina, and Macosa came running with them.

"Here is your talking leaf," she said. "Now I think you will laugh once more. Read it, for I am very curious."

But Nistina snatched the precious package and ran into her lodge, to be alone with her joy.

It was a marvellous thing. There was the letter—a blue one—with her name spelled on it in big letters, *Nistina*, but she opened the package first. It contained a shining pouch, and in the pouch was a necklace of wondrous beads such as she had never seen, and a picture of her lover in white man's dress. How strange he looked with his hair cut short! She hardly knew him.

Her heart beat strong and loud as she opened the letter, and read the first words, "Nistina, I am loving you." After that she was confused, for Hawk could not write as well as she, and she read with great trouble, but the end she understood—"I am coming home."

She rose and walked to her father's lodge, where Macosa sat. She entered proudly, the letter in her hand. Her head was lifted, her eyes shone with pride.

"My letter is from Hawk," she said, quietly. "He is coming home."

And at this message Macosa and Veteora covered their mouths in sign of inexpressible astonishment.

Sunmaker smoked on with placid face till he began to understand it all; then he said: "My daughter, you warm my heart. Sit beside me and tell me of this wonderful thing."

Then she spoke, and her story was to him a sweet relief from care. "It is good," he said. "Surely the white-people are wonder-working beings."

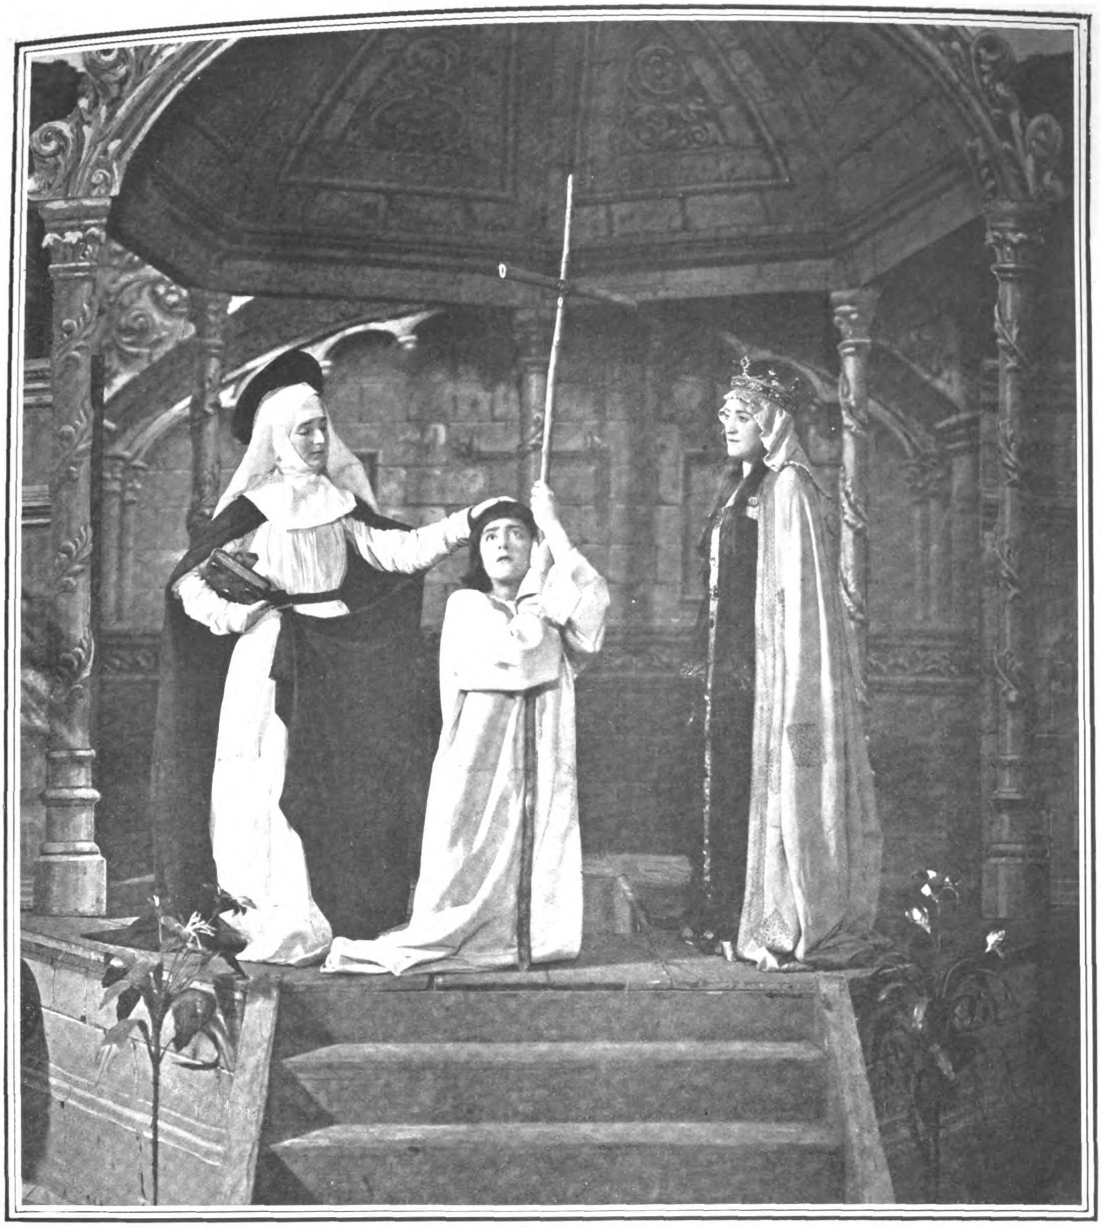
Exploring the Sea Bottom

An Italian Inventor's Machines for Submarine Investigation

CAVALIERE PINO, an Italian inventor, has devised two machines for submarine use, from which important results are expected. One is a submarine worker for use at greater depths than divers can endure. It is a big steel egg, built so strong as to withstand great pressure of water, and equipped with steel arms and hands for moving objects on the sea bottom. It carries two men, who look out through heavy crystal windows and see whatever is in sight. It has a telephone which communicates with the surface, and is furnished with electric power, by means of which it proceeds on a single wheel over the sea bottom wherever its governors choose. It holds air enough to last a moderate time, and when more is needed it can be supplied from the surface. In like manner it can be furnished with light. The inventor believes that his machine will be highly effective for the recovery of sunken treasures, or articles of any kind that have been lost in the sea. In the case of a sunken ship, he proposes to go down in his machine, find the ship, put dynamite in it in the right place, blow off the deck, and direct the operations of men at the surface in getting out the ship's contents. He will be able to mark the position of treasure-chests or heavy articles by line and buoy, so that they may be grasped by grapnels and hauled up.

His other invention, the hydroscope, is an apparatus for searching the sea bottom from the surface. The inventor has not yet disclosed how it works. The laws of optics govern its construction, yet it is something much more than an instrument which reflects images from one mirror to another. That it does work, and well, is attested by a group of competent persons who saw it tried in the harbor of Genoa on January 26, 1903. They certified that through the hydroscope they were able to see clearly objects in the sea bed in their true form, color, and position, and that the instrument did its work well. Its inventor says that down to a depth of one hundred metres his apparatus will reveal the sea bed by natural light, and that greater depths than that will require artificial light. The Greek government has made a contract with him for the recovery of works of art sunk two thousand years ago in Greek waters near Cerigotto, some of which he has already brought up. The English government, too, has contracted with him for the recovery of specie from the *Black Prince*, sunk during the Crimean war. His machines will have a good chance to show their abilities. There are plenty of rich prizes at the bottom of the sea, and the location of many of them is well enough known to make a search for them inviting, provided the means of search are adequate. But the maxim about the bird in the hand being worth two in the bush applies with accuracy to the search for sunken treasure. There have been so many attempts to raise, or rifle, treasure-ships, and so few have succeeded, that we shall all be sceptical about the realization of the Cavaliere's hopes until we see actual results from his endeavors. The Greek statues which he has brought up constitute such results as far as they go, and the results of his further labors in Greek waters will be followed with interest.



Using the new hydrographic invention of Signor Cavaliere Pino for exploring the bottom of the sea, the explorer is able to descend in the egg-shaped cask to great depths. The grappling device shown in the drawing is worked from the deck of the ship; from there, also, the life and treasures of the sea floor may be seen by means of a series of mirrors

Cavaliere Pino thinks his hydroscope will be used by steamship companies for the entertainment of their passengers, who will no longer be satisfied to see only sky and water when they can easily enjoy a curious and extended subaqueous prospect. "They will see thousands of fishes play and flee before them," he says, "while deserts, fields, forests, and mountains will pass like the figures of a cinematograph; daily, and nightly too, for when the natural light fails electric light will replace it."

A remarkable machine this must be if it is to do wonders such as these. It is less comprehensible than the Cavaliere's other invention, which is an application of modern means which seems to be fairly due. Submarine machines have in time past been like air-ships in their propensity to disappoint hopes, but since electricity has come to be so easily and effectively handled they have demonstrated their title to rank among the mechanical wonders that belong in the list of things accomplished. With our government building Holland boats that dive and swim under water, and the various European governments spending money on subaqueous monsters of like powers and purposes, it is easy to believe that we have reached the time when the sea bottom at reasonable depths can be safely exposed by eye-witnesses, and compelled to give up its possessions.

"Good Deeds" and "Knowledge" agree to accompany "Everyman" on his Pilgrimage to the other World

"Everyman," An Old Morality Play

ONE of the notably interesting dramatic productions of the current season has been that of the fifteenth-century morality play "Everyman," first at Mendelssohn Hall and now at the Garden Theatre. Its chiefest appeal is doubtless to the student of the drama pure and simple, but it has not been without entertaining qualities to the ordinary theatre-goer of intelligence. Its effect upon certain minds has been curious. We know of some who have attended with the idea of finding something in the production that would inspire mirthful comment, but it was not long before the would-be scoffer was to be found sitting back in his chair completely and even reverently absorbed in the unfolding of the grim and inevitable story of *Everyman's* pilgrimage from heedless youth to the grave. Even the character *Death*, who in his make-up and movement would seem to verge on something a flippant mind could seize upon for the exercise of its shallow wit, instantly commanded respectful attention, and it was by no means the intense novelty of theme and action that was responsible for this. There was an atmosphere of impressiveness, of sacredness, about the whole performance that was not at all favorable to the disportment of the frivolous spirit, and the deep sincerity of the actors who essayed the rôles was at all times so manifest as to serve as a deterrent to any inclination to make light either of themselves or of the solemn business they had in hand.

The morality play, which in this particular case serves as a link of importance between the mystery plays of ancient times and the modern drama, was revived in London last season under the auspices of the Elizabethan Stage Society of London with this identical production, and played, we are informed, by the same competent company which presents it here. Its run over the sea was of gratifying length, and both for the scholarly intent it inspired, and for its novelty, it made a strong appeal to a very wide class of theatre-goers. Nevertheless, it was a considerable adventure to risk its fortunes on the American stage, and there were not a few who doubted the possibility of its favorable reception in a community where the lighter order of dramatic entertainment has by slow degrees been overshadowing the more serious. We think, therefore, that the public is to be congratulated upon the continued success of "Everyman" wherever it has appeared. It has convincingly demonstrated that in the vast theatre-going body in New York and other cities there is a leaven of fine taste and of appreciation of intellectual effort that is distinctly recognizable. An occasional production of the type of "Everyman" is all that is needed to bring it to the surface.

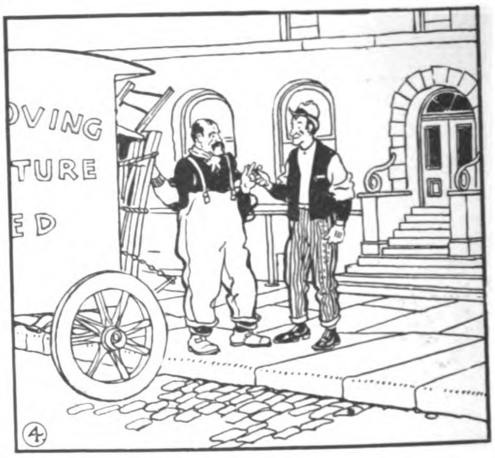
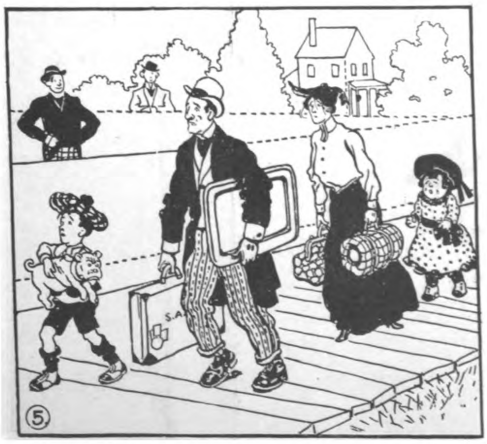
A SERIES OF MOVING PICTURES

A SUBURBAN EXPERIMENT

BY ALBERT LEVERING



"Just listen to this, Belle—six room cottage, hot and cold water, a great big lawn—fifteen minutes to the city—Swell! Hey? We'll just take that place for six months on trial"



8 A. M.—"Now, boys, I'm going to peel right off and help; there's some gimcracks around here my wife's afraid'll get broken"

"Which goes next, mister, that shif'ner er this cubbord?"
"Let's see—er— Oh, Bobby, get out of the way!"

"Think we'll get out in time to set up the old stove and have lunch?"
"Surest ting, ye know. We'll hav yez all moved out dere in a couple o' hours—tanks."

"Jupiter! it didn't seem so far from that last trolley when I was out here to hire the place Sunday."

6 P. M. (soliloquizing, great big lawn).—"I see a comfortable bed on it to-night—hot and cold water—I'm in it up to the neck in the fo'mer. Fifteen minutes to the city—ye-es? But six months from it!!"

The woman's cause is man's: they rise or sink
Together, dwarf'd or godlike, bond or free:
For she that out of Lethe scales with man
The shining steps of Nature, shares with man
His nights, his days, moves with him to one goal.
Stays all the fair young planet in her hands—
If she be small, slight-natured, miserable,
How shall men grow?

Tennyson.

"Were I a god, and a well-meaning one, the marriages of people would annoy me more than anything else. . . . The individuals are wasted, the accidentality of marriage makes every reasonable and great course of humanity impossible."—*Nietzsche.*

To talk of nothing but prosperity and commerce is to talk like a merchant, and not like a philosopher. To aim only at the enriching of nations is to act like a banker, but not like a legislator.—*Joubert.*

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE MILK OF THE COW is richer in proteids, fats and salts than the human milk, hence it must be adapted to infant feeding. BORDEN'S EAGLE BRAND CONDENSED MILK is the perfection of a cow's milk for infants. Forty-five years experience has made it the leading infant food of the world.—[*Adv.*]

TELEPHONE Service is the twentieth-century means of communication. Rates for Residence Service in Manhattan from $48 a year. New York Telephone Co., 15 Dey Street, 111 West 38th Street, 215 West 125th Street.—[*Adv.*]

BRAIN and brawn benefited with a tonic which aids digestion—ABBOTT'S, the Original Angostura Bitters, are noted for their digestive properties. All druggists.—[*Adv.*]

Henry James

IT has been said of Professor James of Harvard that he is too good a novelist to be a good psychologist; and of his brother, Henry James, that he is too great a psychologist to be a novelist. However true that be,—and truth is usually sacrificed in some measure to an epigram,—each of these men has won a unique reputation in his chosen profession, aided undoubtedly by his comprehension of his brother's calling.

Of the two, Henry James the writer of books, whose latest portrait we now publish, has won the wider recognition. "Master of involutionary style," he is beyond doubt one of the keenest analyzers of character among living writers. It is a remarkable tribute to his power that with his involved and analytical method of treatment,—his worship of literary style for its own sake,—he yet commands the attention of an enormous public on both sides of the Atlantic, including that body of readers which devours the popular novel, as well as a more discriminating class. The obvious conclusion is that he does not sacrifice interest in an effort to attain to what he may consider higher things.

Mr. James is one of the many distinguished Americans residing abroad. The quaint old house in Rye, where he has his home, is one of the landmarks of a town by no means poor in "lions." Here he works steadily, and with a prolificacy by no means his least remarkable trait.

Since *A Passionate Pilgrim* in 1875 a book a year he has averaged, and each is a distinct and measured step in the upward progress of his work.

The Ambassadors, now appearing serially in the pages of the *North American Review*, is his latest, and in many respects his greatest work. Henry James the psychologist has not permitted retrogression in the mental power of Henry James the writer.

Transportation in London

By Sydney Brooks

LONDON is an impossible city to get about in. Whatever attractions it may possess, its rapid transit system is not one of them. As a matter of fact, "system" is the wrong word for the chaos of ill-connected, desperately competing railroads and omnibus routes that suffices, or pretends to suffice, for the needs of its six million inhabitants. The other day, in the House of Commons, Mr. James Bryce brought forward a motion on the subject. He asked "whether his Majesty's government would consider the desirability of inquiring, by royal commission or otherwise, into the means of locomotion and transportation in London on and beneath the surface, including the better regulation of vehicular traffic, the possibility of appropriating certain thoroughfares to certain kinds of traffic, the means of facilitating the construction of electric tramways along or immediately beneath the streets, and the steps to be taken for creating a properly arranged and conveniently interconnected system of deep-level electric railways." Mr. Balfour replied that, though he had not quite made up his mind, it was probable that a royal commission would be appointed. If so, it will be one of the most interesting and hardest-worked commissions that has ever sat.

One has only to live in London a week to see the need of some such impartial, systematic inquiry. Traffic, in spite of an absolute stringency in observing the "rule of the road," is blocked in every direction. A fine June afternoon makes one's progress down Piccadilly work out at the rate of a mile in ten minutes. That is the quickest one may hope for. A quarter of an hour per mile is the average performance, and this quite irrespective of the vehicle one happens to be sitting in. A champion roadster, the broken-down cavalry charger that works out the fag-end of his life between the shafts of a cab, and the weedy omnibus hack are all on a par in Piccadilly. The pace of a procession is the pace of its slowest unit, and a carriage and pair stand about as good a chance of getting ahead of the humbler traffic in that famous thoroughfare as a Broadway car has of outstripping its immediate forerunner. Americans who have not seen it, can hardly conceive the volume of Piccadilly's traffic. There is nothing in New York that even suggests it. A block of vehicles, a quarter of a mile long and from eight to ten deep, is so common an occurrence that one hardly notices it. At the corner of Hamilton Place and Piccadilly, where the traffic flowing east and west meets the stream flowing north and south, you may count almost any afternoon in the season as many as three thousand vehicles in an hour. There they stand, with wheels almost touching, sometimes for ten minutes on end, till the policeman waves his hand, and the monstrous cavalcade of carriages, costers' carts, omnibuses, motors, hansoms, brewery drays, railroad wagons, shop vans, four-wheelers, pony traps, and butchers' carts goes surging along till the outpourings of another side-street pull it up once more. Things are a little better now than they used to be. Early last year the London County Council shaved off a portion of the Green Park, and added it on to Piccadilly just opposite the point where Hamilton Place debouches. There are now six parallel streams of traffic almost constantly in motion, with as many policemen perpetually stationed there to deflect them into the proper route. The blockades rarely last more than two or three minutes, and the American who is hurrying to catch a train at Paddington or to keep an appointment at his club or hotel, no longer finds Hamilton Place the obstacle it was. The big Picca-

Exhibition of the Society of American Artists

THREE generalizations may be affirmed of this year's exhibition of the Society of American Artists. The average of achievement is,on the whole, a grade higher than usual; the number of canvases painted by Americans in Paris is increasing year by year; despite the great names in the catalogue the list of painters who do not exhibit with the society is growing so long as to suggest the condition that resulted in the formation of the society itself by seceders from the Academy.

The present exhibition is properly dominated by Abbott Thayer's "Winged Figure," a large canvas hanging on the north wall of the Vanderbilt Gallery opposite the entrance. A white-robed female figure of heroic size is seated on a rock. The painting is "Inscribed to Robert Louis Stevenson." In the dark background, tropical foliage is suggested. The drapery flows lightly over the slender figure, and sweeps in lines of beauty down the rocks. The face is of the exquisite type Mr. Thayer delights in painting, and which in its perfection all good Americans instinctively refer to Mary Anderson.

The same gallery contains John S. Sargent's portrait of William M. Chase, a capital example of the painter's most vigorous work, and a worthy memorial of Mr. Chase, which his pupils will present to the Metropolitan Museum of Art. Near it is "The Flower," by John W. Alexander, a study of a young woman fastening in her gown a water-lily just chosen from a great cluster of half-open blossoms, the whole broadly painted in the low tones which are Mr. Alexander's favorite medium. This artist is further represented by his charming full-length portrait of Mrs. Thomas Hastings. A place of honor in the Vanderbilt Gallery is given to Samuel Isham's "The Coming of Spring," inspired by the lines of FitzGerald's Omar beginning:

Come! fill the cup, and in the fire of spring
Your winter garment of repentance fling.

This is a broadly painted, decorative composition, beautiful in color, and true to the spirit of the subject.

"Mother and Child."—By Paul Moschowitz

In the same gallery are also hung the winners of this year's prizes: Douglas Volk's "The Boy with the Arrow," winner of the Carnegie award for the best painting entered in competition; Louis Loeb's "The Dawn," a landscape in a luminous mist with female figures walking, reclining, and bathing in a pool, winner of the Webb gold medal; and Louise Cox's "Olive," the portrait of a daintily clad, pink-cheeked child, to which has been awarded the Shaw memorial prize for the best work of art exhibited by a woman. The pictures reproduced in this number include Mrs. Cox's prize-taker, Sergeant Kendall's wholly delightful painting, "The Green Gnome," portraits of a mother and daughter, the small green-robed child perched at her mother's side, and intent upon a story which the mother is reading from the book in her lap; and Paul Moschowitz's "Mother and Child," an excellent piece of work by this talented young painter.

The most cursory glance at the remaining pictures in the show can hardly overlook Miss Mary Shepard Greene's "Une Petite Histoire," a charming interior of the period of Louis XVI., with a young woman reading, which received a second award at last spring's Paris Salon; Kenyon Cox's strong and lividly colored portrait of Mr. Powers; and Winslow Homer's two admirable views.

"The Green Gnome."—By Sergeant Kendall

"Olive."—By Louise Cox.—Shaw Prize

(Continued from page 553.)

dilly jam has now moved farther east, and centres round Berkeley and Albemarle streets. There it is just about as bad as it used to be at Hamilton Place. Bond Street, the meanest and narrowest of streets, lined with the most expensive shops in London, grows more impassable every year, though here, too, as in Piccadilly, the amount of traffic depends a good deal on the season. In the Strand, however, the block is perpetual. The quickest way of getting from Charing Cross Station to Ludgate Circus is to walk. As for the City itself, and the narrow tangle of arteries leading to and from it, locomotion there is simply a series of jerks—every few yards, and the "uplifted hand of the policeman," on which the late Mr. Bayard used to enlarge with such enthusiasm, pulls you up.

There is only one thing to admire about it all—the super-excellence of the driving. A bad whip is unthinkable in London; he could not survive a day's outing in the overstocked streets, where the strain on the nerves of those inside the vehicles is so great that few Londoners over sixty years of age venture out in a hansom. The sight of the innumerable quarter-inch escapes of catastrophe they run is too much for them, and, like Sir Henry Irving, they seek the security of a brougham or four-wheeler to shut it out. Collisions, though, are wonderfully rare; every drayman, coster, cabby, omnibus drives, handles the ribbons with the sureness of the president of the Four-in-Hand Club. Still one does not hail a hansom merely to admire the cleverness of the man on the box. There is a human desire to reach one's destination, and if that happens to lie anywhere within the congested area, which, roughly speaking, includes the City and most of the shopping districts, it is well to be triply armed in philosophic brass. A great deal of this congestion is not only inevitable, but, so far as one can see, irremediable. It could only be got rid of by rebuilding London, and that is an impossible task, if only on the score of expense. The city of six millions has to get along as best it can with the streets that served a population of half a million; and it is quite vain to hope that any man or any governing authority will arise to do for London what Haussmann did for Paris and Shepherd for Washington. Most of the charm and all the inconvenience of London come from this one fact, that it is a city which has *grown*. New York by comparison looks as though it had been hit off at a stroke and dumped down on Manhattan Island by contract. London as we know it to-day is simply an amalgamation of a great many old suburbs and villages that have joined together without plan, symmetry, or method of any kind. The country lanes of former days are now busy streets, but otherwise as straggling and narrow as they ever were. The old village streets are now the thoroughfares of a prodigious traffic, but not one whit wider than they were in King Charles's day. Very few of the London streets have been actually built—that is to say, deliberately laid out and planned and executed from beginning to end. Very few of them existed on paper before they existed in fact. Almost all are the survivals and extensions of century-old lanes and by-paths, "short cuts" across fields, and so on.

There can, therefore, be hardly any question of rebuilding London, of pulling it down, and remodelling it afresh. The city will remain to the end of time much as it is now, a fascinating jumble of irregularities. What, however, can be done, and what the London County Council is doing, is to widen the already existing streets, and occasionally to build a new one. At this moment what promises to be a really magnificent thoroughfare is being built between Holborn and the Strand at a cost of some

The Oldsmobile "Goes"

"Nothing to watch but the road."

The greatest efficiency with the least trouble is obtained by the mechanical perfection of this world-standard Runabout.

No complicated machinery to get out of order—no "breakdowns"—every part of the simple, strong, and practical construction of the Oldsmobile is readily accessible and easily understood. It is built to run *and does it.*

Runs thirty miles on one gallon of gasolene—Climbs any hill—Goes through the muddiest roads and is proclaimed by 8,000 users as "*The Best Thing on Wheels.*"

Over a Million Barrels a Year

Schlitz

Those are sales of Schlitz Beer making it the leader of all Milwaukee beers, by far.

That's a result of maintaining absolute purity. We doubled the necessary cost of our brewing to have Schlitz Beer right.

The Result Is
A Million Barrels a Year

We have used the best materials—the finest barley—paid as high as twice what we need pay for hops. We bored six wells to rock to get pure water. We kept our brewing as clean as your cooking.

The Result Is
A Million Barrels a Year

We filtered all the air that touched the beer. We filtered the beer through white wood pulp. We aged it until it could not cause biliousness. We sterilized every bottle after it was sealed.

The Result Is
A Million Barrels a Year

Isn't Schlitz Beer—pure beer—worth asking for, when the cost is the same as of common beer?

$25,000,000; the Strand, too, is being slowly widened; there is a scheme, which in a few years will begin to bear fruit, for the broadening of the Circus end of Piccadilly; and in a short time the narrow gut of Knightsbridge will be developed into something approaching a street. All this, of course, will help to relieve the congestion, for a while, at any rate. Nothing can permanently relieve it, for the volume of traffic grows at a quite uncontrollable rate. Already it is being prophesied by the experts that the new avenue between Holborn and the Strand will require a fresh bridge over the Thames to take charge of the traffic that will come thundering down from northern London. Indeed, it is becoming obvious that new streets and wider streets will not of themselves solve the problem; that what is needed is a vital change both in the character and disposition of the traffic.

Take, for instance the immense item of passenger traffic. London's management of it is, in some ways, about twenty years behind New York's or Berlin's or even Rome's. Within the four-mile radius from Charing Cross there are plying year in and year out some 2500 omnibuses and about 12,000 cabs. The omnibuses carry not less than 350,000,000 passengers yearly, but they are hideous contrivances, intolerably cold in winter, intolerably stuffy in summer. It is they who set the pace for the rest of London, for they are big, lumbering, difficult to pass, and constantly stopping to take up passengers. On an ordinary route, part of which would lie in the congested area and part in the comparatively open thoroughfares, their pace is about six or seven miles an hour at the outside. No one less apt than an Englishman to agree that whatever is is right would have tolerated them all these years. They have, of course, the merit of cheapness—along some routes you may travel three miles for two cents—and they have also "garden" seats on the roof, which, though carefully arranged to "catch" you in the small of the back, do in summertime give one a very pleasant opportunity of sitting up aloft and watching the endless panorama of the streets. Americans "doing" London are advised by Baedeker to mount an omnibus and take a seat as near as may be to the always talkative and cheery driver; and very good advice it is. As for the world-famous London hansom—the gondola of London, as Disraeli called it—too much praise cannot be sounded. They are as comfortable as the omnibuses are uncomfortable. No public vehicle can rival them anywhere. I have even heard them described as "the one civic institution of this metropolis that a town in Western America, on the lookout for the latest improvement, would do well to transplant." Except a well-sprung victoria they offer perhaps the pleasantest way of getting about a city. They are clean, swift, easily driven, and the fare, which is fixed by law at twenty-five cents for any distance not exceeding two miles and twelve cents for every additional mile or part of a mile, with a charge of four cents for each item of baggage that may be carried on the roof, puts them within reach of people of moderate means. Whatever changes may be made in the transit systems of the future, however great may be the popularity of "Tu'penny Tubes" and motors, the hansom will always hold its own.

Now these omnibuses and hansom-cabs are the only means of surface transportation offered to Londoners. London is so big that one has to distinguish. In the suburbs and on the south, the "impossible" side of the river, you will find horse-cars, steam-cars, and even a few lines of electric-cars. But I am talking of that section which to most people represents the whole—residential London, the London of society, of shops, of theatres, of Kensington, May-

fair, Belgravia, the "City," Regent Street, the Strand, and so on. It is here where the surface traffic problem is greatest and where omnibuses and hansoms alone are relied upon to solve it. An American asks at once, "Why not electric or even cable-cars?" The only answer to that question I have ever heard is that "tramways," to give them their English name, are not considered "genteel." An English expert on the subject gives this as the sole explanation. "Streets," he says, "are supposed to deteriorate in social standing if a tram-car enters them. At present the streets of London, or at least of the West End, seem to be managed solely in the interests of the wealthy, who keep carriages and ride in cabs. It is the opposition of this class which has succeeded hitherto in preventing London from having a tramway service equal to that of all other capitals." What, at any rate, is obvious is that electric-cars are quietly ruled out of the whole discussion. It is one of those cases where British prejudice seems insuperable. They will not even consider it—and there's an end on 't. Neither will they for one moment dream of experimenting with elevated railroads of any kind whatsoever. "None of your damned Yankee contrivances" is the spirit in which they dismiss the matter, once and for all. Even subways at the intersection of two or more streets they are inclined to throw out of court, having heard that similar things are to be found in Boston and Chicago.

Equally averse, then, to electric-cars and elevated railroads, there is nothing for the Londoner to do but to burrow underground. This he has done with much persistence and of late with real success. Of the District and the Metropolitan Underground railways, that are operated by steam, it is impossible to say anything fresh. All the recognized dictionaries have been exhausted in abusing them as the dirtiest, smokiest, most comfortless, most sulphurous, and most unaccommodating services to be found outside of Italy. So long as they were without competitors, they earned huge dividends, and disregarded all criticisms and all protests, in the best British fashion. To-day they find themselves in consequence in the hands of Mr. Yerkes, who will electrify them in more senses than one. On the other hand, the "Tu'penny Tube" is an achievement which even New York will be hard put to it to beat. The system is operated by electricity, there are plenty of trains, and they all run quickly and smoothly. They are arranged like the cars on the Manhattan Elevated, but better upholstered, better finished, and perfectly lighted. The conductors know their business, and make the passengers "hustle" as Englishmen never hustled before. Ten seconds during normal and fifteen seconds during rush hours is the average stop at each platform. The stations, their approaches and passages —all of which are lined with white tiles— and the elevators that take you fifty or sixty feet underground to your train, are all admirable. There is, indeed, hardly a hostile criticism to be made except that the cars are apt to get overheated and close. If New York manages to overcome this drawback in her subway line, she will be possessed of the speediest and most comfortable means of city transportation that has yet been invented. Naturally the success of the "Tube" has started up schemes for half a dozen similar projects, and Parliament has already authorized the building of nearly sixty miles of new underground railroad. It is to have all these schemes brought into harmony and dependence with one another, to have them considered in conjunction with improved surface facilities, and especially with the utilization of the Thames, now utterly neglected as a highway of traffic, that Mr. Bryce asks for a royal commission to inquire into the whole subject in all its bearings.

Skin Diseases

Eczema, Salt Rheum, Pimples, Ringworm, Itch, Ivy Poison, Acne or other skin troubles, can be promptly cured by

Hydrozone

Hydrozone is endorsed by leading physicians. It is absolutely harmless, yet most powerful healing agent. Hydrozone destroys parasites which cause these diseases. Take no substitute and see that every bottle bears my signature.

COMMENT

WE have discussed elsewhere the principal features of the award made by the Anthracite-Coal Strike Commission, and would here merely direct attention to the recommendation with which the report concludes. The suggestion is that the State and Federal governments should provide machinery for a compulsory investigation of difficulties similar to the investigation which this commission has undertaken. It is obvious that, if such machinery were provided by both the State and the Federal governments, there would be a conflict of jurisdiction unless there were some agreement as to the order in which recourse should be made to the two methods of inquiry. There is no doubt about the power of the State to investigate and regulate any industrial corporation which it may have created. It is questionable, on the other hand, whether the Anthracite-Coal Strike Commission itself, or any similar body called into being by the Federal government, would have the right of investigating and regulating the within-State business of a corporation against its will. The commission expresses the opinion that, with a few modifications, the Federal act of October, 1888, authorizing a commission to settle controversies between railroad corporations and other common carriers could be made the basis of a law for arbitration in the anthracite coal-mining business. The common carriers contemplated by the Federal statute in question were engaged in inter-State commerce, whereas anthracite coal-mining is a within-State industry. Apparently, the commission holds that the power of the Federal government to reach the within-State business of State corporations was affirmed by the decision of the United States Supreme Court in the lottery cases. Unquestionably, the Federal government would have a formidable regulative power if it could prohibit a given anthracite mining company from sending its coal beyond the borders of the State in which the combustible was mined. It is to be noted, however, that the commission would not make submission to the award of a Federal board compulsory on the part of either operators or mine-workers. It believes that the report of a Federal board of inquiry would enlighten public opinion, and would thus subject both parties to a strike or lockout to a moral pressure that would impel them voluntarily to accept the terms of settlement proposed. Whether the Fifty-eighth Congress will sanction the suggested extension of the law of 1888 from inter-State common carriers to within-State industrial corporations is uncertain, although those who doubt the constitutionality of such a project may well be discouraged by the close approach to unanimity with which the Fifty-seventh Congress appropriated money to defray the cost of the Anthracite-Coal Strike Commission, which Mr. Roosevelt appointed, he said, not as President, but in his personal capacity.

We do not share the apprehension expressed in some quarters that the Cuban reciprocity treaty is dead because the Senate's amendment, providing that it shall not go into effect until Congress approves it, is inconsistent with the original provision that it should become operative ten days after the exchange of ratifications which was to be made before March 31, 1903. There is all the difference in the world between death and suspended animation. All that Cuba needs to do is to ratify the treaty in the amended form adopted by our Senate. Then, when the Fifty-eighth Congress meets—and it is likely to be convoked in November—it will simply be necessary to secure the approval of the document by a bare majority in each Chamber. In view of the fact that the treaty was ratified in the Senate by a majority of the Democratic Senators, as well as by an almost solid Republican vote, Mr. Roosevelt should have no difficulty in prevailing upon the new Congress to approve the measure. If the ultimate execution of the treaty is doubtful, the ground for the doubt now lies in Cuba rather than in the United States.

What may prove a source of obstruction is the demand embodied in the amended treaty that certain American commodities shall be admitted to the island at rates of duty materially lower than those originally agreed upon. As the reduction exacted will affect the island's customs revenue to a certain extent, it may be made the pretext for opposition to the treaty. It must be borne in mind that English and German exporters, who have many friends in Havana, are vehemently opposed to a compact whereby American manufactures would obtain so decided a preference as to give them a close approach to a monopoly of the Cuban market. Then, again, the prospects of the Cuban sugar industry are decidedly brighter than they were a year ago. The agreement reached by the Brussels sugar conference will go into effect early in October, and will relieve Cuban sugars from the ruinous competition to which they have hitherto been subjected on the part of the European beet-root product. The Cubans will make a grave mistake, however, if, elated by the promised improvement in their economical situation, they miss the opportunity of monopolizing the American market for raw sugar during at least five years. It is very questionable whether the countries of the European Continent which are interested in the beet-sugar industry will long adhere to the Brussels convention.

The arguments before the Federal Court of Appeals at St. Louis in the important Northern Securities case came to an end on March 21, but, owing to the enormous amount of evidence taken, several months are likely to elapse before a decision is made. It will be remembered that the Northern Securities Company, which is a New Jersey corporation, acquired a controlling interest in both the Great Northern and the Northern Pacific railroads. The question is whether the Federal Anti-Trust act, which was intended to insure competition between common carriers, is not thereby violated. The defendant corporation, the Northern Securities Company, insists through its counsel that it had a right under State laws to form the combination to which the Attorney-General of the United States objects; that it is for the States, and not

for the Federal government, to regulate the consolidation of railway companies; and that the Anti-Trust act has not been violated because the Great Northern and Northern Pacific railways are separately operated. On the other hand, the counsel for the United States Attorney-General maintained that the alleged separation of the railways named is merely nominal and technical, and that these roads, ostensibly competitive, are, as a matter of fact, managed in the sole and exclusive interest of the Northern Securities Company, which, controlling both systems through its agents, arrogates the right to establish rates and dictate commercial policies in Minnesota, Dakota, Montana, and other States. It is denied that the Northern Securities Company had a right to secure under the laws of New Jersey a charter that would enable it to violate the laws of Minnesota and Wisconsin, and it is further claimed on behalf of Attorney-General Knox that the laws of New Jersey confer upon the defendant corporation no such power as is asserted for it. We scarcely need point out the magnitude, actual and prospective, of the interests involved in this litigation. The whole future of the American railway system may be materially affected by the decision ultimately reached. We say ultimately, because, whatever judgment may be handed down by the Federal Court of Appeals, the case will undoubtedly be carried to the United States Supreme Court. We shall probably have to wait a year, at all events, before the status of the Northern Securities Company is finally determined.

No well-informed politicians doubt that Mr. Roosevelt's tour in the West and Far West will furnish proof of his continued popularity in those sections. Nevertheless, there have been lately some signs of a concerted movement to put forward opposing candidates for the Republican nomination for the Presidency in 1904. The open or secret opponents of a formidable candidate usually employ the following tactics: On the one hand they take measures to secure the delegations from the Southern States which are hopelessly Democratic, and, on the other hand, they try to persuade each of the large Republican States to pledge its delegation to a so-called favorite son. Senator Fairbanks, who could probably obtain the delegation from his own State, Indiana, is said to be negotiating for newspaper support in the South in an effort to procure delegates from that section. Ex-Speaker Keifer, who knows a good deal about Ohio politics, has recently expressed the opinion that Mr. Roosevelt is losing ground. That Senator Hanna will control the Ohio delegation seems to be generally taken for granted, although he pooh-poohs the notion that he will be a candidate for the Presidency. Whether Senator Allison will control Iowa's delegation is uncertain, owing to the great strength possessed by Governor Cummins in that State. In the Michigan delegation Senator Alger is likely to have a good deal of influence. Just now it looks as if Mr. Roosevelt's opponents would eventually concentrate on Senator Spooner of Wisconsin.

Much depends on the question whether Governor Cummins will carry the Iowa idea into the next Republican national convention, and demand the incorporation of it in the platform. Precisely what position Mr. Roosevelt will take with regard to a revision of the tariff is not yet known, and quite different conclusions have been drawn from the fact that Governor Cummins, after three long conferences with the President, has announced his determination to work for a revision of the Dingley act. Was this announcement concerted with the President, or was it made in defiance of the Executive's wishes? We shall soon get light upon this subject. Mr. Roosevelt can scarcely avoid alluding to it during his Western tour, though he knows that, if he declares himself in favor of a genuine, as distinguished from a pretended, revision of the tariff, he may expect to find the extreme protectionists consolidated against him in the national convention of his party. Of course were the nomination once assured, Mr. Roosevelt might well desire to see a revision plank inserted in the platform on which he was to stand, for he would thereby be enabled to hold a good many votes which otherwise might drift to the Democracy.

On the Democratic side, also, there are indications of activity. Mr. Bryan in his *Commoner* has bewailed the elevation of Mr. Gorman to the leadership of the Democratic Senators, but the latter and his friends have studiously refrained from uttering a word calculated to embitter the Nebraskan. The men who are destined to control the next Democratic national convention are determined not to give Mr. Bryan any plausible pretext for bolting. So long as he is not subjected to personal insult, he cannot, with any show of consistency, refuse to support the platform and the candidate adopted by his party's convention. There will be more than one plank in that platform of which he can heartily approve, and, if the convention maintains a judicious silence regarding the free coinage of silver it will simply be doing, as Mr. Bryan knows, what the Kansas City convention earnestly wished to do. The position which the Democracy will take in 1904 was probably outlined correctly by Mr. Edward M. Shepard at the Jackson-day dinner at Chicago. He declared that, as a Democrat, he was equally impressed with the danger threatened to American liberty by the trusts on the one hand, and by trades-unions on the other, and he demanded the guarantee of personal independence from encroachment by either side. In his reference to the tariff, he undoubtedly foreshadowed the course of the convention, which will advocate, not, of course, free trade, nor a sweeping revision of the tariff, but the removal or the reduction to a revenue basis of duties on imported goods that compete with American products which are the subjects of monopoly.

It is probable, also, that the convention will recommend an income tax, although, unless the decision of the United States Supreme Court should be reversed, a constitutional amendment would be needed for the purpose. The extensive tour in the West which Mr. Cleveland is about to make will teach us whether the remarkable revival of his influence which has of late been noticed in the East is a national, rather than a local phenomenon. We may be tolerably sure beforehand that his view of the policy which the Democracy should pursue will not differ materially from Mr. Shepard's. We may learn presently how the Parker boom is looked upon by Mr. Hill, for he has agreed to address the Democratic Editorial Association of New York on Jefferson's birthday, which will be April 13. It is possible, though not probable, that, without Mr. Hill's consent, Judge Parker could obtain an undivided delegation from New York, but there is some reason to believe that he would decline to be a candidate unless he was sure of Mr. Hill's support. Another matter of interest to the Democracy is the approaching municipal election in Cleveland, Ohio, where the Republicans will make a desperate effort to prevent the re-election of Tom Johnson to the Mayoralty. Should Mr. Johnson be re-elected, he would have a chance of controlling the Ohio delegation in the next Democratic national convention, in which event Mr. Bryan would have a powerful ally.

Commenting upon the resolution introduced in the last Congress by Representative De Armond, the resolution requesting the President to learn upon what terms Great Britain would cede to us the Dominion of Canada, the Chicago *Tribune* rightly says that for the schism of the Anglo-Saxon race upon this continent the United States are partly to blame. The *Tribune* overlooks, however, our fundamental blunder. During the summer and autumn of 1774, after the government of Lord North had instituted a blockade of Boston, the Canadians shared the sympathy with which the inhabitants of that town were regarded by most of the American colonists. The French and English denizens of Quebec combined to send them a thousand and forty bushels of wheat. To stifle such sympathy, the British government passed the Quebec act, whereby the Roman Catholic Church was as effectually established in Canada as was the Presbyterian Church in Scotland. Unfortunately, the American colonists had not wholly purged themselves of Protestant fanaticism, and in its address to the people of Great Britain the first Continental Congress denounced the Quebec act, and described the Roman Catholic religion as one that had propagated impiety, bigotry, persecution, murder, and rebellion in every part of the world. All it would offer the French Canadians was complete religious freedom and equality. Naturally, the Catholic clergy of Canada preferred the monopoly which the Quebec act conceded to them. Had the first Continental

Congress kept in view the fact that at that time in Virginia, in Massachusetts, and in many another colony a particular form of Protestantism was by law established, and had recognized the right of the Canadian people to establish Catholicism in their province, there is but little doubt that the expeditions headed by Arnold and Montgomery would have been successful, and that Canada would have joined the Thirteen Colonies in a struggle for independence. Fatal were the consequences of our reprobation of the Quebec act, which simply assured to Catholicism in Canada the same privileged position which the Anglican Church possessed in Virginia, and Congregationalism in Massachusetts. We are not sure that the Chicago *Tribune* is right in describing our abrogation of the reciprocity treaty with Canada in 1866 as another mistake. The *Tribune* thinks that the effect of that treaty had been to create a tendency toward continental union. No such effect was contemplated by Lord Elgin, the negotiator of the treaty. On the contrary, he secured the ratification of the convention by Southern Senators, who did not want any more Free States admitted to the Union, by frankly avowing that, unless the Canadians could get reciprocity, their demand for political incorporation with the United States would within ten years prove irresistible. Lord Elgin's view of the situation was confirmed by the event. No sooner was the reciprocity treaty passed than the annexationist movement in Canada died away.

We have formerly discussed the machinery provided in Switzerland for the application of the initiative and referendum to both federal and cantonal legislation. It looks as if the Swiss example might be followed in one of our larger commonwealths. The Upper House of Missouri's Legislature passed the other day by a unanimous vote a joint resolution providing for the submission of the question of adopting the initiative and referendum to the people of that State. If the plan proposed is ratified by the electors, a petition signed by ten per cent. of the voters will suffice hereafter to compel the Legislature to introduce a particular measure; a petition signed by fifteen per cent. will compel the Legislature to refer any statute which may pass to the popular vote. When, however, it is desired to initiate a constitutional amendment, a petition signed by twenty per cent. of the voters will be requisite. If the joint resolution embodying these provisions is accepted by the Lower House of Missouri's Legislature—which seems probable—the proposal will be laid before the people at the next general election. It was wise to fix that date for testing the popular will, for experience has shown that it is seldom possible to elicit a full expression of public opinion on any occasion except when a general election or important local election is held. Thus, in New Hampshire the other day, less than a third of the vote cast for President in 1900 was recorded with reference to a number of amendments of the State Constitution, one of which substituted the word "Christian" for the word "Protestant" in the organic law of the commonwealth, while another conceded the suffrage to women, and a third prescribed an educational qualification for the ballot. Profound as were the changes threatened by these amendments in the political structure of the State, they excited much less interest than the question whether Mr. McKinley or Mr. Bryan should become the Federal Chief Magistrate. When George Washington was chosen President, on the other hand, the people of New Hampshire looked upon their State government as incomparably more important than the scheme of Federal administration which had been devised at Philadelphia in 1787.

For the first time since Mr. Gladstone resigned the post of Premier, public attention in the United Kingdom, and to a considerable extent on this side of the Atlantic also, is fixed upon Ireland. We do not yet know the details of the Land Purchase bill which was introduced in the House of Commons on March 25 by Mr. Wyndham, Chief Secretary to the Lord-Lieutenant. It is confidently believed, however, that the forecast of the measure formerly outlined by us will be fulfilled. It is even more necessary for the Balfour government to conciliate the Nationalistic members in Parliament and the Irish vote in British constituencies than it was six weeks ago. In the interval the cabinet has twice been rescued from an adverse vote in the House of Commons by Nationalist support, and its candidates have encountered a series of disastrous defeats at by-elections. Fortunately for the ministry, it can meet the wishes of the Irish people for agrarian reform without alienating its friends in the House of Lords, many of whom are Irish landlords. For the first time since the reign of George I., Irish landlords and Irish tenants are united in interest. As we have previously pointed out, they are agreed upon a scheme whereby the landlords will be enabled to sell their lands for more than the market price, whereas the tenants will get it for less than the market price. This paradoxical conciliation of interests will be brought about at the expense of the British taxpayer, who will be called upon to pay the difference. The annual interest, however, on the sum needed to make good the difference will be inconsiderable, compared with the vast importance of securing tranquillity and order in Ireland. According to Mr. T. W. Russell, who has done more than any other man to bring about the present era of good will, the Land Purchase bill is not the only concession by which the Balfour government aims to propitiate the Irish people. It is said that a considerable instalment of home rule will be granted in the form of a local government bill, by which we understand that on the substructure of the county and district councils will be erected a species of national council at Dublin which will be intrusted with certain powers of local legislation. There is no reason, however, to expect that such a measure will be introduced before the next session of Parliament. Some doubt has been expressed concerning Mr. Chamberlain's view of the proposal, but it is not shared by those who remember that he was willing even to accept Mr. Gladstone's first Home-rule bill, had a clause been inserted providing for the retention of Irish members at St. Stephen's.

Last week we chronicled the defeat of the Conservative candidate at the Woolwich election, and the damper put on the rejoicings of the Tories over the home-coming of the Secretary for the Colonies. Hardly was the news published when the story of another defeat came to hand, even more unexpected and alarming to the Balfour cabinet. Woolwich was considered a very safe seat, almost a certainty; but it was thought that the Rye division of Sussex was an absolutely sure and impregnable stronghold for the Conservatives; that they simply could not fail to carry the day. Yet the Rye division of Sussex has gone the way of Woolwich, and the Balfour ministry has had its majority reduced by two more votes. Three years ago the government candidate, Colonel Brookfield, was returned by twenty-five hundred votes over his Liberal opponent. The tide has now turned by no less than three thousand votes, something unprecedented and ominous. Further than that, close on the heels of this disaster comes the news that Fermanagh, which was hitherto one of the strong Unionist centres in the north of Ireland, has also gone back on Mr. Balfour, the Opposition candidate Mr. Mitchell, a disciple of Mr. T. W. Russell, having been returned triumphantly, all the Nationalists casting their votes for him. It becomes doubtful, however, whether a seat gained by the Irish Nationalists must still be reckoned a seat lost for the Unionist government. Since the unpublished and unwritten treaty with the Nationalists, which preceded the liberation of Irish members incarcerated under the Crimes act, and the announcement of the Land Purchase act, it is becoming clear that an understanding has been come to, under which the Nationalists agree to keep the Conservatives in power, for value received. Lord Rosebery, with his declaration that home rule was dead, is to be thanked for this; and, as we foreshadowed two weeks ago, there are already rumors of a modified Home-rule bill to be introduced by the Unionist government. Meanwhile, it is doubtful whether even this daring expedient can long preserve the life of the cabinet, for defections come thick and fast, and it is considered almost certain that the Chertsey election will go the same way as Woolwich and Rye.

Is the Liberal party in Great Britain doomed? Many men, no doubt, would answer no, in view of the recent victories won by Liberal or Labor candidates over Conservatives at by-elections. There is reason to believe, however, that the Conservative reverses are due to popular distrust of the leaders of the party in power, and not to any desire to see them superseded by Sir Henry Campbell-Bannerman or by Sir William Harcourt. So far as England proper is concerned,

there is no doubt that the mainstay of the party which supported the home-rule policy of Mr. Gladstone was the Nonconformist element. It was this element which forced Mr. Gladstone to demand the withdrawal of Mr. Parnell from the leadership of the Irish Nationalist party, after the exposure of the latter's relations to Mrs. O'Shea. From that day to this there has been no love lost between the English Nonconformists and the Irish Nationalists. Now, however, the English Nonconformists seem to be irremediably alienated, owing to the support given by the Nationalists to the Balfour government's Education bill. In this conflict of sentiment, which side are the Liberal leaders to take? Sir Henry Campbell-Bannerman, for his part, has announced that he will never forsake the Irish home-rulers. Lord Rosebery, on the other hand, has avowed his conviction that home rule for Ireland must be postponed until it is distinctly favored by a majority of the voters of England proper. Curiously enough, Lord Rosebery, although an Anglican and an ex-owner of race-horses, is the favorite of the Nonconformists. It looks, therefore, as if the English Liberal vote formerly consolidated by Mr. Gladstone would be henceforth split into two sections, and as if the section headed by Lord Rosebery might control the larger number of seats in the House of Commons. As for the good-will of the Irish Nationalists upon which Sir Henry Campbell-Bannerman sets store, it seems likely to be captured by the Conservatives, if the latter, in addition to an acceptable Land Purchase bill, offer a large instalment of home rule.

The week's budget of news from Latin America is unusually interesting and full. First we have a special session of the Cuban Senate called, to ratify the reciprocity treaty in its amended form. The days during which this can be done are numbered, and it is hardly likely that the treaty will arrive in Washington in time to be signed by the President in person. That duty will be delegated to the minister to Cuba. While there is much regret in Cuba over the amendment sending the treaty back to Congress, it is recognized that half a loaf is better than no bread. On the other hand, the delay in bringing the treaty into action is a direct bonus to Germany and England, the two powers which protested against the preferential rates given to this country by Cuba. In Colombia also there is much energy and activity in the business of ratifying the canal treaty. A government commission is traversing the country, canvassing public opinion, and, so far, all Colombia seems favorable to ratification and the canal. As we forecasted a short time ago, General Fernandez has succeeded José Marroquin, the acting President, and everything indicates that Colombia will gain in security from the change. The record of General Fernandez is reassuring. He has also taken temporary charge of the Department of Finances, while his stanch friend Señor Casas, already Minister of Public Works, has for the time undertaken the duties of the Foreign Office also. This change will not interrupt or delay the treaty ratification, and the general outlook is perceptibly improved. From Uruguay also we have good news. The government and the revolutionists have come to terms, through the intermediation of Señors Ramirez and Lamas, though what the terms are is not yet announced. Bolivia too sends its olive branch. Protocols between that country and Brazil have been signed, which provide for a *modus vivendi* in the Acre dispute, and for definite negotiations to end the matter finally. Thus another element of danger is removed from the Latin-American field.

We shall soon learn the real significance of President Castro's resignation of the Presidency of Venezuela. It will be remembered that our State Department recognized him as the head of a *de facto* government as long ago as November, 1899; that he was chosen provisional President in March, 1901, by a Constituent Assembly, and regularly elected President of Venezuela in February, 1902, for a term of six years, beginning on the 20th of that month. He had, therefore, nearly five years of *de jure* rule before him. The Venezuelan Congress promptly declined to accept the resignation, and, even should he insist on an acceptance, it is probable that arrangements would be made whereby his brother might succeed to the Presidency. Meanwhile, Castro has received a unanimous vote of confidence. It is improbable that a change of Executive will have any effect on the settlement of the controversies between Venezuela and foreign powers. It turns out that the delay in signing the protocols to which Mr. Bowen very properly directed the attention of the representatives of Great Britain and Germany was due to some difference of opinion regarding details. There is no longer any doubt that the protocols will be promptly signed, and that in September the question whether preferential treatment should be conceded to the blockading powers, as distinguished from other claimants, will be submitted to the Hague arbitration court. There seems to be considerable misapprehension regarding the scope of the matter to be referred to that tribunal. All the Hague court will be called upon to do will be simply to say whether, in the eye of international law, Great Britain, Germany, and Italy deserve to have their claims paid before those of other powers that refrained from resorting to acts of war. With the validity and amount of those claims the Hague tribunal has nothing to do. Each of the three blockading powers named a sum which it would be willing to accept by way of reparation for *wrongs*, and those sums, which, even in the aggregate, were inconsiderable, Venezuela agreed to pay forthwith. It is the ordinary debts accruing out of contract, and alleged to be due from the government or citizens of Venezuela to the subjects of foreign powers, that are said to constitute the formidable total of $45,000,000, exclusive of the cost of collection. Under the protocol signed by Mr. Bowen the validity and amount of these claims are to be determined by mixed commissions, on each of which the debtor and creditor countries shall be equally represented, provision being made for the appointment of an umpire in the event of disagreement. It was really, of course, in order to extort the payment of these large sums, and not to secure the pittances demanded for the redress of grievances, that Great Britain, Germany, and Italy resorted to blockade and bombardment.

We have received from the minister plenipotentiary of the Argentine Republic at Washington a copy of the communication which he was directed by Señor Don Luis M. Drago, the Argentine Minister for Foreign Affairs, to lay before our State Department. It is interesting to compare the document with Secretary Hay's responsive memorandum. Señor Drago draws a sharp distinction between demands for the redress of grievances, which he willingly concedes may be enforced by acts of war, and ordinary debts resulting from transactions into which foreign creditors went voluntarily, with their eyes wide open to the risks involved. The fact is recalled that the capitalist who supplies any money to a foreign state always takes into consideration the resources of the country, and the greater or less probability that the obligations contracted will be punctually fulfilled. It is for this reason that the credit obtainable by a given government is proportioned to the current view of the grade of civilization attained by it, and to the more or less businesslike conduct of its affairs. These circumstances are carefully measured and weighed by the lender, and serve to make the conditions of a loan more or less onerous. Señor Drago proceeds to insist that the acknowledgment of a debt thus growing out of contract, and the determination of its precise amount at a given date, ought to be left to the courts of the debtor nation, and cannot be arrived at in any other way without injury to its primary rights as a sovereign entity. The assertion of the opposite principle, to wit, the right to extort payment at any moment by means of force, could scarcely fail to bring about the ruin of the weaker commonwealths at the hands of the powerful nations of the earth. The latter principle, as Señor Drago says, cannot be reconciled with the fundamental rule of international law, namely, that all sovereign states, whatever be the physical forces at their disposal, are perfectly equal entities *de jure*, and entitled to the same amount of consideration and respect.

Touching the collection of ordinary debts by force, our State Department is reminded of the position taken by Alexander Hamilton — the position, *i. e.*, that contracts between a nation and private individuals are binding according to the conscience of the debtor sovereign nation, and cannot be the object of compulsive force. They do not confer any right, he held, for action outside of the sovereign will of the debtor nation. Señor Drago goes on to show how far we have gone in the application of this prin-

ciple in the Eleventh Amendment to our Federal Constitution, which provides that the judicial power of the United States shall not be construed to extend to a suit in law or equity begun or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign state. The Argentine Republic has not gone so far. On the contrary, it makes its provinces subject to prosecution in the federal tribunals, and even permits the Confederation itself to be prosecuted before the Argentine Supreme Court in the case of contracts entered into with private individuals. What Argentina has never recognized is that, the amount for which she is liable having been determined by her own courts, she could be deprived of the right to elect the form and time of payment, for in regard to such matters she is as deeply interested as the creditor himself. Finally, the Argentine Minister for Foreign Affairs submits that the enforcement of the payment of ordinary debts by blockade, bombardment, and the confiscation of customs revenue is an act counter to the letter and the spirit of the Monroe Doctrine as originally formulated, because it undoubtedly *oppresses*, and to a certain extent *controls the destiny*, of an American commonwealth.

What was the answer of Secretary Hay to the announcement that Argentina would like the United States to join in the enunciation of the principle that an ordinary debt, due, or alleged to be due, from the government or citizens of an American commonwealth to foreign creditors cannot be made the pretext for an armed intervention? Our State Department refrained from accepting or rejecting categorically the principle propounded. No assent or dissent is expressed to the propositions forcibly set forth in the note of the Argentine Foreign Office to which we have just referred. Señor Drago is merely referred to the more or less divergent positions taken by Mr. Roosevelt in his first and second annual messages, and left to reconcile those documents as best he can. In the first message, dated December 3, 1901, Mr. Roosevelt said that we do not guarantee any Latin-American state against punishment if it *misconducts* itself, provided the punishment does not take the form of the acquisition of territory by a non-American power. The word "misconduct" would naturally be understood to refer only to the public torts and wrongs, the right of the injured nation to demand redress for which is universally recognized. It was in the second annual message, dated December 2, 1902, that an American President, for the first time, employed a much more elastic and ambiguous phrase, stating that it behooves each of the independent American republics to maintain order within its own borders, and to discharge its *just obligations* to foreigners. When this was done, Mr. Roosevelt said, they could rest assured that they would have nothing to dread from outside interference. Mr. Hay does not tell the Argentine minister whether, by the phrase "just obligations," and by the construction thereof indicated by our State Department to the British and German Foreign Offices, the Anglo-German demonstration against Venezuela was, in his opinion, warranted. He merely says that the United States would be glad to see the settlement of ordinary debts, as well as of technical wrongs, effected by a resort to arbitration, instead of by acts of war. He does not say that the United States will peremptorily demand the substitution of arbitration for war in such cases; much less that we will join with Argentina in asserting that principle. Meanwhile, we are probably safe in saying that nineteen Americans out of twenty, provided they have considered the matter at all, deem the position taken by the Argentine Minister for Foreign Affairs to be the right one.

The names of the British members of the Alaskan Boundary Commission are now to hand. These are Lord Alverstone, Lord Chief-Justice of England, Sir Louis Jette, formerly Judge of the Supreme Court of Quebec, and Sir John Douglas Armour, Judge of the Supreme Court of Canada. The precise terms of the treaty appointing the commission are obscure, as Sir Wilfrid Laurier and Mr. John Hay have each published interpretations of its purpose, and these interpretations are almost diametrically opposite in sense. But it seems fairly clear that the commissioners will be called upon to take the dispute back to the treaty of 1825 between England and Russia, and that the three-quarters of a century of effective occupancy by this country of the territory now claimed by Canada will not be held to constitute satisfactory evidence of possession and sovereignty. The truth is that even Canada never seriously thought of putting forward her very fanciful claims until after the discovery of gold in the Klondike, when it became her interest to have a free outlet to the sea, which she could only gain by claiming the headwaters of the Lynn Channel, as being within British territory. Hence the whole dispute. Apparently, a *modus vivendi* can be reached on the wording of the Russian treaty, for while this treaty very clearly defines the boundary-line of Alaskan territory in the sense claimed by our government, it also allows to British shipping the right of free navigation in perpetuity of all rivers rising in British territory, but reaching the sea through Alaskan territory, then Russian, but now belonging to the United States. According to the strict interpretation of this clause, Britain and Canada could claim the right of free navigation of the Lynn Channel, and the outlet desired by Canada would thus be secured. While there is still much protest in Canada against the choice of the American members of the commission, it is clear that this protest is wholly unofficial, and therefore not likely to have any important result.

We can best understand the position of politics at this moment in Japan by a comparison with a familiar epoch in English parliamentary life. The two great Japanese figures are the Marquis Ito, who may be likened to Gladstone, and General Count Katsura, who is the Salisbury of the Flowery Kingdom. Count Katsura has a reliable majority in the Upper House, which is full of feudal and aristocratic traditions and prejudices, but cannot maintain a solid and united party in the Lower House, just as Lord Salisbury, strongly entrenched in the Lords, more than once lost his hold on the Commons. Marquis Ito, on the other hand, like Gladstone, has a great and growing following in the Lower House, but a majority of the aristocratic Upper House distrusts his liberal tendencies, and thinks he is going too fast, and endangering his country's stability. The result of the elections so far is that Marquis Ito's position is strengthened, so that he will be in a position either to dictate to Count Katsura, or to form a ministry of his own; and thus in either case he will have an opportunity to carry on his life-work, the introduction of constitutionalism into the once exclusive and strictly feudal life of Japan. Incidentally, it will be decided whether the whole burden of the new naval programme is to fall on the land-owning classes, which really means, on the cultivators of the soil. In view of the fact that famine is at present rife in the northwestern provinces, it is evident that the agricultural class is not in a position to bear many additional burdens. As the navy exists chiefly for the defence of commerce, it would seem to be just that the chief part of the cost should fall on the commercial class who most benefit from the outlay.

An extraordinary man was Charles Godfrey Leland, who died on March 20, in Florence, Italy, at the age of seventy-eight. He lived a long, happy, useful, and laborious life, of which it was hardly more than an incident that when he was about fifty years old he became famous as the author of the ballads of *Hans Breitmann*. Everybody used to know how "Hans Breitmann gife a barty," and about the "himmelstralendestern" and the other incidents, multifarious and varied, of Hans Breitmann's social career. And from knowing Breitmann, everybody came to know Leland. There was a good deal to know. He was a writer as remarkable for erudition as for versatility. The son of an old Philadelphia family carefully educated in the best schools of his day, he appears as an infant prodigy who wrote a good poem at ten; as a schoolboy who was deeply read in black-letter; as a Princeton College boy who was one of the best-read men in America, and as a revolutionist who helped in 1844 to man the great barricade of the Faubourg St.-Antoine in Paris. After four or five years in Paris and London he studied law in Philadelphia. But he practised not law, but literature, beginning as an editor in New York in 1853, and continuing as editor or writer in New York or Philadelphia until 1869. He had a hand in making *Appleton's Encyclopædia*, and was one of the staff of *Vanity Fair*. The Breitmann ballads made him famous in the early seventies, and after that he lived

much abroad, studying gypsies, folk-lore, and whatever interested him. He published many books, but perhaps the most important of all his labors was the part he took in introducing industrial art into the American schools.

An invention which promises to do away with much profanity—expressed or implied—and any quantity of vexation is now being tried on a large scale in Chicago. It is already satisfactorily at work in a dozen cities with a population of 25,000 and over, and its promoters are certain of its complete success in the largest cities. It is the automatic, "secret service," girlless telephone. By means of the automatic switchboard the telephone girls at the central stations are absolutely done away with. When a number is wanted you simply turn a small dial, like that which operates the combination of a vault, to the numerals which make up the required number, in their consecutive order. Then you press a button which rings the call-bell on the other telephone, and the connection is complete. The whole operation is automatic and almost instantaneous; no one can break in and interrupt or overhear a conversation; and a person speaking cannot be cut off before he has finished. Though more than one telephone company in a city is a nuisance, the adoption of an automatic switchboard would certainly go far towards remedying most of the faults of the present system. The Chicago company has already spent several millions of dollars in the building of tunnels for its wires, and will have 10,000 telephones in operation within the next two or three months.

Yale University has made provision for allowing diligent students to take the A.B. degree in three years instead of four. The courses in her schools of law, medicine, and divinity will be arranged hereafter so that the first year's work in any one of these schools may be done by Seniors in the academic department, who will thus save a year's time in their professional studies. These changes indicate the strength of the pressure towards lessening the time required for professional training. Discussion of the value of the fourth year at college goes on, and protests abound against premature specialization and the narrowing of the foundation of general culture, but the fact is that the strongest universities in the country are making the fourth year in their academic departments optional. Students who can do four years' work in three are welcome to do so.

Mrs. Ballington Booth's suggestion that bandages, restoratives, and anæsthetics shall be carried on passenger-trains on American railroads is not derisively intended. Mrs. Booth is quite in earnest, and the suggestion seems to her nothing more than humane. She is herself a constant traveller, and has seen something, and read much more, of the sufferings of trainmen, engineers, and passengers in railroad accidents. Cases where people have been pinned down by wreckage and burned to death have especially impressed her. Most passenger-cars already carry an axe, a saw, and a sledge for use in emergencies. She thinks experience has amply justified the further provision that she suggests. She has learned that employees of the Pennsylvania Railroad, and perhaps of other roads, have attended lectures on "First Aid to the Injured," but one may have knowledge, she says, and yet be helpless to render quick and efficient relief without bandages and remedies. The objection that cans of chloroform might be broken in a wreck and do mischief, does not impress her as important, and truly there is not much to it. The suggestion is humane, and in view of the report of the Inter-State Commerce Commission that 8455 persons were killed and 53,339 injured in railroad accidents in the year 1901, it seems reasonable, and amply worth consideration.

Dr. Parkhurst, in a sermon on lying, finds that we Americans are altogether too prone to inveracity, and discovers "a deplorable illustration of the general apathy upon the matter" in the "easy popular assent" accorded to the wiles used by Funston in capturing Aguinaldo. But was the popular condonation of that exploit so easy? Funston's actions were officially approved, and he was promoted in consequence of them; but in his case there is a distinction between official opinion, which declared in his favor, and that species of public opinion which is the sum of private opinion. From the start Funston's exploit went very much against the grain with thousands of his countrymen, who willingly conceded its daring, but found grave ethical defects in it, and whenever it has been discussed it has stirred up as much protest as commendation. If Dr. Parkhurst must use Funston's feat as an illustration, he may just as well use it to demonstrate the sensitiveness of the American conscience as its apathy.

Dr. Obrian, the American dentist who was said to have been a lover of the Crown-Princess of Saxony, left Dresden in some haste to avoid expulsion. Since his arrival in New York he has talked to the newspapers about the Crown-Princess, and has talked like a gentleman and a man of sense. He scouts the idea that there was any basis to the gossip about the Princess and himself, and says that the Princess has been more or less irresponsible for some time, and that he happened to be one of the twenty-three men to whom she had addressed letters which had never been sent. The royal family of Saxony seems to have made the worst of a difficult situation. It had on its hands a woman who needed to be protected and probably restrained. It failed to safeguard her, and has shown so much incompetence in the management of its domestic affairs that its imputation of misconduct to Dr. Obrian, unsupported by any evidence, carries no weight at all.

Bishop Huntington, of Central New York, feels that hell is being unduly neglected by the clergy. In a mid-lenten sermon in Syracuse on March 22 he expressed his conviction that there was a place for hell, and that it was there, and that self-indulgent persons whose habits and conduct were not good would some day have a painful personal experience of it. Hell has at times been much overdone. It has been described as hotter and more continuous than the human imagination can endure, and overmuch freedom has been used in forecasting its population. No hell that contains unbaptized infants or persons who died casually and unintentionally unregenerate will wash in these times. An eternity of hell as a consequence of misconduct of limited continuance also seems to modern minds an improbable dispensation. But the idea that evil-doers who manage to avoid punishment in this life are going to get off altogether does not commend itself to the average observer's sense of fitness. Almost every one believes in God, and every intelligent believer in God must believe in eternal justice. Somewhere, somehow, the odds come even, and all crops are harvested. Without hell, or its equivalent, we average observers cannot see how final justice is going to be done. A good deal of the time the way of the transgressor is hard in this life, but some transgressors play their game so ably as to elude all obvious penalties, and make a show of having a good time as long as they live. The religious mind is confident that there must be appliances somewhere for getting even with these persons.

Anybody who doubts that there is a hell is invited to consider the reports which have come from London of the disclosures of Captain Guy Burrows and Mr. Edgar Canisine about the atrocious cruelties committed by Belgian officials of the Congo Free State in mid-Africa. Burrows and Canisine are Englishmen who spent three years in the Congo Company's service. Their book has been suppressed for the moment, but it tells stories of the abuse of the Congo natives by torture, slavery, and wholesale murder, which are to be investigated by the British Parliament. If they are true we shall hear more of them.

Mr. Lloyd C. Griscom, lately appointed minister to Japan, is a son of Clement A. Griscom, of Philadelphia. He is a young man, as his picture shows, but is well launched on a career of diplomacy for which his aptitude has already been tested by a considerable experience. He was secretary of our legation in Constantinople in 1899 and 1900, and for many months, between the departure of Minister Straus and the coming of Minister Leishman, managed our concerns in that capital with excellent ability. In 1901 he was appointed minister to Persia, and spent two years at Teheran. He starts in a few days for his new post in a third Oriental country, but one that seems nearer home, and with which our relations are highly important. Mr. Griscom's preferment is an excellent and commendable example of promotion within the lines of the diplomatic service.

The Coal-Strike Award

To all but those who are primarily interested in the anthracite-coal strike the issues of wages and of hours of labor were the most unimportant of all those referred to the President's commission. On these issues the miners have won a partial victory—that is, the commission has given them half of what they demanded. No reasons are given for this determination. Indeed, the reasoning of the commission's report would sustain a denial of any additional pay or of any shortening of the hours of labor, but no one will quarrel with the illogical character of the result at present. We may have a different tale to tell if the consumers are eventually made to pay for the decision, or if the miners overlook that part of the report which, to the public, is the most important. So far as the miners are concerned,—there is some doubt expressed as to the effect of the award on the earnings of the laborers,—they have been made happy by a ten-per-cent. increase of pay after the commission has decided that the daily rate of earning in the anthracite regions does not compare unfavorably with that in other industries; that "the conditions of the life of the mine-workers outside the mines do not justify in their full extent the adverse criticism made by their representatives"; that the social conditions in the region are good; that there is not sufficient evidence to sustain the point that miners' wages are so low that they are forced to put their young children at work in the mines. In brief, the increase of pay is awarded, although the reasons for demanding it are not sustained by the testimony. If this were all, the expensive strike was begun and was maintained for nothing. A loss of $99,000,000, divided between operators, miners, and transportation companies, not to speak of the loss to the public by reason of the increase in the price of coal, has been suffered, and, so far as the surface issue was concerned, to no purpose; for all that the men have gained would undoubtedly have been granted to them if they had acceded to the offer of the various operators, if they had dropped the United Mine-Workers, and if the employees of each company had presented their grievances and demands to their own employers.

This brings us to that part of the report which is most interesting to the community, and which ought to be of chief importance to united labor. The refusal of the men to carry on the discussion as the operators suggested—*i.e.*, between employers and employed—emphasized the issue which has been a sore subject since before the strike of 1900. The real question in dispute was as to the recognition of Mr. Mitchell's United Mine-Workers by the operators of the anthracite region. On this point the operators are sustained, the union having been practically defeated when the commission was appointed, and when the terms of the hearing were settled. The importance of this issue was further emphasized by Mr. Mitchell himself immediately after the conference with the President and the agreement upon the investigation. Mr. Mitchell, it will be recalled, then declared to the public, especially to his followers, that Mr. Roosevelt himself had recognized the union in sending for him, and this notwithstanding the fact that it was understood that before the President he spoke, not for the union, but for the body of anthracite miners. Mr. Mitchell's chief effort, however, was to convince his followers that the President and he, as president of the union, were allies against the operators. In its findings the commission recognizes that the union was not a party to the controversy before it, and adds that "the present constitution of the United Mine-Workers of America does not present the most inviting inducements to the operators to enter into contractorial relations with it." Therefore, Mr. Mitchell was defeated upon his main contention, and his union is at least no nearer to recognition in the anthracite region than it was before the strike began. Indeed, it would be nearer the truth to say that it is farther from its goal, for the reason not only that the decision of the commission is flatly against it, but because, in the strike of 1900, and in obedience to the supposed exigencies of politics, there was a partial recognition of the union which, in consequence of the commission's ruling, is no longer a precedent.

More important still for the community at large is the commission's findings as to the character of the union, and as to the methods adopted, or excused, or ignored by its officers, in the conduct of the strike. Here the commission necessarily discusses some important features of the creed of modern trade-unionism, and condemns them courageously and completely. In doing so, it speaks not only the mind of the sober, law-abiding citizen, but, we have no doubt, the sense of the best and most efficient working-men, non-union or union. It is one of the fundamental beliefs of extreme labor-unionists that strikes are not likely to be successful if the law is obeyed and order is maintained by the strikers. The philosophy is that a state of war exists between labor and capital, and that, therefore, labor has the right, in aid of a strike, to resort to the methods of war, including trickery, promise-breaking, and violence against all who oppose the strike, directly or indirectly—employers, non-union men, and citizens related to the latter, or furnishing them lodgings or food. This has recently been taught by a college professor who is also, strangely enough, a clergyman. It was on this principle that many of the coal strikers acted, unchecked by their local officers, and unrebuked by Mr. Mitchell and their other general officers. Commenting on this, the commission says: "A labor organization whose purpose can only be accomplished by the violation of the law has no right to exist;" and speaking of the boycott of merchants and others who traded with and harbored non-union men, the compelling the discharge of persons who happened to be related to miners who continued at work, the assaults upon women and children, the burning of property, and the other outrages committed in aid of the war theory, the commission says: "The analogy [of strikes to war] is not apt, and the argument founded upon it is fallacious. There is only one war-making power recognized by our institutions, and that is the government of the United States. War between citizens is not to be tolerated, and cannot, in the proper sense, exist." These are words of wisdom, and are strong in condemnation of a rule of conduct which for some years past has been assumed to lie at the root of organized labor's power.

Acting upon the rule that the union was at war with the owners of the mines, some of the strikers, so says the commission, were guilty of practices which "would be outside the pale of civilized war. In civilized warfare," the report goes on to say, "women and children and the defenceless are safe from attack, and a code of honor controls the parties to such warfare which cries out against the boycott we have in view. Cruel and cowardly are terms not too severe by which to characterize it."

The United Mine-Workers of America carried on the strike in such a manner as to deserve this severe censure. They refused arbitration between employers and employed, insisting on the recognition of a union composed largely of bituminous miners. This demand the commission declares against, recommending the adoption of President Baer's suggestion that a true anthracite union be formed. The commission also recommends the adoption of Mr. Charles Francis Adams's plan for official inquisition into every strike in which the public may be concerned. But, above all, it condemns without measure the acts of tyranny which are making modern unions hateful—those acts of tyranny which affect more immediately working-men and the community than the employers. This condemnation is unanimously agreed to by men whose findings in favor of the miners as to pay, etc., show that they lean rather to the miner than to the operator. Two at least of these commissioners were appointed because of their expressed sympathies with organized labor. One of these was the recognized representative of labor. One other is trusted by labor leaders as completely as if he were one of themselves. Yet these men are unanimous in condemning the United Workers, not only for permitting a strike to be voted by young breaker boys, not only for misrepresenting the condition of labor in the region, but for crimes against the community and against other working-men. And this verdict is of supreme importance to the community whose interests it defends, to the non-union men whose right to work unhindered by strikers is proclaimed, and to all union men who desire the maintenance and continuance of organized labor. The verdict of the commission in these respects is the verdict of sound men throughout the community. United labor must yield to the principle that private war is obsolete; that the organization that seeks its end "by violation of law has no right to exist"; that the interference of associations with individual liberty cannot be tolerated. United labor must abandon the policy which the commission condemns, or cease to exist. Not only will the community not tolerate associations that break its laws and disturb its peace, but the best and most efficient labor men will not forever consent to be pulled down, by their unions, to the level of the average or the incompetent. Herein lies the lesson taught by this report to labor unions, and they would do well to ponder it and to heed it.

Analysis of the Coal-Strike Commission's Report

THERE are two obvious reasons why the conclusions set forth in the report of the Anthracite-Coal Strike Commission may be presumed to be equitable. In the first place, they are approved by all the members of the commission, although these must have entered upon the inquiry with diverse prepossessions. In the second place, they are viewed with satisfaction by all the parties interested in the controversy—that is to say, by the operators, the union mine-workers, the non-union workers, and the community at large. The presumption based upon these facts is confirmed by an analysis of the document submitted to President Roosevelt. The results of such an analysis will be best appreciated if we begin by pointing out the demands which were made by the union mine-workers, and which the commission had to consider. The primary cause of the strike was, unquestionably, the refusal of the operators in the anthracite region to treat with the United Mine-Workers of America. The recognition of the United Mine-Workers by the anthracite operators was included in the list of demands ultimately submitted to the commission by Mr. Mitchell on behalf of the strikers. It

really constituted the most important feature of the list, and, could it have secured approval, the total rejection of the other demands would have been received with equanimity by the union mine-workers. The commission not only declined to recommend it, but advised the anthracite miners of Pennsylvania to form a new and independent union.

The other demands made by the strikers were for twenty per cent. increase in wages, for twenty per cent. reduction in hours of labor, and that the mining of coal should be paid for by weight. The commission awards an increase of ten per cent. in the wages paid to all contract miners over and above the rates paid in the month of April, 1902; the increase to date from November 1, 1902, and to continue until March 31, 1906. With exceptions, to be noted presently, the same increase of ten per cent. in wages is awarded to engineers, pumpmen, firemen, and all other men employed by the operators. As regards the reduction of the hours of labor, the commission decides that engineers employed in hoisting water and firemen shall have eight-hour shifts, with the same wages per day, week, or month as were paid in April, 1902. Engineers other than those employed in hoisting water are to have an increase of ten per cent. on their earnings between November 1, 1902, and April 1, 1903, but from the last-named date, and during the life of the award, they are to have an increase of only five per cent. on the rates paid in April, 1902. They are, however, to be relieved from duty during the day shift on Sundays without loss of pay. All company men other than those specially mentioned are to be paid on the basis of a nine-hour day, receiving therefor the same wages as were paid in April, 1902, for a ten-hour day. Overtime in excess of nine hours in any day is to be paid at a proportional rate per hour.

The demand that all coal mined should be paid for by weight is rejected, the commission deciding that during the life of the award the present methods of payment for coal mined should be adhered to, unless changed by mutual agreement. Wherever by usage or agreement coal mined is now paid for by weight, check-weighmen shall be employed when a request is made by a majority of contract miners in any colliery, but, when employed, they shall be paid by the miners. It is further provided, on the one hand, that mine cars shall be distributed among miners as uniformly and equitably as possible, and, on the other, that there shall be no concerted effort on the part of the miners in any colliery to limit the output of the mines. In all cases where miners are paid by the car the increase awarded to contract miners is based upon the size of car, the topping required, and the rate paid per car which obtained on April 1, 1902. Any increase in the size of car or in the topping required is to be accompanied by a proportionate increase in the rate paid per car.

An important effect upon the remuneration earned by all miners and mine-workers will be exercised by the introduction of a sliding scale of wages which was proposed by the operators, and is approved by the commission. For each increase of five cents in the average price of white-ash coal of sizes above pea coal, sold at or near New York between Perth Amboy and Edgewater, and reported to the Bureau of Anthracite Coal Statistics, above $4 50 per ton, the employees are to have an increase of one per cent. in their compensation. The average prices are to be computed monthly by an accountant named by a circuit judge of the Third Judicial Circuit of the United States, and paid by the coal operators.

We pass to that part of the award in which non-union workers are concerned. The commission declares that no person shall be refused employment or in any way discriminated against on account of membership or non-membership in any labor organization; and there shall be no discrimination against or interference with any employee who is not a member of any labor organization by a member or members of such organization. The grounds for this decision are set forth in terms that deserve the highest commendation. The commission points out that the right to remain at work where others have ceased to work, or to engage anew in work which others have abandoned, is part of the personal liberty of a citizen which can never be surrendered. Every infringement thereof merits, and should receive, the stern denouncement of the law. The commission repudiates the notion that the terrorizing of a so-called scab may be justified on the plea that a man who takes the place of one who has abandoned his work helps to defeat the aspirations of men who seek to obtain better recompense for their labor. As to the boycott, it is stigmatized as a cruel weapon of aggression, and its use is denounced as immoral and antisocial.

The more closely the award is analyzed, the more honor it reflects on the commission. It is a resplendent and far-reaching triumph for the principle of voluntary arbitration, nor can it be denied that the credit for the application of the principle is primarily due to Mr. Roosevelt. Whether his initiative is constitutional is a question that we shall not now discuss.

Our Unratified Constitution

We have had occasion several times to point out that English newspaper writers who comment on the structure and working of our Federal government seem never to have read our Federal Constitution which was framed at Philadelphia in 1787, and went into operation in April, 1789. Even had those writers, however, read that document and remembered it, they would still fall short of comprehending our constitutional law as it exists to-day. There is a good deal of that law which is not to be found in the Constitution, and which has never been ratified by the legislatures or conventions of three-fourths of the States, but which, nevertheless, is binding. For an exposition of all that this assertion means, we commend our English readers to a book lately published by the Putnams, entitled, *The American Republic*, by Mr. James Albert Woodburn, Professor of American History and Politics in the Indiana University. As the author of this work points out, even Mr. Bryce does not fully explain the character of our Federal government when he describes it as a government of enumerated powers only, and says that it can do only what it has received competence to do by a grant of powers expressed or implied in an enumerated list. Inasmuch as a growing community requires a flexible Constitution, it is fortunate for the United States that the enumerated powers have been supplemented, not only by implied powers, but by *resultant* powers. The implied powers will be found set forth at great length in the reported decisions of the United States Supreme Court, which, it is probable, few English students of our institutions have ever examined. Aside, however, from the powers which by our highest Federal tribunal have been declared to be implied in the enumerated grants, there are several things which our Federal government has assumed to do, and which it has been justified in doing by the United States Supreme Court. As Professor Woodburn reminds us, it has been found impracticable to confine the Federal government to a list of recited and implied powers, although the written Constitution intended that it should be so confined. It has turned out that, from a national point of view, the Federal government must be regarded as one of original and inherent powers, powers that come to it from the very nature of a political entity, from necessity and usage, in the conduct of government. These functions Alexander Hamilton called *resulting powers*. Implied powers are deduced, as we have said, by the United States Supreme Court, from specific and express grants. Thus, since Congress is endowed by the Constitution with power to coin money and to regulate commerce, it follows logically that Congress may establish a mint, build lighthouses, and improve harbors. *Resulting powers*, on the other hand, are deduced from the functions which the Federal government has to perform with reference to foreign nations. From this point of view every power essential to the life and processes of a *nation* must be conceded to it. It must be allowed to perform every national government function which any national sovereign government can perform, provided it is not expressly restrained from the performance of such a function by the restrictions of the Constitution. Even the expressed prohibitions of the Constitution do not restrain the national government from the exercise of sovereign national powers, according to the late decision of the United States Supreme Court in the insular cases. The Louisiana Purchase also was an example of the exercise of original rather than recited or implied powers. The purchase of the Louisiana Territory was undertaken and allowed because the Federal government was a government, and, as such, was in possession of sovereign and original powers touching the acquisition of territory by war or treaty. There seems to be, in other words, a certain residuum of powers prohibited to the States in their individual capacities, but neither prohibited nor delegated to the general government by the Constitution. These powers the general government assumes to exercise by virtue of the fact that, while with reference to the component States it is to some extent a confederation, it is, with reference to the rest of the world, a nation.

Aside, however, from the implied powers and the resulting powers, for a formulation of which an English student of our political system would in vain scrutinize our written Constitution, there are certain usages which have come to have almost, if not quite, the force of law, and which may be said to form our unwritten Constitution. Among these usages may be mentioned the following: Presidential electors have no right to exercise their discretion in voting for Presidential candidates, but must vote for their party nominee. A President may not be elected for a third term. A President may remove his appointees without asking the consent of the Senate. The Senate will not refuse to confirm cabinet appointments. A member of Congress must reside in the district from which he is chosen. We add that all our party law regulating party machinery and the proceedings of party conventions is unwritten law. It consists of nothing but precedents and customs, and the latest national convention of a party may change the party constitution at will. For example, the coming Republican national convention might, if it chose, ordain that the number of delegates receivable in the next national convention of the party, from the Southern States, should be proportioned to the number of Republican votes cast in those States.

Our English friends need not mind being

told that they do not understand our Federal Constitution. There are very few men in the United States qualified to interpret it with perfect accuracy. The proof of this assertion is that the decisions of the United States Supreme Court in the income-tax case and in the insular cases were made by a vote of five to four out of the nine judges. Where such doctors of laws disagree, a journalist's slips may be pardoned.

Trading for Influence

WITHIN a generation we have come to demand that the President shall make an effort to influence or to procure Congressional action, and there has always been a tendency in this direction. The President has a policy, we argue; no other individual, and no other branch of the government, is so endowed. Therefore, we expect the President to back his views. The Constitution has imposed upon the Chief Executive the duty of submitting his opinions to Congress in his messages. As time has gone on, the annual messages have increased in length, until now they cover every subject of interest or importance which may, or which ought to, command the attention of the legislative branch of the government. So much a matter of fact have all-embracing and comprehensive messages become that when Grover Cleveland confined his attention to one subject in his famous tariff message of 1887, many regarded his infringement of what was then really a new practice as an impertinence. At any rate, it is clear that the attitude of the country is one of expectancy, and perhaps of demand, that the President shall try to secure the realization of his wishes in legislation or in treaties, and the tendency is to measure his success as President by his accomplishments in this direction rather than by his achievements as a purely administrative officer.

Mr. Roosevelt has endeavored to satisfy this demand by securing the good-will of the Senate, by consulting Senators as to appointments, and, in the matter of treaties, by yielding to the demand of the Senate leaders that the majority members of the Committee on Foreign Affairs shall be consulted during the process of negotiation. The result shows that failure can confidently be expected from trading on the constitutional checks and balances of the two departments of the government, the Executive and the legislative, or at least, that when the policy of the majority of the Senate is opposed to that of the President, the latter cannot surely secure the adoption of his policy by making terms with Senators. In most instances, when the Senate differs from the President on a question of importance, it is because the Senate has views of public, or of party policy antagonistic to the opinions of the President, or else is determined to defeat him for personal or political reasons.

The fate of the Cuban reciprocity treaty furnishes a case in point. As we pointed out last week, this treaty was negotiated on the plan insisted upon by Mr. Lodge and other Senators. Leading Republican Senators, especially members of the Foreign Affairs Committee, were consulted in advance during the negotiation of the treaty. The assumption was that a treaty so negotiated would be pretty certain of ratification, for the Senators consulted would speak the minds of their associates. As a matter of fact, the new method, so far as this particular treaty is concerned, is no better than the old. The treaty has not been ratified as it was negotiated. In other words, it has not been ratified at all, and all that we have is a treaty in process of negotiation on which both the Cuban and our own Congress must act before it is completed. We do not speak of this by way of objecting to the contention of the right of the House to participate in any action affecting the tariff, and this treaty does modify our revenue law. What we had to say on this point was said last week. But the Senators who agreed to the treaty as presented, and who promised its ratification, knew of this point, and yet permitted such a delay that the treaty was thrown over to an extra session, called partly on its account, and, in doing so, they postponed ratification possibly for nine months or more, and actually imperilled the treaty; for our own House of Representatives may not concur, while the Cuban Congress may decline to agree to the changes which have been made affecting the revenues of the new republic. So far as the treaty-making power of the government is concerned, the change which delays and imperils negotiation by the admission of Senators to the consultation has not materially improved the chances of ratification.

When the President enters upon the domain of bargaining with the Senate, he meets a real power of great selfishness. In the creation of the system of checks and balances, the framers of the Constitution gave the advantage to the legislative branch of the government. In bestowing offices upon the friends and followers of Senators, the President simply purchases individuals; he may thus fall far short of securing a majority. In yielding to the demand of Senators to be consulted during the negotiation of a treaty, he may gain the adherence to his project of the members of one committee, who are themselves at the mercy of a single Senator with the power of talk strong upon him, and whose opportunity fully to exercise that power is afforded to him by the rule of "courtesy." The President who bargains may now and then gain a point, but the issue is always in doubt. The Senate and the House of Representatives may play him false, for no Senator or member will be held responsible by the country for deceiving the President who intrigues for legislation.

The fact is, that experience has shown that the undignified and unworthy practice of trading is not very successful. Mr. Roosevelt, for example, has endeavored constantly to win the support of Senators by giving them control of the Federal patronage with certain proper limitations. The Senators have taken his gifts, and have treated him as they pleased, not only denying him the laws and the treaty which he has had most at heart, but actually refusing to confirm appointments which he and his friends assert to be purely personal. Even Mr. McKinley, most adroit manager of Congress, was more than once sorely disappointed. His reciprocity treaties were pigeon-holed, and his effort to secure immediate free trade with Porto Rico was defeated.

The success of Grover Cleveland, on the other hand, in securing the repeal of the purchasing clause of the Sherman act, shows the value of the dignified observance of constitutional boundary lines. The President is most powerful, and most influential, when he remains strictly within his own domain. He may advocate his policies with all the warmth of which he is capable, as Mr. Cleveland did. He may take the country into his confidence, and he ought to, also as Mr. Cleveland did. By doing this he will gain the aid of popular respect for character, for dignified observance of official proprieties, and if his policy be popular, as much of Mr. Roosevelt's defeated policy is, he will gain the support of a power which is the only power that is feared by the Senate and the House of Representatives, the power of the body of electors. The President who manfully stands up for his constitutional rights will win nine times out of ten, when the trading President must fail in the very nature of things.

Saving Time in Education

FROM the moment that the number of years required for the attainment of the degrees of Doctor of Medicine and Bachelor of Laws was increased at some of our leading universities, the necessity of securing the preliminary degree of Bachelor of Arts at as early an age as possible was widely recognized. President Eliot of Harvard University was the first eminent advocate of the change, which, as he pointed out, was the more imperatively needed, because, owing to the more exacting requirements for admission to the college proper, the age of graduation had been materially raised. Even when the number of years, however, prescribed for an A.B. degree is reduced to three, it is still impracticable for most men intended for the liberal professions to enter active life before the age of twenty-five, for, at present, few youths are admitted to the most distinguished universities in the Eastern States before the age of eighteen. The problem, then, of so rearranging the whole scheme of liberal education as to make it possible to graduate from professional schools as early as twenty-three must, evidently, be solved in another way. While the standard of attainments needed for admission to the college proper should not be lowered, young men must be enabled to conform to it at the age of sixteen. This end can only be achieved by a readjustment of the studies pursued, not only in the higher, but also in the primary schools. President Eliot and Professor Paul H. Hanus, of Harvard University, have lately made some useful suggestions on the subject. The former has directed attention to the fact that the study of classical and modern languages, which mainly tax the memory, and of such sciences as botany, which call for observation, can be, and should be, begun by boys at the age of nine or ten. Moreover, the elective system should be introduced in the primary schools, the kind of instruction given to a particular boy being adapted to his natural aptitudes. Professor Hanus, for his part, insists that the emphasis now laid in primary schools on arithmetic and English grammar should be diminished until, by a child's tenth year, these studies are dropped altogether. Beyond simple arithmetic and beyond the fundamental facts of English grammar, he thinks, a child should not go. Not only would he have the course of studies which a boy is to pursue at college chosen for him at an early stage of his school life, but he holds that, as the boy approaches the end of his school training, the professional career which he is ultimately to follow should be kept in view. If that were done, and if a part of the time spent in the college proper were devoted to professional studies —an arrangement already countenanced at some of our leading universities—the time prescribed for the attainment of a degree in law or medicine might be abbreviated. To put the whole matter in a nutshell, if a boy is to become a doctor or a lawyer, the work of preparation should be begun at an early age. President Eliot evidently thinks that, if the whole scheme of school instruction were reformed, the age of twenty-three would be by no means the lowest limit at which a young man might graduate from a professional school.

A SONG OF SPEED

TO ALFRED HARMSWORTH

BY W. E. HENLEY

In the Eye of the Lord,
By the Will of the Lord,
Out of the infinite
Bounty dissembled,
Since Time began,
In the Hand of the Lord,
Speed!

Speed as a chattel:
Speed in your daily
Account and economy;
One with your wines,
And your books, and your bath—
Speed!
Speed as a rapture:
An integral element
In the new scheme of Life
Which the good Lord, the Master,
Wills well you should frame
In the light of His laugh
And His great, His ungrudging,
His reasoned benevolence—
Speed!
Speed, and the range of God's skies,
Distances, changes, surprises;
Speed, and the hug of God's winds
And the play of God's airs,
Beautiful, whimsical, wonderful;
Clean, fierce, and clean,
With a thrust in the throat
And a rush at the nostrils;
Keen, with a far-away
Taste of inhuman,
Unviolable vastitudes,
Where the Stars of the Morning
Go singing together
For joy in the naked,
Dazzling, unvisited
Emperies of Space!
And the heart in your breast
Sings, as the World
Slips past like a dream
Of Speed—
Speed on the Knees of the Lord.

Speed
Speed, and a world of new havings:
Red-rushing splendors
Of Dawn; the disturbing,
Long-drawn, tumultuous
Passions of Sunset;
And, these twain between,
The desperate, great anarchies,
The matchless serenitudes,
The magical, ravishing,
Changing, transforming
Trances of Daylight.
Speed, and the lap
Of the Land that you know
For the first time (it seems),
As you push through the maze
Of her beauties and privacies,
Terrors, astonishments:
Heath, common, pinewood,
Downland and river-scape,
Cherry-orchards, water-meads,
Forests and stubbles,
Oak-temples, daisy-spreads,
Vistas of harebell,
Hills of the ruggedest,
Vales of the comeliest,
Barrows and cromlechs;
Brooks with fat, comforting,
Sociable sallows
Fenced, and still, sleepy-faced
Lengths of Canal,
Where the one thing alert
Is the horse on the tow-path,
Tugging in dreams
At the long barge that hangs
Like a dream on his collar;
Noble alignments,
Secular avenues,
Of Elms, since a century
Hailing the Dawns
And exalting the Sunsets;
Beech-woods that burn out
The life in their leafage,
And figure the death
Of the Year in a glory
Of color and fire;
Roads, where the stalwart
Soldier of Cæsar
Put by his bread
And his garlic, and, girding
His conquering sword
To his unconquered thigh,
Lay down in his armor,
And went to his Gods
By the way that he'd made.
All this, and more than this:
Brilliant, enchanting
Visions of Summer,
Somnolent, stately,
Gravid and satisfied;
And Autumn, his hands
Full of apples; and Winter,
The old Tyrant we love
For the sake of his kinswoman,
Spring with her violets,
Spring with her lambs,
Spring with her old,
Irresistible mandate,
The joyous, the reckless
Compeller of Wombs,
Spring! And with these
Smoke, Rain, and Mist
In their subtle, fantastical
Moodiness; Gardens
And Woods in their pleasure,
Their pride of increase,
And their helpless and sorrowful
Pomp of decay!
Then the gray Sea,
The Antient of Days,
With his secret as new
After thousands of years
As it was to the old,
The alert, aboriginal
Father of Ships;
And Speed!
Speed you conjure
With a crook of your finger;
Speed which your touch
On a core, on a master-bit,
Breeds for your use;
As Man's hand on a tiller
Gives brain to a boat;
As Man's hand on a pen
Turns the poor, workaday
Laborers of language
Straight into insolent,
High, living Song;
Speed—
Speed in the Eye of the Lord.

Trim, naked Speed!
Speed, and a victory
Snatched in the teeth
Of the Masters of Darkness.
For the antient, invincible
Spirit of Man,
Stern-set, adventurous,
Dreaming things, doing things;
Strong with a strength
Won from tremendous
And desperate vicissitudes,
Out of unnumbered,
Unstoried experiences;
Fighting the one fight,
The last and the best fight,
Hard, and by inchmeal
Winning it steadily,
Corner by corner,
Here a snatch, there a bit,
Over the black, irresistible
Legions of Death,
The impassive, unfaltering
Captains and Companies
Of the primordial
Powers of the Princedoms
And Thrones of the Grave—
Fair in the Eye of the Lord.

For the Heart of Man
Tears at Man's destiny
Ever; and ever

Makes what it may
Of his wretched occasions,
His infinitesimal
Portion in Time,
His merely incomputable
Shred of Eternity,
His ninety-ninth part,
If you count by God's clock,
Of a second on Earth
In the lust and the pride
Of God's garment, the Flesh.
So Woman and War,
And the Child (the unspeakable
Promise and proof
Of a right immortality),
Learning and Drink,
And Money and Song,
Ships, Folios, and Horses,
The craft of the Healer,
The worship of God
And things done to the instant
Delight of the Devil,
And all, all that tends
To his swift-to-come, swift-to-go
Glory, are tested,
Gutted, exhausted,
Chucked down the draught;
And the quest, the pursuit,
The attack, and the conquest,
Of the Unknown goes on—
Goes on in the Joy of the Lord.

For, beaten in Time
From the start to the finish,
So utterly beaten
Appeal is impossible,
The Spirit of Man,
Enquiring, aspiring;
Passionately scaling
Ice-bitten altitudes,
Neighbored of none
Save the austere,
Unapproachable Stars;
Scapes from its destiny,
Holds on its course
Of attent and discovery,
So as to leave,
When the Lord takes it back to him,
The lot of the World
Something the prouder,
Something the loftier,
Something the braver,
For that it hath done:
Something the good man,
The wise man, the strong man,
Poet or Soldier,
Maker of Empires
Or Broker of Diamonds,
Preacher or Surgeon,
Or the Inventor:
Artist in elements,
Expert in substances,
Strengths, frangibilities,
Points of combustion,
Points of resistance:
These, and an hundred,
A thousand besides
Of the right, the authentic
Talon and pinion,
Snapping up in a flash
After years of Endeavor
One of God's messages,
Do to Man's glory,
Pride, and magnificence,
Under the Feet of the Lord.

Hence the Mercédes!
Look at her. Shapeless?
Unhandsome? Unpaintable?
Yes; but the strength
Of some seventy-five horses:
Seventy-five puissant,
Superb fellow-creatures:
Is summed and contained
In her pipes and her cylinders.
Mind after mind,
On fire with discovery,
Filled full with the fruits
Of an hundred fat years,
And mad with the dreams
And desires of To-Day
Hath toiled itself dull
To achieve her components.
She can stop in a foot's length;
She steers as it were
With a hair you might pluck
From your Mistress's nape;
She crawls, if you please
So to lightly her virtue,
At your Mistress's pace
When she goes for a stroll,
Which is partly on Earth
And partly, She dreaming
Of You, in broad Heaven.
Yet ask but a sign,
But a proof of her quality,
Handle her valves,
Her essentials, her secrets,
And she runs down the birds
(You can catch them like flies
As, poor wretches, they race from you!);
Ay, and becomes,
As the Spirit and Mind
Of God's nearest approach
To Himself hath so willed it,
The Angel of Speed—
Speed in the Laugh of the Lord.

There be good things,
Good things innumerable,
Clutched like an alms
In the hand of the Master;
And at times, when He feels
That His creatures are doing
Their best to assert
Their part in His dream,
He loosens His fist,
And a miracle slips from it
Into the hands
Of His adepts and servants.
Thus, in late years,
Smiling as *Corot*,
Smiling as *Lister*,
And *Tolstoi* and *Rodin*,
And *Pasteur* and *Strauss*
(That with his microbes,
This with his fiddles!),
Tugged at His fingers
And worked at His meanings,
Thus has He slackened
His grasp, and this Thing
This marvellous Mercédes,
This triumphing contrivance,
Came to make other
Man's life than she found it:
The Earth for her tyres
As the Sea for his keels;
Alike in the old lands,
Enseamed with the wheel-ways
Of thousands of dusty
And dim generations,
And in the new countries,
Whose Winds blow unbreathed,
And their Lights come first-hand
From our Father, the Sun.
Thus the Mercédes
Came, O, she came,
This astonishing device,
This amazing Mercédes,
With Speed—
Speed by the Grace of the Lord.

So in the Eye of the Lord,
Under the Feet of the Lord,
Out of the measureless
Goodness and Grace
In the Hand of the Lord.
Speed!
Speed on the Knees,
Speed in the Laugh,
Speed by the Gift,
Speed in the Trust of the Lord—
Speed!

The English Press

By Sydney Brooks

LONDON, *March 11, 1903.*

THERE is one illusion that Englishmen will never outgrow. It is that the English press is the best in the world, the best written, the best informed, the most respectable, the wealthiest. You will find the reflex action of this opinion in the swinging damages awarded by British juries against any newspaper that is convicted of libel. A respected press implies, in the nature of things, a healthy crop of libel actions. It is only in a country where the press counts for little that damages are small and suits for libel rare. People say: "Oh, it's only the papers. Nobody minds them," and so dismiss the matter. Very few will think it worth their while to take out proceedings against a journal of no authority; and if they do, the encouragement and satisfaction they will receive from an average jury will not be very great. The general feeling will be, as it is in France and Italy, that the libel, however plain, is discounted by the insignificance of the libeller; and damages in consequence will rule low. But an English paper never has a chance of escaping through any such loophole as this. The gravity of its offence is felt to be proportionate to the reputation, the miraculous reputation, which the English press enjoys; and the heavy damages in which newspapers found guilty of libel are systematically mulcted in this country, are really an expression, an indirect and highly inconvenient expression, of the juryman's regard for the power of English journalism. Possibly a good many editors would quite willingly dispense with these left-handed tributes; but they have usually themselves to thank if the jury persists in thrusting them upon them.

These editors have preached the glories, the influence, and the virtues of the English press until their countrymen have come to take them at their own valuation. The superiority of British newspapers is one of the average Englishman's most impregnable beliefs. He may, if of a liberal turn of mind, admit that there are some things which are better managed outside than inside England, but among these things he never by any chance classes journalism. The American press he comfortably dismisses as "sensational," and nothing will induce him to take up an American paper. The French press is gutter, indecent, and corrupt; the German and Russian nothing but what officialdom cares to make them; the Austrian a mere tool of the Jewish capitalists; the Italian of no account whatever. English journalists alone respect private life, pay court to the decencies, are independent, fearless, and weighty.

Well, it is a satisfying faith. And not only satisfying, but indestructible. This is proved by the fact that the events of the last few years have not destroyed it. Some of the London papers were filled with accounts of Queen Victoria's last moments, so obviously and wretchedly "faked" that even the yellowest New York journal would have been ashamed to print them. Shortly after, a reporter on the staff of the most widely read paper in the kingdom was proved in open court to be in the habit of bribing a solicitor's clerk to steal documents from his employer. Since then we have had murder cases "worked up" and exploited by at least half a dozen London papers with unrivalled shamelessness. Press law, which used to be held in England as rather worse than lynch law, seems now to be a national institution. And if you question an Englishman about these and other incidents he will assure you with disgust that the English press is becoming Americanized. It is becoming nothing of the sort, except in so far as it is beginning to copy some of the worst habits of the worst papers in New York.

In all their essentials the English journals are still as thoroughly English as ever. The obvious comment, the dull, dreary editorial, the old hackneyed way of putting things, the temperamental distrust of liveliness as something dangerous and ensnaring, are as pervasive to-day as they were twenty years ago. If English journalists could impart something of the brightness and admirable "make-up" of, let us say, the New York *Sun*, they might then claim to be Americanized to some purpose. But that is just what they cannot or will not do. A priggish and somewhat hypocritical respectability is the note of all the daily journals that have real power and standing in England. Sir John Millais was once complaining that an enthusiastic but not properly balanced lady asked him whether "he had really painted all that by hand." One can never quite rid one's self of the notion, after a dose of the English papers, that machinery is responsible for more than the printing of them. Individuality is so famously lacking in their pages. The sense that one always has in reading a reputable American paper of a lively and diffused intelligence at the back of it, one altogether messes in the London press. In this way journalism over here may still pride itself on being immaculately and unmitigatedly British.

Nevertheless there is a change at work. The credit of it should go to Mr. Harmsworth. He was the first to see that Englishmen had outgrown verbatim reports of everything reportable, stodgy columns of Parliamentary debates, long-winded and sententious editorials. In the *Daily Mail* he produced for the first time in English journalism a paper that was at once comprehensive, brisk, and readable. The success has been simply overwhelming, because it not only knows how to collect, but how to present the news of the day, and often the news of to-morrow. Nothing is so strange as to note how out of touch is the ordinary London paper with the commercial life of the country. A really informed and rational article on any matter of commercial or financial moment is the rarest possible thing to find in the English press. It seems to be thought enough if a journal sends out a special correspondent to Persia or Afghanistan, fills its pages with the profundities of European politics, opens an occasional subscription-list for some semi-public object, and produces now and then a new scheme of army reform. A paper that does all this is considered to be very "enterprising."

Trade and industrial matters generally lie outside its province—how much outside was shown at the time of Mr. Morgan's shipping deal when not a single London paper could either understand or intelligently guess at what was happening. The English press never displayed its limitations and feeklessness more clearly than throughout that transaction. The *Daily Mail* alone was equal to the occasion. It saw clearly, and it criticised with force and knowledge. Perhaps, indeed, its greatest achievement is precisely this enlargement of the scope of things in which journalism should concern itself. It gets clean outside of the humdrum game of politics. And when it does touch on politics, foreign or domestic, it is not to treat them in the gingerly, noncommittal way that most papers affect, it is not to act as a mere phonograph for "ministerial views," but to take an intelligent line of its own. While all the other London papers are merely echoing or criticising, the *Daily Mail* is suggesting; while they are waiting for the news to come to them, the *Daily Mail* goes out to hunt it up; while they are temporizing and on the fence, looking everywhere for a lead, the *Daily Mail* has a cut-and-dried policy of its own, ready for presentation. Theirs, in short, is the journalism that talks; Mr. Harmsworth's is the journalism that acts.

Something of this kind was badly needed. I do not say that the methods of the *Daily Mail* are in all respects admirable, that it does not sometimes exaggerate, or that it is always free from the taint of sensationalism. Undoubtedly, it is occasionally guilty of excesses, and its numerous imitators are often guilty of worse. But, on the whole, it has given a very salutary impetus to English journalism, and if Mr. Harmsworth were to try his hand on a larger scale, with a penny instead of a half-penny paper, the results would revolutionize the entire press of the country. There is never likely to be any lack in the leading English papers of dignity, solidity, stolidity, seriousness, stupidity, and all the other safe and estimable qualities. But it would be an immense gain if this rather indigestible mass could be leavened with a little liveliness, if the editors would for once lay aside their pedagogic ferrule and mix genially with their fellow-mortals. The Englishman is far more faithful to his paper than the American. He changes it as rarely and with as much difficulty as he changes his religion, and even the appearance of a joke in the *Times* or of some practical common sense in the *Daily News* would not lose to either paper more than half a dozen subscribers.

In fact, here is one of the most loyal and patient publics in the world, waiting to be experimented on, waiting to be enlivened. No doubt the experiment would be made if English editors could only convince themselves that it is possible to be influential without being pompous. That is where Mr. Harmsworth's success will tell in the long run. It will help to make people see that solemnity and influence do not necessarily go together, in journalism any more than in other professions. At present the English press has indisputable power. You could never see here, as has often been seen both in New York and Chicago, a man elected to the mayoralty of a city in spite of the opposition of all the local papers. The average Englishman takes his cue from his favorite journal much more readily than the average American, and unanimity among the press would mean unanimity among the voters. In this respect it would probably be right to say that journalism in England has more influence than in America. At the same time it is much less in touch with the rulers of the country and knows far less of what is going on behind the scenes. The "governing class" in England holds journalism, and journalists suspect, instead of following the American example and welcoming the Fourth Estate as an ally. That is one of the reasons why from time to time the "governing class" contrives to run full-tilt against the almost unanimous opinion of the country. The press in England emphasizes and confirms rather than leads, playing the part of interpreter, exhorter, persuader, between the politicians and the people. That, of course, is no insignificant position to fill, nor is the measure of authority that goes with it a small one. But both the position and its influence might be immeasurably increased if only the papers here would broaden out and become a little more human and a little less professional. Of this, however, outside of Mr. Harmsworth and the *Daily Mail*, there is still no sign.

Count Cassini's Warning of Danger in China—Macedonian Prospects

By Charles Johnston, B.C.S. (Retired)

A HIGHLY sensational announcement was made a few weeks ago, by Dr. Robert Coltman, for several years physician to the late Viceroy, Li Hung-Chang, and to the Peking court, that a new storm was gathering in China, that fresh outbreaks might be expected, greatly exceeding in destructive violence anything that happened in 1900, during the Boxer uprising and the attack on the embassies.

This declaration naturally drew forth expressions of opinion from many well-informed sources. Of these, the most notable came from Count Cassini, the Russian Ambassador at Washington, who fully shared Dr. Coltman's apprehensions. His view was also endorsed by two such authorities as Prince Esper Ukhtomski and Colonel Verestchagin, formerly on the staff of Skobeleff. Mr. W. W. Rockhill protested against this opinion as an alarmist exaggeration, but his view was evidently partial and one-sided, and did not carry conviction. The same may be said of the declaration of an anonymous diplomatist in Vienna, who affected to think that all was peace and tranquillity in the Middle Kingdom. With practical unanimity among all those best qualified to judge, the outlook is, therefore, very grave and menacing.

I had an opportunity to talk the matter over at length with Count Cassini, who willingly allowed me to make his views more widely known, in consideration of the grave interests involved and the danger arising from the ignorance or carelessness of some of the powers.

"The nations are all seeking commercial relations with China," said Count Cassini, "yet many of them seem to be taking a course which will be fatal to commercial relations. They are pouring arms and ammunition into China in immense quantities, in the name of commerce and enterprise, and are evidently oblivious of the fact that these very arms will be used against themselves. I have tried again and again to draw attention to this danger, and I hope to convey my apprehensions to the powers in question, and to prevent further evil.

"I had many opportunities to note the state of Chinese military training before and during the war with Japan in 1894; and I can assure you that since that time China has made tremendous strides forward. The armies of Europe will not again find themselves confronted with an ignorant and unarmed rabble, under the name of a Chinese army, as in the past. And as soon as the Chinese learn to use their weapons, as they are learning fast, they will be most formidable opponents; for they have absolutely no fear of death. They will be amongst the bravest troops in the world. Therefore, the folly of European or American merchants, in pouring rifles and cartridges into China, in the name of trade extension, is nothing short of criminal."

There has been a disposition to connect the Empress Dowager with the coming outbreak. Count Cassini did not agree with this.

"All through the Boxer uprising," he said, "the Empress Dowager was the great restraining influence. It was due to her, and to her alone, that the embassies were not cut to pieces. What could they have done, a few hundreds in all, against the armed hordes of many thousands who surrounded them? The Empress stretched forth a protecting hand over the ministers, and this alone saved them."

General Yung Lu, the most influential of the Chinese Ministers, was, according to Dr. Coltman, the accomplice of the Empress Dowager, not only in 1900, but the preparations made since then, for a new attack on the "foreign devils."

Here again Count Cassini took a different view:

"Yung Lu is not formidable. The really formidable man is General Tung Fu-Hsiang, who is acting in harmony with Prince Tuan. I think the real danger will arise at the death of the Empress Dowager. She is a great woman, a remarkable woman, and one who has been often misjudged and harshly criticised in the West. It seems that the course of the present dynasty is nearly run. The life of a dynasty in China is about two hundred years, and then there always comes a change, an invasion or a revolution. The Manchus have already outstayed their time; they have been rulers of China for two hundred and fifty years. And the Empress Dowager is an old woman, especially in China, where great age is very seldom reached. She cannot live much longer now, and with her death will begin a period of trouble, ending, I think, in the establishment of a new dynasty."

I asked Count Cassini whether he thought General Tung Fu-Hsiang would try to place Prince Tuan's son upon the throne, or, on the other hand, would merely use him as a temporary puppet, and afterwards come out boldly as founder of a new dynasty himself.

"It is very difficult for us to judge," he replied, "but Tung Fu-Hsiang is a very dangerous man. He is a Mohammedan, and the Mohammedans in China, who form a large section of the population, especially in the western provinces, are a great power, a much greater power than is generally understood. There is where the real danger lies."

Count Cassini thought that a great part of the Chinese hatred of foreigners was due to the attitude of the foreigners themselves, and that here also there was much opportunity for change. The moderation of the Americans during the Boxer uprising and the occupation of Peking he considered admirable, and worthy of imitation by the European powers.

The conversation then turned to Manchuria, and I asked Count Cassini whether it was not to all intents and purposes a Russian province.

"Our influence there is certainly great," he answered, "and necessarily so. It is imperative for us to safeguard the railway, which is our one outlet to the sea for the six million square miles of Siberia, absolutely dependent upon the line to Port Arthur as their one commercial route. We might have annexed Manchuria at the beginning of the outbreak of 1900. We had a perfect right to do so, under the rules of international law; for the Chinese invaded our territory and attacked our posts; and this, of course, is a declaration of war. We should have been justified in taking Manchuria then, and it is difficult to see what could have prevented us.

"But his Majesty the Emperor is a passionate lover of peace. Peace is, for him, an object of religious devotion: and he was unwilling then, as always, to take any step that might lead to war, even though he would have been perfectly justified in so doing. So we contented ourselves with securing the railroad to Dalny and Port Arthur, and left Manchuria an integral part of the Chinese Empire, though Russian influence is certainly predominant there."

This led naturally to a question as to the powers which at one time seemed inclined to dispute Russia's position in Manchuria, and especially as to the present attitude of Japan.

"I think," Count Cassini replied, "that Japan now understands the true situation and has accepted the facts. Japanese opinion is much more tranquil and better disposed towards Russia than it was a few years ago; and there is evidence that we need have no further apprehensions from that quarter. Japan is much more reasonable and better recognizes the necessity of our position in Manchuria,—and also, perhaps, the impossibility of changing that position. For our situation there is unique. We have a land frontier of thousands of miles along the border of China, and can bring in troops to any extent. The completion of the Siberian railroad makes our position very firm from a military point of view, though that railroad was originally built for purely commercial and industrial purposes. In a few years, when the development of Siberia has progressed somewhat, the real use of the Siberian railway will be evident to everybody. I think, also, that both England and Germany are much better disposed towards our position in Manchuria than they were a few years ago. In that direction we have a fairly clear sky."

Prince Ukhtomski not long ago expressed the opinion that vast tracts of Mongolia would presently follow Manchuria's lead, and come more directly under Russian influence. With reference to this Count Cassini said:

"It is difficult to see what use we could make of Mongolia. I travelled through Mongolia some years ago, in a carriage drawn by post-horses supplied by the Chinese authorities, and I had an opportunity to see Mongolia with my own eyes. Most of it is a sandy desert, the bed of an ancient sea. There are multitudes of deer and other game there, but the almost entire absence of water would make cultivation impossible."

In answer to a question whether Merv, also a desert, had not been turned into a garden by irrigation, Count Cassini said:

"Merv is altogether different. It is possible to do something there, because you have abundance of water, the great rivers like the Oxus and Iaxartes coming down from the Pamirs. But there are no rivers in Mongolia. The country is a vast plateau, and though it was only the end of autumn when we went through, the cold was beginning to grow intense, and I was frankly delighted to see Kiakhta with its Russian church and settlement, and to know that the great desert was passed. We came from Peking along the old caravan route through Urga, and at every station a sheep was brought to us by the authorities. The first act of my daughter," said the Count, smiling, "was always to cut the string and let the wretched sheep loose again. And it was not long in taking advantage of its liberty."

From the Far East, we came to the storm centre nearer home, in Macedonia.

"I do not think," said Count Cassini, "that the situation in Macedonia is at present so menacing. I think matters will work themselves out without any general catastrophe. Our Emperor is determined to avoid war, and public opinion in Russia grows stronger and stronger in this sense every day."

This last view is extremely reassuring, for there have been moments during the last few months, the last few weeks even, when it looked as though Macedonia was about to become the centre of a general conflagration.

Books and Bookmen

It was inevitable that *Lady Rose's Daughter* should be dramatized, but the news coming so fast on the heels of the book's publication is the astounding fact. It is a further testimony to the popular appeal of the novel, if any were needed, in view of the widespread interest which Mrs. Ward's latest work has evoked. The story is vivid and strikingly picturesque in situations, and is full of intense dramatic power; nevertheless, it will be no easy task to make a play out of it. But if "George Fleming," who is Miss Constance Fletcher, could make a satisfactory adaptation of Kipling's sketch *The Light that Failed*, which Mr. Forbes Robertson is now presenting with great success in London, she may be trusted to do the same for *Lady Rose's Daughter*, which, after all, provides more inviting material for stage purposes than Kipling's slight story. Then, as one critic has remarked, Julie Le Breton is a host in herself, and ought to bring fame and fortune to all concerned, on the stage. So commanding a personality, so appealing a heroine, has rarely been presented in either fiction or fustian. Mrs. Ward dramatized *Eleanor* herself, and it was played at a few matinées last year, but she has done wisely in assigning the work of dramatizing *Lady Rose's Daughter* to a practised hand, for there be few novelists who are also dramatists, especially of their own novels. There can be no doubt that a very fine play will evolve from *Lady Rose's Daughter*. The question that troubles us is: "Where is the actress in America who can adequately impersonate Julie Le Breton?"

Very early in the nineties, when what is called the Higher Criticism was to many of us a new, and to some of us a threatening, thing, a little group of students met on Sunday afternoons in an obscure hall in Bloomsbury, London—almost chapel-like in its stillness and its stained-glass light, though neither bell nor organ summoned the faithful to that eagerly sought hour. He who spoke there to his fellows disclaimed to be either teacher or preacher to them, but talked as informally as their hushed attention and enthusiastic veneration of himself would allow. They drank in every word, with eyes fixed on that unforgettable and beautiful figure in front,—aged, gaunt, silvery-haired, magnetic, with the dignity of a man who was before all else a scholar, but whom scholarship had humanized and mellowed, serving the religion needed for the hour. The audience was curiously mixed. Besides the young, ambitious or revolutionary, there were many old and many poor; wanderers through all creeds; the spiritually homeless; seeking—not for the first time—new anchorage of faith among the shifting sands of dogma or ritual. They took notes; they bought books; they asked for more lectures and classes. When they turned from the speaker it was generally to look at another face, vitally responsive to his, unfailingly,—the face of a woman in the front row, still young, dark-eyed, Madonna-browed, with waving hair parted austerely back from the clear-cut features, so as to seem at first glance Puritan, till the smile brought a look alert and gracious, as of one who has known religious fanaticism intimately well—and passed beyond it into the larger light.

Yet in a real sense Mrs. Humphry Ward is Puritan to the core. For she it was who came so regularly to the late Dr. Martineau's classes in Biblical Criticism at the little settlement in University Hall, now grown and flown into a large educational centre in Tavistock Place, but at that time the first direct outcome of the influence of *Robert Elsmere* upon religious thought. The author herself would be the first to disclaim this influence, and indeed with some reason, for *Robert Elsmere* was not an epoch-making book,—rather an epoch's fruition. To change the metaphor, it crystallized the thought and feeling that lay ready everywhere in the religious world. The Broad Church movement of the last half-century had prepared the way for such a book, through Kingsley and Maurice, through Robertson of Brighton, through Dean Stanley and the Arnolds (uncle and grandfather of Mrs. Ward), through Tennyson and other humanists of that time. A review by Mr. Gladstone increased its popularity in many quarters; and certain utterances of Archdeacon Wilson and Canon Cheyne at the Church Congress of 1888 did much to force into notice the problems of Biblical criticism upon which turns the crisis of Robert Elsmere's life. Two other books, near enough to be called coincident, had a clear kinship with it, though coming from widely distant places—the one from South Africa, the other from these United States, for the revolt of the younger generation from at least the cruder forms of orthodox belief was also the motive of Margaret Deland's *John Ward, Preacher*, and Olive Schreiner's *Story of an African Farm*. But with these two novelists, as with the poets and preachers of the last half-century, the revolt was from the heart rather than from the intellect; or at least, when the appeal was to the intellect, it was by the way of natural science rather than historical evidences. Mrs. Humphry Ward was the first to bring into fiction the most modern aspect of the struggle for religious ideals, and to do for the problem of "literal inspiration" what other imaginative writers had done for the religious crises of other ages and nations. It is in her fulfilment of this task that Mrs. Ward shows herself Puritan and Protestant, coming of a race that takes its religion seriously, and does its thinking at home, claiming the supreme authority of his own conscience for the individual man, independently of all churches, scriptures, and creeds; and demanding complete intellectual honesty between a Christian minister and his congregation. Robert Elsmere, when he finds he can no longer hold as a supernatural revelation the faith he is preaching, gives up the church, which is his means of livelihood—a step which had already been taken by a popular English Broad Church clergyman who has often been claimed, though on very slender grounds, to be the "original" of Robert Elsmere.

In *Marcella*, Mrs. Ward broke new and unfamiliar ground. It purports to be a novel of the English socialist movement and its developments, say from 1892 to 1894. Into *Sir George Tressady* she carried forward much of the same subject-matter, removed from the immediate differences of factions, and treated with the fine and sympathetic imagination inseparable from her telling of a tale. That she is deeply and actively alive to the social as well as the religious problems of to-day, no one will doubt who knows anything of the civic and humanitarian work carried on in the Settlement so largely inspired and supported by her in Tavistock Place, with its homely residential life, its many educational gatherings, its school for delicate and crippled children collected from the neighborhood, and—to mention one notable architectural feature—its memorial fireplace in honor of Thomas Hill Green, the Henry Grey of *Robert Elsmere*. No living writer quite equals Mrs. Humphry Ward in the analysis of a spiritual crisis as it so often presents itself in modern life, closely bound up, on the one hand, with tender personal ties, and, on the other, with the practical question of a career for those who have set out in good faith to "live of the gospel," and suddenly find themselves driven to shatter fond hopes and break loving hearts by their inability to accept any longer the intellectual conditions of that life. And even those who differ most profoundly from Mrs. Ward's conclusions—or those of her heroes and heroines—will admit that she has handled these high and delicate themes with passionate seriousness and unerring taste. Of *Lady Rose's Daughter* our readers have now had the opportunity to judge for themselves, and to place it in the rank it claims as her most mature and significant work.

"The Dream of Gerontius"

Mr. Edward Elgar's celebrated oratorio, "The Dream of Gerontius," was performed last week by the Oratorio Society at Carnegie Hall, for the first time in New York. Mr. Elgar's work, which is built upon the text of Cardinal Newman's grave and noble poem, has been acclaimed with extraordinary enthusiasm in England and on the Continent, and it may fairly be said that its production by the Oratorio Society constituted, upon the artistic side, the most important and considerable event of the current musical season; but with the best will in the world we cannot convince ourselves that Mr. Elgar's achievement justifies the superlative claims which have been made for it. Mr. Elgar is, we believe, a Roman Catholic, and Newman's ecstatic and mystical fantasy of the translation of a human soul from its mortal case into the awful majesty of the Divine Presence has inspired him to a musical expression conceived upon a plane of the most exalted nobility. For the devout and beautiful spirit which pervades the work from beginning to end there can be nothing but unreserved praise; but Mr. Elgar has not been able to transmute his fervor and his piety into music of original and authentic inspiration: wherewith we come to the prime cause of our dissatisfaction with his work. There are many moments of intense and beautiful expression in this poetic and brilliant score—moments in which the precise emotion of the text is realized in a tonal equivalent of superb and affecting eloquence. But the intensity and the beauty and the eloquence are not, as Matthew Arnold would say, "self-sprung": they are not Mr. Elgar's; they are Wagner's. Mr. Elgar speaks with the tongues of men and of angels, but they are the men and the angels of Wagner: they are *Tristan*, and *Parsifal*, and *Amfortas*, and the celestial choir of the temple at Monsalvat. Indeed, Mr. Elgar has absorbed Wagner's idiom, his manner of musical speech, in so complete a degree that passages which sound startlingly like intentional transcriptions are doubtless quite unconsciously and quite innocently reproduced. Those portions of the score which one must recognize as Mr. Elgar's own are, in the main, without potency, without vitality, without significance. There are some admirable pages, wherein Mr. Elgar has written with undeniable force and loveliness—for example, the magnificent climax with which he has contrived to suggest, in a passage of overwhelming power, the stupendous disclosure of the majesty of God.—But that must be, we think, a just verdict upon his achievement which finds that, for all its fine and noble sincerity, Mr. Elgar's score lacks that interior and vital flame without which no art can live.

Finance

THE usual phenomena of a professional market have been observed of late. Periods of weakness have been brought to an end by the realization on the part of the professional speculators that they were the only sellers of stocks. Upon their buying back the securities sold prices have moved upward. Dulness returned to the speculative arena, and when the professionals were convinced that none but themselves were purchasing stocks, they sold again, checking the advancing tendency, or, going further and starting a fresh selling movement. Fundamental conditions, commercial and industrial, outside the Stock Exchange have undergone no change, but technical stock-market conditions differ from day to day, and at times even from hour to hour, and these changes have formed the basis for the bulk of the professional operations. Obviously, such a situation has few "interesting features," and such "developments" as occur, so long as they have little bearing on basic conditions, merely furnish food for gossip, or excuses for trivial market movements, rather than good reasons for the indefiniteness of the market's "tendency."

The public, or, at any rate, that portion of it to which the newspapers are fond of referring as the speculative community, is taking no interest in stock speculation. It is not selling securities, because such securities as it holds are held for investment, and nothing has happened to disturb confidence in the ability of the companies, railroad or industrial, to continue to pay dividends or interest at the prevailing rates. But neither is it buying any, either because it is too busy attending to its "legitimate" business to find time to gamble, or because it regards prices as high enough. The other sustaining force of speculation, the "big men," are similarly doing nothing. They confessedly have securities to sell, and they realize that the times are not propitious for the wholesale distribution of their wares. Neither have they any desire to increase their holdings. Both the public and the strong interests, who together make bull times, being "out of the market," the professional is left to his own devices, and since there is no other buying power than his own, he is apt to be a bear.

Consideration of the causes of the prevailing dulness in the stock-market inevitably leads to the scrutiny of the condition of the money-market. No sane man can be a pessimist who regards the very substantial prosperity of the country at large. Manufacturers of all classes of goods are busy, and, what is more to the point, they are profitably busy. The railroads, as every one knows, are taxed to their utmost. The congestion of freight is not so severe as it was, and with the opening of Lake navigation there should be a further improvement. But as far as can be judged by experts, the current year will be one of a remarkable volume of business. To carry on this business much money is needed, and the supply is not equal to the demand because the creation of new securities during the past three years has been enormous. There is not enough money to "go around." The more speculatively inclined among "outsiders" fear to buy. The investor hesitates. The result has been not only a monotonous stock-market, but a congested bond-market. There is a light demand for investment issues and an enormous supply. Money cannot be borrowed for long or short periods much under 5½ per cent. The better class of railroad bonds do not net the holder even 4 per cent. Neither do many standard railway stocks. There is obviously no inducement for a man to buy bonds yielding 4 or even 4¼ per cent. when he has to pay 5 or 6 per cent. to his bank for money with which to carry on his business.

IN HARPER'S WEEKLY next week there will be, among the other interesting features, a graphic account, with photographs and a full-page drawing, of the floods in the Mississippi Valley. Both the text and the pictures are from our own correspondents in the threatened districts of the South.

"THE LIBRARY FOR BRAINY MEN"

MODERN ELOQUENCE

Ex-Speaker THOMAS B. REED'S Great Library, in ten volumes; Brilliant After-dinner Speeches, Classic and Popular Lectures, Great Addresses, Anecdote, Illustration, Repartee, and Story.

THE MASTER THINKERS OF THEIR CALLINGS—the thought, but only the best thought of these has entered MODERN ELOQUENCE. The names of the contributors are international names; the subjects are living ones, without the broad knowledge of which found in MODERN ELOQUENCE no man can discuss intelligently the problems of to-day or to-morrow. The leaders of their various callings speak with burning words from MODERN ELOQUENCE for our instruction:

In LAW, there are Evarts and Phelps, both the Choates, Coudert, and David Dudley Field.

In JOURNALISM, Dana, Halstead, Watterson, McClure, McKelway, and Whitelaw Reid.

In POLITICS, Cleveland and Harrison, Blaine and Conkling, Sumner and Seward; we listen to the eloquence of Gladstone, then to that of his great rival, Disraeli.

In LITERATURE, we have the best thought of Dickens and Thackeray, in contrast with the more modern humor of Howells and Mark Twain; or Carlyle, Froude, and Morley speak to us from across the sea, for comparison with our own Emerson and Curtis.

Among the heroes of WAR are Grant and Sherman, Sampson and Schley, Miles, Wheeler, and Lew Wallace.

Among great EDUCATORS are Presidents Eliot, Gilman, and Hadley.

Among great SCIENTISTS, Huxley and Tyndall, Herbert Spencer and Agassiz.

Among successful men of BUSINESS are Carnegie and Depew, E. W. Bok and Cyrus W. Field.

The result is a library the possession of which fits a man to conquer and to hold a high position in his vocation or in society.

COMPLETE MASTERPIECES—FREE

The booklets described on this page are priceless works of thought and expression, complete in themselves and as found in MODERN ELOQUENCE. You may have one by filling out the attached coupon and inclosing six cents (for postage), that you may see why the thousands upon thousands of owners of MODERN ELOQUENCE are enthusiastic concerning its beautiful and powerful masterpieces. Send for one now, for the number is limited.

Booklet No. 348

MERCHANTS AND MINISTERS
By HENRY WARD BEECHER

THE BENCH AND THE BAR
By JOSEPH HODGES CHOATE

THE MEDICAL PROFESSION
By SAMUEL BALDWIN WARD

INTERNATIONAL ARBITRATION
By WILLIAM MAXWELL EVARTS

Here are topics that are timely and vital to you, no matter what your occupation may be. It is not necessary now to allude to the eloquence and intellect of Beecher. Never before was his theory that the church and the store have a common interest in the foundation of morality so applicable to conditions.

Ambassador Choate was a lawyer before he was a diplomat, and whatever he has to say of his profession is replete with humor and truth.

Dr. Ward's opinions of physicians and their practice are also tinged with levity while containing at the same time much food for thought.

As for William M. Evarts, no man stood higher as an exponent of law and few excelled him in beauty of expression.

There is instruction as well as entertainment in these speeches.

Booklet No. 346

FREEMASONRY, ANCIENT AND MODERN
By the EARL OF CARNARVON

UNIVERSAL FRATERNITY OF MASONRY
By CHARLES WHITLOCK MOORE

SPIRIT OF ODDFELLOWSHIP
By ALFRED S. PINKERTON

THE UNITY OF HUMAN NATURE
By JOHN JAY CHAPMAN

Are you a Mason? Are you an Odd-fellow? The chances are that you belong to one of these or to another order, perhaps to a Greek Letter Fraternity. How many know fully, however, the history, the meaning, and the animating spirit of these institutions?

These four brief papers are illuminating. The Earl of Carnarvon's was delivered when the present King Edward was installed as Grand Master of England, and it treats of the antiquity and universality of the Masonic order.

The others, in turn, concern the history and extent of Masonic influence, the origin and growth of Oddfellowship—a distinctively American institution—and the natural unity which binds mankind together as one family.

Even if you are not a secret-society man, there is immense interest and instruction in the booklet.

Booklet No. 349

NEW ENGLAND WEATHER
By MARK TWAIN

A BLEND OF CAVALIER AND PURITAN
By HENRY C. CALDWELL

CAUSES OF UNPOPULARITY
By HEMAN LINCOLN WAYLAND

First of all, these speeches are humorous, full of gentle satire, and, withal, founded on good, solid truth.

Mark Twain has long since outlived the need for eulogy, and he never said funnier things than these about New England weather.

Judge Caldwell presents the proposition that our sturdy Americanism is an outgrowth of those conflicting elements, Puritanism and Cavalierism.

Dr. Wayland proves, in delightful fashion, that New-Englanders have enemies only because they are so virtuous.

The tone of all three speeches is one of originality. They are tonic and refreshing. But they are not trifles, for all that. The most casual thoughts of such men always contain something new and worth knowing.

HARPER & BROTHERS
FRANKLIN SQUARE, NEW YORK

Famous Wood Engravings

INTEREST in the portraits of the great men of America was never so acute as at present. No private library is complete without these inspiring faces, and to every public library, school, and college they are necessities.

During the last fifty years the portraits of nearly all the men who impressed their personality upon their time and made the history of their generation and ours were engraved for Harper's.

The art of engraving portraits on wood in this country was largely developed in the art department of Harper & Brothers. The quality of these large portraits has never been equalled. They are works of art by famous men like Staudenbaur, Butler, Kruell, Goetze, Johnson, Baude, Wolf, etc.

Weeks and months were spent by the artist on one of these portraits; and in the direction and the quality of line for form, color, and modelling they may be said to fairly equal the best work ever done. The sympathetic quality of the medium used for the portraits lends itself to textures and delicate tones, and places them absolutely in the front rank of the art of engraving.

We have printed a very limited edition of eight of these portraits on the best heavy coated paper, with wide margins for framing or for a portfolio (size 12¼ x 17 inches).

We have ready now for delivery the portraits of

RALPH WALDO EMERSON
SAMUEL L. CLEMENS (MARK TWAIN)
JAMES RUSSELL LOWELL
HENRY WADSWORTH LONGFELLOW
WALT WHITMAN
WILLIAM DEAN HOWELLS
JOHN GREENLEAF WHITTIER
OLIVER WENDELL HOLMES

These portraits are sold only in sets of four (any four) for $1.00 a set, or the entire eight portraits will be sent, postpaid, on receipt of $2.00.

HARPERS BOOK NEWS

THE SUBSTITUTE

Will N. Harben's latest book, "The Substitute," has just been published. Like "Abner Daniel" and other stories by this author, its scenes are laid in Northern Georgia and its people are characterized by their simple philosophy and quaint humor. The story tells of the love of a man for a woman above him in social station. The story is novel, vivid, compelling, and, above all, it rings true.

WALDA

Another new publication is "Walda," the first book of Mary Holland Kinkaid. It is a love story placed in a religious community (the scenes are photographically true) where love and marriage are tacitly discouraged. A man of the world falls in love with Walda, the coming prophetess of this community, and she finds that she must struggle between her religious beliefs and the instincts of her heart. An atmosphere of austere piety pervades the story and gives it additional charm.

THE PRIDE OF TELLFAIR

Elmore Elliott Peake, in "The Pride of Tellfair," tells a plain, unvarnished tale of the people of one of the progressive small "cities" of the middle West. The book has all the bustle and alertness of the West in it, while an unforced humor and common-sense philosophy entertain the reader on every page. The story tells of a keen young lawyer—the pride of the town—and a love affair in which much of the city assisted.

SIX TREES

Mrs. Mary E. Wilkins (Freeman), in her latest book, "Six Trees," tells of the lives of some very human New England people and of the part played in them by their favorite trees. The author has made true in this volume the saying that the life of every man and woman contains the material for at least one good, dramatic story. The book is tastefully bound, and is illustrated with twenty-two pictures in tint.

HARPERS BOOK NEWS

THE SUBSTITUTE

It is one of the charms of Mr. Will N. Harben's stories that the reader instantly feels that the author knows the people of whom he writes. This was true of "Abner Daniel," and it is even more true of Mr. Harben's new story "The Substitute." It is a story of Northern Georgia — a tale overflowing with amusing anecdote and good humor—and through it all runs a love story of absorbing interest.

WALDA

This is a love story of a most unusual sort—a romance of to-day, yet with an atmosphere wholly non-modern. The scene is laid in a sternly Puritanic community the prototype of which actually exists in the Middle West. Into this community comes a strong man of the outer world. His love for the beautiful daughter of one of the most bigoted of the communists is the motive for the story.

PUTNAM PLACE

Somehow there are a lot of people in New England—people who are rich in honorable family tradition and in heirlooms—who are seldom represented in New England stories. They are comfortable though frugal, happy though married, and cheerful though single. They enjoy life, and the reader enjoys life with them, because his humor is excited more often than his sadness. Such people are to be found in Grace Lathrop Collin's charming "Putnam Place." Miss Collin takes the reader straight to the centre of exclusive family circles, and there he is only too glad to remain as long as the pages of the book last. It is a bewitching view of New England.

THE PRIDE OF TELLFAIR

Elmore Elliott Peake, in "The Pride of Tellfair," tells a plain, unvarnished tale of the people of one of the progressive small "cities" of the Middle West. The book has all the bustle and alertness of the West in it, while an unforced humor and common-sense philosophy entertain the reader on every page. The story tells of a keen young lawyer—the pride of the town—and a love affair in which much of the city assisted.

THE SCOTCH-ENGLISH SUCCESS

Wee Macgreegor

By J. J. BELL

A NEW writer has suddenly appeared in Scotland who is more than rivalling Ian Maclaren and J. M. Barrie in popularity, while differing widely from either one of them in his portrayal of Scottish character. Mr. Bell has admirably told the humorous and realistic story of a little Glasgow boy, "Wee Macgreegor," of his father, who slyly pets and spoils him, and of his mother, who adores and disciplines him—three unforgetable people who live actually before us in the author's exquisite and sincere work.

In this story of "Wee Macgreegor," and in his relations to his humble but lovable family and friends, there is a suggestion of "A Window in Thrums," which made J. M. Barrie's reputation; and, on the other hand, its humor and fun are as entertaining as "Helen's Babies." It is a unique contribution to modern literature, and comes as a real surprise to the British and American public. The book has taken England by storm in spite of its Scottish dialect.

PRESS COMMENTS ON ENGLISH EDITION

PALL MALL GAZETTE.—"One of the most amusing and enjoyable studies that has come under our notice for a long time."

THE MORNING LEADER.—"These adventures (of 'Wee Macgreegor') are absolutely commonplace, and are related without a trace of exaggeration, whether comic or sentimental, yet with such knowledge, sympathy, and delicate art as to make them not only delightful, but now and then actually touching. The father and mother are quite as well drawn as the son, and the trio are unforgetable."

DUNDEE ADVERTISER.—"'Wee Macgreegor' is the creation of a genuine humorist."

THE SKETCH.—"One may well hope that the author will give us something more in the same vein."

LONDON BOOKMAN.—"A book of genuine humor. . . . Recent fiction has given us no more delightfully whimsical or quietly sympathetic creations than this sturdy, human young laddie, his father and mother, and his small sister Jeannie."

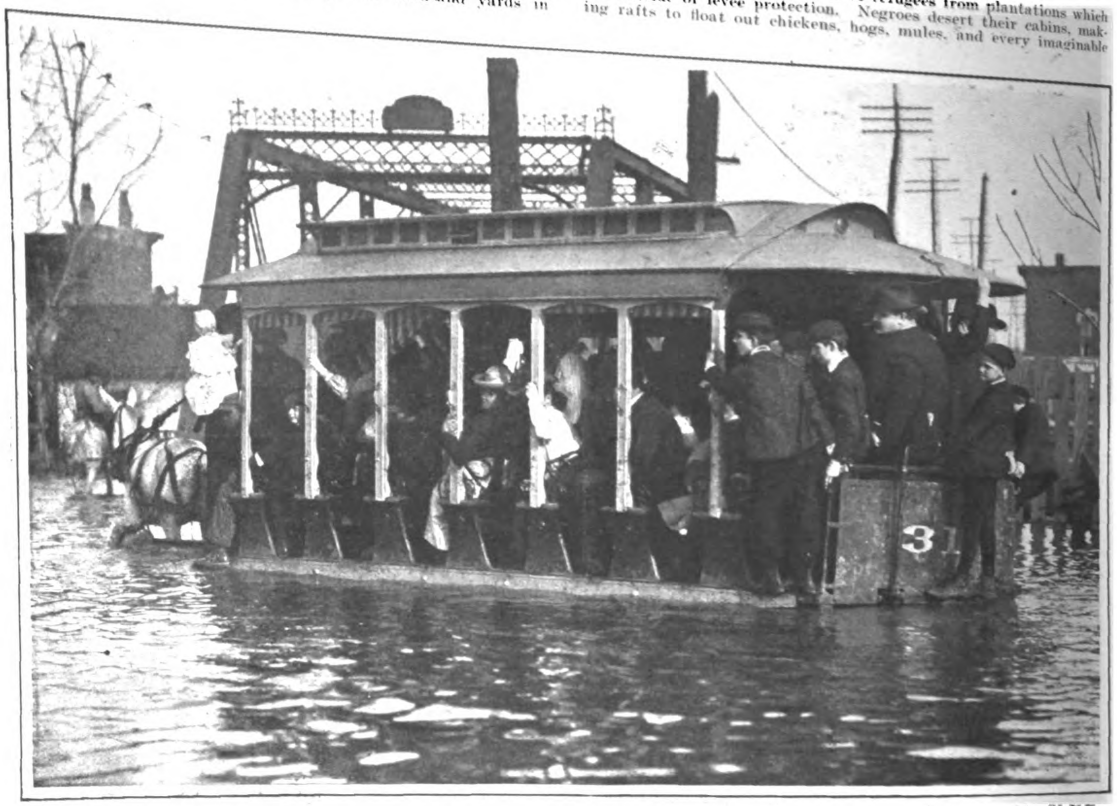
The Fight for the Levees

A Graphic Account of the Floods along the Mississippi, by Harris Dickson, our Special Correspondent

At this writing vast areas of fertile land in the Mississippi Valley—land usually protected by the levees—are under water. These inundations are not new. The alluvial deposits brought down by the floods of many years have made the incomparably fertile valley of the South. Since the days of the pioneers, mud-banks have been built to hold the river in a restricted course. In 1882 the Federal government first offered its aid to the communities of the South. For the improvement of the waterway and for the advancement of commerce, Congress began its annual appropriations to the levee, made common cause with the planter, and the levee system received an enormous impetus. Since that time, largely by the efforts of General T. C. Catchings, then a Representative from this district, Congressional appropriations have been continued.

The work thus contemplated was nothing less than the construction of 1400 miles of earthen dikes intended to be above the highest flood. These dikes were to restrict the drainage of a continent within a channel approximately four thousand yards in width. Without such restraint the river at flood height frequently widened into a sea seventy-five miles from hills to hills—a controlless expanse of watery desolation.



It may convey some idea of the magnitude of this undertaking to remember that water from Olean, in the State of New York, joins with the outlets of Lake Winnipeg and the Yellowstone Park, to destroy a plantation opposite Vicksburg in the State of Mississippi. At Cairo alone a million and a half cubic feet of water is estimated to pass every second. Twenty-seven States contribute to this gigantic volume which formerly dispersed at will over the 32,000 square miles of territory constituting the Mississippi Delta. To-day, when the same flood starts south from Cairo, instead of wandering untrammelled through this vast basin, it is restricted by two narrow ridges of earth, seeking to hold it in check and convey it harmlessly to the sea. And generally these ridges do their work.

It is only in the years when all its tributaries overflow simultaneously that the Mississippi becomes dangerous. Such floods sometimes break the levees. Or the natural contortions of the stream in changing its channel eat them away; they cave, slough off, and slide into the river. But a shattered line is immediately repaired; "run-arounds" are constructed in a semicircle around the broken place, a spur of sacks is built to turn the current, and another year finds the levee stronger. In each succeeding year the disastrous crevasses have been fewer, the damage from them less and less. Throughout the valley there has been a steady growth of confidence in ultimate immunity from overflow.

Vicksburg perches high upon her hills at the foot of the Yazoo-Mississippi Delta, with every interest bound up in that of her lower-lying neighbors. Here live the planter who owns the threatened fields, the factor who sells his cotton, the banker who holds his mortgage, and the merchant who furnishes supplies to his plantation.

Therefore when the river-gauge climbs above the forty-foot mark, and the city front goes under, "high-water talk" absorbs every other topic of conversation upon her streets. The river continues to rise until the gauge registers above fifty feet, with every prospect of more. The Weather Bureau warns the planter to prepare for extremely dangerous stages.

Boats begin to bring in loads of refugees from plantations which are outside of levee protection. Negroes desert their cabins, making rafts to float out chickens, hogs, mules, and every imaginable species of plunder. They crowd upon the levees, waiting for a boat to take them off. Cautious planters send their stock away to safer pasturage. The river swarms with busy craft. Men are hired for emergency work along the levees; lumber is shipped to build up bulkheads and prevent caving; sacks go forward by the thousand to be filled with earth and raise the crown of the levee above the flood.

A Snap-shot of the Street-railway Traffic in Memphis during the Flood

At the foot of Clay Street the stanch little *Belle of the Bends* lies ready to perform these services. With "Captain Gus" on deck and "Uncle Billy" at the wheel, she casts loose her line and turns her head up the brimming stream. On her decks are dozens of planters, levee-board officials, and government engineers, anxious to see what changes a single day has brought.

A man familiar with the river and river methods would know from her cargo that an overflow is imminent. The *Belle* carries lumber, wheelbarrows, skiffs, sacks, and material of every kind. Once launched upon the broad and eddying river the necessity for it all seems fully justified.

The river gorges its channel to the very top between two long lines of levees. Cotton is stacked everywhere. The *Belle* seems floating on a huge horse-trough, twenty feet above the level on either side. Only the merest streak shows where the levee runs, and this thin barrier of dirt, sodded with Bermuda grass, looks ridiculously insufficient to fence out such a stupendous flood

of water. The wave-wash of the boat splashes over its top. A child with a pocket-knife might cut the dike, and then no human power could save it. Men on horses and men afoot patrol it night and day, watching for signs of weakness and to guard against a cutting. For if the levee should give way upon the Louisiana side that would instantly relieve the strain in Mississippi. And it has happened in days gone by that a man crouching behind his own levee and grown desperate with fear has taken his life in his hands, paddled his silent dugout across the river—a few swift strokes of a spade, a sudden rush of water, and the thing is done. And timber thieves, too, waiting in the swamps for water to float out their rafts, have been known to cut the levees. But the guard asks no question of the man with the spade; he shoots, shoots to kill, and no questions are ever asked of him.

At this writing there is a guard—generally a volunteer—pacing every half-mile of levee on both sides of the river. His horse stands hitched at the quarter-boat ready for instant use. And with a fatuous confidence every man of them will answer your inquiry, "We're going to hold this levee, sure; there's no danger here." For God never made a more buoyant-spirited and braver people than these whose wives and children sleep with that thin green line between them and destruction.

The man of confidence stands on a crumbling foothold scarce six inches above the rising river. At his back, and twenty feet below him, lie the level fields of a country richer than the fabled Valley of the Nile—that granary and treasure-house of the ancient world. There stand his home and household gods; a sweet-faced woman sits upon his gallery; his children sail their mimic boats in the seepage-water trickling through the levee. Yet the man smiles and waves his hand to friends upon the *Belle*, "We'll hold this levee—sure."

At every landing-place the steamer puts off a skiff or two, some sacks, and a bundle of oars. A hundred negroes crowd upon the levees to laugh and cheer her on. The warehouse at Lake Providence is almost gone, while the huge seawall lifts itself eight feet yet above the flood. Five miles farther on the levee is low, and men are working like beavers building it up with sacks. The exciting fight goes on between the monster and the men—a race to see whether the levee or the water can rise the faster.

The *Belle* lands very cautiously against a threatened levee, where a number of gentlemen are gathered. "We are perfectly safe here, I think," says Mr. Ransdell, member of Congress from that district, himself at work upon the levee. "I never knew a break to occur where we had good weather, plenty of men, and dry dirt to fight it with. The break generally comes where you least expect it."

Some of this work is done by paid labor, but much of it is volunteer and perfectly organized. White men and black men work together side by side—the gentleman of property and the humblest tiller of his fields. As a rule, the more substantial negroes labor very cheerfully. But when the trifler refuses there's no hesitation as to him. A ball and chain is hung to his leg, and he works anyhow. Their compulsory levee-working laws are very like those for working public roads, except these levee laws are rigidly and promptly enforced. In some places the boat must approach very gently lest her waves may dash across the narrow line and start a crevasse. At others she can land broadside without the slighest danger. And here her guards project like a shelf above the diminishing levee.

At the most God-forsaken points she touches to take on a sack of mail. Everywhere there is a constant stream of negroes parading the levee. A black and jolly set they are, idle and unearing, for summer is nearly here; if the levees break they can swim out, and they've nothing whatever to lose. When moving-time comes, the negro can always shut the door, whistle to his dog—and move. That's all.

One of the deplorable results of an overflow is the complete destruction of game in the swamps. For weeks the deer, bear, rabbits, and game-birds have been running to the hills; all their paths are beset by pot-hunters, and they are shot down mercilessly. Sometimes upon a higher point no bigger than a city block a hundred starving deer are seen; the owner of the plantation protects and feeds them.

Returning by rail from Greenville to Vicksburg the train passes through a country much lower than the river-front, and now rapidly filling with back water from the Yazoo. The locomotive drags us on through miles of water which almost extinguishes the engine fires. Two men are stationed on the cowcatcher pushing aside the driftwood which cumbers the track, and we creep along more like a toilsome barge than a passenger-train.

One of these floating chunks carries passengers—fellow-travellers, one of whom might well be called an original flood sufferer. A melancholy jack-rabbit squats on a piece of drift not more than three feet long, and mournfully regards a big snapping-turtle sitting on the other end. They circle about and meander slowly through the submerged forest, whither they know not—and the turtle doesn't care.

At the time of writing several bad breaks have occurred in the levees. The city of Greenville is submerged. The rest may hold back the flood; they may not; no man can even hazard a guess. Dry weather and a falling river will save them: another rise, heavy rains, or a high wind might work their destruction in an hour. The people are making the fight, a hard fight, a brave fight. If the water covers them they will wait until it goes away, plant behind the receding flood, and trust to the richest country on the earth to give them ample harvests.

In some Districts the only way to get Home during Flood-time is over Temporary Sidewalks

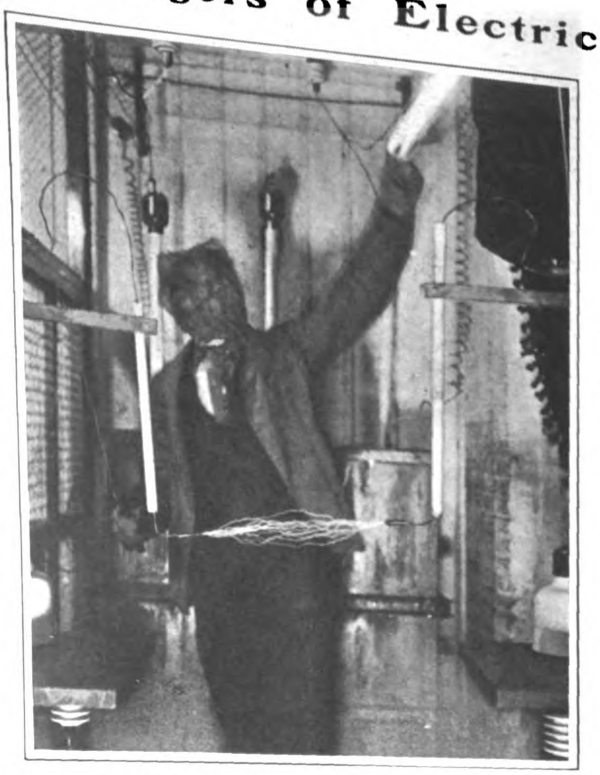
Drawn by W. E. Mears

A PERILOUS MOMENT—THE BREAKING OF THE LEVEE NEAR GREENVILLE, MISSISSIPPI



When the levees are threatened, or when the negroes are actually driven from their homes by the floods, they take all their household goods and camp out for protection on the banks of the river. It sometimes happens that the levee breaks near these camps, with the result, as shown in the drawing, that there occurs a hurried scramble for life and safety

The Dangers of Electricity

WE have frequent illustrations of the hazards of handling electricity. Every little while a lineman at his work at the top of an electric-light pole mishandles the powerful current he has to deal with, and either falls from his perch or is shocked or burned to death, and hangs an awful spectacle from his perch. Industrially, the dangerous high currents are more and more used all the time, and scientists are constantly experimenting with them in the effort to come to a better understanding of the nature and properties of man's newest servant. Many of these experiments are more or less dangerous, and the need of caution handicaps the experimenter in his investigation and the practical electrician in his work.

The means most in use as a protection against injury from the high currents are rubber gloves and overshoes. Rubber is a bad conductor, but the protection it gives is imperfect. News of a surer safeguard comes from Europe. Professor Nicholas Artemieff, director of the Electro-Technical Institute in Kief, South Russia, has devised a dress made of a thin tissue of metal, which envelops the whole body, and makes the wearer impervious to all electrical currents. Clad in this armor, the electrician need concern himself no more about the dangers of his business, but can go on with his work or his experiments with an easy mind.

Dress and Head-Shield invented by Professor Artemieff for Protection against Electric Currents of high Power

Professor Artemieff brought his metallic dress to Berlin. We are told that there it stood all tests perfectly, and that the German artificers, working out his idea, made a dress which is a perfect conductor of high current of electricity, and which affords perfect protection without interfering with the use of the hands or the eyes.

How practical a device this is we shall not know until it has been more fully tried, but it would seem likely to prove useful both to experimenters and workmen in work which involves special risks. Certainly for linemen, and men who work on our elevated railroads, where the third rail is charged with a deadly current, some sort of protective armor is very much to be desired. In the thunder-storm season too there might be a market for lightning-proof garments which timid ladies could put on to the relief of their nerves. Getting under the bed is a fairly effective precaution against lightning, but it is undignified.

The tenth part of an ampère passing through one's body may produce fatal results. Just what keeps this tenth part of an ampère in its proper course is just enough of a mystery to the ordinary unscientific layman to make Professor Artemieff's invention of very possible popularity.

Miss Elsie De Wolfe in her new play "Cynthia," at the Madison Square Theatre

The Reappearance of Miss De Wolfe

MISS ELSIE DE WOLFE has been somewhat deliberate in making her appearance as a star in New York this season, but she is none the less welcome. She is one of the fortunate few players of the present day whose following is sure because it attaches itself to her personal qualities rather than to what the more enthusiastic of them choose to term her art. It is to Miss De Wolfe the woman, not the player, to whom a certain class of the New York play-goers are devoted, and in the *succès d'estime*, as distinguished from the merely theatric success, there is no one on the American stage to-day who can boast more enduring laurels. It is to be regretted that Miss De Wolfe's abilities are not so well suited in the comedy of "Cynthia," written for her by Mr. Hubert Henry Davies, as in Mr. Fitch's "Way of the World," in which she appeared last year. A somewhat kittenish rôle is not precisely the sort of thing in which one who is noted for a certain calm reserve and distinction of manner is likely to make the strongest appeal, and in this respect Mr. Davies has fallen far short of giving to his star a dramatic garment that fits to a nicety. Miss De Wolfe's talent falls more easily into a modish rôle than into one of ingenuousness, so that she does not quite create in the first act the exact illusion that is necessary wholly to enlist our sympathies; and when, on top of this, we are given a last act that is wholly unnecessary, and in which the natural grand manner of the star is subordinated to the exigencies of a skirt-dance, the general result is not all that one could wish. This particular star and skirt-dancing are as unrelated as a Vicar to a Midway, and one would as soon expect to see Ellen Terry in Miss Katie Barry's rôle in the "Chinese Honeymoon" as to find Miss De Wolfe essaying to win the terpsichorean honors of a Letty Lind.

Nevertheless, "Cynthia" is a pleasant and wholly refined performance. There is nothing in it that grates upon one's sensibilities, and it holds much that is bright and amusing. It is a sort of *de luxe* drawing-room affair, toward which one is disposed to be amiably polite rather than severely critical, and since no claims to greatness are made for it, it may be said that it amply fulfils its purpose. It serves as a gently enlivening evening's entertainment, and occasionally tickles the sense of humor by an epigram or two that has real wit and significance.

A SOCIAL FUNCTION FOR WORKINGMEN

A Workingman's Fair, attended by about one hundred and fifty thousand representatives of all branches of labor, has just been in progress at the Grand Central Palace in New York. Apart from the plan of the organizers of the Fair to have these representatives of labor meet together socially, enough money was raised to start a newspaper in the interests of labor and of the various organizations represented by unions throughout the country

THE TRANSFORMATION OF A PLEASURE PALACE

For musical concerts this summer Madison Square Garden will be turned into a Venetian fairy-land. The principal buildings of Venice will be reproduced, and gondolas, with Venetian gondoliers, will ply on the miniature Grand Canal shown in the drawing. The Piazzetta of St. Mark's will serve as the band-stand for the Metropolitan Opera House orchestra, under the direction of Mr. Duss. For the first concert, on May 31, Madame Nordica and Edouard de Reszke will be the soloists

The "Newest Navy" of the United States

See double page

EVER since 1885 the United States has had what has been called the new navy. The expression has meant generally new war-ships of various types, of improved modern construction, in commission and available as a fighting force. This new navy has included in its development from time to time gunboats and protected cruisers, then armored cruisers and battle-ships, then torpedo-boats and torpedo-destroyers, then battle-ships of the highest power and armored cruisers of the swiftest speed—fast battle-ships really—and then practical and effective submarine boats.

There have been so many additions to the navy since 1885 that the expression new navy has come to be top-heavy and almost meaningless, and the words newest navy have been substituted. The newest navy means the war-ships that are being built and that are not yet in commission. What would be called the new navy of the United States, using the expression that is becoming obsolete, now consists of 110 war-ships. That is to say, we have 110 steel naval vessels, built and equipped in the last eighteen years, which are either in service or fit for service. All these vessels rank with the best of their types, at the time of their construction, in the other navies of the world. Some of them, however, owing to improved methods of construction, are almost out of date. All the other navies of the world have vessels in a similar condition.

The newest navy of the United States consists of sixty war-ships. With the exception of the five battle-ships just authorized by Congress, all are under construction. In less than four years all will be ready for service. Many of them will be ready within a few months. This newest navy means that a tonnage of 375,000, in round numbers, with a horse-power of about 630,000, is being built. It means an expenditure of more than $80,000,000.

The most important significance of this extensive plan of naval building is that the United States is actively and persistently in the race for naval superiority, and that on paper—that is, until the boats now being built by this and other countries are actually in service—the United States is already the third naval power in the world. It has passed Russia and Germany, and is fast approaching France. It will probably never overtake Great Britain, but it may catch up to France in a few years if the present rate of increase is maintained. Here are the figures of tonnage, built and building, of the chief naval powers, as gathered by the Navy Department, and published under the date of November 30, 1902: Great Britain, 624 ships of a tonnage of 1,807,874; France, 453 ships and a tonnage of 804,274; United States, 153 ships and a tonnage of 578,743; Russia, 275 ships and a tonnage of 509,568; Germany, 225 ships and a tonnage of 483,428.

It will be observed that Russia and Germany, although behind the United States in tonnage, exceed this country in the number of ships built or building. This is accounted for by the fact that Russia has no less than 196 torpedo-boats built or building of various grades, that Germany has 120 of these vessels, while the United States has only 52. Torpedo-boats are going out of fashion, so to speak. Their usefulness has never been proved in naval warfare—in fact, if anything has been proved regarding them, it is that they are useless, compared with other war-ships, in time of war.

Great Britain has had a sorry experience with them in time of peace. Spain's torpedo-boats were blown to pieces in the recent war with the United States, and our own torpedo-boats in that conflict were used chiefly for scouting purposes and guard duty. Germany is building no more of them. The United States has given up appropriations for any more. Great Britain is fighting shy of them. The latest designs of ships for this "underhanded kind of sea fighting," as it has been called, is to build sub-

A Wire-rope Performer testing the Amount of Vibration of an Auto in Motion

A New Plan for Testing Autos

CONNECTED with an automobile factory in Michigan there is a very novel testing-ground for automobiles. It includes a speeding-track which is perfectly level, and which is macadamized to give a smooth surface. In addition, an incline has been constructed which has a grade considerably steeper than the average hill encountered on the highway. Not only is the full power of the auto tested on the track, but its climbing capacity as well. One of the principal faults liable in a motor vehicle is the vibration caused by the irregularity of the engine when in motion. The absence of this vibration is essential to the comfort of the occupant. On this proving-ground experiments are made to determine the extent of vibration, as shown in the photographs. They assume the form of tight-rope performances. An "aerial artist" balances himself upon a bar supported by a framework which is attached to the body of the ordinary runabout. The runabout is operated at various rates of speed, both on the level track and on the incline. The amount of vibration of the engines is decided largely by the ability of the wire-walker to keep his balance while the auto is in motion. The feat of balancing on a wire while the auto is going up grade, however, calls for considerably more skill. When the trial is successful, it is due to the uniform movement of the engine.

The Test on an Incline—if the Rope-walker can keep his Balance, the Engine is considered to be in good working order

(Continued from page 593.)

marine boats. France, the United States, and Great Britain are now engaged in constructing these boats rather than torpedo-boats. The race between them is about equal. So, it may be seen that, eliminating torpedo-boats, the United States is ahead of Russia and Germany in sea-going war-ships. It will probably remain in that position.

The call nowadays in the navies of the world is for great fighting-ships, battle-ships and fast armored cruisers. They are the ones that count in naval rank. How do we stand in this respect? On November 30 last the Navy Department figures show that Great Britain had forty-six battle-ships built and eleven building,—a total of fifty-seven. France had thirty-nine battle-ships built and six building,—a total of forty-five. Germany had thirty-two built and five building,—total, thirty-seven. Russia had twenty-four built and eight building,—total, thirty-two. The United States had twenty built and eleven building,—total, thirty-one. In battle-ships, therefore, the United States ranked fifth, being just behind Russia, and close to Germany. The United States, however, was building within one as many battle-ships as Great Britain, and more than the other powers. Since then five new battle-ships have been ordered, a record that surpasses all but Great Britain. In battle-ships, it will be seen, the United States is taking rank with Great Britain, so far as new construction is concerned.

In armored cruisers—those fast war-ships of about 14,000 tons, 23,000 horse-power, and 22 knots speed—Great Britain is building twenty, France is building ten, Germany is building two, Russia is building none, while the United States is building eight. Again the United States scores high rank in this grade of vessel, being third and close to France. In protected cruisers, vessels from 5000 to 9500 tons, the United States is building six; Great Britain, four; France, one; Germany, one; Russia, five. In new construction in this field the United States is leading, but all the others surpass it in the number of boats already built in this class. However, these are the boats that become obsolete the quickest, and our deficiency in this respect need not cause alarm. They are not effective fighters in time of war; they are essentially valuable in times of peace.

The newest navy of the United States undoubtedly should be classed third in the naval powers. It consists of no less than fourteen battle-ships, with a tonnage of more than 200,000, nearly equalling Great Britain's, and surpassing all the rest; eight enormous armored cruisers of the *California* class, 14,000 tons each, all of the same type, and valuable for the homogeneity of the grade; three semi-armored cruisers of the *St. Louis* type, each with a tonnage of 9600; six protected cruisers of the *Denver* type, and of 3100 tonnage; six improved submarine boats; four sea-coast monitors of the *Florida* type and of a tonnage of 3200; two small gunboats, not yet laid down; ten torpedo-boat destroyers; and seven torpedo-boats.

All of these vessels, with the exception of the battle-ships, are of what might be called standard types. That adds immensely to their effectiveness when acting together. There will be no laggards to keep the others behind. In battle-ships, too, this country is fast approaching a type. Three of the new ones just authorized, 16,000 tons each, are to be of the *Connecticut* type, ordered a year ago. Two of them, those of the 13,000 tons, will probably be like the *Ohio* type, of which two are under construction.

The United States will soon have its battle-ships grouped into three or four grades, which may be duly separated and made cogent fighting forces, according to the varying standards. What Charles H. Cramp has called "battle-ship seamanship" may be developed easily by keeping these vessels together in their work.

The recent activity of Germany as a naval power has caused some alarm in this country lest we should not be prepared to cope with that country in case of trouble growing out of Germany's evident determination to be aggressive in reference to the Monroe Doctrine. The naval programmes of the two countries do not show any cause for such alarm. The United States is now in the

lead, and the temper of the people is to keep it there.

Germany, however, has made great strides, and has adopted a naval plan that might be emulated to advantage by others. It laid down an exhaustive naval programme in 1898, which was amended in 1900, calling for a thorough and gradual upbuilding of her navy. That programme has been adhered to strictly, with the exception that it has been finished in one-half the time, so far as it has gone, allotted for the work. It has included in this programme a complete scheme of rebuilding its vessels as fast as they get out of date. The United States has rebuilt several of its vessels, notably the *Chicago* and *Olympia*, but there has been no well-defined plan of continuing this work.

Germany has taught all the naval powers a lesson in this respect, and the United States would do well to take immediate heed of it. This country not only wants first-class vessels in its navy, which it is now getting, but it also wants no lame ducks in that force. In guarding against this Germany leads the world.

The New Artists' Studio Building

THE new Co-operative Studio Building, in Sixty-seventh Street, New York, is the only one of its kind in America which is owned by artists. It is a fourteen-story skyscraper, giving to every studio in it the advantage of a north light. There are also a number of apartments for the artists and their families. These apartments are arranged like tiny country cottages, with three rooms on the first floor and three above, with a private stairway, hall, and elevator, quite as one would have it in an exclusive cottage isolated in the centre of a lawn.

Mr. Henry Ranger, now president of the stockholders, originated the plan two years ago, and has been one of the most active promoters. The artists own their own homes, and, together, own the land upon which the structure is built. The cost of the building is about $350,000. Each artist occupant is his own tenant, and pays rent to the co-operative landlord. The artists owning and occupying apartments are: Mr. Henry Ranger, president; Mr. V. V. Sewell, vice-president; Mr. Jules Turcast, treasurer; Mr. Louis Paul Dessar, secretary. The other stockholders are Allan Talcott, Childe Hassam, Sidney Smith, Edward Naegele, Frank V. Dumond.

The Studio Building commands a magnificent view of Central Park, with a glimpse of the Hudson in the distance. There are fourteen large studios, two on each floor. A private entrance from the main hall brings one into the private hall of each apartment. Leading from the studio and facing the west are a reception-room, drawing-room, and library beyond. The dining-room, kitchen, wash-room, all well equipped with modern appliances, are on this floor. There is a private entrance and elevator from the basement for the servants. The sleeping-rooms and bath, also facing the west, are reached by one flight of stairs, and are situated directly over the drawing-room and library. The cutting in two of the inevitable city apartment gives a cozy, homelike atmosphere entirely foreign to the usual New York city home. The large apartment studios are leased for $2000 a year. Each stockholder pays his yearly rental dues to the general fund, and draws dividend from the stock. The plan diminishes his rent, and at the same time piles up capital and slowly pays the purchase debt.

To the rear of the building are the bachelor quarters, consisting of three rooms and a bath. These rent for $750 a year. There are also apartments consisting of two rooms and a bath which rent at $600 a year. The apartments in the latter category will be rented to bachelors of either sex, the Studio Building being chaperoned, as it were, by the artists' wives and families.

A co-operative restaurant owned and conducted by the stockholders will be situated in the basement. Elevator service, steam heat, gas, electric lights, and telephone service will be furnished individually

REDUCED RATES TO NEW ORLEANS.

Via Pennsylvania Railroad, Account Meeting National Manufacturers' Association.

On account of the meeting of the National Manufacturers' Association at New Orleans, April 15 to 17, the Pennsylvania Railroad Company will sell excursion tickets to New Orleans and return, April 11, 12, and 13, good going on date of sale, and good returning to reach original starting-point not later than April 19, from all points on its lines, at *reduced rates*. By depositing ticket with Joint Agent at New Orleans between April 12 and 19, and payment of fee of fifty cents, an extension of return limit may be obtained to reach starting-point not later than April 30.

to each studio and building. For the exclusive telephone $1 a month additional to the rent will be required. The top floor of the building is given over to servants' quarters, and for a small sum those occupying the apartments can secure the servant's room apart from their home.

The decorative scheme throughout the building will be one of the most attractive features. A frieze fifteen feet long, contributed by V. V. Sewell, will be placed on either side of the main entrance hall. The subject is a group of Roman boys, semi-nude, riding in the wood, and is suggestive of the Parthenon frieze. The tone is low, the action admirable; the decoration will add materially to the building, and is a valuable gift. The rooms are finished in hardwood with waxed floors. An item important to the housewife is that there is a plentiful supply of closets. The color scheme carried out in the decoration is left to the individual taste of the occupant, but the expense is carried by the stockholders. Each room has not less than forty feet of outer light and air. There is no enclosed air-shaft or court on the premises. An unobstructed view and good light have been provided for in the lease. For twenty-five years no sky-scraper will be permitted in the vicinity of the Studio Building.

The Co-operative Studio Building will set a good example for more co-operative homes on the same plan. In fact, the renting and general promotion of the original plans laid by Mr. Ranger and his associate artist friends have been so particularly successful that another building owned and conducted on the same order will soon be in the course of construction.

"People have no conception of how difficult it is for one to find a suitable studio in New York," said V. V. Sewell, the vice-president of the stockholders, and one of the most enthusiastic of the artists who with families are to occupy the sunny apartments. "There are, of course, plenty of buildings where studios are to rent, but they have been finished without even a thought as to the lighting or even minor advantages. Any old skylight or hole in the wall, when it has outlived its usefulness for anything else, has been placarded with the sign 'Studo to let.' Landlords are generally under the impression that inspiration needs no light, not much ventilation, and for the privilege of being dissatisfied artists are anxious to pay a goodly sum each month in rental and janitor service. Heretofore artists have been obliged to occupy studios in one part of the city and have their homes in another, and most of these studios have been situated in wholly undesirable quarters. With the march of time offices have moved into sky-scraping buildings that are scarcely less than towers, leaving untenanted the rambling old blocks with their small windows, winding stairs, poor elevator service, mysterious corridors, and mouldy walls. These, under the landlord's eye, are ideal quarters for genius. Hence the only studios to let have been in these buildings, and have been the cause of general dissatisfaction. To leave a musty studio, ride an hour in a crowded train, and at last reach the prosaic home situated in the centre of a solid row of houses, where every room may be predicated from the outside — narrow hall, narrow stairway, bay-windowed front parlor, dark back parlor, stuffy dining-room, pleasant kitchen—oh, you know them all—the inevitable rooms of an inevitable city house may be all right for some, but they are death-blows to originality. However, the Sixty-seventh Street Studio Building, which is appropriately termed a Barbizon without the Fontainebleau, will have nothing prosaic. There is sun here in plenty."

The artists who have promoted the plan as well as those who are to be benefited by it are to be congratulated on the completion of the new building. It marks a very practical step forward in art, one that might well be imitated by artists in all our large cities.

COMMENT

THERE is no reason to suppose that Admiral Dewey will be rebuked either by President Roosevelt or the Secretary of the Navy for the recent interview in which he compared the navy of the United States with that of Germany, to the disadvantage of the latter power, and added that our recent naval manœuvres in the Caribbean were an object-lesson to European governments, and especially to that of Emperor William II. In such expressions of opinion there was nothing necessarily offensive to Germany, although some German newspapers seem to have taken umbrage at them. It is not strange that Admiral Dewey should be proud of the past achievements and of the present efficiency of the American navy. Foreign naval experts would cheerfully admit that, from certain points of view, the manœuvres of the large fleet recently assembled by our Navy Department in the Caribbean deserve careful study. It is also true that they are especially worthy of attention on the part of that European power, namely, Germany, the naval strength of which corresponds most closely to our own. England and France, both of which possess a sea power much greater than ours, would manifestly derive less profit from observing how, with a navy of moderate size, a large fleet may be promptly concentrated in a given quarter. It will do neither England nor France, however, any harm to note how effective would be our defence of a Panama Canal.

It is probable that German newspapers would show themselves less sensitive to Admiral Dewey's remarks if these had not followed our polite refusal to permit our Atlantic Squadron to visit Kiel, which itself followed our polite suggestion that the gift of a statue of Frederick the Great should be postponed. These incidents are coupled by newspapers with Admiral Crowninshield's courteous declination of the offer to let one of his vessels, which had been injured near Christiania, be repaired at Kiel. He sent the vessel to England instead. On the whole, it must be admitted that ill luck has attended Kaiser William's overtures to the United States, and it is no longer possible to make the German ambassador at Washington the victim of his chagrin. We can afford to laugh at the ill-humor provoked by these little incidents in certain representatives of the German press. The *Vossische Zeitung* opines that the American navy is suffering from a disease of infancy—lack of modesty; and that superheated Deweys need to be cooled down. The *Tageblatt* sees in our Admiral's words confirmation of its oft-repeated assertion that our easy victory over Spain has produced exaggerated self-conceit. The German navy is somewhat of an infant itself, and we have not yet heard of its achieving any victories, easy or difficult, unless the destruction of a Haitian gunboat and the bombardment of Fort San Carlos can be ranked in that category. Our own notion is that if military conceit is rampant in any European country, it is in Germany, and that there, if anywhere, a cooling-down process might be useful.

When we consider the enormous losses caused by the coal strike to the operators, the mine-workers, and the community at large, the cost of settling it seems trivial indeed. Of the fifty thousand dollars which, it will be remembered, was appropriated for the expenses of the commission by Congress, more than a fifth will be returned to the Treasury. It is computed that the whole cost of the investigation will not exceed thirty-eight thousand dollars. Of this sum a large part goes for salaries. Three of the seven members of the commission received salaries of four thousand dollars each, besides a daily allowance of fifteen dollars for expenses. The other four members and the two assistant recorders drew fifteen dollars a day. As the board was appointed on October 24, and remained in existence until March 23, each per-diem allowance amounted in the aggregate to about $2250. The stenographers worked cheaply for the commission, because they were allowed to furnish outsiders with copies of the testimony. It is a creditable fact that the special train chartered for the purpose of enabling the commissioners to inspect the anthracite region was paid for out of the per-diem allowances. When we bear in mind that, if the mine-workers are faithful to their promise, the commission's award will assure tranquillity in the anthracite district for three years, we must recognize that the remedy applied by President Roosevelt was extraordinarily cheap. Can we take for granted, however, that recourse will again be made to it? That depends on the mine-workers. If they strike during the next three years, they cannot expect the operators again to assent to an arbitration by the outcome of which one of the parties refuses to be bound. Even if the mine-workers, influenced by Mr. Mitchell, who has shown himself a long-headed man, should refrain from breaking their agreement, it begins to look uncertain whether they will a second time consent to refer their claims to arbitration. Already there are signs of dissatisfaction on their part with the award, and some of their representatives assert that they would have done better to accept the offer made by Mr. Baer on the part of the operators last autumn. We shall get more light upon the views prevailing among the miners after they have received the lump sum coming to them by way of increased wages from November 1.

One of the most important events of the last week was the unconditional ratification by the Cuban Senate of the reciprocity treaty as amended by the Upper House of our Federal legislature. The insular Constitution does not prescribe a two-thirds vote, but permits ratification to be made by a majority. The vote was pretty close—12 to 9—and, by a vote of 11 to 9, a resolution was passed recommending the Cuban Executive to take action conducive to making reciprocity effective as soon as possible. That the resolution was purely academic and perfunctory is evident from the fact that it contained an express statement that the recommendation must not be regarded as an amendment to the treaty, or a modification of it. As we have formerly pointed out, it was hoped by the Havana friends of the European countries that are rivals of ours for Cuba's import trade, and also by the opponents of the treaty in the United States, that the amendments made by our Senate would prove an insuperable obstacle to ratification by the other party to the contract.

Señor Sanguilly, who is the most persuasive speaker in the Cuban legislature, did his best to make them so. His principal argument, however, that the treaty was a step toward the political absorption of Cuba by the United States, was clearly fallacious. Senator Newlands, who opposed the treaty on the explicit ground that it would postpone annexation, was right. Whatever increases Cuba's prosperity will obviously assist her to maintain an independent existence, and will minimize the motive for seeking absolute free trade with the United States through annexation. It has been alleged, indeed, that the reduction of duties on imports from the United States will materially curtail the island's customs revenue. Well-informed Havanese, however, believe that any loss resulting from the lowering of duties will be more than made good by a signal augmentation of purchasing power. That was the gist of the reports made by the industrial, commercial, and financial associations whose expert opinions were requested by President Palma. It is doubtful, nevertheless, whether the treaty would have been ratified had not Señor Quesada, the Cuban minister at Washington, been authorized by Secretary Hay to telegraph an assurance that President Roosevelt would convoke Congress in extra session in November in order to secure the approval of the treaty by the House of Representatives. Now that the document can be presented as an accomplished fact, we deem it almost certain that the approval will be given. It will go hard with those Representatives who in this matter venture to set themselves against the tide of public opinion. We believe that, before the present year has ended, Cuba will enter upon a career of prosperity unexampled in her history. Not only will the reciprocity treaty enable her planters to sell their cane sugars at a profit in the United States market, but the agreement signed by the parties to the Brussels Conference, which will become operative early in October, will deliver them from the competition of bounty-fed beet sugars.

As Senator Morgan of Alabama voted for Mr. Bryan in 1896 and 1900, he is undeniably "regular," and, therefore, the friends of the ex-candidate cannot well refuse to consider his views of what should constitute the Democratic platform next year. They were set forth on Saturday, March 28, in an interesting interview with the Washington correspondent of the Philadelphia *Public Ledger*. The Senator advocates the dropping of the issues put forward in connection with Mr. Bryan's candidacy, and the adoption of a platform based on the traditional principles of the party. The silver and the Philippine questions he regards as dead. He would insist upon a revision of the present tariff, which, confessedly, was made too high in many particulars, on the plea that the very excess of taxation would enable us to make bargains with other countries on the reciprocity plan. The tariff as it is, Senator Morgan thinks, is a shelter for trusts and a nesting-place for monopolies. He believes in a tariff for revenue, but if, in raising revenue, a tariff furnishes protection for particular manufactures, he holds that nobody should wish to prevent it. As to the trusts, he suggests a remedy which, in his opinion, would prove effective. Why should not the government, he asks, declare by act of Congress that any person or corporation which produces, or transports from State to State, any article that is used by the government, and enters into any combination to monopolize or forestall the market for such article at any place, shall be liable to the pains and penalties of the Sherman Act? He points out that the government of the United States is a very large consumer of a great variety of articles that enter into inter-State commerce. It is, in truth, the largest single consumer.

Look, he says, at the equipment of the army and navy, and the post-office, and the different government establishments throughout the country, and at the vast number of servitors whom the government has to supply with materials. He calls to mind the fact that for centuries it was the common law of England that the government could enact a law declaring that men and corporations that combined to monopolize and raise the price of beef, pork, lard, flour, iron, steel, copper, or any other articles used by the government, should be amenable to punishment. It is obvious that such legislation would be a reversion to paternalism, and most people would say that a recourse to that remedy should be postponed as long as possible. Senator Morgan is not frightened in the least by the term paternalism, however, and maintains that it is the duty of a government, considered as a consumer, to protect itself against monopolies. As regards the section of the Union from which a Democratic candidate should come, Mr. Morgan sensibly says that, for some reasons, he would prefer a Northern man. He seems inclined to think that the Federal government would be safer in the hands of such a man. Moreover, it would be easier to elect him. He would be more likely to carry doubtful States at the North. Mr. Morgan would deem no nominee objectionable on the ground that he had failed to support Mr. Bryan in 1896 and 1900. The word "bolter" has no terrors for him. On the contrary, he considers it Democratic doctrine, as well as Christian doctrine, that when a man repents, he should be taken back on the same ground as if he had never sinned.

As we expected, President Castro's resignation of his office proved to have been modelled on the sham exits of Bismarck. It will be remembered that, during the latter years of the Emperor William I., his famous Chancellor used periodically, when annoyed by court cabals against him, to offer to resign. As his imperial master was keenly conscious of his obligations to the man of blood and iron, the latter was invariably urged to resume his official functions, and the designs of his enemies were brought to naught. The Venezuelan Congress in like manner seems to have recognized that in the existing situation Castro was an indispensable man, and, without waiting even twenty-four hours, besought him by a unanimous vote to reconsider his purpose of retiring to private life. He graciously accepted the request as a vote of confidence, and announced his consent to retain his post until all the questions in dispute between Venezuela and foreign countries shall have been settled. So neglectful of international law are many South-American politicians that Minister Bowen, who has nearly completed the task of arranging protocols with Venezuela's creditors, might have found himself in an awkward position had Castro been succeeded by a President who might have held himself at liberty to repudiate some of his predecessor's promises. Not that even a Venezuelan Chief Magistrate would have ventured to repudiate a protocol actually signed, for it is well known that even a *de facto*, and much more a *de jure* government, such as Castro's ultimately became, has power to bind its successor. Another President, however, might have preferred to negotiate privately with those creditors who had not come to terms with Mr. Bowen.

There is still current some misconception about the scope of the reference to The Hague. The international tribunal will have absolutely nothing to do with the validity of the claims put forward by the creditor powers. It is simply invited to say whether, in pursuance of the principles of international law, the countries which undertook to enforce the payment of alleged debts by blockade and bombardment shall be preferred, as regards the time of payment, to those countries which refrained from resorting to acts of war. The damages demanded for pretended grievances have already been assessed, and, where they have not been paid in cash, the time, mode, and amount of payment have been agreed upon. As to the ordinary debts alleged to be due from Venezuela or her citizens to the subjects of Germany, Great Britain, Italy, or any other foreign power, these in each case are to be verified by mixed commissions, on which the debtor and creditor countries will be equally represented, a provision being made, moreover, for an umpire in the event of disagreement. How long thirty per cent. of the customs revenues of La Guayra and Puerto Cabello will be sequestrated for the benefit of creditors depends, of course, on the aggregate amount of the claims allowed by these commissions. It is not improbable that the total, including costs of collection, may reach $45,000,000. It should be borne in mind that if Castro or his successors in the Presidency should fail to turn over monthly the promised thirty per cent. to the agents of the foreign creditors, the two custom-houses mentioned must be placed in the hands of officials appointed by the King of the Belgians. This stipulation may lead to trouble that will open the eyes of the American people to the possible significance of the confiscation of customs revenue for the payments of ordinary debts. We presume, however, that the intervention of Belgium will not be called

for, unless Castro's fiscal resources should be exhausted by the task of putting down the revolutionists, who are still giving him some trouble.

Along with the announcement that President Castro has been graciously pleased to withdraw his resignation comes a harrowing tale of the woes of certain American merchants in Venezuela, with pictures of the manner in which President Castro endears himself to his subjects and to the stranger within his gates. Here we have the wail of a firm which obtained certain concessions from the predecessors of the present ruler, and was permitted to import, duty free, about half a million dollars' worth of machinery. The precise nature of the industry involved we are not told, the reason being that an identification of the complainant would mean a short shrift, and a funeral in the cool of the tropical morning. Having imported its machinery, this firm thought it saw the way open to great wealth. The way was open all right, but it led in the wrong direction. Tawny gentlemen belonging to the government immediately developed a habit of dropping in and making forced loans, explaining that, if the subsidy were not forthcoming, something might happen to the plant; and something invariably did happen, we are told, so that the bleeding process went gayly on. Then came a really painful incident. The government commandeered four mules belonging to the firm, and this led to a fierce complaint to Castro in person. Castro was truculently sympathetic, and promptly gave orders that the mules should be paid for. In fact, he sent his commissioner of stamps the next day to pay for the mules—in stamps. The commissioner sat around and smoked and smiled. Then he remarked that the weather was very warm, and that the government of his dear master was in great straits. He further remarked that there was a considerable sum in gold, some two thousand dollars, in the safe of his dear friend the American manager. Finally, he declared that this sum was in danger from the revolutionists, and that, to assure its safety, his dear master had decided to take it over, paying for it in stamps. The wretched manager had to acquiesce. The gold went to Miraflores, and the stamps took its place. A few days after, a notice came that the whole issue of stamps had been cancelled, because some had been stolen from a sub post-office up in the Andes.

It is noteworthy that the Balfour cabinet has been able to gain a victory at Chertsey, not only in the face of all sorts of predictions of defeat, but, what is much more important, after the Irish policy of the government was made known to the electors. It has been said again and again that the Irish tenants, and therefore the Nationalist members who represent them, are naturally favorable to Mr. Wyndham's land-purchase scheme, that the Irish landlords, and the Ulster Unionist members who represent them, are also naturally very glad to be able to sell their lands on very favorable terms, but that it remained to be seen whether John Bull would stand for the cost. So far as the Chertsey elections show, and, taken after the two defeats at Woolwich and Rye, it seems a fair index, John Bull is quite willing, and is, indeed, impressed with the fact that the investment is a good one. All the same, with consols at a phenomenally low figure, with the Transvaal loans in sight, while Mr. Brodrick's tremendous army expenditure has raised the cost of the army alone to an amount which used to pay for army and navy both, and, finally, with the payments on the national debt for the last forty years altogether swept away, one cannot but hope that the government may shortly see its way to turning the tide in the direction of retrenchment and economy. Among other news from across the ocean, there are rumors of the resignation of Mr. Brodrick, as a result of his hotly criticised army scheme, and, what is more important, though hardly likely to be true, that his example will shortly be followed by Mr. Joseph Chamberlain.

The tragedy that closes the life of General Sir Hector Macdonald is a subject of universal regret, and it is fairly established that the mind of the distinguished soldier has for some time been seriously unbalanced as a result of a sunstroke received at the great fight at Paardeberg, where Sir Hector was also somewhat seriously wounded. The chief matter for regret is that the army authorities did not realize this in time before sending Sir Hector out to Ceylon, which has its charms and its beauties, certainly, but is not the best place in the world for the cure of sunstroke. When the gloomy circumstances which surrounded his death have been forgotten the valor and intellectual force of this distinguished soldier will be remembered, and, even more, the conspicuous example of merit rewarded which lies in the history of his rapid rise from raw recruit and ex-draper's assistant to the culmination of his life on the field of Omdurman.

We have pointed out that Italian statesmen are deeply interested in the outcome of the next Conclave. Will the successor of Leo XIII. adopt a conciliatory attitude toward the Quirinal, or will he pursue the middle course which the present Pope has followed, or will he be a representative of that uncompromising faction in the Curia which desires the pontiff to abandon the Vatican and take up his residence outside of Italy? Our own belief is that the Moderates will prevail, and that the next Pope will not depart to any serious extent from the path traced by Leo XIII. as regards the treatment of Italy or of France. It must, at the same time, be admitted that the irreconcilable cardinals are exhibiting a good deal of confidence, and the fact has revived the discussion of the country in which the papacy would be likely to take refuge. An asylum has twice been offered at Malta by the British government, and there is no doubt that the Emperor William II., about two-fifths of whose Prussian subjects are Catholics, to say nothing of the Bavarians, would willingly afford a domicile to the Holy Father within his dominions. There is a fatal objection to either of the proposals. The very idea of a Pope residing in *partibus infidelium* would be shocking to Catholic traditions. For the same reason the Pope could not take up his residence in the United States. To seek an asylum in the French Republic, as his predecessors sought one at Avignon, would be impracticable at this time, when even the maintenance of the Concordat is doubtful. The Hapsburgs, on the other hand, and the Spanish Bourbons, are zealous Catholics. It follows that the occupant of Peter's chair might find a convenient place of refuge in one of the Austrian towns on the Dalmatian seacoast, or in one of the Balearic Isles. The island of Minorca, for instance, would be an ideal sanctuary. But, as we have said, we think that the Moderate party in the College of Cardinals is likely to win, in which event the next Pope, like the present one, will cling to Rome.

It is pleasant to have something to record of China other than wars and rumors of wars. The present news is that an agitation has been started to protest against the barbarous custom of bandaging the feet of Celestial girl babies and thus making artificial cripples of the mothers of the Chinese race. There are many absurd and idiotic fashions and customs in the world, but this is perhaps the most idiotic of all. There are great hopes of enlisting the active sympathies of the Empress Dowager in the movement, not only because, as a Manchu, she herself never submitted to this torturing deformity, but also because the Manchus have opposed the custom of foot-binding all along, and have again and again issued edicts against it, but hitherto all in vain. It is said that the prime mover in this campaign is the reformer Kang Yan-Wei, of Canton, who has added example to precept, and being himself the father of fair daughters, has refused to send them hopping and hobbling through life, and has further prevailed on numbers of his personal friends to follow his example. This is the real solution of the difficulty, in China as elsewhere, and doubtless the pioneers will have to pass through the same stages of social ostracism as did the strong-minded and enlightened persons in India who began the campaign for the remarriage of infant-widows,—of girls, that is, who, having been betrothed when they were babies, or even before they were born, were bereaved of their lords and masters while still mere children, and who, under the interpretation of Manu's law, were held to be widows, deprived of the right of remarriage, and doomed to perpetual servitude, privation, and hardship. We may well compare their lot with that of their sisters in China who are tortured and maimed by the bandaging of their feet in infancy. It is pleasing to find the initiative in this reform being taken by the Chinese themselves. That is the true and healthy path of national progress. Outside forces can never accomplish genuine reforms, as was shown, for instance, in the repeated failure of the Manchu

dynasty to abolish this very evil. The Manchus, by the way, are responsible for introducing the pigtail into China; they made the conquered nation wear it as a sign of loyalty.

Cotton-manufacturing in New England is momentarily in an uncertain state—and chiefly on account of the nearly universal unrest of the labor on which it depends. It has been difficult, and a work of many years, to bring the mill-workers into unions; and even now some classes of the help are so loosely organized that the organization is effective for not much except agitation. The spinners, who are comparatively few in number, and who are all men, have the strongest union, including nearly all the spinners in New England; the weavers, who number more than any other class, and who are largely women, have a union which lacks power because many weavers have never joined it. Wages vary for the same kind of work in different parts of New England, those in Fall River and New Bedford generally running a little higher than wages in Lowell and Lawrence, and in Manchester, New Hampshire. Large numbers of the workers are among the smallest wage-receivers in the New England States, and are thus naturally the most dissatisfied. At the present time all the Lowell mills have shut down, the managements closing just before the unions were ready to carry out a strike threat, throwing 20,000 persons out of work; while there is scarcely a mill centre in New England where differences with employees concerning wages are not acute. Strikes of some magnitude are imminent in Fall River and New Bedford, and small strikes in cotton-mills may be expected anywhere at almost any moment. It is no secret that the managers of the cotton industries are much concerned, but it may be accepted that refusals to advance wages are not made carelessly. As a rule, the strikes of cotton-mill employees in New England have proved disastrous to the strikers; but they have also been so costly to mill-owners that even a possible strike is never viewed lightly. For two or three years the cotton industry has been profitable in New England—with some exceptional mills, very profitable—but at this moment the general condition is not quite as encouraging, and the attitude of the labor organizations is causing stockholders considerable anxiety.

In a report to Mayor Low, dated March 12, Commissioner Robert Grier Monroe declared that the appropriation for public lighting in Greater New York for the current year was inadequate to buy at present prices the light that the city needs. In view of circumstances and conditions, which he explained in detail, he recommended that the charter, which now requires the commissioner to make annual contracts with the lowest bidders for lighting the city, be so amended that he may make contracts without public bidding, and for a term not exceeding three years, when authorized by the Board of Estimate and Apportionment. He also urged that legislation be asked for to give the Mayor power to establish and maintain an electric plant for street-lighting. The commissioner has made these recommendations because he thinks the city is paying altogether too much for its light. The plan of annual contracts with the lowest bidders was devised in 1897, when a number of companies competed for the city light. Since then the companies have all come under control of the same organization, so that there is no longer competition between them. In Manhattan the price bid this year for a 2000-candle-power lamp is $146. The price in Brooklyn for a 1200-candle-power lamp is $124 50. The average price in sixty-eight American cities for 2000-candle-power lamps is $88 60. The average price in twenty-three cities for 1200-candle-power lamps is $81 08. More street-lamps with incandescent mantles are needed. It costs Chicago $2 40 additional for these mantles. It costs New York $11 50 additional, and Brooklyn $15 additional. Upon the bids that make these prices the commissioner has been unwilling to execute contracts, and has recommended that all bids be rejected. The Consolidated Gas Company and the New York Edison Company, and various companies controlled by them, are the concerns which at present supply New York with light, and there is no competition between them. Pursuant to the commissioner's recommendation, a bill has been introduced into the Legislature empowering New York city to install an electric plant for public purposes. Chicago has had such a plant since 1887. The cost of its 2000-candle-power lamps last year was estimated to be $53 51. Detroit also has such a plant, and the highest estimate of the cost of its 2000-candle-power lamps last year was $80.

Will Mayor Low, whose nomination seems assured, be re-elected? That is a question to which we might venture to reply if we could foresee the political effect of certain bills which are known to be favored by Governor Odell, and which seem likely to be passed by the Albany Legislature. We refer to the excise measure, which increases by fifty per cent. the cost of licenses in the larger cities, and the proposal to tax mortgages. Thus far the brewers and distillers have shown themselves vehemently opposed to the projected increase in the cost of licenses, and talk of making the change odious to consumers by augmenting the retail price of beer and whiskey. It has been suggested that the price of beer in the city of New York should be made ten cents, and that of whiskey fifteen cents, a glass, but it is most improbable that retailers will agree to the plan. Without recurring, however, to such a course, there is no doubt that the brewers and distillers can affect in several indirect ways a large section of the metropolitan vote. They are credited with defeating Mr. Cleveland for the Presidency in 1888, and with electing Mr. Hill to the Governorship at the same time. Their field of influence is believed to lie mainly among the German and Jewish voters, without whose support Mayor Low could not hope for re-election. Nor could Mr. Low escape responsibility for the new excise measure, because he has signified approval of it. The mortgage-tax bill also, as originally framed, was calculated to make the Republican party and most of its leaders extremely unpopular, not only among the large associations which invest a considerable part of their resources in bonds and mortgages, but also among the multitude of small capitalists who prefer that form of security. It is now understood, however, that, in deference to the wishes of Senator Platt, the mortgage bill is to be so amended as to minimize its political effect. The tax is to be reduced from four mills on the dollar to two mills, and mortgages held by savings-banks, by building and loan associations, and by life-insurance companies are to be exempted. Even thus modified, the bill is certain to encounter a great deal of resistance, on the ground that a tax on mortgages is practically a tax on real estate, which would thus be subjected to double taxation.

An event that promises to be of greater importance to the city and State of New York than any that has occurred since the Erie Canal was thrown open to navigation was the approval given on Thursday, March 26, by the Lower House of the Albany Legislature to the Canal bill, which had already passed the Senate. This bill gives the people of the State the right to vote upon the question whether $101,000,000 shall be expended upon one-thousand-ton-barge canals connecting Lake Erie, Lake Ontario, and Lake Champlain with the Hudson River. The bill could not have been carried without the concerted support of the Democratic members, all but three of whom voted for it. It may fairly be termed a Democratic measure, because, although it is favored by Governor Odell, the Republican leaders in the Assembly were bitterly opposed to it. The line of political cleavage becomes intelligible when we call to mind that the strength of the Democrats lies chiefly in the cities, and that of the Republicans in the rural districts. Whether the Canal act—we take for granted that the bill will be signed by Governor Odell—will be sanctioned by the people depends upon the answer to the question whether the urban will outnumber the rural vote. We hope and believe that it will. The bill has been criticised on the curious ground that the cost of the proposed improvement—more than half that of the Panama Canal—is out of proportion to the resources of a single State. Compared with the population and wealth of the State of New York at the time when the Erie Canal was constructed, the cost of that artificial waterway was immensely greater than will be that of the proposed improvement to-day. At that time the city of New York was outranked in population and wealth by Philadelphia, and there is reason to believe that, but for the Erie Canal, it would have continued to occupy a secondary position. Such, certainly, would have been the fate of New York city if, while De Witt Clinton's plan was defeated, the Philadelphians had carried out the project of connecting Lake Erie and the Ohio River by means of a canal across the Alleghenies with the

Delaware. Nobody thoroughly acquainted with the conditions governing the transportation of grain from the West to the seaboard doubts that on the completion of one-thousand-ton-barge canals the port of New York will begin to regain all of the grain-export business that it has lost in recent years.

It appears that the point reached in the antarctic circle by Captain Scott of the exploring-steamer *Discovery,* which left England in 1901, was 2° farther south than was at first announced. In his final sledge journey he pushed forward to latitude 82° 17′, when he was about 460 geographical miles from the south pole. It was well known that explorers have come considerably nearer to the north pole, less than 4°, or less than 240 geographical miles, remaining to be crossed in the arctic circle. Captain Scott has unquestionably shown that Victoria Land stretches much farther south than had hitherto been demonstrated, but it remains uncertain whether the land extends to the south pole. It is said that a rich collection of marine fauna, including many new species, has been made by the scientists attached to the expedition, and we may take for granted that due attention has been paid to seismographic records, and to magnetic and pendulum observations. As the explorers were revictualled toward the end of January by the relieving-steamer *Morning,* they will be enabled to live with an approach to comfort during the next six months, which are, of course, the winter months in the southern hemisphere, after which they can resume their southward journey, and may possibly succeed in reaching the antarctic pole. Should this feat be accomplished, it will undoubtedly cause a revival of arctic expeditions.

The early history of our fleet was recalled at the recent dinner of the Transportation Club in New York, at which Senator Depew so eloquently presided. We were reminded, and the story has a very curious flavor now, that when Mr. W. C. Whitney, as Secretary of the Navy, was about to form the nucleus of our fleet, the committee on naval work made special provisions in their bill allowing the Secretary to import engines for the future war-ships from Europe, it being their opinion that this country was quite unable to manufacture the necessary machinery. That sounds strange at the present day, when we are acknowledged masters in this very matter, and have turned out fully equipped fighting-ships not only for ourselves, but also for Russia, for Turkey, and Japan. It was further said that this country had not a single dockyard where a first-class battle-ship could be built, and at the time that was doubtless true. But the need soon brought the dockyards, and the vigorous competition for the recently authorized ships illustrates the present situation in that department of enterprise. As a speaker said, the country was swarming with men ready to undertake the building not only of battle-ships, but even of submarines or air-ships, or anything else under heaven, if they could only get the contract.

At the same dinner, Mr. Lewis Nixon, famous as designer of the *Oregon,* and sometime chief of Tammany, spoke vigorously on behalf of our mercantile marine, which is at present at about the same stage that had been reached by the navy when Secretary Whitney was empowered to buy his engines abroad. The point was well brought out that the demand for ships for the navy had brought into existence a number of ship-building yards which could now be admirably used to turn out ships as good as those of the German lines or those which have enriched Belfast. And this led him on to a story of an English lady who happened to invade Ireland, and was struck by the backward state of civilization in the sister isle. She met an Irishman called Michael, who was carrying a bucket of water from the well. She talked to him patronizingly of improvements and opportunities, and when he informed her, in answer to her inquiries, that ducks brought two and six in his out-of-the-way corner of the world, told him regretfully that if he had the same ducks in London he could sell them for twice as much. "True for your ladyship!" said Michael. "Indeed, there's nothing like having the right thing in the right place at the right time!" Here the audience laughed heartily, but somewhat prematurely. The point was still to come. "Now, your ladyship," continued Michael, "if I had this bucket of water in Hades, I could sell it for a guinea a drop." The moral of the tale was, of course, the expediency of ship subsidies to the right men at the right moment.

So far as the Rhodes scholarships are concerned, the most unkindest cut of all comes from Australia. The *Argus,* which is the most influential paper in Melbourne, points out that, setting aside social polish, and looking only to intellectual acquisition, Australians, at all events, should recognize that the student who seeks merely to graduate, and who does not take the so-called "honor" course, has nothing to gain from Oxford. In the opinion of the *Argus,* the colonial would be, for the most part, better taught at Melbourne, Sydney, or Montreal, because the B.A. degree conferred at the larger colonial universities means more as regards quantity and quality of acquirements than the "pass" degree obtainable at Oxford. It adds that, hitherto, when rich Australians have sent their sons to graduate, or to try to graduate, at Oxford or Cambridge, rather than Melbourne or Adelaide, they have done so candidly on social grounds. As regards an equipment for the struggle of Australian life, the step is pronounced injudicious.

The matter of water waste, which is always under consideration in New York, is a problem of importance in every large city, but especially so in New York, which is big already, and expects an enormous growth in population. The allowance here now is said to be 120 gallons a day to each inhabitant. It cannot be long maintained without the acquisition of more watersheds. They will have to be acquired in time in any case, but meanwhile the experts tell us that from 40 to 60 gallons a day apiece is a liberal allowance of water, and that about half the water the city gets now is wasted. Where the waste is is not clear, because it has not been fully investigated, but part of the surplus water is lost through leaks in the pipes underground before it reaches the houses, and part is wasted in buildings by undetected leaks and careless consumers. The City Club through its committee on water supply has taken up this question of water, and has made investigations on its own account, the results of which it has submitted to the Mayor. Its action is timely and important. Water is not only expensive, but it is limited in quantity. The supply cannot be increased indefinitely, even though there is money to pay for it.

It seems that about six months ago the Staten Island Chamber of Commerce was invited by Commissioner Willcox, president of the New York Department of Parks, to appoint a committee for the purpose of elaborating a system of parks, parkways, and playgrounds for Richmond County. The committee has reported in favor of raising the two and three-quarter acres at present used for park purposes on Staten Island to 3500 acres. As experience has shown that land required for parks has to be obtained by condemnation proceedings, and that the prices exacted of the city of New York are always exorbitant, we may fairly presume that the park scheme proposed would draw from the city treasury four or five million dollars. Our estimate is based on the assumption that land would not, on an average, be procurable by the city for much less than fifteen hundred dollars an acre. Now a tunnel under the Narrows is of infinitely more importance than a park system to the Staten-Islanders themselves, and to their fellow-citizens in the Borough of Manhattan, who would have to bear most of the expense. If four or five million dollars are to be expended for the benefit of Richmond County, they should be devoted, so far as they will go, toward the assurance of quick, frequent, and regular communication by means of a tunnel under the Narrows with the business part of the metropolis. To give a park system and withhold a tunnel would be to put the cart before the horse. As we have previously said, Mayor Low and his coadjutors in the municipal government ought to recognize the imperative duty of relieving the congestion of Manhattan Island below Canal Street, and on the east side as far north as the Harlem River, by enabling the swarming millions of the tenement houses to acquire homes in the only section of New York where land is still relatively cheap.

For some time farmers in our prairie States have been deeply interested in the report that a new cereal known as "corn wheat" has been discovered. According to the exaggerated statements that have been current in the West, the kernels of the new grain are about midway in size between wheat and

maize, and the proportion of crop to seed is far greater than in the case of wheat. Just how much foundation there is for the story has been made known by the Department of Agriculture. Not only is there no such thing as "corn wheat," but, in the opinion of the department's experts, no hybrid of corn and wheat could be produced, or, at any rate, no hybrid that would be fertile. The true name of the cereal which has been incorrectly designated is "Polish wheat," so called because it is largely grown on the Polish steppes, though it is not native there, its original home being believed to be in the Mediterranean region. As regards the size of the kernels of this grain, there is no doubt that, while much smaller than the kernels of maize, they are often twice as large as those of ordinary wheat. The assertion that the normal yield of this grain is from sixty to one hundred bushels the acre is pronounced exaggerated, though the department does not discredit the reports from Idaho and Washington that in those States from sixty to seventy-five bushels per acre have at times been garnered. It seems that Polish wheat is restricted as regards adaptability to soil and climate. So far as the United States are concerned, the Department of Agriculture thinks that the new cereal could only be grown successfully in the region of the great plains and in the territory on the western side of the Rocky Mountains. It should be a boon to eastern Kansas, and to all sections where artificial irrigation has been accounted a condition of fertility, because a characteristic of Polish wheat is its exceptional power of resistance to drought.

James Smithson, Englishman, who founded the Smithsonian Institution in Washington, died in Genoa in 1829, and was buried there. The cemetery wherein his bones lie has been abandoned, and the land is to be used as a stone-quarry. All the bodies in it are to be removed. The Regents of the Smithsonian propose that James Smithson's remains shall be brought to this country and reinterred in the grounds of the institution which is so noble a monument to its founder. James Smithson was the illegitimate son of Hugh Smithson, who became Duke of Northumberland. From the family of his mother, a well-born woman, he inherited a fortune. He became a noted scientist with a strong political preference for republican institutions. He never married, and when he died left nearly all his estate "to the United States of America to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." The money, £104,960, was sent to the United States in 1835, and the institution was established by Congress in 1846. Smithson once wrote: "The best blood of England flows in my veins. On my father's side I am a Northumberland, on my mother's I am related to kings; but this avails me not. My name shall live in the memory of man when the titles of the Northumberlands and the Percys are extinct and forgotten." He hitched his wagon to the right star, and his forecast is well on the way towards fulfilment. His bones should come to Washington. Mr. Alexander Graham Bell, one of the Regents of the Smithsonian, strongly advocates bringing them over-seas, and has offered to pay the expenses of removal.

Gustavus F. Swift is dead at the age of sixty-four. He was the celebrated Swift, the great Chicago beef-packer. He began business with a meat-market in Sandwich, Massachusetts, on Cape Cod, moved in due time to Boston, and from there, in 1875, to Chicago, where he got rich in the beef-packing business. He seems to have been a shrewd, industrious, and worthy man, of simple tastes, interested in meat, money, the Methodist Church, and his own family. He left a fortune of a number of millions—some say seven, more sanguine estimators say twenty—certainly more than he seemed to have use for. Mr. Swift appears to have regarded himself as a successful man, and in several particulars he was so. He made money superabundantly; he was the head of a concern that employed 22,000 men, and that was known all over the world, and he doubtless enjoyed the power that went with the place he had won in the commercial world. He seems, moreover, to have been a decent, upright man, whose pleasures, such as they were, were legitimate. But it is hard to see that he had any more fun than he could have had on an income of twenty thousand a year. A number of maxims which the newspapers attribute to him, all favor diligence in business and moderation in expenditure. No young man, he thought, was rich enough to smoke twenty-five-cent cigars; no one "had money enough to waste in putting on style." "Business, religion, and pleasure of the right sort should be the only things in life for any man." "The richer a man gets, the more careful he should be to keep his head level." These are fairly sensible maxims, but they show some lack of imagination and little talent for epigram. Devery or John L. Sullivan could make better maxims. Mr. Swift did not care for New York men. "They want too much luxury," he said. "I don't like their city any better than I do them."

After all, and without disparaging Mr. Swift's endeavors, the thing that he seems to have succeeded in was the distribution of meat. With that he began and with that he ended. The opportunities which his success in that opened to him he seems not to have been qualified to appreciate or improve. There are many rich men in the country who regard themselves as marvels of success, and are so regarded. Some of them are respectable men like Mr. Swift, and some are not. Many of them are valuable citizens because of the work they do. But very few of them are especially enviable. Their chief happiness is in work—their work, as a rule, is not of an especially uplifting sort, and, as a rule, it drives them too hard and cuts them off before their time. To work hard is *good*; to make a sufficient living is very important; to amass a competence is highly desirable; but there is great choice in work, and as between the men who make more money than they need in work that is not uplifting, and the men who make as much as they need in work that is uplifting, the latter really seem the more successful. Mr. Swift was extraordinarily successful as compared with market-men who make two or three thousand a year, but his success is not attractive as compared with that of Senator Hoar or President Eliot. It was, however, precisely the kind of success that the youth of this generation are continuously urged to emulate. Writers and speakers by the hundred are continually dinging into the ears of the rising generation, "Make money! make money! make *money*!" Periodicals exist for the special dissemination of this gospel. Men who have made money pose, or are exhibited, as examples of success, and every sort of success which does not find expression in dollars is disparaged by comparison. There is too much of this sort of talk. Mr. Swift succeeded certainly, but it is worth while remembering that there are thousands of Americans who would not have spent their lives in doing the work that he did, even if they could have been assured that they would die "worth twenty millions." To work out the best that is in you is success. Mr. Swift, doubtless, succeeded, even according to that test. He was able in his line, and stands as a shining example to butcher-boys.

Not all the Buffalo police and New York and Buffalo newspaper men have been able to make sure as yet who killed Mr. Burdick. A great deal of pains has been taken with the Burdick case. Expense has not been spared to discover what was hidden and to publish what has been disclosed. But so far as concerns the actual murder, publication has far eclipsed disclosure, for a vast deal has been printed, and the murderer has not been positively identified. What we do know, as a result of the inquest, is that Pennell was infatuated with Burdick's wife, and she with him, and that if Burdick had lived and prosecuted his divorce suit as he intended, the facts that came out at the inquest would have come out in that suit, to Pennell's discomfort and discredit. He had a strong motive for stopping the divorce suit. It was stopped. If he killed Burdick or caused him to be killed, he had motive enough for self-destruction to escape detection. The fact that he had policies of life and accident insurance, some of which would have been void in case of suicide, afforded him a motive for self-destruction so effected as to seem accidental. These facts work together in a fashion very detrimental to Pennell, and very effectively adapted to increase respect for the seventh commandment. The story does pretty well as it stands. It is easy to believe that Pennell was responsible for Burdick's death and for the death of his own wife and himself. But if that is true it is probably incapable of proof. If Pennell's wife knew that he was the murderer, we have a motive for her destruction. She was the person most likely to know whether he had killed Burdick or not. The story has been interesting. We have probably had as much of it as we shall ever get.

A New Device for an Old Crime

THE science of criminology is of great human interest, and none of its revelations are more curious than those of apparently unconscious crimes. We mean by unconscious crimes offences against both the moral law and the law of the state, which are not recognized as crimes by their perpetrators, nor, at a glance, by the community itself. It apparently requires that an important victim, or many victims, shall suffer before the public indignation is aroused, or before the dulness of perception bred by use and custom is shaken up.

Recently we have had an illustration of this sort of psychological phenomenon in the raid which was attempted upon the Interurban Street Railway Company, a raid that was accompanied by certain tangible acts which in a recent suit for criminal libel have revealed the most obvious, if not the most active, of the operators. Without attempting to prejudge, or to express any opinion whatever, upon the merits of the case before the court, we may tell the story of the development of what the New York *Commercial* has happily called a "brand-new occupation." Stripped of all its disguises and half-disguises, this occupation has, thus far, been pursued by a company of young and youngish men in search of business openings. It is said that the arch-instructor—the Fagin of the enterprise (not to be offensive)—stands in the background, and sees his artful dodgers play the trick which he has taught them. The person suspected of being the astute leader is the last of the wreckers, the last of a bad old school which began its dazzling career in the early seventies, under the leadership of the notorious adventurer Fisk. This man, whether he be suspected rightly or wrongly, is the living reminder of a time when a good deal of the power and energy of Wall Street were directed to making fortunes for the operators by the destruction of values. The criminal classes of high finance then sat in their Wall Street offices and concocted schemes for lowering prices—in short, for taking away other people's property just as dishonestly as Fagin's pupils "swiped" handkerchiefs and watches from unsuspecting old gentlemen who ventured in their neighborhood. The wreckers took away other people's property by slandering corporations and titles, and once they destroyed hundreds of fortunes in a single day by slandering the government by base attacks upon its credit.

The new game is to "investigate corporations." In the case under consideration, the investigation was begun by intimations that a great defalcation had been discovered, which had materially injured the railway company. This first step was perhaps a trifle bolder than will hereafter be taken by the new trade, if, indeed, the new trade continue to flourish. At any rate, in consequence of this hardihood, the district attorney's office was called in, as it had been called in before by the "investigators" themselves, and we have the revelations of "investigators" and detectives. The purpose of the group of operators and "investigators" was to discredit the street railway company in order that the price of the stock might be lowered—whether this end was sought because the members of the group were short of the stock, or because they felt like owning the corporation, and wanted to buy it cheap, history has not yet informed us. What we do know is that an "investigator" has for many months been examining into the company's affairs for the purpose of injuring it as a property. It was a surreptitious and unauthorized application of that great principle of publicity of which we have heard so much of late, and we have thus an intimation of what might be accomplished, under law, by our ingenious politicians. The money to pay for the investigation, a tidy sum, came from a well-known firm of brokers. The friends of the young men of the firm, and of the person shrewdly suspected of being the careful head of the enterprise, were greatly excited as the revelations came out, and were eagerly inquiring as to whether it was time to buy now, or whether the stock was to be had at even a lower price. It is here that we see the phenomenon in criminology of which we spoke at the beginning of this article. Men of repute in the community were engaged in a conspiracy to enrich themselves by slander of a property which, if believed, would bring unmerited disaster and ruin upon others. If this is not criminal, what is? In truth, there is no room for doubt on this score, and it is odd that any human mind capable of reasoning does not, at a glance, comprehend that there are few crimes more cowardly or meaner. It is cowardly, as all conspiracies are, and it is mean because, if the crime be successful, the victims who are most seriously injured are those who can least afford the loss.

The wrecking business is not widely pursued at the present day. In the evil times of the war, and of the years immediately following, it flourished, and men grew rich by raids upon the properties of others. In these raids the large men sometimes suffered, but they who suffered most were the small owners, estates, widows, and orphans, the helpless people who were not in Wall Street, who did not understand its methods or its ethics, and who could not defend themselves. The wreckers took the property of these people by indirect methods, perhaps, but they were robbers, and as much deserving of prison as if, in the ordinary course of burglary, they had broken into the houses of their victims and stolen their securities, instead of sitting in the safety of brokers' offices "knocking out values." Wall Street got its worst name from these old wreckers, and adverse public opinion and improved morality gradually drove them out of business, until now, as we have said, only one of the conspicuous old leaders remains doing the bad old business at the same old stand. Whether it is true that he is the inventor of the trade of "investigator of corporations" we do not know. The evidence certainly points to him. At any rate, the "investigator's" business seemingly is wrecking. The affairs of corporations are to be pried into for the purpose of blackening their reputations for reasons already pointed out. To slander a title is a criminal offence, and he who is able to back his slander by an array of statistics, every figure in which may tell a truth, whereas the *ensemble* may be the blackest kind of a lie, is a much more dangerous offender against morality and the law than the mere expander of oral slanders. In these days, when Wall Street is led by strong builders-up of properties, the wrecker is not only a criminal, he is an anachronism. If he should return in numbers, it would be as if our streets should once more be filled with the hired bravoes and assassins of the early sixteenth century. As it is, the difficulty of bringing to the law any conspirators against property except the meanest, perhaps, of the paid "investigators," is evident. The best that can be done, because the most effective, is to create a healthful public sentiment which will recognize in such a business as this new trade a criminal occupation, the pursuit of which, or the sharing in the fruits of which, shall exclude a man from decent company, either financial or purely social. As time and civilization advance, the functions of the Stock Exchange become too important to permit the playing of the old games or the presence of the old players. Honest business has no place for the man who preys upon the community by pretending to bet upon his pessimism, and the nature of the offence cannot be changed by the recently invented pretence that he is betting on his "investigator's" discoveries.

Mr. Cleveland and the Presidency

SOME of our contemporaries imagine that they detect signs of a concerted attempt on the part of certain influential Democrats to put forward Mr. Cleveland as a candidate for their party nomination for the Presidency in 1904. It is even asserted that Mr. Cleveland himself is countenancing the movement. If we ask for evidence, we are invited to observe that the New York *World* earnestly advocates the selection of the ex-President by the next Democratic national convention, and that a similar course has been pursued by a number of newspapers published in various quarters of the Union. It is further pointed out that, simultaneously with Mr. Roosevelt's westward journey, Mr. Cleveland has emerged from his retirement, has accepted an invitation to attend the dedication of the St. Louis Exposition, and was urged to make an extensive tour through the trans-Mississippi States lying north and south of Missouri. How, we are asked, can we account for these phenomena on any other theory than that Mr. Cleveland is tentatively a candidate for the Democratic nomination? It seems to us that the facts are susceptible of a much simpler explanation. They are easily reconcilable with Mr. Cleveland's oft-repeated declaration that he is not, and never expects again to be, a candidate for any public office. But, while his personal ambition is satisfied, as well it may be, his physical and intellectual powers are unimpaired, and it necessarily follows that he has lost neither his lively interest in public affairs, nor his profound conviction that the upholding of the Democratic party is indispensable to the welfare of the country and to the progressive but constitutional development of American institutions. Like all upright and conscientious men, he recognizes his deep obligation to the party that has trusted him and honored him. He acknowledges a great debt to the Democracy, and he desires to pay the debt by devoting what strength remains to him to promote its reconsolidation, and to assure the triumph of its principles. This is a sentiment that reflects high credit upon his character, and it is a pity that all ex-Presidents have not been equally ready to attest it, even at a considerable sacrifice of leisure and convenience. One illustrious example, indeed, he has for the solicitude with which he watches the drift of the great political party with which his name is inseparably associated. From the hour when Thomas Jefferson left the White House on March 4, 1809, until he died some seventeen years later, his correspondence with his two Virginian successors in the office of Chief Magistrate was ceaseless, and his desire to see the party which he had organized continue to deserve the confidence of the country was unwavering and anxious. In the case of Andrew Jackson also, throughout the eight years for which he survived his retirement from the Presidency, his name remained a spell to conjure with, and the active leaders of the Democracy continually turned to the Hermitage, and sought the veteran's advice in the formulation of their

party policies. The friendly and monitory service which Jefferson and Jackson deemed it incumbent upon them to render is rightly at this time held to be a duty by Grover Cleveland. The country needs the Democracy, and the Democracy itself needs help if it is to present a united front and to march forward once more to victory. Mr. Cleveland would have shown himself deaf to the dictates of gratitude and blind to a great opportunity of usefulness if at a crisis in the fate of his party he had remained an impassive spectator of the earnest and multiplied efforts making to rehabilitate it in public confidence, to redeem it from error and from folly, and to launch it on a triumphant career.

Sincere well-wishers of the Democracy like Colonel Henry Watterson are ill-advised when they endeavor, by imputing a selfish motive, to discourage Mr. Cleveland from the fulfilment of a sacred obligation. There is probably no Democrat alive who has it in his power to offer so great a service to the party as may be rendered by the ex-President. He speaks from the bedrock of experience, and his voice is clothed with unique authority. There is no other man whom Democrats would go so far to see, and to whom they would listen with such serious attention. The citizens of the trans-Mississippi States are certain to regard his projected visit as an honor. They would rightly feel that for such a man to traverse thousands of miles, in order to meet them at their homes and to confer with them on questions of great public moment, was a memorable tribute to their intelligence, and to their character. From his entrance into public life, Mr. Cleveland has given indisputable proof of his trust in the good sense and in the probity of the plain people. He knows them, and he loves them, and he has never been brought face to face with them without arousing corresponding sentiments. Such a man may do incalculable good to the country, as well as to his party, by such a tour as has been suggested. Nor do we for a moment believe that private prejudice and personal rivalry would avail in the slightest degree to chill the reception given by the people of the West to the only Democrat who has occupied the White House since the civil war.

But, it will be said, may not the tour suggested to Mr. Cleveland, while undeniably useful to the Democracy on general grounds, prove detrimental to the prospects of the party from a tactical point of view? Is there not some danger that the impression made by the ex-President might be so profound that the demand for his nomination in 1904 would become widespread and irresistible? We are troubled by no such misgivings. It is our conviction that Mr. Cleveland is entirely sincere in disclaiming all political aspirations, and that he would refuse the nomination, even though it were unanimously tendered. Nothing is more certain, however, than that unanimity would be unattainable. That a fraction of the delegates to the next Democratic national convention will obey Mr. Bryan is indisputable, and he has repeatedly proclaimed himself inflexibly opposed to the ex-President. Just how large the fraction will be is one of the questions which Mr. Cleveland's tour may help to determine. Should he meet with only a lukewarm reception, the inference would be that Mr. Bryan's hold upon Democrats in the trans-Mississippi States is still unshaken. If, on the contrary, the reception should be enthusiastic, as we predict it will be, an opposite conclusion might be drawn. That is one of the reasons why men interested in public affairs will watch Mr. Cleveland's progress with interest, not to say anxiety. Whatever may prove to be, however, the numerical strength of Mr. Bryan's friends in the convention, Mr. Cleveland, as a far-sighted politician, will appreciate the necessity of disarming them by putting forward a candidate to whose "regularity" no exception can be taken. This he will recognize and earnestly enjoin if, as we firmly believe, he has only the triumph of the Democracy at heart. Our faith is steadfast that, in the reorganizing and reinvigorating work upon which Mr. Cleveland has entered, he is building, not for himself, but for another, and that any standard-bearer likely to unite the scattered columns of the Democracy may depend upon his strenuous support.

Are Democrats to Look Forward or Backward?

SEVERAL Democratic Senators have recently expressed their opinions as to the issues that should be set forth by their party in the next Presidential campaign, and as to the character of the candidate whom it should nominate.

There is a sort of commonplace politician who prattles opinions for the purpose of meeting the prejudices of those who do no thinking for themselves, but who are pleased to accept the platitudes of the multitude for the verities of a real political philosophy. If the politician be a Democrat, he is bound to utter what he fancies will gratify a large majority of those who voted for Mr. Bryan in 1896 and in 1900. Tradition says to him that he must, first of all, gratify the men who composed the bulk of his party three years ago and seven years ago, and, therefore, he prates on subjects concerning which the country has plainly told him that he and his party have been wrong, and that there is no chance of succeeding with them or under the leadership of any one who stands for them. Thus, Senator Carmack of Tennessee, in many respects a most promising young man, says that no one can be nominated in 1904, as the candidate of the Democratic party, but one who vigorously supported Mr. Bryan in 1896 and, again, in 1900. Nearly all the Democrats who did support Mr. Bryan in those years, when interviewed, follow Mr. Carmack's example and say this sort of thing. To one who hopes that something will happen between now and next year, something to build up a real, vigorous, and hopeful opposition to the Republican party, this sort of talk is most discouraging. If the Democrats and Populists who nominated Mr. Bryan and made his platforms in these campaigns, so fraught with misery and defeat for all opponents of the Republican party, are to insist on fighting over again their old campaigns, of refusing to be the nucleus of a new party contending for the issues of to-day and for the future, there is to be no obstacle in the way of Republican success in 1904, and no check upon Republican wantonness, if the party becomes wanton, until, at the earliest, after the election of 1908.

The political situation is plain. The Republican party is in power mainly because there is no party opposing it which can, by any possibility, command the confidence and the support of the country. This condition of affairs is due to the fact that Mr. Bryan gained possession of the Democratic party and turned it into a party of Socialism, into a party representing and speaking for all the elements of discontent in the country. This attitude of the Democratic party while it was under the influence and the leadership of Mr. Bryan united necessarily with the Republican party all property interests, all conservative elements, all the sober-minded people who, in this country and in the long run, invariably win. Not only did the protected interests and those trusts which live and thrive because of protection, not only did what we may call the predatory property interests, remain Republican, but these were joined by all who had a stake in the country, by the business man whose interests would be promoted by free trade or lower duties, and by the working-man or mechanic who owns nothing but his home. There was, it is true, a good deal of unreasonable fright manifested by conservatism, but conservatism is frequently timid, and Mr. Bryan was astutely made to appear as the enemy of property. The consequence was that property generally became his frightened foe, and when we say this we but repeat the assertion of the voters of 1896 and 1900, which showed that the majority of the people of the United States were against him and his principles and his policies. The wide distribution of property in this country among all classes makes the property vote, once united, invincible. It is not naturally a united vote; a large part of it is diametrically opposed to those favored interests whose wealth has been increased by legislation; but Mr. Bryan, it was fancied, made it necessary to defend all property and business interests, and, whether this view of him and his cause was correct or erroneous, it brought together all the thoughtful, prudent, saving classes, eminently American in their characteristics, and united them, for the moment, for the purpose of putting an end to Bryanism.

Now it may be said that this feeling toward Mr. Bryan was unjust and even extravagant; that he was not, and is not, the enemy of prosperity and the prophet of discontent. Unfortunately it is the nature of democracy to settle its problems not necessarily as they are, but as they seem to be. Candidates are not always successful because of what they are as of what they appear. In an election, reputation, if it differs from character, is stronger than character, for the people vote not for what they know, but for what they think they know. They, or a large majority of them, think that they know that Mr. Bryan was the leader of the forces of discontent and of failure, and they have, therefore, defeated him.

As a matter of fact, most of those who followed Mr. Bryan believe in a good many policies and principles which are not thought of when the campaigns of 1896 and 1900 are talked about. They have cast behind them the issues of the past. They are thinking of the problems of the present as they bear upon the future. With them are many men who agree with them on the questions of to-day, and who never followed Mr. Bryan. They either refrained from voting or they voted with the Republicans. In doing so they thought they were acting for the best interests of the country, and were, therefore, patriotic. Some of them were even more than merely patriotic; they courageously made sacrifices. Among them were men who had filled some of the highest places in public life, but they thought that true Democracy had been abandoned by their party; that its essential principles had been flouted; that the welfare of the country was of more importance than the triumph of their party, especially of a party which had, for the time, abandoned its principles. Therefore they went apart and, in doing so, risked all chance of future political preferment. To men like these, to men who, whether they were right or wrong, manifested a high-minded patriotism without which democracy cannot long exist, Mr. Carmack and such as he propose to deny leadership.

When they say that no man shall be nominated in 1904 except one who, accord-

ing to the popular verdict, was aggressively in the wrong in 1896 and again in 1900, they say in effect, that the country must withdraw the verdicts which it found in those years. They insist that the opposition to the Republican party of to-day shall be based on the mistakes of the past. There is, in fact, only one question to ask as to party standing, and that is, "Does the man who professes to be a Democrat oppose the present policies of the Republican party?" There is also but one question to ask as to a candidate, and that is, "Does he believe in the Democratic side of to-day's issues, and will he command the confidence and support of those who left the party when Mr. Bryan was its candidate?" The country is interested in the building up of a real and vigorous opposition to the Republican party. Such an opposition can be constructed only by ignoring the fact, and by recognizing the issues and the candidate of 1896 and 1900 as of that past. The man who raises the question which Senator Carmack, following Mr. Bryan's example has raised, is inviting disagreements, discord, the continuance of enmity, the maintenance of confusion of counsels, and defeat. Are you in agreement with us now? Are you opposed to the Republican party to-day? Are you ready to stand side by side with us in the fight of the future? These are the questions of moment, and the man who would rule out as a possible candidate any one who can answer them in the affirmative, would prevent the organization of a hopeful opposition, and would restrict the choice for a Democratic candidate to some one whose nomination would enable the Republican party to elect to the presidency any candidate running on any platform. On the great issues of to-day, Gold Democrats are in harmony with Free Silver Democrats, whose issue is dead, and the narrow mind that would not hail with delight the union of the two is a mind that was not made for leadership or for counsel. The country, including the most intelligent and patriotic Republicans, wants an opposition which Mr. Carmack's policy would prevent.

The Literary Outlook and Inlook

At a spring opening of publishers' goods held by *The Dial*, of Chicago, we have been interested to note some facts which we hope may also interest the reader, and may afford him a breath of relief, if he is gasping in the odors everywhere rising from the artificial flowers of fiction. He may be surprised, as we were, to find that these flowers are not so abundant in prospect as he had supposed, and that their stifling effect is very largely the work of his own imagination. We do not wish to be rashly hopeful as to their nature, but a cursory glance at their labels has given us the impression that they are rather less than more of the nature of the blossomed weed.

We were of course first attracted by the show contributed at this opening by the publishing-house nearest to ourselves, and vigorously affirmed to our secret heart that if the display of Messrs. Harper & Brothers could contain books by Mrs. Humphry Ward, Miss Wilkins, Mr. Howard Pyle, Messrs. Boone and Brown, and Mr. Will Harben, as well as younger writers whose quality we had made sure of in their occasional magazine work, the outlook was by no means so baleful as the inlook. Our terrors, we decided, were in great measure subjective, and from a glance at other exhibits we gathered fresh courage to combat them. Here were novels by Mr. James Lane Allen and Israel Zangwill, promised by Macmillan; stories of Mr. Henry James, by Scribner's Sons; a new story by Mr. Arthur Sherburne Hardy, a fresh volume of Bret Harte's ever-new tales, a novel by Miss Alice Browne, and best, raciest, tangiest of all, a collection of Mr. George S. Wasson's Kittery Point story-studies by Houghton, Mifflin, & Co.; the first novel of Miss Edith Wyatt, the most artistic and delightfully natural of all our admirable women writers, by McClure, Phillips, & Co.; and in considering these, and others, we gained sufficient hope to match the quantity with the quality of the coming fiction, and were less and less dismayed. The quantity appeared to us much smaller than in former seasons, and although fiction seemed to lead all the rest, yet when we put together history, and biography and reminiscences which are also forms of history, we found that these much surpassed fiction in mere quantity.

The books of verse in which we are always supposed to be weltering, formed the slenderest of all the tributary rills of the great tide of literature. They were outnumbered fivefold by collections of letters and literary essays, which seemed to our casual glance very uncommonly promising; and there was an exhibit of titles in travel and description which was quite as engaging. Art, music, and the drama were well represented, and there was a greater abundance of nature and outdoor books than we could have asked for since Mr. John Burroughs has taught us so much doubt concerning them. In theology and religion we found ourselves fully half as rich as in fiction, and in the cognate branches of profane thinking, such as science and technology, politics, economics and sociology, philosophy, psychology and ethics, very much richer. Books on education and for school and college use were in such force as to inspire the lively belief that no array of romance could make head against them. Besides these, we were offered a choice of standard literature in new editions, and books too numerous to classify (though we do not see why Mark Twain's essay on Christian Science should have been found so miscellaneous as to be excluded from the list of religious books), and upon the whole we came away from that spring opening in a gayety which we should be very glad to impart to the reader.

The fact is that the world, even the literary world, is never quite so bad as the other world within us would like to make out. Pessimism is so easy, and at the same time so impressive, that only a very strenuous conscience can keep us from making it our pose. But we ought really to try to look upon the bright side, especially the bright side of books; and if this is oftenest the outside, why, there is no power which obliges us to penetrate within. The publishers make books so pretty nowadays that it is a pleasure to have the very worst and poorest of them about; they furnish a room so agreeably, or they contribute decorative qualities to the shelf or the table that take the mind off the wall-paper and the upholstery. If, in many cases, it is wiser to regard them purely as charming spots of color, and not interrogate them, take them as appeals to the intelligence at all; there is also no denying that their effect is not wholly sensuous. It is not well to shy off from every new book; even a new novel is not to be shunned as such; some quite new novels may be good, as we have been trying to encourage the reader to believe.

We might push our contention still farther, and insist that there are always more good books than bad. A bad book is very, very perishable. How many of the poor novels of last year have survived into this? They have all ceased to be; and of the last year's books that still exist, there is not one in a hundred that is bad. This reflection is immensely consoling; we commend it to the author who is trying to write good books, and to the reader who is afraid of being cumbered by bad ones. We say, let the reader occasionally seek to buy a good book, instead of the bad books which his ignorance of differences in literature renders him liable to buy, and he will be surprised to find how lively and vigorous it is at the end of a year. If he will look into it after that lapse of time, he will find it far more interesting than the bad books which he forgot a year ago. He was induced to buy these by the ambient craze, by that most insulting and stupefying device of the advertiser that they were the largest-selling books of the moment; but probably he never enjoyed them. He only enjoyed saying he had read them, so as to be in the swim; and if he was young, he got a topic out of them that carried him over the conversational spaces left bare by the inadequacy of the theatre as a whole evening's proposition.

The people who make books,—even the people who materially make them, like the publishers, — probably never really understand how the average reader, or the average non-reader, as he more truly is, regards them. For him we suspect that they always remain impersonal and unvital. They are something queer, something out of the scheme of his being. He can grasp the notion of going to the theatre; that is something tangible. You ask a girl to go, and if you must you ask her chaperon, and you pay your four or six dollars for seats in the orchestra, one of them behind the pillar; and you pass the evening interpreting the action on the stage to the luminous intelligences beside you, or in accepting their construction of the meanings of the drama, if it has any. But a book is a very different thing. That is something you must grapple with in your own room, and make the most you can of it without the help of a smiling companion, and the agreeable sense of being in the brilliant world which you buy with your tickets to the theatre. Then you must take your chances of getting enough out of it to be able to talk of it without slipping up. With a good cigar you may get through the evening, but that is only the beginning of your triumph. This eventually comes when you have asked the girl whether she has read it, and she has said she has, and asks you if you have, and isn't it fine; and you say it is out of sight.

Yet it is not an appreciable victory, then. What you really want is a book that you can get a funny point out of, and that you can reproduce in original epigram, and this happens to you from few novels, even the worst. If you are that drollest and yet driest of human creatures, the average American man, your juiceless whimsicality is not affected by your experience of popular literature. It is the mistake of the author and the publisher to suppose that it is, and they keep on making books for you, which the critics justly censure for their worthlessness, but which, if they were ten times as bad as they are, would not really mean anything to you. You remain unaffected by them, but your amusing and charming womenkind read them, and suffer or enjoy, as they are less or more enlightened. They have certain strong prejudices; they prefer the romantic and the heroic; but after several years of unintermitted partridge, even partridge begins to pall. This is perhaps why there is an apparent change in the literary outlook and inlook; why there actually are fewer novels threatened this spring than last; why their quality is better, and why of serious, but not less attractive, books there is an increasing number. We cannot believe that we have

evolved this conclusion from our inner consciousness, though but for that spring opening in *The Dial* we might fear that our fondness for good literature had abused our perception. Unless our eyes have been made the fools of the other senses, there is evidence that the worst is over, at least for the present, in what has been so bad, and we think we have woman to thank for this improvement, as we have her to thank for most others. Woman is becoming refined, civilized, enlightened to the point where she cannot any longer stand the literary truck of the last four or five years: this is our firm belief. It is her mute and yet powerfully emotional demand for better things which has made itself felt in the superior quality of the books at the spring openings. We cannot allege any proofs of our conclusion, indeed, but if woman was as articulate as she is voluble, we do not believe they would long be wanting.

Instruction from the Laity for the Clergy

A GREAT newspaper of this city, which our sense of the higher journalistic etiquette restricts us to mentioning as a solar contemporary, has come to the support of a distinguished naval authority in his contention that what he believes the present decay of church influence is the result of the church's practical teaching of works instead of faith. In his remarks to the members of a religious club lately, this authority held it error to prefer one's neighbor, not merely to one's self, but to one's God. He regarded this, he said, as "symptomatic of decline in spiritual life and aspiration in the Christian body," and he affirmed an immediate personal relation to God, through our love of Him, to be the ideal Christianity. It is this position of his which our solar contemporary, in the habitual mood of Mr. Mayor Low, cordially approves, and so reinforces as to give the altruist seeking to assail it very little hope of carrying it against them. It is true that the report of the naval authority's words does not give the sense of unbroken logic in his thinking, but enough is clear from them to justify our solar contemporary in backing him against the whole tribe of the charitable who have been palming themselves off, more and more, as the sort of Christians that Christ intended his followers to be. We are not so hardy as to question their joint position ourselves, for in the small love we have to our neighbor we feel that we have no right to dispute with such a naval authority, or such a *lumen ecclesiæ* as our solar contemporary: and in venturing to reconnoitre their position out of rather a vague curiosity, we have no other purpose than to note what Christ himself had to say of it.

In the words of God's Son there seems to be a good deal of excuse for the spiritual decadents, if we may call those so who have taken, or mistaken, love of one's neighbor to be the supreme expression of love to one's God. In one place the Son of God said that the commandment to love one's neighbor as one's self was like unto the commandment to love God: that is of an equally supreme validity. In another he said to his disciples that men would know them for his disciples if they loved one another. In a third place he said, "If thou wilt be perfect, go and sell that thou hast and give to the poor," and he also said that their Heavenly Father could not forgive them their trespasses unless they forgave their brother's trespasses against them. Yet again he said, that when they did so to the least of their fellow-men, they visited himself in prison, and gave him to eat and to drink. Not on one occasion only, but a hundred, on every occasion that offered, he taught that religion—that is to say, Christianity—was nothing more mystical than doing good to others; and one of the most spiritual-minded of his apostles declared this alone to be true religion before God and the Father. It is apparently upon the sands of such texts that the spiritual decadents have built the house which the waves, in the naval authority, have beat upon, and which our solar contemporary, the *lumen ecclesiæ* we have cited, has pierced with its intolerable rays; and there can be little doubt that the inmates have been jarred and troubled. In the course of the debate in that religious club one of its members asked a brother clergyman who had deplored "the craze for parish houses and institutions, and the tendency to identify religion with charity," whether there had been a decrease in the spiritual influence in two churches peculiarly famous for their good works, which he named, and got what comfort he could from the rather reluctant admission that there had been none. Apparently what the champions of love to God, as distinguishable from love to the neighbor, both in the case of the naval authority and our solar contemporary, desire is a state of preparedness for the decline of faith if works should multiply. Neither has cared to indicate the point at which charity should begin to control itself in the interest of a more mystical aspiration; and unless they are of the impression that many of Christ's words touching the conduct of life are to be taken in a Pickwickian sense, their conclusion is not without its difficulties, its defects. Only upon some such ground is their union one of inexpugnable strength, and if they do not now enter together upon an aggressive campaign, the decadents have perhaps not the worst to fear. These may still go about succoring the widow and the fatherless, and if only they will not venture to the extreme of selling all they have and giving to the poor, the community will hardly accuse them of a want of spirituality. It is possible that being so largely pagan as it is, the community will not concern itself with the question of their spirituality, but will ask itself how any man is to experience or to manifest love to God except by doing good to other men, descending even to acts of the grossest philanthropy, and sounding all the turbid depths of altruism.

Porto Rico a Territory?

THE Porto-Rican House of Delegates, which has been recently in session, has asked for Porto Rico's admission as a Territory, but the Executive Council (with its six American and five native members) has declined to concur in the petition.

One of the last official acts of Mr. James Harlan, who has just returned to the United States to resign the Attorney-Generalship of Porto Rico, must have been the draughting of the report of the Judiciary Committee of the Executive Council on the memorial and resolution which came up from the House of Delegates expressing this desire for adoption; for it bears a date but a few days before that of his sailing. It is a document to bring envy to the people of our Territories, who, denied Statehood, are subject to restrictions and deprivations which the fortunate little island has escaped as an "insular possession." The whole import of this considerate veto is that it would involve for Porto Rico a distinct degradation and great financial loss to be put under the constitutional limitations of a Territorial government, which is but "a crude method for governing a frontier."

This report, signed by Mr. Harlan and Mr. Garrison, the auditor, the two American members of the Judiciary Committee, notes appreciatively the loyalty and devotion to the national government which the memorial and resolution indicate, but urges upon the Delegates the moral duty of examining the question not from the standpoint of their personal sentiments (which would immediately and narrowly be to the advantage of the United States), but from the broader standpoint of the real interests of the whole people—that is, of the island.

It is urged, in the first place, by this report, that there has been and is no impediment to progress in the present form of government. This is supported by the remarkable advancement which has been made since civil government was organized in the island. No greater powers are needed than are delegated under the organic act. But the appeal of the Porto-Ricans has undoubtedly had other motive than this. It is thought by them that their insular government has not the dignity of a "Territorial government." There is a vague hope for something higher and better which the latter seems to promise. It is answered by the committee that in the popular estimate "a Territory has no place of special importance in the American system," and, further, that it is not necessary that the people of Porto Rico should pass through this period of probation, for there is precedent for admission to Statehood without such tutelage. The political and social status of Porto Rico has been on a higher plane than that of an ordinary Territory of the United States, and superior even to the most populous and commercially aggressive of the regular Territories in its form of government and in the efficiency of its system of laws. The economic advantages of the present status seem unquestionable. The people of the island are not required to contribute to the national defence. The only national item in their budget is the amount which they expend for the maintenance of the Federal court. They keep the customs duties and the internal-revenue taxes for their own use. Every dollar of revenue remains in the island to be utilized for the public weal. Hawaii, as a Territory, is clamoring for what Porto Rico enjoys as a "possession." And there is no limit, it is urged, to what may be accomplished in the future if the present conditions continue.

The disadvantages of the extension of the Constitution "in all its parts" are serious. While under the present relationship all the constitutional guarantees are enjoyed, the people are free from certain restraints which would inevitably work hardship to their island. One of these hardships would be the loss of all their customs duties and internal-revenue taxes, which would fall into the Federal Treasury, and thus deprive Porto Rico of more than three-fourths of her present income. The total receipts for insular purposes last year were $2,202,531 50, of which gross sum the amount received from the regular property tax was only $407,414 05. The rest came from the sources just named. The present property tax, it is felt, ought not to be largely increased until conditions of commerce and agriculture are radically changed.

It is certainly an indication of the loyalty and devotion of the Porto-Ricans that they are willing or seem to be willing to sacrifice this financial advantage for the one thing they lack—the statutory declaration of citizenship. It is proof also of a very high order of patriotism in our representatives that they should show such solicitude about our doing the best thing for Porto Rico regardless of our own narrower interests.

British Expenditure

By Sydney Brooks

LONDON, *March 28, 1903.*

THE price of empire comes high. For the current year the English army and navy estimates reach the staggering total of nearly $350,000,000. No nation in the world is now spending so much on its defences, either actually or per capita, as Great Britain. Twenty years ago the entire expenditure of this country for all purposes was very little more than its present outlay on the army and navy alone. Ten years ago the combined estimates for both services were less than is now spent on each. Within the last five years alone the army estimates have increased by over $60,000,000. Is the wealth of the country increasing in the same ratio? Statistics return a dubious and, as usual, an insufficient answer; but they make clear the fact, for whatever it may be worth, that within the past decade the trade of the country has increased by little more than twenty-five per cent., as against a cent-per-cent increase on the national defences. One conclusion, at any rate, is being patently accepted by the people. It is that "this sort of thing cannot go on forever," that a halt must be called somewhere. But where? Cobden used to say that nothing was easier than to raise a cheer in the House of Commons by praising economy, and nothing harder, nothing more certain to lead to defeat, than to propose some specific reduction. The nation feels its expenses are running too far ahead, but where to retrench it does not know. It is nervous and apprehensive. The weariness that always follows a great war is stealing over it. The burden of empire is making itself felt. A profound distrust of the capacity of their rulers agitates the masses. In no one except Mr. Chamberlain have Englishmen the confidence that Americans place in Mr. Roosevelt, in Mr. Hay, in Mr. Root—the three strongest, most capable, most sagacious administrators in the world of Anglo-Saxon politics. Consols which a few years ago stood at 115 are now at 91, and in all probability will fall still lower before long. One-sixteenth of every man's income is claimed by the income tax. And all the time this appalling increase of expenditure continues, the strain grows yearly greater, the demands on the exchequer multiply with each fresh session of Parliament. Where will it all end? The country asks the question with feverish anxiety, but without receiving any very satisfactory response. It is haunted by spectres—of an immensely widened basis of taxation, of sheer inability to stand the pace, of socialism, and much else. Never was the weary Titan groaning so audibly under the too-vast orb of her fate.

And yet on one thing all agree — that, come what may, the British navy must be supreme. By every Englishman that is regarded not merely as a question of "insurance," but of life. "The fleet of England is her all-in-all," wrote Tennyson, and the nation unreservedly subscribes to it. The naval estimates are never criticised as being too high; there is the utmost rivalry among admirals, politicians, and popular "experts" to prove that they are not high enough. Parliament, as I write, is voting over $172,000,000 for the naval expenses of 1903-4. It would vote twice as much were there any need for it. That the British fleet must more than equal the combined maritime power of any two rivals is not the platform of any particular party, but the faith and policy of all. It is as much a national axiom as the Monroe Doctrine. There are some who even declare that the "two-power standard" is not enough, that Great Britain ought to prepare to meet the strongest combination that any three powers could bring against her. But there is no one who would be content with a mere one-power standard, who would maintain that so long as the British fleet was stronger than the French or the Russian or the German all was well. It is the destiny and the pride of England to gauge from year to year the naval forces of her two most formidable rivals, and then to go one better.

This is a matter which has long been withdrawn from the barren jugglery of party politics. Twenty-odd years ago the nation took it into its own hands and forced it upon the government. Reforms in England are often effected in this way. They work, that is, from the bottom upwards, not, as in Germany, from the top downwards. Like the free-trade movement, the demand for an overwhelmingly strong navy was a popular long before it was an official policy; and the nation has always more or less insisted on its being treated as an issue outside of party. It would overthrow any government that was suspected of starving the navy, and it is ready to foot any bill that the Admiralty cares to run up. The periodic "scares" that sweep through the country over some alleged defect in the size or efficiency of the fleet show the intensity of its determination to maintain the mastery of the seas. During the last few years those "scares" have been frequent and prolonged. The Boer war and Mr. Balfour's avowal that at one time there were not more than 3000 cartridges in the national arsenals, could not help making Englishmen ask whether the Admiralty might not, when put to the test, prove another War Office, whether the squadrons would not turn out to be as unready and as ill-equipped as the army corps. It was a grim and harassing doubt, that would not down. It brought the average Englishman to a yet fuller sense of the distinguishing qualities of modern naval warfare—its suddenness and its finality. It made him grasp the fact that a naval war is precisely one of those things it is impossible to "muddle through"; that a defeat on the ocean is decisive and irreparable; that while a beaten army is still an army and may do better next time, a beaten fleet is no fleet at all, but a chaos of useless steel and iron. It made him realize that at sea there is no second chance, no time to reorganize or effect new dispositions or send round the corner for a maritime Roberts; and that everything that is not done for the fleet in times of peace will have to remain undone in times of war. The reflex action of the Boer war was to stimulate almost as much interest in the navy as in the army, and the amazing blunders of the War Office undoubtedly put the Admiralty on the *qui vive*. As a result, large and well-considered reforms have been planned and are now being carried out; a new naval base—to offset the growing power of Germany—has been decided on; the training of seamen has been revolutionized, and gunnery is at last taking in the British the foremost place it has long held in the American navy. The Admiralty, in short, is setting its house in order. It is an expensive operation, but nobody minds that. So long as Englishmen can feel that the fleet is really ready, a weight is lifted from their minds of which Americans, in their happy security, have no knowledge—indeed, no conception. For that feeling no price can be too high.

It is not, then, the expense of the navy, but of the army, that is terrifying England. For the current year the army estimates are actually larger than the navy. That fact alone, argue a good many Englishmen, is their best condemnation. England's first and main line of defence must be the fleet. It is "on the navy," in the words of the old Elizabethan statute, "under the good providence of God, the wealth and welfare of this country mainly depend." How, then, has it come about that she is spending more on her army than on her navy? Some, at any rate, of the cost must be put down to the fact that Mr. Brodrick is attempting a thorough reorganization of the whole army system. Mr. Brodrick is not by any means a great war minister. He is not a Roon nor a Root. But he is honest, painstaking, splendidly grounded in details and technicalities, and has the bulldog courage, obstinacy also, that often goes with a slow-moving mind. I have it from Colonel Arthur Lee, whom all Americans will remember as the English military attaché during the Spanish war, that Mr. Brodrick has really effected many valuable reforms—reforms that cost money to make, but save it in the long run. Let this go to his credit. Also let it be remembered that though the Boer war is over, a large garrison has still to be kept in South Africa, and that the increased pay is likewise an important item in the estimates. But after making full allowance for Mr. Brodrick's good work in decentralizing the War Office and improving Woolwich and Sandhurst, and for the exceptional and inevitable expenses left by the war, the country is still convinced that the true reason for the abnormal size of the estimates is to be found in Mr. Brodrick's scheme of six army corps. The attacks on that scheme have within the last few weeks been extremely damaging, both in and out of Parliament. It was first brought forward in 1901, during the stress of the Boer war, hurriedly, and, as was thought, because the government felt that "something must be done." The Germans would not have set about the business in that spirit. They would have waited till the war was over and all its experience had been gathered—sifted. Mr. Brodrick, however, was anxious to score a run off his own bat, and could not wait. It will be always considered a curious and characteristic fact that what is perhaps the most sweeping change that has ever been made in the English military system should have been decided upon without taking the advice of England's greatest military organizer. From first to last Lord Kitchener was not consulted. The scheme is Mr. Brodrick's, and Mr. Brodrick's alone. It has been criticised from innumerable points of view, but chiefly from this—that it is altogether too big for England's necessities. "If the navy is efficient," says the popular voice of the country, "we do not need three army corps of professional soldiers to be kept at home for emergency purposes. If it is not, then three army corps are not enough." It is because Mr. Brodrick has not studied this argument that the country finds itself loaded with his wasteful, grandiose, altogether disproportionate scheme. He seems to have forgotten, first of all, the navy, secondly, the volunteers, and thirdly, the fact that even England's purse is not bottomless.

If men would but observe the golden Mean in all their Passions, Appetites, and Desires, and if in their Gratifications they followed the uncorrupt Dictates of Nature, and neither spurred her on beyond her Cravings, nor violently restrained her in her innocent Bias, they would enjoy a greater Measure of Health than they do, live with less Pain, and die with less Horror.

George Cheyne.

We easily tolerate an authority that we hope some day to exercise ourselves.

Joubert.

Joan of Arc Not to Be Canonized

About three months ago the Congregation of Rites at Rome announced its resolution to deny canonization to Joan of Arc, giving, among its several reasons for its action, a declaration to the effect that after a careful consideration of all evidence presented both for and against the fair Joan, it was impossible to arrive at any other conclusion but that the dame in question was not entitled to the surname of "maid" accorded to her by her admirers. The Congregation, moreover, held that she was guilty of faults of the most grave character in attacking Paris on the feast of the Blessed Virgin, and in signing a confession to the effect that her pretensions to a divine mission were based on fraud, in the hope of escaping thereby the death to which she had been sentenced by the English. Besides these there were other and minor reasons. But the principal ones are that she was neither a heroine nor a maid, and these are held to destroy for all time the prospects of her canonization by the Roman Catholic Church.

The Roman Curia has always been hostile to the demands of the French Catholics for the canonization of Joan of Arc. The idea was first started during the closing years of the reign of Napoleon III., and it is possible that, had he remained on the throne and continued to keep his troops in the Eternal City for the protection of the Papacy against the Kingdom of Italy, the shapely head of Joan of Arc would have been surmounted ere this by the halo of the saints. But with the overthrow of the Empire, the consequent withdrawal of the French army of occupation from Rome, and the subsequent seizure of the Eternal City by the Italian government, the Vatican showed a disposition to become hypercritical with regard to the Maid of Orleans, and the matter dragged along until Leo XIII. became Pope. He at once realized the importance of pleasing the French Catholics, and of identifying, as far as possible, French national sentiment with Catholicism.

Accordingly, after duly inquiring of Queen Victoria whether she had any objections to offer to the canonization of the Maid of Orleans, and receiving a reply in the negative, Joan of Arc was duly proclaimed "blessed," which is the first step towards canonization.

The fact that the Queen of England—that is to say, a Protestant sovereign—should have been consulted by the Vatican about the canonization of a Roman Catholic saint may excite some comment. But it must be remembered that the Maid of Orleans was put to death by the English, and that her alleged martyrdom at the hands of the latter constituted one of the chief reasons advanced for her canonization. Moreover, at the time of his accession Leo XIII. was most anxious to establish friendly relations and, if possible, diplomatic intercourse with Great Britain, and did not wish, therefore, to do anything which might be construed at the Court of St. James as unfriendly.

This declaration by the Congregation of Rites that Joan of Arc was not entitled to the qualification of "maid" lends a new importance to the pretensions put forward by several French noblemen, of a more or less authentic character, to include her among their ancestresses. There have been some noblemen, including a pseudo-French duke, who have brought to this country family parchments and genealogical trees in which the name of the Maid of Orleans figures among their forebears. It is only fair to add, however, that the general public has always been agreed that Joan of Arc left no descendants—at any rate of a legitimate character. True, she had a brother, and from this brother are descended—not in the male line, but on the distaff side—the Marquis and the Counts de Maleyssie, one of whom, Count Stephen, is married to an American girl, who was a Miss Stears of New York, and who would have figured prominently in the grand ceremonies in St. Peter's at Rome, which were to have signalized the canonization of the Maid of Orleans, had not the Congregation of Rites decided against it. The lineal male line in direct descent from Joan of Arc's only brother became extinct with the death of Charles du Lys, advocate-general of the so-called Court of Aids in 1632. One of his daughters, however, married a certain M. Barentin, whose daughter in turn became the wife of the Marquis de Maleyssie in 1684. The eldest son of this marriage was killed at the battle of Malplaquet, and left no issue. From the second son, who in 1723 married Philiberte de Bouillon, are descended the present Marquis and Counts de Maleyssie. The American-born Countess de Maleyssie has among her most treasured possessions three authentic letters of the Maid of Orleans, signed "Jehanne."

A Retort from the Underworld

Homer to Carnegie

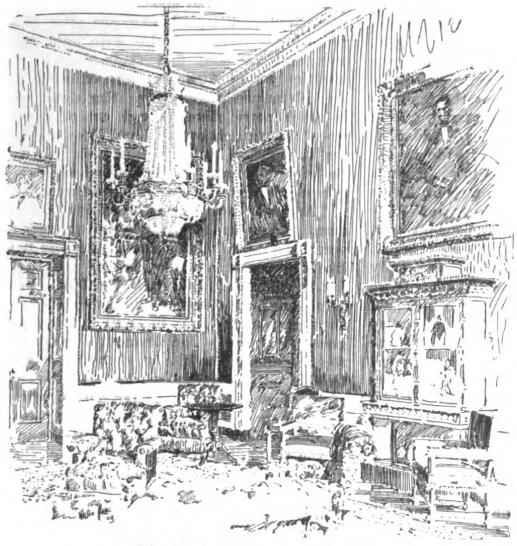
By Telephone to John Kendrick Bangs

Of Carnegie I fain would speak, and of the
solemn things he says,
Of me and mine? Ha-ha! Excuse, I pray,
this un-Homeric smile,
Yet doth it fill with lively mirth, not only
self, but all my friends
And neighbors in the seven spots wherein
'tis rumored I was born,
From Cyme unto Smyrna doth the merry
laughter loudly ring.
I mind me not the pratings of this sage;
this Pennsylvania Highlander,
Who, like Colossus of ye ancient days, doth
stand astride the sea,
One foot at Skibo placed and t'other 'mid
the sooty depths of Pittsburg,
And with a wondrous lavish hand dispenseth monuments to letters.
He likes not me? Well, what of that? In
this he is consistent since
From immemorial time the sage hath been
disciple of Protection;
Arrayed against things foreign made,
though self-exotic to the land,
I blame him not. With Dooley, Ade, and
Mrs. Wigg's Cabbage Patch,
With Tarkington and Churchill, and the
Man whose Hoe hath scarred our souls,
Embroiled in competition with the Sages of
our Grecian days,
What use hath he for Homer and his most
stupendous fighting crew?
Yet when my dear Achilles he red-handedly
doth strike, I would
Return to Earth and give him one, straight
from the shoulder such as Gog
To Magog might have given for that he
hath sat upon Achilles.
A fighting-man? Aye, so he was indeed,
but what of him
Who sits in judgment and would have his
gloried song made mean and low?
Hath Carnegie himself ne'er made, e'en as
I made Achilles bold,
A thing to fight, to battle and embroil?
I've heard a pleasant tale
Of battle-ships, and cruisers said to be of
strength invulnerable;
Of steel wrought but for castings used in
war; guns, armor-plates, and such—
In which this critic was so deep-involved
there was no alibi.
And hence it is if I were asked to write
for some small syndicate,
To fill the Sunday papers up with stuff
that's really fit to print,
I'd choose the subject, dearer now than ever
to my Grecian heart;
"Achilles and the Modern Man of War:
Who Was It Builded Best?
The Poet of the Ancient Greeks, or He Who
Makes an Iron Clad?"
The one a minor god, perhaps, yet full of
flesh and blood and soul;
The other a Machine, an Engine cold, designed to deal out death.
And to receive with imperturbability the
enemy;
A thing of iron, not of flesh, no blood, no
semblance of a soul,
But marlin-spikes and turrets round, and
easy garboard strokes instead.
And as for the construction it hath sometimes happed, or so I'm told,
That in the latter plates defective have been
found in numbers large—
Say twelve—while in mine own Achilles'
heel but one small blow-hole was.
Eheu! and Hoi Polloi! Why send to exile
one and not the other?
The question may be Greek to some, but
not to me who am a Greek.
Yet, spite of all, do I forgive this sage for
times are sadly changed,
And surely he but speaks as he doth think
with perfect honesty.
He in his own queer age ranks high amongst
the figures 'mongst whom I
Would seem to be most like a quarter and
a plugged nickel coin;
An age that is Homeric in the things that
he is strongest in.
So let it not be chidings that I send. Let
him and all of his
For his own time sufficient be, let me and
mine suffice for mine.
In *my* time he was not, why should I
strangely seek to be in his?
And for the end, let that which ends all
things, whatever it may be,
Present the Verdict that shall give to each
the place that he hath won.

Men in the Woman's Hotel

New York, *March 23, 1903.*

To the Editor of Harper's Weekly:



Sir,—Referring to the article in your issue of March 21, permit me to say that your informant was under an entire misapprehension in the statement that men are not allowed in the dining-room of the Hotel Martha Washington on the second floor. Men are not only allowed there, but the patronage of men and their families who reside in apartments in the immediate neighborhood is welcomed. The difference between the two rooms is that the second-floor dining-room is conducted upon the American plan, and the first-floor restaurant upon the European plan. If you will kindly make this correction, you will greatly oblige,

Yours truly,
The Woman's Hotel Company.

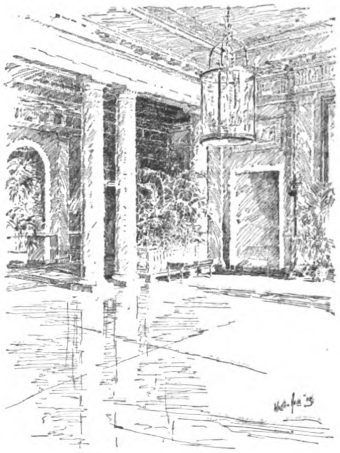
The Restored White House

THE people of the United States, in their warm affection for the White House, have always been jealous for its appearance. They have been reluctant to have any changes made that would alter its architectural character or detract from its dignity as a suitable home for the President of the great Republic. Moreover, the people have always liked a President who received them freely in the White House, and whose entertainments there were in keeping with their ideals of the Presidential office.

The Red Room as Restored

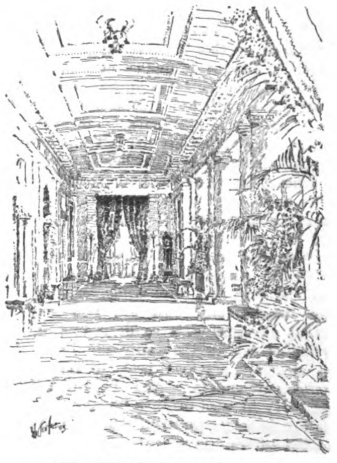
The people liked it when Mr. Roosevelt discarded the pretentious name Executive Mansion, and called this house by the name the people have always given to it, The White House. They were pleased when Mr. Roosevelt threw open its doors and invited there all men of varying degrees who had a claim upon his attention. They resented the absurd talk in Congress of extravagance and valued it at its worth—cheap oratory for political effect. They knew that they did not provide sufficiently by public appropriation for the scale of entertainment that Mr. Roosevelt established, and that the heavy expense involved made serious inroads upon the private income of the President, an expense that he bore ungrudgingly and without even private complaint.

But when it was given out that alterations were to be made to the White House which, including furnishings, would cost nearly $500,000 there were some misgivings. It would seem impossible to spend that amount of money without altering the appearance of the simple structure or modifying its character. The appearance has been changed, but only slightly, and that in accordance strictly with the original design. The building has become what it was intended to be, the home of the President, and not his business office with living rooms annexed. The White House has simply been restored, made safe, healthful, habitable, that is all, and as the people have come to understand this, they have given their complete approval to the changes that have been made.



A Corner of the Green Room

Few persons even now realize the serious conditions that existed in the White House before the improvements were made. It was not safe. At every great entertainment it was necessary to shore up the floors to keep them from breaking down. When the waiters walked about in the State dining-room the dishes on the sideboards rattled. What is known as the Garden floor, the one apparently in the basement as one enters from the north, but really the ground floor as one enters from the south (the White House faces the south), was cluttered up with pipes and wires suspended from the ceiling. Arches had been cut away and the woodwork was all out of repair. The second floor, the living-room of the house, was so uneven that a new one had to be put in. The attic, where the servants slept, was a fire-trap, reached only by an elevator. The roof drainage was carried through the house in old troughs hollowed out of logs, which, as they rotted away, were lined with copper. Many of the beams were actually charred by defective insulation of electric wires, and the wonder was that the place had not burned down. The roof was almost ready to fall in and a new one had to be put on. The truth was that the house was frightfully dilapidated and unsafe from top to bottom. It had to be rebuilt from the inside.



The architects found the original plans in the Congressional Library. The President insisted that these should be complied with strictly. The names for the various rooms—Blue, Green, Red, East, and State Dining-room—were ordered retained. The heating apparatus was lowered from the garden floor to the basement. The lighting apparatus was made modern and safe. The only outward change in the appearance of the house was to build two porticoes, provided for in the original plans, one on each side and stretching clear across the White House grounds. These give the fine architectural effect, from which as a base the house rears itself in singularly effective dignity in the centre.

The west terrace was partly in existence, but it was used for workshops and servants' quarters, and was marred by ungainly greenhouses in front of it. The foundations of the east terrace were found in putting up the new one. The old one had been removed before 1870.

A View of the Main Entrance

An office for the President was placed inconspicuously at the end of the west terrace —a temporary affair. It would not do to mar the White House grounds by an imposing office building. The garden floor was remodelled so that on state occasions guests could enter by the east terrace and make use of dressing-rooms designed for their comfort. Heretofore the guests have had to assemble on the north portico and run chances of taking cold, exposed to the weather. The State dining-room was enlarged to seat 107 guests instead of 60. Two historic mantels, beautifully carved, that had been imported from London, about the only historic furnishings in the house, were removed from the State dining-room, being too small for the places they occupied, and one was placed in the Green Room and the other in the Red Room. The new furnishings were strictly in accordance with what they should be.

The White House Corridor

And so the White House, enlarged in its interior appointments and made safe, has been restored to its original design and purpose. It is now a fitting habitation for the First Citizen of the land. Its quiet dignity satisfies the eye and appeals to the patriotic impulses of every American.

The Canterbury Club Tales

By James MacArthur

Two weeks later the Canterbury Club held its second meeting. It was found that there were thirteen books on the table, and when the Matron discovered the fact, she at once moved that one of the books be removed. Thirteen was an unlucky number. There seemed to be some difficulty in choosing a victim, and the Cantankerous Critic grumbled in his beard about idle superstitions and old wives' fables. The Humorist said he knew of at least one Thirteen Club. The Matron scowled at him, and said 'twas flying in the face of Providence. Finally they decided on a meek, dapper, little volume that looked as if it wouldn't be missed, but I am not going to name the title or author, for obvious reasons. The round dozen that remained were as follows:

Lovey Mary. By Alice Hegan Rice (Century Co.).

Horses Nine. By Sewell Ford (Scribner).

What Manner of Man. By Edna Kenton (Bobbs-Merrill).

Under the Rose. By Frederic S. Isham (Bobbs-Merrill).

Before the Dawn. By Joseph A. Altsheler (Doubleday, Page).

The Lieutenant-Governor. By Guy Wetmore Carryl (Houghton, Mifflin).

A Daughter of the Pit. By Margaret Doyle Jackson (Houghton, Mifflin).

Spinners of Life. By Vance Thompson (Lippincott).

A Lad of the O'Friels. By Seumas Mac Manus (McClure, Phillips).

Cornet Strong of Ireton's Horse. By Dora Greenwell McChesney (John Lane).

The Substitute. By Will N. Harben (Harper).

Walda. By Mary Holland Kinkaid (Harper).

The meeting was called to order, and the Cantankerous Critic at once rose with a copy of *Lovey Mary* in his hand.

"Lovey Mary"

"I took up this little volume," he began, "with a marked prejudice against it, for which I do not hold the author responsible. I notice that she has protested against the use of her portrait for purposes of publicity, and in commending her for this nice reserve I must also condole with her abused sense of delicacy in seeing her little book blazoned forth as a cure for biliousness. The first time I caught sight of this placard in an 'L' car, shouting at me that it 'Cures the blues,' it was flanked to right and left by similar placards of some quack specific also claiming to 'Cure colds, coughs, bilious attacks, etc.' To me, this sort of blatant advertising is so degrading in the service of letters that only my liking for the author's previous book overcame my intellectual nausea. And I should have been sorry to miss reading *Lovey Mary.* As a tale it is better threaded than *Mrs. Wiggs,* and the author has wisely avoided straining for effect in constructing her story, recognizing that it is in the humorous delineation of character her power lies, and not in any novelty of incident or situation. The story, like the people in it, is elemental, simple, obvious. It is Mrs. Rice's gift of humor blent with 'humanest affection' that disarms the critic and takes captive the man. Nothing in the book became Lovey Mary so well as the way she went out of it. Do you not see her as she waves from the train platform at the receding Cabbage Patch? 'It ain't hard to be good when folks love you,' she said, with a little catch in her voice. 'I'll make 'em all proud of me yet!'"

"And she'll do it," nodded the Merchant with emphasis. "And when she does, and Mrs. Rice comes to tell it, may I be there to see and hear it. You may speak about the humor of *Lovey Mary* and *Mrs. Wiggs,* and of course it makes you laugh and grin till you're ashamed of yourself, especially if you read them in the cars or the train as I did, but it's the grit and brawn in Mrs. Rice's characters that rouse one's admiration, the determination to smile down adversity and win out somehow. There's nothing mawkish or silly about them. There is a story of how Mrs. Wiggs sent Billy out on the horse for two watermelons, and how he brought them home, that is worth any number of Sunday-school yarns. Billy was told not to come home without those watermelons. But when he got to the field he found them all so big he couldn't carry one, let alone two. What did he do? Come home without them? No, sir, that wasn't the way Mrs. Wiggs brought her children up. Let me read you what he did: 'He jes set on the fence an' thought awhile, then he took offen his jeans pants an' put a watermelon in each leg an' hanged 'em 'crost old Rollie's back an' come ridin' home barelegged.' That's the kind of boy the world hears of, sooner or later, mark my words."

"There is a profound lesson for all of us," remarked the Young Clergyman, "in the chapter called 'A Denominational Garden,' but especially for the minister—a lesson of charity and tolerance with men's beliefs and creeds and ecclesiastical crotchets. 'There's all sorts of Christians;' as Miss Viny says, 'some stands fer sunshine, some fer shade; some fer beauty, some fer use; some up high, some down low. There's jes one thing all the flowers has to unite in fightin' ag'inst—that's the canker-worm, Hate. If it once gets in a plant, no matter how good an' strong that plant may be, it eats right down to its heart.' Mrs. Rice is not only a humorist and a humanist; she is a good theologian."

"I should like to observe," quoth the Humorist, "that my friend the Editor submits that though Mrs. Rice's humor is individual and original with her, it is distinctively American, and springs from the same source as that of Bret Harte. In fact, he claims that Mrs. Rice alone, of all our humorists, has caught the quintessence of Bret Harte's humor, consciously or not, though the manner is her own."

"A Daughter of the Pit"

"Now if you want an example of what a woman of intelligence and some literary talent is liable to write when she lacks humor," went on the Humorist, "take *A Daughter of the Pit.* This book is an illustration of what can be accomplished by plodding industry and fidelity to the fact without imagination or humor. The result is dulness and tedium, though it pains me to say so, for there is an abundance of rich material, some good scenes and characterization, and much painstaking in the effort to lay bare the workings of a young girl's heart and mind, reared as the daughter of a pitman, but with strivings of soul above her station. Eliza Whitlake ought to have become an interesting personality in the hands of an imaginative writer; in the pages of this book she remains a colorless prig."

"I could almost fancy," said the Cantankerous Critic, "that I was reading one of Dinah Mulock's household tales, hoary with piety and priggishness, as I conned wearily the pages of *A Daughter of the Pit.* No light or shade—the wicked are unmitigatedly wicked and are punished accordingly; the good are *so* good and are rewarded accordingly. Eliza's hankerings after material advancement, mingled with mild goodness and pietism, find their goal in the wealthy young American who comes to the English mines prospecting. Her sister, who is much more alive, though cut to a well-worn pattern, chooses ill, and bites the dust for it. Yet, I suppose this book will find its way into many a Sunday-school library because of its innocuous and mild morality."

"And why not?" asked the Young Clergyman. "You are altogether too crushing in your judgment of this book. Suppose it is like the works of the author of *John Halifax, Gentleman,* and *A Noble Life.* Have these books not had an influence for good on the young? And is there not a young generation to-day for whom *A Daughter of the Pit* and books like it, elevating in tone, teaching the nobility of goodness, the law of kindness, the ugliness and heinousness of sin, are needed? There is not any great complexity or weighty problems in the lives of the struggling poor with whom this story deals; their aims and needs are fundamental and their conditions circumscribed. I think that the only problem that enters into these lives was stated by one of them when he commented thus on another character in the book, a hard, selfish woman: 'I often wonder why God lets such people be. Maybe it is that we may understand better what the world would be without love. Perhaps it is to teach us the beauty of kindness one to another.' This simple problem—a problem of character that more especially needs to be considered by the young—is, to my mind, presented in the working out of this story with great clearness and conviction. I trust that I am showing no disrespect to the author when I hope that *A Daughter of the Pit* will be placed on our library shelves beside the worthy works of Dinah Mulock."

The Matron and the Sentimentalist purred approvingly and shot glances of admiration at the Young Clergyman as he sat down. The Scholar lightened the strain to some extent by remarking: "By the way, I read on page 255 of *A Daughter of the Pit* that the '*Oceanic* sails in three days from New York.' It is one of those curious anachronisms that an author sometimes perpetrates, for, as a matter of fact, the *Oceanic* wasn't built at the period in which the story is laid. I remember about a year ago reading an historical romance of the times of Alfred the Great, in which a number of besieged Christian ladies were described as lifting up their voices in singing Cardinal Newman's hymn, 'Lead, Kindly Light'—all three verses being printed in full to add to the impression on the reader!"

"Horses Nine"

"Speaking of the Sunday-school library," observed the Matron, "here is a book that ought to go on its shelves beside *Black Beauty. Horses Nine* will delight everybody who loves horses, and the writer takes the point of view in telling his stories that insures interest, especially young readers. Not unlike Mr. Thompson-Seton's manner, he gets, as it were, inside the horse, and tells what happened to him, viewing men and things through the horse's eyes. There is the story of 'Skipper' who became a 'Blue-ribboner'; of 'Calico' who began life on a farm and landed in Barnum and Bailey's; of 'Old Silver' of the Gray Horse Truck,

the firemen's favorite; and so on. The author has not only a wide knowledge of the horse and its ways, but, what is more essential, a strong affection for the equine race which enables him to treat his subject very sympathetically."

"And he has humor, too," quoth the Humorist. "The story of Barnacles and how he assisted at the splicing of Captain Bean and Stashia Buckett is one of the funniest stories I have ever read."

"No doubt about it," remarked the Cantankerous Critic, sententiously, "*Horses Nine* is the best volume of horse stories that has ever been written. Both as an artistic product and a humane gospel it is worth all the *Black Beautys* that were ever penned. I'd like to see a copy of the book in the hands of every young person, and every carrier and coachman ought to read it."

"I shall call the attention of the Society for the Prevention of Cruelty to Animals to the book," concluded the Sentimentalist.

"What Manner of Man"

"I like *What Manner of Man*," said the Sentimentalist, "for its touching portrait of Clodah and its picturesque descriptions of the wild western coast of Scotland. In the latter respect it recalled the pleasure William Black's novels used to give me. And Clodah is not unlike some of the Scottish novelist's attractive heroines. How well Edna Kenton reveals the young tumultuous soul of the Highland girl when the mounting fever within makes her turn from the commonplace life about her to follow the great natural instinct of every woman child toward the luring fascination of the unknown. She was what Mrs. Ward in *Lady Rose's Daughter* calls 'a child of feeling.' And when the great London artist appears on the Island of Rohan in search of a model for his painting of 'The Christian Martyr,' it is natural that her dreams and imaginings should fasten upon him, and that she should fall an easy prey to his artistic rapture, mistaking it for a deeper emotion. They are married and proceed to London, and then begins Clodah's disillusionment and martyrdom, ending in her flight back to her island home, closing her eyes on the scenes they first opened upon, but what an experience lay between! As for Thayer the artist, one cannot hold him accountable as one would other men. His art engrossed him; it was his life; he meant no harm to the gentle Clodah; his seeming cruelty was a moral obsession. His remorse was keen and genuine, and he suffered for his blindness in self-abasement and renunciation. He was an artist, be it remembered, and to sin against the artistic temperament was more heinous than to sin against any moral code."

"That is a very dangerous doctrine, my young friend," observed the Clergyman. "The artistic temperament is too often used to cover a multitude of sins, and is synonymous with selfishness and self-indulgence. Temperament is not intended by nature to be the master; temperament is the servant of the mind, and character must always be the master if temperament is to serve noble ends. As for this book, frankly, I do not like it. Clodah in her maiden sweetness and purity is an exquisite picture, but she is used as a fillip to the sensual æstheticism of Thayer, who, the author tells us, was a man in whom the passions had had so much indulgence that it took more than a passing whim to rouse them to keenness."

"He was a selfish beast," interrupted the Matron, "and when he carried off that sweet young thing, all dreams and innocence, from her Highland home to his den in London, it was like seeing a dove in the brute grasp of an ourang-outang. I shall certainly not allow my daughters to be contaminated by it."

"I want to rescue one passage from the book," resumed the Young Clergyman, "which embodies a truth that marks the sincerity of the author in writing her book. Clodah says her father used to tell her that 'too much thinking on evil things leads one to evil deeds, an' that no man is strong enough to stand before evil to learn it, for he has to take some o' it into his heart. An' that evil desire leads him to take others into sin an' shame, an' that there's no thing on earth to be desired good enough to need the sacrifice o' a living soul.'"

"I wonder," spoke up the Scholar, gently, "if Edna Kenton was ever in the northwest of Scotland. I hardly think so, or she would have known that they do not speak the Lowland Scots dialect there which she puts into the mouths of her characters. Besides, on an island like Rohan, sequestered from the mainland, they speak Gaelic only, to this day. Her Scots dialect is, as a matter of fact, an American corruption of the real thing. However, there is little of it, but it is a pity that in what there is of it she did not stick to pure English with a Gaelic word here and there to suggest the original. Again, the postal address of Clodah's home would not be 'Rohan Island, Great Britain,' within the realm, but North Britain or Scotland, the latter being really the correct form."

"*What Manner of Man* is simply a woman's attempt to blend Zola and William Black," observed the Cantankerous Critic, "and they won't blend — Gallic or Gael, French or Anglo-Saxon, never will blend or meet at any given point. The races are poles apart. No Englishman would have acted as Thayer did. I hope when Edna Kenton writes her next novel she will refrain from making her serious people talk essays like Thayer and Hilda on almost every occasion of their meeting."

"Before the Dawn"

"Mr. Joseph Altsheler, who has entertained us with several good stories of American history," said the Sentimentalist, "has further enlivened us with a story of the fall of Richmond, appropriately called *Before the Dawn*. The interest is centred in Lucia Catherwood, a Northern girl who finds her way into Richmond and is suspected of being a spy. Of course there is a gallant young Southerner who falls in love with her, and favors her, while fighting on the opposite side. It is prettily told, though a trifle long. I was disappointed not to learn who the spy really was that stole the papers, if it wasn't Lucia, and the author seems to have forgotten to tell where Lucia hid that time the officers searched Miss Grayson's cottage and couldn't find her—but it is a good story."

"I'm tired of these civil war stories," blurted the Cantankerous Critic, "especially when written by merely clever authors. This one hasn't even the merit of an original plot, although one could say the same thing of Hamlet. It is on the old lines; the hero and heroine on opposite sides of the war; the heroine a suspected spy, and the hero torn 'twixt love and honor; then the usual rendezvous for the heart-to-heart talk, the hospital, where the heroine nurses the hero. Then it is time writers were letting up on the threadbare formula, how he or she did so and so 'in the usual Southern fashion,' or 'with the ornate courtesy of the old South,' or 'like the cream of the old South.' Then there are 'our Southern women, my boy, who stand supreme for beauty and wit!' and the man who 'seemed different, indeed, from the average Southerner,' and so forth. 'The trouble with Redfield,' says some one in the book, 'is that he wants all the twenty-four hours of every day for his own talking.' The trouble with this author is that he has the same fault in his fiction; there is too much tall talk in these 372 pages—it interferes with what is, after all, a pretty interesting story."

"I think you are too sore on him," retorted the Merchant. "I rather enjoyed the story as I read it on the train going out and in to my business. Prescott was a fine, manly fellow, and Lucia was worthy of all he went through for her. There must have been many such incidents during the war, and it is interesting to have it brought home to you in this pleasant way. I do wish, however, with the Sentimentalist, that the author had not forgotten to acquaint us with Lucia's hiding-place, but that is the veriest trifle, and does not mar one's wholesome enjoyment."

"The Lieutenant-Governor"

"There is a class of novels," resumed the Cantankerous Critic, "which is not literature, and yet which represents a very thick crop among the fiction that is being daily produced in this country, a class which I should designate as belonging to the Fourth Estate. They are the work of certain aspiring young journalists, ambitious to enter the ranks of the writers of fiction. Now take Mr. Carryl's story, *The Lieutenant-Governor*. Mr. Carryl has written some clever short stories, nonsense verse and other verse; indeed, he has written some very beautiful poetry. But when he comes to write a novel it is a strange jumble of observation, experience, pedantry, and obstinate theory. There are good bits in *The Lieutenant-Governor;* some fine character sketches, a spirit of true patriotism and a dramatic climax when the way out is opened for the Lieutenant-Governor by the shooting of the Governor. But all through the narrative there is a sense of failure to realize the characters and their action in the situations which are meant to develop the story. One of Mr. Carryl's weaknesses is his tendency to drop into long rhetorical speeches for the explanation of his motives. And then the ending is all wrong and contrary to all the dictates of art or reason."

"Yes, that ending made me furious," replied the Matron. "There surely was some other way of solving the difficulty than allowing patriotic principle to hang the friend who, by shooting the Governor, freed the State from ignominy and ruthlessness and gave Barclay his opportunity to serve his country. Besides, the act was really inspired by a fanatic insanity."

"It is a bad anticlimax, I must admit," remarked the Scholar, "and seems quite unnecessary. It does not add anything to the dignity of Barclay's stubborn stand for equity and justice, and gives him a taint of priggishness that one had not suspected in him. It almost seems erratic on the author's part, and lacks the convincing power of sincere art."

"Spinners of Life"

"Another novel that comes under this category," continued the Cantankerous Critic, in pursuit of his argument, "is Mr. Vance Thompson's *Spinners of Life*. When a writer uses such phrases as 'Silence is most golden in the specification of friendship, and when employed in the particularizing of intimate emotion, the silver of speech is apt to turn to veriest tinsel,' or the 'pachydermatous inertia of the citizens of Alleghenia,' or the 'Achilles' heel of the community,' as Mr. Carryl does; or when Mr. Thompson says, 'There was a bell at his elbow and he spun a silver ripple of sound out of it,' then you detect the earmarks of the journalist and the facile

phrase-maker. Style in its last analysis discards all affectation and tricks of rhetoric. Even Stevenson, 'sedulous ape' though he called himself, knew this and put the inimitable stamp of his own mint upon his rememberable phrases before issuing them. Another grievance I have against these books is that instead of appealing to life they depend upon something bizarre, eccentric, or extraordinary in their situations to attract. The conclusion of *The Lieutenant-Governor* was undoubtedly planned in this way, and the whole fabric of *Spinners of Life* rests on the following proposition from Rousseau: 'If, in order that you might inherit a good fortune from a mandarin, living in some far-away China, whom you had never seen, nor heard of, it were necessary for you merely to touch a spot on your wall—would you touch it and kill the mandarin?' This is actually what Gaffney, out at elbows, does, and the rest of the story is an unfolding of the result. It is interesting, if fantastic, and is built together, piece by piece, almost like a play; indeed, it is as a theatrical experiment, very clever, very ingenious, very amusing, that we view it, and I don't think Mr. Thompson wants us to take it too seriously."

"A Lad of the O'Friels"

"I wonder," said the Sentimentalist, "how the Critic would classify *A Lad of the O'Friels*. It isn't a novel, for it has no plot; it isn't even a story, for it can scarcely be said to have beginning or end. It opens among the gentle Irish peasantry of Knockagar on the eve of Nuala's coming, and it ends with young Toal's return from the States without any apparent reason except that the author chooses to drop his rambling tale there. But it is no less than he claims. It is a novel as a poet would write it, and Seumas MacManus is, in the heart of him, a poet, and never poet loved his native land as he loves Ireland. It is the story of his heart. Dinny O'Friel—'always dhreamin'—tells the tale, and there is undoubtedly much of Seumas MacManus in Dinny. He has that magic quality of making the land and its people so human and picturesque, you want to make a pilgrimage to the home of his thoughts and behold its beauty for yourself. But the secret of it all lies in the soul of the poet."

"And what a wag he is!" quoth the Humorist. "Such a lover of fun and pure mirth and rollicking humor, for Seumas MacManus would be no Irishman if he wasn't continually alive to the humorous side of things. It is the salt of life to him. Indeed, it is through his humor that he weaves his spell in legend and story and song as he keeps your interest alive in his handful of quaint, lovable characters."

"It is one of the quiet books," said the Scholar, "to be cherished by the few who care for work that is genuine in feeling, sincere and beautiful in its art—a book that will crave to be read now and then, just as some old familiar strain comes into your mind and clamors to be heard again. And it is the books and the melodies that endear themselves to fond remembrance that have a lien on life."

"Cornet Strong of Ireton's Horse"

"If there is one kind of novel that bores me worse than the civil-war novel," observed the Cantankerous Critic, "it is the story of Roundhead and Cavalier. *Cornet Strong of Ireton's Horse* is no better and no worse than dozens of Puritan novels that I have read, and if you like this sort of thing, you will like this one; if not, you won't."

"I think the story is hampered by one serious defect," remarked the Sentimentalist. "It is in the main a battle-field tale in which woman and love don't begin to figure until the book is drawing to a close. Then the character of Cornet Strong is drawn with such masculine firmness, and so lacking any trace of womanliness, that when the surprise of the climax comes, revealing the sex of the soldier in disguise, it does so with a shock that is disagreeable and far from pleasing."

"Yes," interrupted the Matron, "and especially as the disclosure occurs just after you learn that Cornet Strong has struck down Captain Standish, who is her son, because of his love for the Irish Royalist girl. That act is so abhorrent to the maternal instinct that it is practically inconceivable."

"Just so," cut in the Cantankerous Critic; "my argument again. It is the tendency in amateur novelists to resort to artifice and theatrical expedients for startling effects and climaxes."

"The Substitute"

"You have noticed," observed the Humorist, "that there are books which seem to shout 'cheer up!' at you from every page. Well, here's a book that had just that effect on me. *The Substitute* is written by an optimist, one who sees life whole, who believes that it is good and wholesome. Yet he is not blind to its aches and ills, and there are several characters in this Georgia tale who have their share of trouble before their meed of joy comes to them. Mr. Harben is as genuine a humorist in this book as he proved himself in *Abner Daniel*. Even the most pathetic figure in the story, old Hiram Hillyer, is not without his humorous side.

"Hiram Hillyer is, to my mind," said the Young Clergyman, "one of the most interesting and touching human problems I have run across in a long time. An old man paying a lifelong atonement, suffering agonies of remorse, for the crime of murder done in self-defence and hot anger years ago—so many years ago that everybody has forgotten it and exonerated him as the court did at the time of his trial and acquittal—and yet he is in a worse state than if he were in jail. 'The fear o' meetin' my God was awful,' he tells George Buckley, whose life is bound up with his efforts at atonement. 'I come clear in the eyes o' the world, but, as God knows, not in my own. That crime is before me, wakin' or sleepin'. I often dream that I never done it, an' daylight gives that the lie.' The haunting misery of that soul, suffering in silence and despair, is a living, throbbing reality. There is a spiritual force in the slow-working leaven that gradually leads to light and joy which has the true ring of life in it. And the author's triumph is in the natural, or rather, the spiritual, triumph of the old man, which has nothing accidental or artificial in its solution; it just happened as it might have done in real life. I think that to many who may be groaning under the burden of remorse for some past deed of guilt this book will have a message, a gospel which is not a vain thing, but which partakes of that hope which saves mankind."

"You have spoken for Mr. Hillyer," remarked the Matron; "now I want to say a word for Mrs. Hillyer. The endurance, the good-nature, the smiling countenance hiding the heavy heart which divined, all unknown to her husband, the secret sorrow which ate like a canker at his hidden existence, were heroic. Yet she bore herself as other women, and accounted herself as no more than they. She had always a hearty word and a kindling smile for the dejected and struggling. You may feel grateful for old man Hillyer, but for my part I thank Mr. Harben for this good, sensible woman, who, 'when folks was continually a-complainin',' as she says, exhorted them in scriptural language, 'Don't kick agin the pricks.' And that's good philosophy. As she goes on to illustrate, 'Ef you set down on a board with a tack in it, the harder you set the more tack you git, an' that's so with life; it's full of tacks, an' don't you forgit it.'"

"I guess that's what Mrs. Wiggs meant," said the Merchant with a laugh, "when she said that she made it a practice to put all her worries down in the bottom of her heart, then 'set on the lid an' smile.'"

"Walda"

"*Walda*," said the Sentimentalist, "is the book that I like best of all the dozen. If for nothing else, it is so refreshing to have a heroine who is good yet womanly, and not one of those vexed, tormented souls stretched on the rack of psychological analysis or physiological dissection. Walda is a simple, pure, beautiful maiden who has been set apart by the Zealots of Zanah—somewhere out West, I believe—as their coming prophetess. Meanwhile, a stranger, an artist from the outside world, enters by chance and is of timely medical assistance to Walda's father. Love draws the twain together, and the gradual awakening of this human passion, deprecated in Zanah, is exquisitely portrayed and as subtly unfolded as the opening of the bud into flower beneath the warm sun. There is opposition, and Walda suffers in the conflict betwixt religious and filial duty and the call of love. The setting is fresh and unconventional and lends zest to an old theme."

"The author of *Walda*," observed the Scholar, "evidently knows the power that lies in restraint and the beauty that resides in simplicity. There are several situations in the story which fairly tug for melodramatic treatment, but she has kept a firm hand on the movement and preserved its refined and restrained action intact. Yet for this reason, the appeal of Walda as a living, pulsating being is stronger and more individual."

"Walda is the figure upon whom the drama centres, of course," said the Cantankerous Critic, "and a most appealing figure, I grant, notwithstanding her conventional lover; but the character that to me stands head and shoulders above all others in this book is the schoolmaster, Gerson Brandt. His is the most human, as it is the most memorable portrait in *Walda*. There is a heroic fibre, an endurance in silence, a capacity for sacrifice in him, which comes out clear and distinct before our eyes, as if the man had lived and suffered to our knowledge. Mrs. Kinkaid has every reason to feel proud of this creation, as it remains in the memory—lone, silent, enduring in a great pathos of loneliness."

"Under the Rose"

"*Under the Rose*," continued the Cantankerous Critic, "is a merry-going tale of courts and court fools in the France of Rabelais, when Francis was King and Charles I. was Emperor, which might have won a wider hearing a few years ago when 'Zenda' was the password to the heart of the reading public. Of course it is romance, and is cooked after the romantic recipe, though, to be sure, the ingredients have been well mixed to present a rather novel and attractive dish. It has a certain charm and fine air which are pleasing, and the style passes well for a thin counterfeit of *The Forest Lovers*. My pleasure in the story might have been greater but for the pictures. I like Christy all right in half-tone, but these crude, staring color plates gave me mental jaundice."

"I enjoyed *Under the Rose* thoroughly," the Merchant burst in. "I could scarcely

lay it down, once I had started it. It held my interest right up to the last, and I couldn't tell, for the life of me, just how it was going to come out until I was well in sight of the finish."

"I think *Under the Rose*," observed the Sentimentalist, "a most beautiful romance, full of warmth and color, and bathed in an atmosphere of the most exquisite and tender charm. The style is not a counterfeit, the Critic notwithstanding, but is of a part with the tale, of a flexibility and delicacy, a virility and refinement, a humor that is sweet yet oftentimes biting, woven into the very tapestry of true romance. This is no swashbuckling, roystering tale, but that finer, rarer, more gracious art descended from the *Romaunt of the Rose*."

The Scholar was appealed to for an opinion. "Well," said he, "I should say the truth lay between the Critic and the Sentimentalist, and I think that it lies nearer the latter than the former." Then, smiling, he added, "I shall read it, and let you know if my guess is right."

The meeting was then adjourned.

Books and Bookmen

THE latest claimant for public suffrage is *Wee Macgreegor*. There is no tyrant like the *enfant terrible*. In Scotland, where our hero rose to power and reigns supreme, we understand that for the moment all theological differences have been waived in favor of Wee Macgregor's absolute monarchy. There is only one power in Scotland that can overthrow the cast-iron grip of theology and metaphysics, and that is humor. *Wee Macgreegor* is the usurper of the hour. "And a little child shall lead them." Isaiah's words are as true to-day as they were in his own time; indeed, he is the most modern of the prophets. There is something very beautiful, very touching, very wonderful in the sight of a little child arresting the busy, bustling mart in its hurrying drift, to lead it into the quiet shelter of a humanizing atmosphere, loosening its heart-strings and slackening the terrific strain under the beneficent influence of a gladdening humor and a refreshing simplicity. This is the spectacle that has been witnessed during recent weeks by our kinsmen across the sea; this, too, is what we may witness erelong if Wee Macgregor succeeds in touching the hearts of his kin in this country. For is not the child at home in any land, the offspring of the universe?

There have been many children of fiction who have had the world at their feet—who of us can ever forget *Helen's Babies?*—but Wee Macgregor differs from them all. He has his own quaint, boyish individuality, and, as the critics have one and all agreed in saying, recent fiction has given us no more delightfully whimsical or quietly sympathetic creations than this sturdy, human wee laddie, his father and mother and his small sister Jeannie. Long before you are half through the book you are on intimate terms with all four, and as keenly interested in their experiences as if they were a living family, and you were actually acquainted with them. Yet those experiences are absolutely of the ordinary, and are related without a trace of extravagance or exaggeration. The family goes out shopping together of a Saturday afternoon, and Wee Macgregor keeps up a running fire of questions; they pay a visit to the Zoo; they go out to tea at Aunt Purdie's, a trying and onerous ordeal, for Aunt Purdie's goodman is a well-to-do grocer, and they are getting up in the world; they visit Macgregor's grandparents at the seaside, and Macgregor insists on taking an oar when they go out rowing; Macgregor is unwell and his father nurses him;—whatever it is, and wherever they go, you follow them with the warmest interest and the kindliest, heartiest laughter in the world. It is in the homely naturalness and simplicity of its humor that the supreme charm of the little book lies. Yet underlying its comic and amusing element there is a fund of tenderness and sympathy which is most touching. Your true humorist is also a humanist, and the author of *Wee Macgreegor* knows that the well-springs of laughter and tears lie close together, and has blent them with delicate art and sureness of touch.

Not since Mr. J. M. Barrie quickened our sense of humor and aroused our sensibilities with *A Window in Thrums* has there been any Scottish writer who could claim to rival him as a gentle humorist as does the author of *Wee Macgreegor*. Subtle and delicate in insight, playful in his touches of humor, deeply in love with his characters, there is much to suggest Barrie. But the creator of Wee Macgregor is a distinct personality, as Wee Macgregor himself is an original creation. The author of *Wee Macgreegor* is Mr. J. J. Bell, a native of Glasgow, and about thirty years of age. He was educated at the Glasgow University, where he began his first attempts at writing. In 1898 he became assistant editor of *The Scots Pictorial*, an old-established Glasgow weekly. Through Mr. John Lane he published two books, *The New Noah's Ark* and *Jack of all Trades*, consisting of clever jingling rhymes for children, and revealing the intuitive knowledge of child life which is evident in *Wee Macgreegor*. He has been a constant contributor of sketches, stories, and verses to the leading London magazines, as well as to several Scottish periodicals, most of his work appearing over the initials "J. J. B." Lately he resigned his editorial work to devote his whole time to writing. One feels certain that Mr. Bell has a future in literature, whatever form it may eventually take. Meanwhile we are grateful for *Wee Macgreegor*. The Scots dialect is a hard nut to crack, but a little perseverance will well reward the reader with a kernel worth biting into; after the first few pages it is astonishing how familiar one becomes with the dialect and how easy it is to comprehend the meaning. We should not be surprised to see *Wee Macgreegor* rivalling in popularity the famous *Bonnie Brier Bush* stories.

"Wee Macgreegor"

The death of John Henry Shorthouse, the author of *John Inglesant* — the book that Andrew Lang declared he had denied himself when he was beguiled into reading *Robert Elsmere* — recalls the interesting fact that the book was rejected by the firm of Smith, Elder, & Co., on the advice of Mr. James Payn, their literary adviser. Payn denied this, and talked of bringing an action against those who could so accuse him of gross unfitness for his post. He took his complaint to the late Mr. George Smith. Mr. Smith listened quietly to Payn's indignant remonstrance, and then said:

"I should let it alone if I were you. What does it matter what that kind of people say about you?"

Payn insisted, until the twinkle in Smith's eye caught his attention.

"Is there any reason," he asked then, "why I should not contradict this man?"

"Well, yes; the fact is we did reject the book."

"What? Do you mean to say I rejected *John Inglesant?*"

"I am afraid so; at all events we did it amongst us. I don't blame you; I think it even now a dullish book."

"And you never told me? Never let fall a word of it all these years?"

"Certainly not. I thought it might distress you. I should not have told you now but that I was taken unawares."

Payn used to tell this story as a tribute to the admirable qualities of Mr. Smith.

COLORABLE IMITATION.

Or, a J. M. Barrie'sment of Titles.

Punch says that the sincerest form of flattery has already overtaken *The Little White Bird*. A publisher announces *The Little Red Fish*. *Punch* understands that the following works are in preparation:

The Little Blue Bottle;
The Little Blue Pill;
The Little Black Eye;
The Little Pink Pearl;
The Little Purple Emperor;
The Little Brown Boot;
The Little Yellow Jaundice;
The Little Scarlet Fever;
The Little Gray Hair;
The Little Gold Stopping.

The Letters of a Self-made Merchant to his Son, by Mr. George H. Lorimer, was published recently in England, and is already making a record sale there. The heads of large business houses, it is said, are giving it away to their clerks. One firm is known to have bought a thousand copies for this purpose. On this side the book has just gone into its hundredth thousand. The reason for the success of the book is not far to seek. Its shrewd humor and homely aphorisms together with the quaint personality of old John Graham make it appeal with equal interest to the lettered and unlettered. Mr. Lorimer is the editor of the *Saturday Evening Post*, in whose pages the "Letters" originally appeared, and first attracted wide attention.

If public libraries were half as costly as public dinners, or books cost the tenth part of what bracelets do, even foolish men and women might sometimes suspect there was good in reading, as well as in munching and sparkling.—*Ruskin*.

Before you look for something to eat, look for some one to eat with.—*Epicurus*.

Correspondence

THE HOOK-WORM AND AMERICANITIS—A REPLY.

PIERCE CORNERS, NEW YORK, *March 16, 1903.*

To the Editor of Harper's Weekly:

SIR,—I am much disturbed by your recent article attributing to "Hook-worm disease" the apparent laziness of the shiftless "poor whites" of certain Southern States. I scent trouble in the near future, a whole lot of trouble; trouble that may be serious. I am sure my office boy has read in the WEEKLY that inconsiderate biologist's announcement that laziness is due to a germ, or a bug, or a worm with a hook on it. It may be merely the annual attack of "spring fever"; but his steps are certainly slower than they were a week or two ago.

There is no doubt, in my mind, that hired men on half the farms in America will sit on the fence, this summer, twice as much as they ever reposed thereupon before; and when brought to account, they can go scot-free by calling attention to the statement that rest and sunshine and fresh air are absolutely necessary in curing "hook-worm." According to the WEEKLY, this disease is a good deal like the grip; when you've got it, you've got to go to bed and stay there until it's over. If this is true, manufacturers of beds may reap a harvest, but all the rest of the world will go backward. No, not all the rest of the world; for a great majority of people living in New York, and other great cities, are afflicted with a disease exactly opposite, in its effects, to "hook-worm"—the malady generally known as "Americanitis," because it is more common here than elsewhere in the world, although certain well-known persons abroad seem to be suffering its acute stage. The intelligent reading public may be pardoned a little surprise when it sees the Kaiser settling questions of Biblical inspiration with one hand, and kicking up a war in South America with the other; persuading England that he is its best friend, and simultaneously bracing the Boers for a final struggle; writing operas with his left foot, kicking China into smithereens with his right; encouraging his people toward breadth of mind and freedom of expression, and at the same time slamming prison-gates on editors who merely asked what made him butter his ice-cream. The intelligent reading public, I repeat, is somewhat surprised at these manifestations, and is justified in wondering whether the Kaiser is a being, or a syndicate. Likewise is it interested in Mr. Chamberlain's sweep of activities from Scotland to the Cape of Good Hope. And as for our own American people, select at random any one of a dozen men in Boston, Chicago, New York, who is president of a bank, president of two or three railroads, director in trolley companies, manufacturing and mining concerns, realty corporations; member of ten or fifteen clubs; active in church work; prodigal of time, thought, energy, money, spent in carrying on educational institutions, hospitals, asylums, dispensaries, fresh-air funds; and also is a patron of literature, an encourager of art, an attendant at the opera, yet finds sufficient leisure to take part in city, State, and national politics, to make presentation speeches, to address missionary conventions, to play golf, manage a motor-car, oversee one or two country-places, enjoy yachting, run across to London or Paris every year, and bring up a family. Such a man, at the close of the civil war, say, would have been regarded as an impossibility—like the telephone, or wireless telegraphy, or any other marvel then unimaged, or almost unimagined. Why do we of to-day regard him simply as unusual? Merely because the disease is "catching"—as old-fashioned folks used to say; because the germs of "Americanitis"

THE BOOKLOVERS LIBRARY

A Two-Minute Talk

TO INVESTORS

The Shares of THE BOOKLOVERS LIBRARY *Corporation* have had an unparalleled record. The stock is held in the United States, Canada, and England by widely known literary, professional, and business people. Among the library's shareholders are hundreds of names familiar to almost every cultured home. No broker, or banker, or underwriter has had a hand in the sales. The sole backing of the concern has been its enterprise, its continuous push, and its far-seeing business policy. Every dollar invested shows a hundred cents' worth of extended and established earning capacity.

The plans outlined from time to time have been carried forward in the most aggressive sort of way. We have done what we said we would do. We planned to extend the *Booklovers* to every important city in the United States; the libraries are there. We promised to include Canada; the two successful centres of Montreal and Toronto are the result; from these cities the service extends to outlying Canadian cities and towns. We made arrangements for extending the work to England; to-day the *Booklovers* is the talk of London; it is delivering books throughout Great Britain, and includes among its patrons scores of the most distinguished families. We promised an auxiliary library to take care of the field not occupied by the *Booklovers;* the *Tabard Inn*, with its revolving book-cases and five-cent exchanges, is extending the library privileges to thousands of country towns; the earnings of **this one department** at the present time exceed one thousand dollars a day with only one-twentieth of the field covered. This new library department was started only a year ago. In another year it will have earning capacity largely in excess even of the *Booklovers.* Last fall we announced the preparation of a monthly magazine to round out our publicity plans; to-day *The Booklovers Magazine* sells out its complete edition by the fifteenth of each month; it is owned independently by shareholders of the parent company, and presents all the elements of an excellent property.

We are building into the future; the whole book and publishing trade is undergoing rapid and far-reaching changes; there is a new book published in the United States every hour, day and night, and this enormous output must have its distributing machinery. Millions invested in central storehouses of granite or marble can never change the popular current. The American people want an up-to-date service in books as well as in newspapers, and they are willing to pay for it with their own cash. There is no denying the fact that the *Booklovers* is already a tremendous power among the book interests of the country; it has battled its way to the front, where it means to stay.

We need a central library and office building of our own, and we intend to build one just as soon as a desirable central property in Phila-

[*Continued from preceding page.*]

delphia can be secured. This is the next important thing to be done. The block of 50,000 Shares of Stock referred to below has been set aside largely for this purpose.

In connection with this public offer of a comparatively small block of *Booklovers* stock there are four inside facts which I want to make public over my own signature: 1. The *Booklovers* earnings during the three months ending February 28th were **the largest in the history of the enterprise**; 2. The operating expenses per library member were never smaller than at the present time; 3. The "used books" are wholly taken care of at good prices by auxiliary library departments; 4. The Corporation pays cash, and has no debts other than its current monthly accounts.

No additional capital is needed for the *Booklovers*; the increased capital is being used at the present time to extend the *Tabard Inn* and other departments; these auxiliary libraries are necessary to round out the best interests of the enterprise at large; they are the "by-products" of the business, and they offer opportunity for very large profits.

The Corporation is capitalized for **$2,600,000** (260,000 Shares at $10 each). Of this amount **190,000 Shares** have already been subscribed and paid for at the par value of $10, making the present cash capital **$1,900,000.** There remain in the treasury only **70,000 Shares.** Of this remaining block the Directors have authorized the Treasurer to set aside 50,000 Shares to be offered for sale on May 15th, next, at $12 a Share. The remainder, consisting of **20,000 Shares,** is now offered to the public in lots of Ten Shares or more at **$10 a Share.** The terms are 10 per cent. with the application and the balance in sixty days. Stock applied for by telegraph will be held five days to await deposit and formal application. (See form of application below.) The sale of this block of 20,000 Shares at $10, and of the remaining block of 50,000 Shares on May 15th at $12, will give the Company **a completely paid-up Capital.** This announcement gives investors the last opportunity they will have of buying *Booklovers* at $10 a share.

The *Booklovers Corporation* has paid dividends at the rate of **10 per cent.** per year since August 1, 1900. The last half-yearly dividend was paid on February 20th. The half-yearly dividend periods end June 30th and December 31st, respectively. The Corporation has no bonded debts, and its stock when fully paid is non-assessable. All Shares become dividend-bearing from the date of final payment. Dividends are payable in February and August.

1323 Walnut Street, PHILADELPHIA *President*

Application Form for Booklovers Stock

(Use wording below in writing out your application)

(*Date*)

Mr. JOHN E. BRYANT, Treasurer
1323 Walnut Street, PHILADELPHIA

Dear Sir:

Please enter my name for.....Shares of the Stock of The Booklovers Library at Ten Dollars a Share. I enclose my check for $.....being Ten Per Cent. of the par value, and I agree to pay the balance in sixty days.

Name.....

Address.....

have inoculated millions of our citizens until they are all of them, to a greater or less degree, affected and afflicted like the typical example referred to. Some people—living in deliberate towns or in the backwoods—may term this affection "insane hustle," but the real name for it is "Americanitis"; and none but the incompetent is immune, when once a man gets within a zone where it holds sway, such as New York.

Take a boy from a New Hampshire farm who never has been off a slow walk in his life; who has had from forty-eight to sixty hours in every day; who thinks not twice but twenty times before he speaks once. Bring that boy to New York, give him a job, and find him a comfortable boarding-house, and watch the results. At the end of the first week he will be dodging like a panther through the Broadway maze of trolley-cars, trucks, cabs, vans, carriages, wagons, and automobiles. In ten days he will be tramping along at the rate of ten blocks in eleven minutes. In a fortnight he will be clean-shaved every other morning, his shoes will be polished at least once a day, and his clothes will be brushed three or four times a day. In a month his voice will have a ring, and his words a crispness thitherto unknown; and in six weeks after he first steps out of the Forty-second Street station, he will be planning what he will do when he gets to be president of the Chemical Bank. By that time he will have "Americanitis," and he will also have a clearly defined idea of some day buying the State of New Hampshire to be used as a country-place for three months each year.

Now I am not holding such a case up as a commendable example—far from it. I do not believe that the best in life is to be obtained from madly rushing into fifty great undertakings, any one of which is enough to absorb all the time an ordinary man ought to devote to business. Of course there are extraordinary men—not only men like Moses, Napoleon, Gladstone, Washington, but some of our own great Captains of Industry,—whose powers are so enormous that they compel tremendous activity in a hundred directions. But the ordinary man, or the ordinarily brilliant man, in this land of endless opportunities for preferment and enrichment, needs to struggle against the temptation to overwork. Of our population as a whole, the "poor white" of the South, afflicted by "hook-worm," offers one extreme; the New Hampshire boy (afflicted with "Americanitis"), exemplifies the other.

As I said, some time ago, the "hook-worm" bacillus has been trapped, and scientific sharps are now trying to find an enemy to overcome him. I concede the importance of this, but we beg, through HARPER'S WEEKLY, to suggest to aspiring scientists that immortal fame is open to the man who, as the WEEKLY proposed in the recent editorial on the Hook-Bug, will find an antidote for "Americanitis," and administer it in quantities to suit. I am, sir,

A. O. FARMER.

"AS TWIG IS BENT."

TRINITY CHURCH, WASHINGTON, D. C.,
March 26, 1903.

To the Editor of Harper's Weekly:

SIR,—Will your correspondent, Mrs. M. Alexander, kindly tell us in what part of the "Good Book," chapter and verse, she finds "as the twig is bent the tree is inclined?" A certain Mr. Alexander Pope has given us those lines in "Moral Essays," Epistle I., line 149 (see Bartlett's Familiar Quotations). As to the general question whether reading fairy stories interferes with the subsequent proper education of a child, Mrs. Alexander will find the vast majority of persons who have had anything to do with children distinctly opposed to her contention. I am, sir,

R. P. WILLIAMS.

Finance

It has been stated in this column frequently that the art of stock-manipulation is but the sublimated art of advertising, and that no display of statistics, however alluring, and no promises of a prospectus, however invitingly worded, can compare, for efficacy, with the effect produced on the public's mind by the manipulated advance in the price of the security which it is desired to "distribute," or, less euphemistically, to unload on the public. Similarly, there is nothing that will bring home to the public the disagreeable features of the financial situation so strongly as a sharp decline in quoted values. This has been demonstrated most interestingly—if disagreeably to unfortunate speculators—during the past few weeks. That is to say, what the speculative community heard but did not heed last year, it is once more hearing and heeding, because of the strong corroboration of a sharp break in security prices. Mr. Frank A. Vanderlip several months ago delivered a speech, which by reason of his former position as the Assistant Secretary of the Treasury, and as the vivid chronicler of the American invasion of Europe, no less than because of his present association with the largest bank in the United States and world-famous capitalists, attracted widespread attention. But even before Mr. Vanderlip pointed out the potential dangers of the financial situation and their ultimate bearing upon industrial and commercial conditions, the same menaces had been discussed and warnings given by the more serious financial critics. Notwithstanding the obvious seriousness of the unpleasant possibilities, the warnings were considered to possess an academic interest rather than actual stock-market value; they were, in other words, too general and too broad to constitute good "tips." Men are no better than women in believing only what they enjoy believing, and the wilful closing of one's eyes to the disagreeable is by no means a merely feminine attribute. These past few weeks, as prices of stocks, good, bad, and worse, have fallen, the same arguments unheeded two months ago were repeated impressively and possibly wofully. The corroborative eloquence of the stock-ticker had done the trick.

There can be no question that to a great extent the present downward movement was due to the aggressive operations of skilful bears. But no bear, however skilful, can achieve success unless he has natural or technical conditions for allies. One week the bank statement made a poorer showing than the Street expected. Stocks declined. The bank statement—that is, the money-market—was, as a matter of course, blamed for the decline in stocks. On the next week, the bank statistics were far better than had been looked for. And still, on the following Monday, stocks were particularly weak. It was evident that the "big men" did not mean to fight the bear operators. The speculative community was obliged to look further for "reasons." Since the country at large is prosperous, factories very busy, railroads eclipsing all previous records for volume of traffic, it is evident that the trouble must be financial rather than commercial, industrial, or agricultural. And the financial trouble arises from the fact that not only does the unprecedented legitimate business require a great deal of money to carry it on, but that there is much capital tied up in huge stock and bond deals. There is, in other words, an insufficiency of the sinews of war and a superabundance of newly manufactured securities for sale. From these conditions has arisen the agitation concerning the investment interest rate and its inexorable bearing upon values. The congestion in the security market is great and serious. It avails nothing to sermonize on the folly of financiers whom greed blinded to the extent of overdoing the security-manufacturing business and undoing their own peace of mind; or, the mad rush on the part of corporations to pay exorbitant prices for the stocks of other companies, and issue new securities for the old in the ratio of two or three for one. It merely means that great financiers miscalculated the public's power of absorption or, rather, that too many financiers went into the business at one time. But success means imitation, whether it is in literature, painting, feminine fashions, horses, or finance. And as for having gone to extremes, there never lived the great man, the man who achieved greatly, who was not an extremist. The railroads, on the other hand, cannot be blamed, if, taking advantage of the great prosperity, they have revolutionized the theory and practice of railroad operation and of corporation finance. For the most part they have acted wisely, intelligently, along lines which make for stability. The concern of the public should not be so much whether the railway generals have lost their heads, but whether present and prospective conditions justify the purchase of the securities of the same railways at the prevailing prices.

IN HARPER'S WEEKLY for next week (out April 15) there will be, among other features, an interesting article by Maeterlinck, the well-known French writer and essayist, on his Personal Impressions of Monte Carlo.

Lady Rose's Daughter

By Mrs. Humphry Ward

Author of "Eleanor," "Robert Elsmere," etc.

Readers have rarely been led with such interest along the course of any novel. —*William Dean Howells.*

The creator of "Lady Rose's Daughter" has given her a personality which tempts and tantalizes.—*Brooklyn Eagle.*

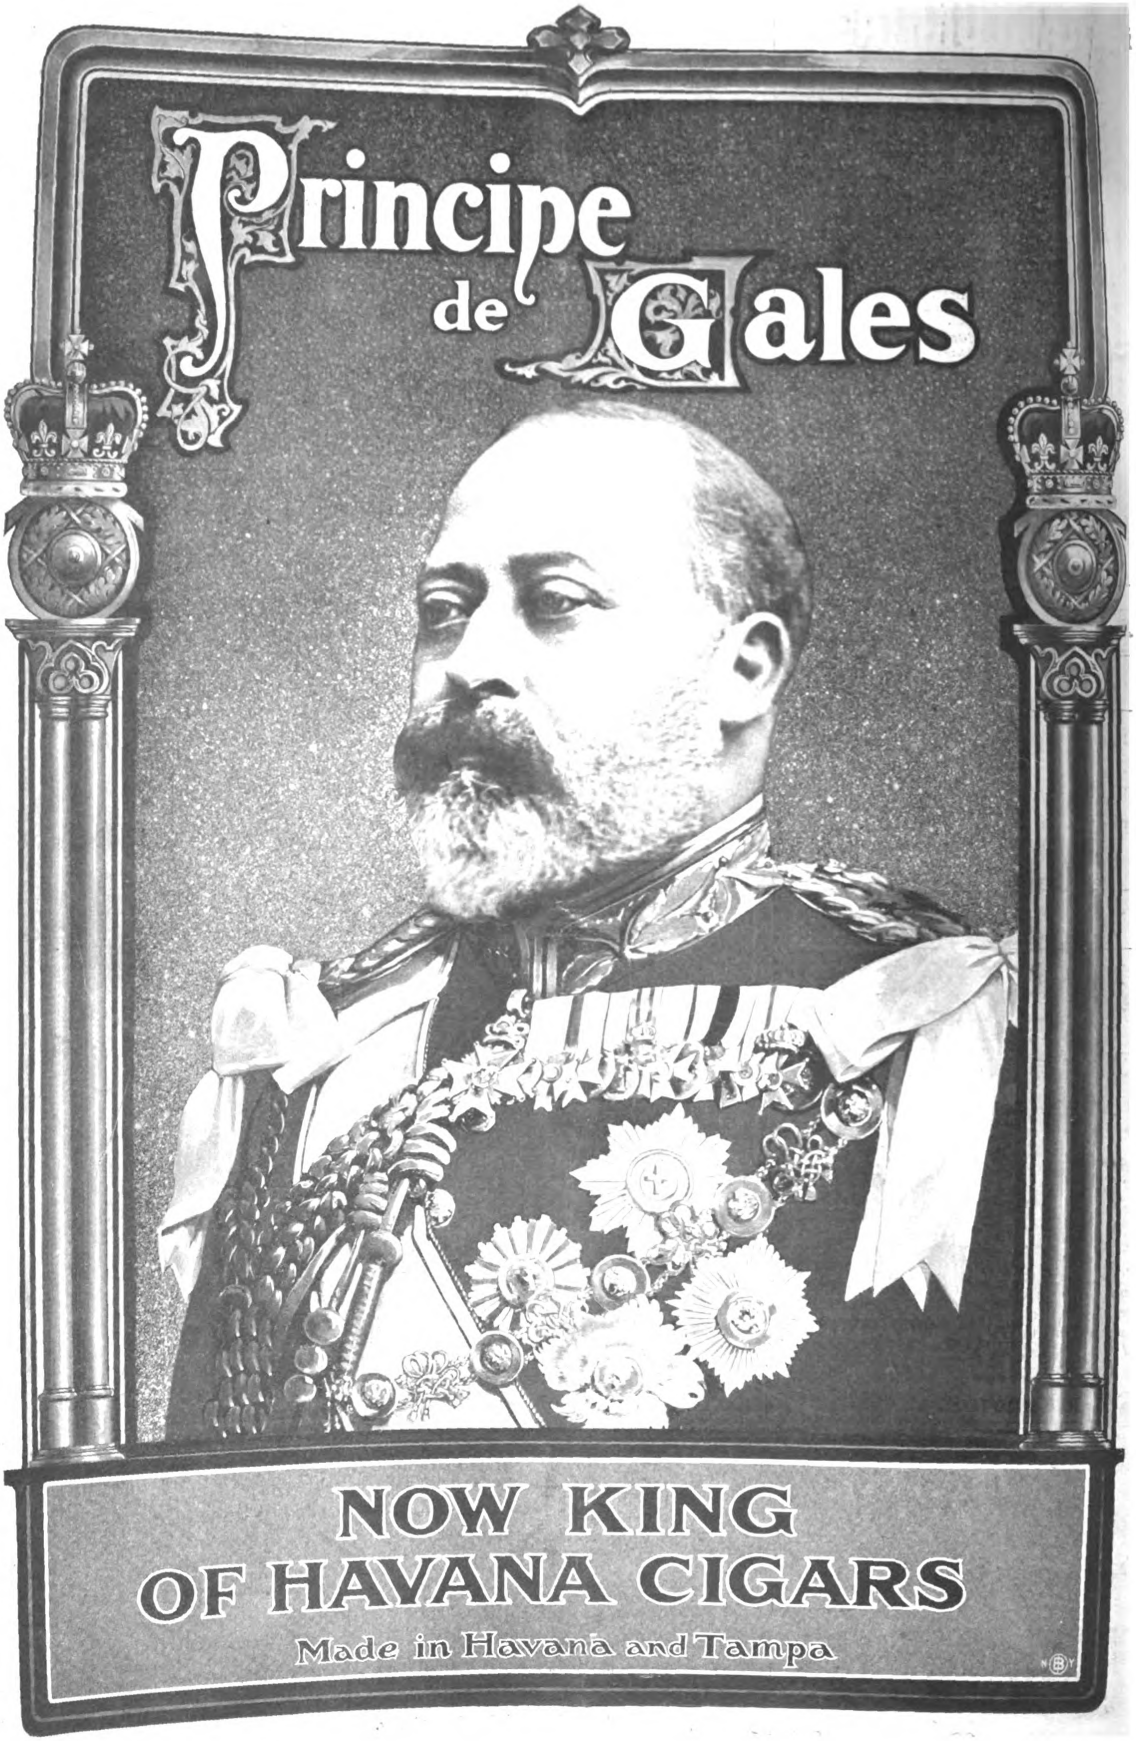
Mrs. Ward has played with edged tools, and to the beholder's delight, and there has been nobody hurt.—*E. S. Martin.*

We touch regions and attain altitudes which it is not given to the ordinary novelist even to approach.—*London Times.*

She is not moral enough for the majority, but for those who are blessed with a clearer view of what matters her character will prove a deep and never-failing well of delight. —*Philadelphia Item.*

No woman whose moral standards were primarily conventional could have understood the temperament of Julie Le Breton. —*Hamilton W. Mabie.*

Love is not here the sentimental emotion of the ordinary novel or play, but the power that purges the weaknesses and vivifies the dormant nobilities of men and women. —*The Academy, London.*



The temperament of Julie Le Breton, who had such a contradictory carriage, animation, artfulness, and the intense fascination of something over-brilliant, over-living—a charm that both repelled and attracted.—*Louisville Courier-Journal.*

Julie Le Breton is a very glorious human creature, tingling with vitality, actuality, and individuality.—*Chicago Post.*

Mount Rainier, the Glacial Peak which is to furnish Power to Many of the large Cities of the West

Harnessing a Glacier

NO more remarkable enterprise has ever been projected in the great Pacific Northwest than the plan, now well under way, of harnessing the mighty glaciers of Mount Rainier to supply the growing cities of Puget Sound—Seattle, Tacoma, Everett—with light, heat, traction, and industrial power. Next to the harnessing of Niagara no electrical enterprise in the whole country, perhaps, presents more striking and picturesque features.

The outpourings of the Mount Rainier glaciers offer a practically ideal source of electrical power, both on account of the constancy of their flow and the remarkably sharp descent at which they pitch down the mountain-side. The peak itself, rising to a height of 14,500 feet, and exposed to the moisture-bearing winds that for certain months of the year blow almost incessantly from the Pacific, gathers an immense weight of ice about its summit. The average annual rainfall on Mount Rainier is not less than one hundred and fifty inches—or more than three times as much as in New York city. Nearly all this moisture is precipitated in the form of snow, which, converted into ice under pressure, melts continuously about the lower edges of the sixteen great glaciers which form the Rainier ice-cap. This supply of water, too, is singularly constant. Even the slight diminution of flow in winter—which on Puget Sound is rather a rainy season than a winter as Easterners understand a winter—is compensated for by the fact that the spongy soil of the national forest reserve below the snow-line is then the source of an unusually heavy flow of water, thus fully making up for the lessened volume issuing from the glaciers above. The daily flow, too, is regulated throughout the year in accordance with the well-known phenomenon of "glacial tides." The sources of the streams rise—that is, to their maximum height, during the early afternoon, when the sun is hottest and the glaciers melt the fastest,—so that the increased volume of current reaches the power-house down stream just at the hour of early evening, when the demand for electricity is greatest in the cities in the valley below. The credit for this unique enterprise of glacier-harnessing is due to the Stone and Webster electrical management of Boston, which already control traction and lighting plants in the Puget Sound cities, including the new "Interurban" between Seattle and Tacoma; and work on it is already progressing, with the expectation that it will be completed early in 1904. When finished it will include some of the most remarkable arrangements known to engineering science. For one thing, it involves the creation of a waterfall nearly nine hundred feet high. The Puyallup River has been dammed at a point near where it emerges from the glacier, and from the pool thus formed water is carried through a flume of very gradual descent along a loop which follows the course of the river for rather more than ten miles. Having reached a point where the river bed lies nine hundred feet below in the cañon, the flume discharges itself into a "forebay," or reservoir. Out of this reservoir pipes seventeen hundred feet long and leading downward at an angle of forty-five degrees hurl their streams against four giant impulse-wheels set in the power-house. The pipes, which are of one-inch steel with a diameter of four feet at the upper end, taper to a five-inch nozzle at the bottom, from which the water will issue at a velocity of nearly three miles a minute. One of these streams, it is calculated, would instantly break through the thickest oak plank or penetrate in a short time a sheet of ten-inch steel. In appearance it will resemble not so much a stream of water as a great, unmoving bar of ice. Strike it with a crowbar and it will ring out like an anvil. All this overpowering force, instead of destroying the wheel, will set it rotating at the tremendous velocity of seven thousand feet a minute, generating twenty thousand horse-power, capable of raising ninety-nine thousand tons a foot a minute.

It seems probable that eventually most of the work done in a whole chain of cities—from Olympia to British Columbia—will be performed by this gigantic volcanic peak.

Map showing the exact Lines to be followed in the Transmission of Power from Mount Rainier to Tacoma and Seattle

The Reformation of Bullfinch

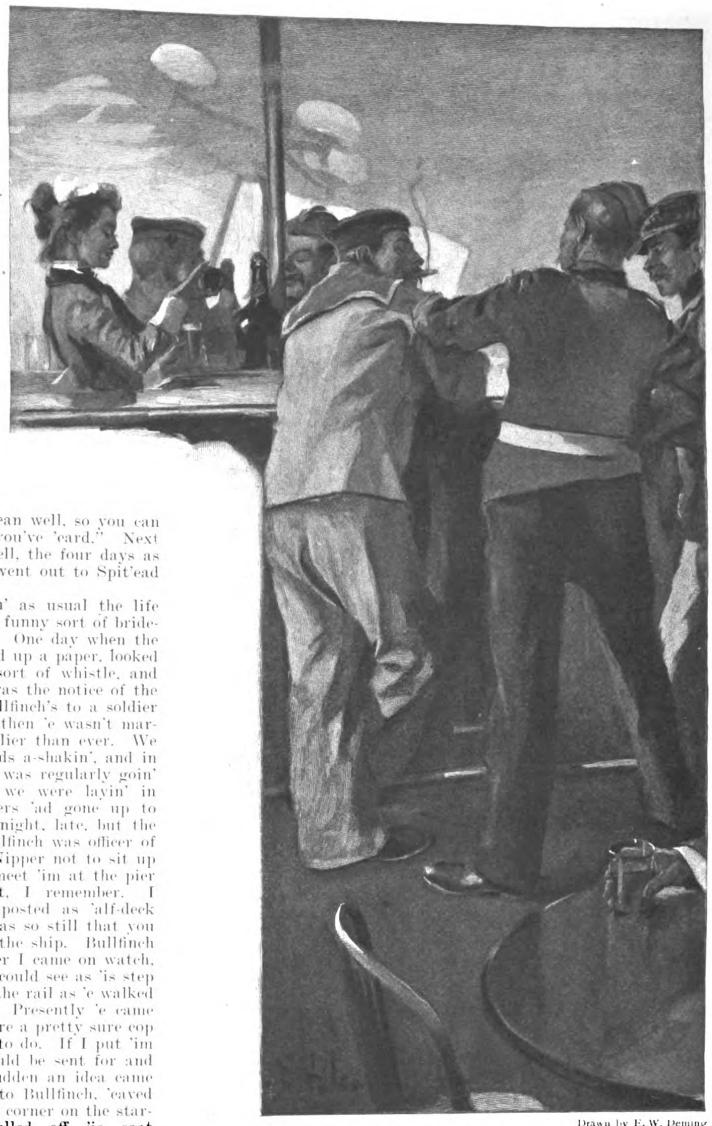
A Complete Short Story by W. E. Cairns

ONE morning I was finishing my breakfast in the ward-room when the concussion of a gun fired by a neighboring ship aroused the attention of us all. The clammy white vapor surrounding us hid from our view all but a few yards of tumbling gray-green seas, which shouldered their lazy way past our black sides. Yells and groans swelling and vibrating through the clinging fog around us told in deafening discord of the neighborhood of our unseen consorts. The fleet was arranged in three parallel columns, and we were the last ship in the column of cruisers; the columns were only a few hundred parts apart; the ships in each column were closer still, but no eye could pierce the white mist which enshrouded us, and the infernal din alone told us of the accompanying fleet. As I made my way forward I saw the captain, bulky in his shiny oilskins, watchful on the bridge, his figure looming in grotesque exaggeration through the fog. I must have stood, fascinated by the novelty of the situation, for some considerable time, when I became suddenly aware that some one was standing beside me in the shadow of the gun-shield. I looked round with a start. It was Private Lester, his ruddy face shining over the turned-up collar of his great-coat, his mustache covered with little beads of moisture, little beads of which also sparkled on his grizzled hair and were thickly powdered over his clothing. Lester saluted me, and apologized for his intrusion.

"Ever seen the fleet in a fog afore, sir? Lord, I remember just such another scene a few years ago. Bullfinch, 'im as I pointed out to you, sir, when we was talkin' the other day, 'e was officer of the watch in us. Ran up almost aboard of our next a'ead in a fog, 'er not 'avin' no proper buoy out. Well, the officer of the watch in 'er 'e got scared and opened on Bullfinch, and then we 'ad a fair treat. My word, Bullfinch 'e fair wiped the floor with 'im. All in good part, you understand, sir, but 'e 'ad the gift of language 'ad Bullfinch. That were before 'e were reformed, as you might say. 'E wouldn't talk so ornermental now. Not unless 'e were excited fearful."

Drawn by E. W. Deming

"Why haven't you placed him under arrest?"



"Tell me how you converted him, Lester. You promised me the yarn the other day."

Lester grinned. It's a good many years now since I was first shipmates with Bullfinch. It was in the Channel, sir, and I was in the *Bella*, a third-class cruiser of the same type as the *Pleione*, the first of her class. Well, as usual we got talkin' about the *Bella's* officers, and soon got good characters of all on 'em but the captain. 'Is name it was Kerr-Smith. Like most captains 'e 'ad a lower-deck name, a sort of fancy name you know, sir, and there weren't no 'yphen about it, sir, not much. No, 'is pet name was plain "Satan," and you can take your oath as 'e 'ad earned it. The first lieutenant 'e was Nipper Jones, no bloomin' 'yphen about 'im, just plain Jones called the Nipper. There was three other lieutenants, one for navigatin' duties, the junior being Bullfinch. Now Bullfinch 'e was the pet of the ship in a month. 'E kept us all a-goin'. 'E 'ad pals in every ship. 'E was a good man was Bullfinch. No one could 'elp a-likin' 'im. And a ladies' man! Whenever a bit of skirt came aboard, and you'll understand, sir, that in the Channel, there's sometimes a good deal of serciety work a-goin', when most of the officers they 'ides in their cabins with their curtains drawed a-pretendin' as they was fair sick at seein' the ship a-turned into a fancy fair; till they've been dug out into their number one frock-coats, when they goes a-smilin' and a-chattin' round the ladies, a-'andin' them cups of tea, and a-showin' the guns and such other gear. It fair sickened me at times, me knowin' the way they used to pretend as it was all a fair nuisance and so on. But with Bullfinch it was quite different. 'E loved 'em all and was proud of it, which was 'onest anyway, though for myself I couldn't 'elp lookin' at it as 'is weak point. Well, the cruise went on and at last we found ourselves a-layin' at Spit'ead. It was in the summer time, and Southsea is a pretty lively place. The officers 'ad a great time, and Bullfinch, as usual, he fairly shone. One of the ward-room servants 'e told me that Bullfinch 'ad been fair copped by one of these 'ere Southsea girls. Instead of flyin' about from one bit of skirt to another 'e was always a-glued to the side of one in pertickler. I saw the girl several times. Bullfinch used to 'ave 'er and 'er ma to tea in 'is cabin. The Pay, whose wife lived near Devonport, used to take on the old woman, who 'ad an eye like a recruitin' sergeant, showin' 'er photergraphs and such like, and Bullfinch 'e used to set a-makin' eyes at the gal and a-whisperin'-like. Oh, it was a fair case. The officers began to get scared that 'e meant to marry 'er, and was very much concerned about it. We went back again to Portsmouth after our run to Portland, and again we was sent inside, though this time they anchored us out in the stream. We'd no sooner got things settled down than Bullfinch went off on shore in 'is very best number-one blue suit with a stror 'at on, all smart. In course 'e'd gone after 'is girl. Directly afterwards we 'eard that 'e'd got four days' leave on "urgent private affairs," which is a good guff for a spell o' on shore. Every one was glad to 'ear of this, because we thought that it would take 'im away from the girl, but it was much more serious than that. And this is where *I* comes in. Just after we'd 'eard about Bullfinch's leave, I was on shore one afternoon on a little bit of urgent private affairs of my own. Now I 'adn't been ashore for two months, and I met a lot of pals, 'avin' belonged to the Forton division at one time, and my private affairs took me into a good many pubs, in fact from one end of the 'Igh Street to the other. Afterwards I thought I would take a stroll down to the beach. I fetched up all right, and after walkin' a little way along the beach I found a boat a-layin' on its side. It was just beginning to get dusk, being early in September, and though plenty of people were about no one took no notice of me as I went down the shingle and lay down under the lee of the boat where no one could see me unless they looked for me special. I put my cap under my 'ead and fell fast asleep in a brace of shakes, and slept on, as peaceful as a child, till I was wakened by voices just beside the boat. At first I couldn't rightly think where I was, but the 'ard shingle soon reminded me, and then I see that there were two ladies a-settin' on the

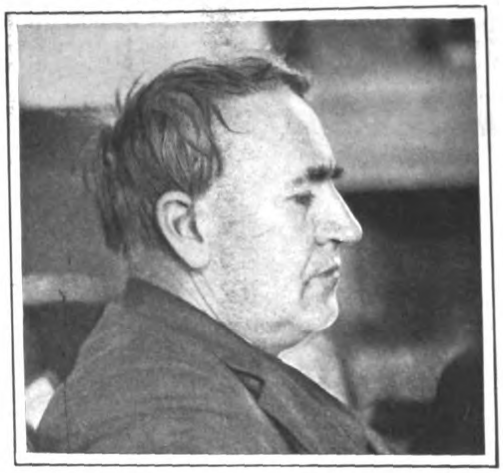
boat as I was a-layin' underneath of. They seemed to be talkin' confidential-like, but I didn't take no perticklar notice till I 'eard one on 'em say something about the *Bella* and Mr. Finch. Then I cocked my ears, as you may imagine, especially as I spotted that one of them was the young woman as was carryin' on with Bullfinch. "Yes," she was a-sayin', "to-morrow will see the end of all this shilly-shallyin'. I've got him to the scratch at last, but it's taken longer than I expected. He's to meet me in town to-morrow mornin', and I shall be Mrs. Finch by this time to-morrow evenin'," and she heaved a sigh, fit to bust herself. My blood almost ran cold at the thought. Now I saw what the "urgent private affairs" were. In course, it was to-morrow as 'e was goin' on four days shore leave, and to think that 'e'd come back to us a married man, with a wife as couldn't 'ardly a-bear the sight of 'im. Well, I went back to the ship and asked to see Number One. Nipper 'e were very short with me at first. "Now, then," 'e said, "You want to see me, do you? Well, out with it." So I pulled myself together and told 'im what I 'ad 'eard. When I 'ad finished 'e said, "Well, of all the 'ard cheek! 'Owever, I suppose as you mean well, so you can go below, but keep your 'ead shut on what you've 'eard." Next mornin' Bullfinch was due to go on leave. Well, the four days as 'e 'ad leave for slipped by. We weighed and went out to Spit'ead to join the rest of the squadron.

When Bullfinch came back, instead of bein' as usual the life of the ship, he was always mopin' by 'imself. A funny sort of bridegroom, 'e was. 'Owever, there came a change. One day when the officers were at breakfast, Number One 'e picked up a paper, looked at the births and marriages column, gave a sort of whistle, and shoved it across to Bullfinch. In that paper was the notice of the marriage of that bloomin' Southsea girl of Bullfinch's to a soldier officer in London by special license. By gum, then 'e wasn't married after all. After that 'e began to get livelier than ever. We soon spotted as 'is eyes were bloodshot, 'is 'ands a-shakin', and in fact, not to put too fine a point on it, that 'e was regularly goin' in for drink. The end came one night as we were layin' in Lough Swilly. Satan and some of the officers 'ad gone up to Derry by train; Satan was comin' back that night, late, but the others were not comin' back till next day; Bullfinch was officer of the day, and the Owner 'ad left word for the Nipper not to sit up for 'im as 'e would be late. 'Is galley was to meet 'im at the pier at twelve midnight. It were a dark night, I remember. I came on watch at twelve o'clock, and were posted as 'alf-deck sentry. Everythin' was quiet, and the night was so still that you could 'ear anythin' movin' some distance from the ship. Bullfinch took a turn or two across the quarter-deck after I came on watch, and then went to his cabin. As 'e passed me I could see as 'is step seemed uncertain like, and 'e slid 'is 'and along the rail as 'e walked as if 'e liked to 'ave somethin' to steady 'im. Presently 'e came back, sat down, and soon fell into a doze. It were a pretty sure cop when Satan came aboard. I didn't know what to do. If I put 'im in 'is bunk and reported 'im sick, the Doc. would be sent for and the truth was bound to come out. All of a sudden an idea came into my 'ead. I ran across quick as lightnin' to Bullfinch, 'eaved 'im up in my arms and carried 'im into the dark corner on the starboard side under the poop ladder. I pulled off 'is coat and cap, threw my coat round 'im, and stuck *my* cap on 'is 'ead. Then I pulled on 'is coat, turnin' up the collar as 'igh as it would go, jammed *'is* cap on my 'ead, pullin' the peak well down over my eyes, a fashion in which 'e used often to wear it, and went to the gangway to receive the Owner. Satan stepped on board and we all saluted. Well, 'e went aft and I followed 'im respectful like, as I've noticed the officers do. Suddenly 'e said, "Where's the 'alf-deck sentry?" I thought I should 'ave fainted. 'E didn't wait for no answer, for at that moment 'e spotted Bullfinch with my coat and cap on 'im, layin' in an 'eap on the deck. 'E went on, "Why, there 'e is!" Then 'e turned fierce-like on me. "Why 'aven't you placed 'im in arrest. Who is 'e?" "Private Lester, sir," said I; "I only just noticed 'im." Well, send for the Master-at-Arms and the sergeant of marines. Relieve that sentry, and place 'im under arrest." With that 'e turned on 'is 'eel and went into 'is cabin. 'Ere was a pretty do! 'Owever, as well be 'ung for a sheep as a lamb, so I nipped across the deck, picked up Bullfinch again, Lor' bless you, sir, 'e weren't no light weight—and ran to 'is cabin with 'im. I 'eaved 'im into 'is cot, threw 'is own cloak and cap on to 'im, put on *my* own coat and cap again, went back to my post and sung out, "Pass the word for the Sergeant of Marines and the Master-at-Arms." I felt my voice sort of tremble I were that excited. The Quartermaster of the watch 'e came back to where I was. "Ullo," 'e said, "what's wrong with you?" "Captain's orders," I said, quite respectful. "The captain said as I was to be put under arrest for drunk." The Quartermaster 'e said nothin', but caught me by the arm and pulled me over to the deck light. 'E took a good look at me then. "Well, I'm ———!" said 'e, "why the man's as sober as me." Meanwhile I could 'ear the snores of Bullfinch from 'is cabin, faintly in course, but quite distinct. What was more, both the Quartermaster and Sergeant could 'ear them too, and I see them look round to listen for a moment and then look at each other. Well, by and by Thompson 'e came along with two men, one 'e left in my place, with the other 'e escorted me to the torpedo flat where I was to spend an 'appy night.

Drawn by E. W. Deming

"I was on shore one afternoon on a little bit of urgent private affairs of my own"

In the morning—it were only a little after seven o'clock—I sent a message to Mr. Finch to tell 'im I must see 'im for 'alf a minute. At last 'e came down the ladder and then I up and told 'im exactly what 'ad 'appened. Well, 'e was fair knocked out. I've never seen a man take on so and 'ope as I never will again. 'E walked up and down the flat with the tears a-regular coursin' down 'is cheeks, a-cursin' 'imself for a senseless fool. Well, he left me and came back in about an hour looking more cheerful. "It's all right, Lester," said 'e, "I've seen the captain, and 'e 'as been as kind as if 'e were my father. 'E 'as noticed this curse as 'as been over me for some time, and 'e said 'e calculated on some shock bringin' me to my senses, so I'm to 'ave another chance."



There was one thing I wanted to know, so I made so bold as to ask Mr. Finch 'ow 'e 'ad got ashore at Portsmouth when 'e 'ad gone on 'is leave. I didn't say nothin' about the weddin', not wishin' to 'urt 'is feelin's—and likewise 'ow 'e 'ad got back to the ship. I could see 'e didn't much fancy tellin' me, but 'e smiled sort of sickly and said as 'e 'adn't been out of the ship all the time. In fact that the night afore 'e was to 'ave gone some of the officers—'e didn't say which—'ad tied 'im up while 'e was asleep and 'ad stowed 'im away in the ward-room store, down in the steerage flat below the water-line, where 'e couldn't possibly make 'imself 'eard. "They wanted me to promise not to do somethin', Lester, somethin' as my 'eart were set on, and at last I promised not to do it for a month, so I was let out the night as my leave was up." My word, so that were 'ow it was. "I 'opes as you've fixed it up all right now, sir." I said. "Oh," 'e said, said 'e, "I don't bear no malice. I think now as per'aps they acted for the best." And so they 'ad.

The Edison of To-Day

By T. C. Martin

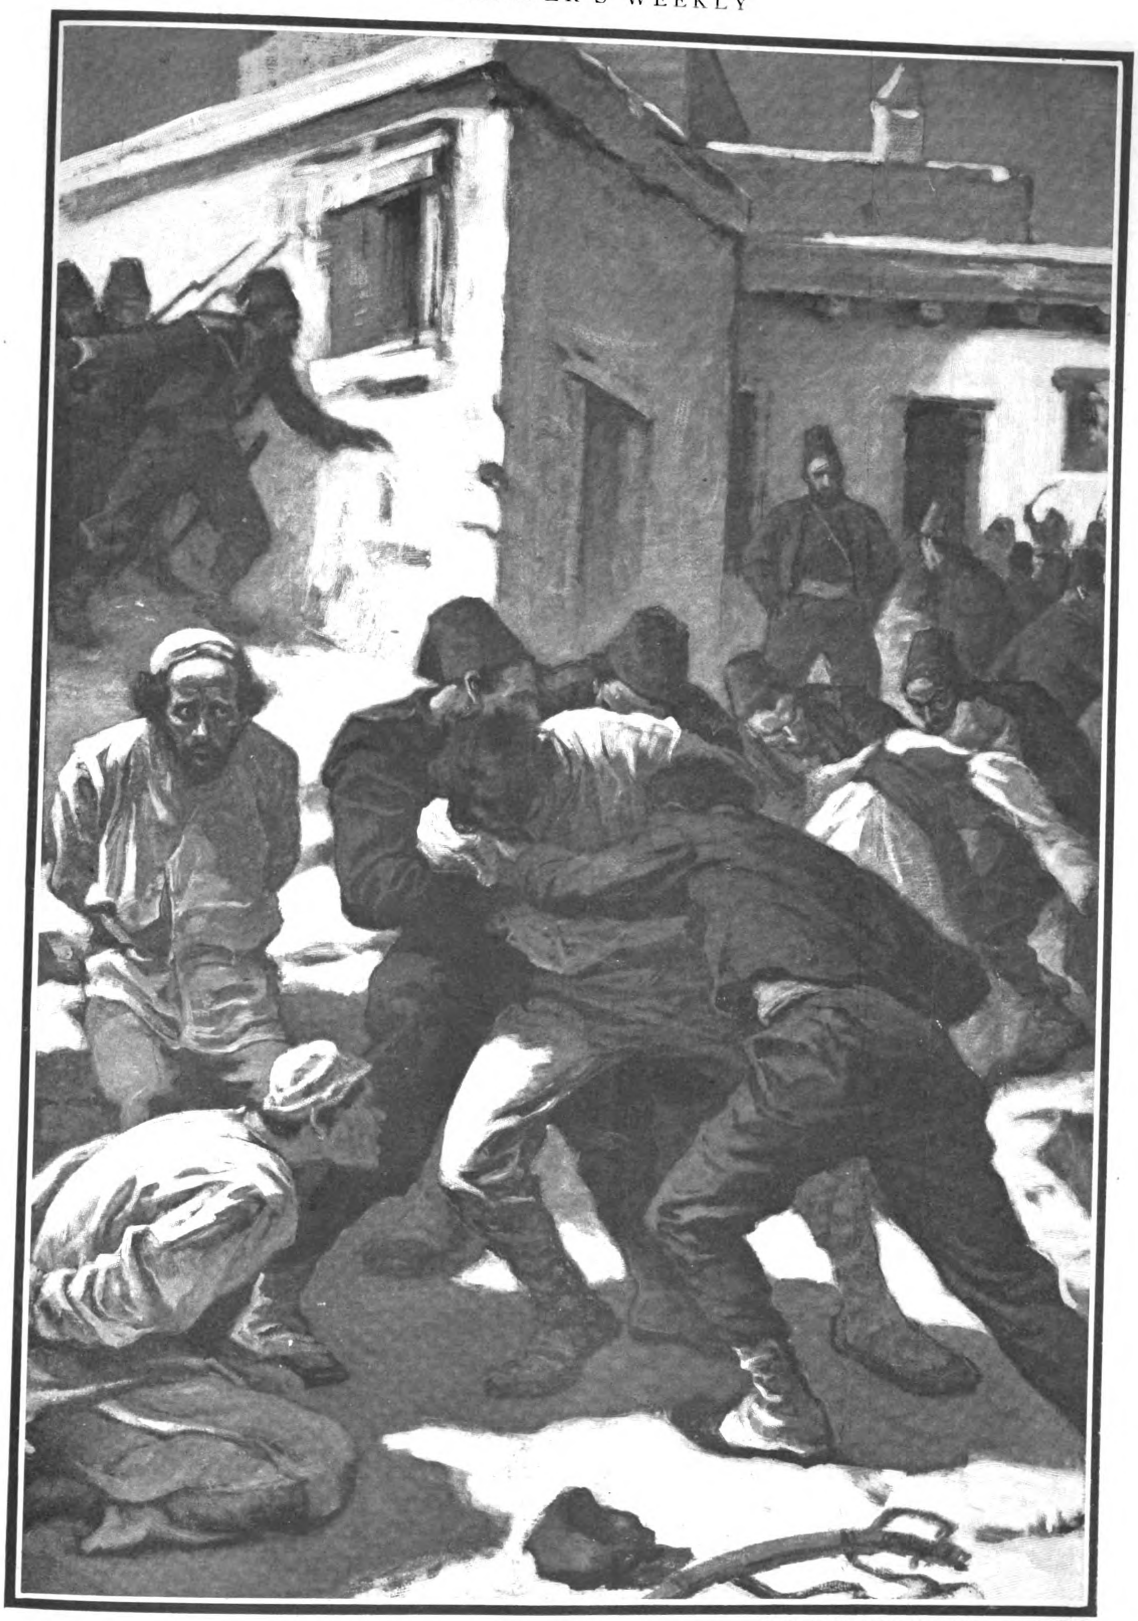
A RECENT item of news from the United States Patent Office furnishes reminder of the manner in which Thomas Alva Edison maintains his primacy as the typical American inventor. By the end of March he had taken out no fewer than 791 patents, and his ordinary fees have amounted to the neat little sum of $51,000. Such figures relate, however, only to this country. Every Edison invention of any importance has also been protected by patents abroad, so that the actual patents bearing his name, in many languages, count up into the thousands; and the mere cost of securing them, in the way of fees, would be a handsome fortune. As to the preliminary work of experiment, the incidental legal labor in getting the strongest claims, and then the herculean task of defending these grants against all comers— that is represented by millions of dollars.

The latest Portrait of Mr. Edison

It is this expense of maintaining a patent that induced Mr. Edison to go slow of late years in resorting to the Patent Office. He still takes out patents. Despite the fact that he is between fifty and sixty years old, he is likely to be paying for such documents through the next quarter of a century; but he prefers now the policy of concealment, and operates more and more under a régime of "trade secrets." To his way of thinking, the American patent system is the best in the world, but it does not safeguard the inventor as it ought. The cost of patent litigation is tremendous; the delays are frightful; and often by the time a favorable decision is won, he has effected some radical improvement that renders earlier ideas useless. A few years ago, sitting with some friends in his private library at Llewellyn Park, on the Orange Mountains of New Jersey, he made a calculation of the royalties fairly due on a prime invention then under trial in the courts. The amount was three million dollars. The case has been won, but up to this time neither Mr. Edison nor his plaintiff company has ever received a cent of that money; and neither of them will ever get a cent. One need hardly wonder, then, that a man who has been obtaining a patent every fortnight for over thirty years should slacken, influenced by the logic of such facts, and be a bit pessimistic nowadays as to the inestimable value of mere sheets of parchment with a red seal.

But the tide of invention flows as strongly as ever in the Edison laboratory, and while its master may not, as of old, crowd a volcanic lifetime of explosive discovery into continuous sleepless vigils of forty-eight or seventy-two hours, he is just as facile, fertile, and resourceful as of yore. No inventor was ever more skilful in gaining the support of capital; none was ever more successful in keeping the enthusiasm of his associates up to white heat. An "Edison man" remains an Edison man to the end of the chapter, and is proud of the stamp left upon his career or his personality by the great spirit with whom trials and triumphs have been shared. It is a curious fact often overlooked in Edison's life that he has always been surrounded by a willing host of coworkers, but has always held easily his leadership among them. This is by no means true of other inventors and workers; and thus may be explained his frequent successes and rare failures. Some powerful thinkers, whether from instinctive distrust or unavowed jealousy, endeavor to hammer out their conceptions in lonely struggle, and names could be mentioned here of electrical inventors whose curse seems to be this sterile seclusion. In Edison's case, the sunny, kindly temperament of the man makes for friendship; and the readiness to use anything that lies handy as a means of attaining the goal, compels him to employ talent as freely as he does raw material.

And he could keep a whole army busy. There never was an inventor who had more irons in the fire. It is the fault of frail human nature that they are not all kept hot at once. With brief fallow seasons, he has been at it, hammer and tongs, planning and scheming and perfecting, ever since he was a gaunt, lank telegraph operator roving the West, and marking his course by the stains of his battery solutions. A great many first-class inventors are sharply concentrated along one line. Edison is, if anything, spread out too thin. His keen curiosity, alert mind, and undying discontent with things as he finds them, drive him into a dozen lines of investigation at once. Just at the present moment, for example, the public has a notion that he is simply striving to perfect a new storage-battery about which so much has been said. He is; but, like the Japanese juggler, he is also balancing half a dozen other little affairs in the air, and giving them the deft spin or kick at the moment when they might drop. Besides the battery, there are the cement-works near Easton, Pennsylvania, where a score of new ideas and devices are being licked into shape, and cement turned out meantime. Sundry improvements have lately been made in the phonograph. Over in Europe his magnetic ore-crushing inventions are being applied on a big scale to replenish the supply from the exhausted iron-beds of England. Half a dozen new things are going forward in electrical experimentation at Orange; and cheaper, better metres are among them. Nor has the earlier interest in recondite phenomena been lost; while aside from work of his own, Mr. Edison has, it is said, placed his own ripe genius and weighty experience back of the Marconi wireless telegraph enterprises.



Mr. Edison in his Study

Photographs taken especially for Harper's Weekly

As to the new storage-battery, there is little to add that people who care about such matters do not already know. Familiar forms of battery are of lead, to which the objections are usually made of great weight, small storage capacity per pound of active material, and rapid deterioration. Edison has brought out a battery with a sheet-steel jar, thin perforated sheet-steel plates or elements, an alkaline solution, and active materials of iron oxide and nickel intermixed with graphite carried in tiny briquettes in the windows of the steel plates. Since the battery was first brought out, the rates of charging and discharging its current have been doubled, the weight has been considerably reduced, and other improvements have been effected. For automobile operation, it has already had encouraging tests.

Wealth is simply one of the greatest powers which can be entrusted to human hands: a power, not indeed to be envied, because it seldom makes us happy; but still less to be abdicated or despised: while, in these days, and in this country, it has become a power all the more notable, in that the possessions of a rich man are not represented, as they used to be, by wedges of gold or coffers of jewels, but by masses of men variously employed, over whose bodies and minds the wealth, according to its direction, exercises harmful or helpful influence, and becomes, in that alternative, Mammon either of Unrighteousness or of Righteousness.

Ruskin.

We cherish life; we abhor bloodshed; we have no sympathy with your juvenile points of honor: we are, in short, a civilized people: and seeing that Success has made us what we are, we advise other nations to succeed, or be quiet.—*George Meredith.*

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

MANY BEVERAGES are so vastly improved by the added richness imparted by the use of BORDEN'S EAGLE BRAND CONDENSED MILK. The Eagle Brand is prepared from the milk of herds of well fed, housed, groomed cows of native breeds. Every can is tested, and is therefore reliable.—[*Adv.*]

TIME, said Franklin, is the stuff of Life. Telephone service saves time. *Verb. sap.* Rates for Residence Service in Manhattan from $48 a year. N. Y. Telephone Co., 15 Dey St., 111 West 38th St., 215 West 125th St.—[*Adv.*]

PURE blood, bright eyes, bounding step, high spirits, good health—synonymous with ABBOTT'S, the Original Angostura Bitters, intelligently used. Test it.—[*Adv.*]

DON'T show your bad taste, but insist on having COOK'S IMPERIAL EXTRA DRY CHAMPAGNE of purest vintage always.—[*Adv.*]

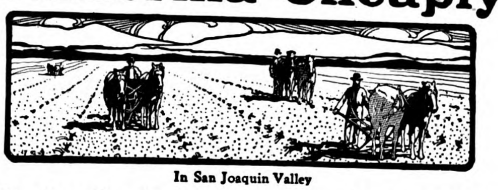
BRONCHIAL Troubles are often permanently cured by PISO'S CURE FOR CONSUMPTION. 25c. per bottle.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

ADVERTISEMENTS.

Pears'

People have no idea how crude and cruel soap can be.



It takes off dirt. So far, so good; but what else does it do?

It cuts the skin and frets the under-skin; makes redness and roughness and leads to worse. Not soap, but the alkali in it.

Pears' Soap has no free alkali in it. It neither reddens nor roughens the skin. It responds to water instantly; washes and rinses off in a twinkling; is as gentle as strong; and the after-effect is every way good.

Established over 100 years.

Parks for Street Dwellers

By Samuel Howe

See page 627

THE East Side is to be congratulated! At last, after years, playgrounds, gymnasiums, running-tracks, and shower-baths are an accomplished fact. The next few weeks will see the completion and formal opening of Seward Park—a playground for the children of the East Side of New York which is practical rather than a picturesque scheme of gardening.

In the former park plans there were picturesque winding walks, pretty flower-beds, many shade trees and bushes, but few, only a few, feet of space in which play was at all possible. The new design embodies shade trees in the right place, a solid bank of green shrubs and flowering plants, well protected with wire and iron fences, a shelter for the mothers and little ones, a liberal bath-house, with retiring and toilet rooms, accommodations for the band, properly accentuated features for statuary and for fountains, and a big, liberal open space laid out as running-track, covered with a preparation of fine cinders and clay, and an open gymnasium.

Many of the thieves' dens in the crowded tenement quarters of the East Side have been cleared away. Cat Alley, Bottle Alley, Bandits' Roost, Gotham Court, are merely unsavory memories of the past. Other undesirable rookeries have been torn down. Mulberry Bend has become Mulberry Park; Bone Alley, Hamilton Fish Park; Thieves' Alley, Rutgers Square; The Hook, Corlears Park. On the West Side, Little Italy will in future appear as the namesake of Thomas Jefferson. Tompkins Square is to have a gymnasium in one corner arranged so as not to destroy the trees. Two new parks are about to be made, one at the foot of Thirty-first Street and First Avenue, covering three acres, and another, of the same size, running from Seventy-fourth to Seventy-sixth street and extending to the river.

Thomas Jefferson Park, running from 111th to 114th street, contains fifteen and a half acres, and will have two seven-lap running-tracks, a forty-foot bulkhead promenade, gymnasia, shelter, and bath. De Witt Clinton, Fifty-third Street and Eleventh Avenue, contains seven and a quarter acres, and will also have a running-track and gymnasium, with farm gardens for the children.

The rest of the parks named contain from three to four acres, each having running-track and gymnasium, in addition to a shelter and bath-house. Connected with these buildings are clubs for the study of languages, history, cooking, stenography, civic responsibilities, and even of ethics and æsthetics. The very existence of these clubs shows that there is a vital inherent reason prompting us to foster the love of art among the people by good architecture, sculpture, painting, and music.

The modern spirit here indicated has prompted the construction of parks in Cleveland, Buffalo, Harrisburg, Milwaukee, and Baltimore, following the inimitable lead of Boston. Philadelphia also is to have parkways, changing the course of the Schuylkill River with an embankment five-eighths of a mile long. The new designs for parks in Washington are ambitious beyond anything ever attempted in this country.

Is it all worth while? Can these young citizens do their work of life the better for what is being done for them? Speaking from actual knowledge and close personal touch with them, I believe in the East-Siders—in their ultimate lasting improvement by the patient and timely introduction of athletics. I believe in the great value of their humanity, in their quick response to appeal, in their keen competition as illustrated in out-of-door exercises.

This equipment for the making of an American citizen, who shall be an intellectual workman, robust, healthy, is a paying investment. Gymnastics and athletics manufacture energy. The young people jostle each other to examine the sculpture, and listen breathlessly to a lecture on the subject of art. Their whole attitude is imbued with the desire to learn, to understand, to love.

HOW
Can I Convince You
that I have absolutely sound securities?

If you will let me prove to you, in any way you like, that these securities are gilt edged and rock-ribbed, guaranteed to net 5%, without the chance of losing a cent, I can sell them to you.

I would be glad to have you make the most careful and scrutinizing search of my record—find out whether I will do just as I agree to or not. I will assist you in every way, or would be glad to have you inquire through any source not proposed by me. You will find me safe, honorable, reliable and responsible. I will personally see to it that you do not regret making an investment in North Dakota, if you make it through me.

I own and offer the following gilt-edge farm mortgages, to net purchaser 5% per annum:

$3,000,	5 years	$1,400,	5 years

W. T. Thomas in his Oldsmobile Racer "Pirate," on Ormond Beach

Racing on the Sand

AT Ormond Beach, Florida, there are thirty miles of smooth, solid beach. Such a speedway has its advantages. The auto tournament recently held there showed that the sand course is almost ideal for tests of speed and endurance. In Europe the autoist—driver and manufacturer—has the benefit of good roads and the co-operation of the government in important racing events. The coming Paris-Madrid race, in which three hundred machines are entered, would be impossible here under present conditions. Speed contests are not permitted on the public roads. Our racing events have been confined to circular tracks and to short and insufficient straightaway courses. Henri Fournier's record of a mile in fifty-one and four-fifths seconds on a straightaway course, contrasted with Winton's one minute two and a quarter seconds on a circular track, pointed the way. Clearly the end to be sought was a course of natural construction, straight, unobstructed, and extensive; and this is found in the Ormond-Daytona Beach. There are only two feet of tide, permitting a racing surface from three hundred to five hundred feet in width at low tide, and a practicable surface of sufficient extent at nearly all hours, except during storm tides.

The races of last month took place at the Ormond end of the beach. The course was surveyed for twenty miles, and mile-posts were erected over the entire distance. The timing arrangements were elaborate. Ten miles of telegraph-wire was strung along the beach, and the Morse electric timing-clocks were used. Captain Henry G. Opdycke, of the Automobile Club of New York, with the assistance of the vice-president of the Chicago Automobile Club, acted as official timer.

The results of the three days' racing were notable. On the first day Winton did a mile in fifty-six seconds, his previous record being one minute two seconds; Oscar Hedstrom broke the American motor-bicycle record for one mile, making the distance in one minute nine seconds; and W. T. Thomas, of Detroit, surpassed the record of one minute thirty-five and three-fifths seconds for machines under 1000 pounds, doing his mile in one minute six seconds on an Oldsmobile. On the second day Winton made a mile in fifty-eight seconds; Thomas, on his 825-pound Oldsmobile, a mile in one minute eight and four-fifths seconds; Hedstrom did a mile in one minute fifteen and one-fifth seconds on his Indian motor-cycle; and W. W. Austin won the one-mile motor-cycle race for the Florida championship, making the distance in one minute thirty-six seconds. On March 28, the last day of the races, Winton, in his famous "Bullet," came within two-fifths of a second of Fournier's American record for one-mile runs, doing the third heat of the race in fifty-two and one-fifth seconds, and Hedstrom broke his own and previous American mile records for motor-bicyclers, making the distance in one minute three and one-fifth seconds.

Modernized Existence

ALADDIN and his wonderful lamp are not more astonishing than the possibilities of the apartment-house to-day, where the dining-room is both joy and beauty without the thralldom of care which accompanies the employing of the servant.

The servant question has become, with its complications, a problem with an answer in fractions, the only real and equal solving of which seems to be found in the elimination of the prime factor. And at this suggestion we hear the repetition of that most hackneyed of quotations from Meredith in which man may live without literature, sociability, and mirth in general, but must ever hang to the cook. But so complicated has become the problem, that neither friends nor books avail to comfort when the cook is rampant. The answer has come, however, in a way most pleasing, the demonstration of which is neither public dining-room, nor practicability evinced in the long-promised by scientists, the pill and pellet system. But it is the encouraging of a healthy and vigorous cultivation of appetite by the promise of fulfilment "in the good old way"—the way which has formed a feature in all festivities of man since the beginning of time.

The solution is a dining-room delivered to order, with all the necessary units which unite to make the all-glorious whole intact.

In a recently erected apartment-house we find the wonderful demonstration of "all the comforts of home" without the discomforts of home rule. All the conveniences, the most modern of man's ingenuity, are here.

The apartments are of any desired number of rooms, ranging from two to ten. The lady of the house, when the utilitarian side of existence asserts itself, needs but call in the assistance of the telephone, and the problem is solved.

Standing in her own apartment in slippered feet and summer gown, with a blizzard raging outside, she may order a dinner of strawberries or turkey and plum pudding, as her mood dictates. Appoint the hour, name the number of plates, and her part of the family repast is accomplished. No irate cook or waiting-maid can pounce upon her at the eleventh hour before the arrival of the guests, with a threat of sudden leave-taking, or burned dinner, to be appeased by what only the skilled housewife of to-day may tell. The reason why this common domestic catastrophe may not occur is a simple one: there is no cook known to the mistress, or at least only one with whom she has but a speaking acquaintance.

When the appointed dinner hour arrives there is a gentle knock, soft-footed attendants enter, and, presto, change! the billiard-table is billiard-table no longer, but a dining-table to which the mistress of the house need feel no hesitancy in inviting the most fastidious of guests.

Linen, silver, glass, china, service, and food all appear as though by magic from behind the confines of the hall doorway. Even the bouquet on the table appears as though from the magician's wand. In course after course comes the dinner, hot and smoking as though but just lifted from a fire no farther distant than the next room.

The wheels and cogs of this pleasing scheme may be found in a little serving-room which is built on each floor of the house. The food is sent from the kitchen in the basement, where the white-clothed cooks make merry with kettles of copper and tin, to the serving-room on the designated floor by means of an elevator especially contrived for the purpose, and which connects immediately with the serving-room. In this room the carving and last preliminaries are accomplished, and each course is served from here.

In a corner of the basement kitchen sits

The Automobile
that solves *the* problem
of rapid, safe and pleasant motor travel on all kinds of roads, in all kinds of weather—is the Cadillac Automobile. If you know of an auto fault, you will find it corrected in the Cadillac. Very powerful engine; entirely new transmission gear; perfect, sensitive steering mechanism; powerful brakes. Simplicity joined to durability; speed united with safety; strength wrought in grace. The
CADILLAC
is made as a runabout with seats for two, at $750. With detachable tonneau that converts it into a handsome and roomy touring car for four, $850—tonneau seats either facing forward or vis-a-vis, giving a comfortable support for the back. The body design of the Cadillac is a very pleasing effect for either city streets or country roads, and the appointments luxurious. Our free illustrated booklet—M—gives address of agency nearest your home where the Cadillac may be seen and tried.
Cadillac Automobile Company

Over a Million Barrels a Year

Schlitz

Those are sales of Schlitz Beer making it the leader of all Milwaukee beers, by far.

That's a result of maintaining absolute purity. We doubled the necessary cost of our brewing to have Schlitz Beer right.

The Result Is
A Million Barrels a Year

We have used the best materials—the finest barley—paid as high as twice what we need pay for hops.
We bored six wells to rock to get pure water.
We kept our brewing as clean as your cooking.

The Result Is
A Million Barrels a Year

We filtered all the air that touched the beer.
We filtered the beer through white wood pulp.
We aged it until it could not cause biliousness.
We sterilized every bottle after it was sealed.

The Result Is
A Million Barrels a Year

Isn't Schlitz Beer—pure beer—worth asking for, when the cost is the same as of common beer?

Ask for the Brewery Bottling.

THE BEER THAT MADE MILWAUKEE FAMOUS

EARLY MORNING

TRAINS TO CATCH. STORES TO OPEN.

HURRY UP BREAKFAST WITH

COOK'S FLAKED RICE.

ABSOLUTELY NO COOKING.

the bebuttoned butler in his pantry, to his ear a telephone, at his hand a pencil, busy taking the orders for the day. And no small allotment of the labor of this great union is his. To him fall allotment and selection of viands, home-bred and foreign, of all seasons and kinds. And a vigorous mentality must be his to withstand the strain which a hundred housewives so gladly escape. But in the period of strenuous living the great machinery of system is called into play, and the mountains of difficulty become as mole-hills of simplicity in its mighty grasp.

In the great entrance hall a reception may be held without inconvenience or annoyance to guests or landlord, so perfectly planned are the mediums of exit and entrance. While in another part of the building a club-room is found, where, in the luxury of smoking-jacket and slippers, the man may enjoy the sociability of a dozen fellows without the irksome task of host or a walk of several blocks to club-house on a wintry night.

Nor is the unexpected guest a hardship or annoyance in this most modern existence. For on every floor are daintily appointed guest-rooms for rent to the tenants of that floor. If a family desires a nurse or maid and has no accommodating room, there is no difficulty of "sleeping out" to withstand, as in the back of the building are neat little servants' rooms for rent to patrons.

All the demands of the most exacting and fastidious are quickly surmounted. And the wind of town existence is tempered by man's ingenuity to man in the modern apartment lodgings.

Correspondence

DRIVING RASCALS INTO THE ARMY

April 4, 1903.

To the Editor of Harper's Weekly:

SIR,—New York papers, dated April 3, 1903, report the case of George Archer, convicted in the Court of Special Sessions of petit larceny. While being tried, Archer was recognized by a court officer as a man convicted a year ago on the same charge, and at that time "paroled on the promise that he would enlist in the army." He did enlist. Justice Holbrook sent him to Governor's Island to be identified, and he was there recognized as a man who deserted five months ago from Fort Crook, Nebraska, after stealing $300 from officers.

It is possible that the magistrate who paroled the criminal "on the promise that he would enlist in the army" would feel insulted if told that he was unpatriotic. And it is quite probable that his Worship would have been more than astonished if any one had suggested that, instead of being palmed off on the service (to enlist in which a *certificate of good character is a prerequisite*), the offender should be given a position about the court, where he might be watched by those who knew him.

The man must have imposed on the recruiting officer who enlisted him when called upon to furnish evidence of good character—or did the *magistrate vouch for him?* When a man of this class creeps into the service, and later on his antecedents become known, his comrades are apt to make things very warm for him. Such may have been the reason why this man deserted.

It would seem that, from the view-point of civilians generally, the army is made up of the riffraff. Soldiers, as a rule, are willing to put up with all sorts of treatment for the good of the service and the country, and this without complaint. But they would prefer that the hardest blows did not come from their countrymen. It would be interesting to know how the non-military element feels on this subject.

I am, sir, L.

Take Your Choice

1 Quart $1.00 or 4 Quarts $3.20

WE PAY EXPRESS CHARGES IN EITHER CASE

For years we have been telling you about the goodness of **HAYNER WHISKEY.** Now we want you to **TRY IT.** We are willing to lose money to get you to do so, for we know if you only try it you will always buy it, just as our half-a-million satisfied customers are now doing. Remember, we have one of the largest distilleries in the world. We are the largest bottlers of whiskey in the world. We have more whiskey in our eight Bonded Warehouses than any other distiller in the world. There is more **HAYNER WHISKEY** sold than any other brand of whiskey in the world. We have been in business for over 37 years and have a capital of $500,000.00 paid in full so you run no risk when you deal with us. Your money back at once if you are not satisfied. Don't forget that **HAYNER WHISKEY** goes direct from our own distillery to you, with all its original strength, richness and flavor, thus assuring you of perfect purity and saving you the enormous profits of the dealers. You cannot buy anything purer, better or more satisfactory than **HAYNER WHISKEY** no matter how much you pay.

Don't forget that a **HAYNER** quart is an honest quart of 32 ounces, 4 to the gallon. It takes 5 of the ordinary so-called "quarts" to make a gallon. We give one-fourth more in every bottle, reducing our price just that much.

Direct from our Distillery to You

HAYNER WHISKEY

Saves Dealers' Profits—Prevents Adulteration

Send us **$1.00** for **ONE QUART** or **$3.20** for **FOUR FULL QUARTS of HAYNER SEVEN-YEAR-OLD RYE** and we will pay the express charges. We ship in a plain, sealed package; no marks to even suggest contents. When the whiskey reaches your home, try it, sample it thoroughly. Then, if you don't find it all right, perfectly satisfactory in every way and better than you ever had before or can buy from anybody else at any price, ship it back to us at our expense and your money will be promptly refunded. Isn't that fair? We stand all the expense if you don't wish to keep the whiskey. **YOU** risk nothing. We ship one quart on your first or trial order only. All subsequent orders must be for at least 4 quarts at 80 cents a quart. The packing and express charges are almost as much on one quart as on four, and even at $1.00 for one quart we lose money, but we want you to try it. **We would prefer to have you order 4 quarts for $3.20, for then we would make a little profit and you would also save money.** But take your choice. $1.00 for 1 quart or $3.20 for 4 quarts, express prepaid. Your money back if you're not satisfied. Write our nearest office today.

FREE IF YOU MENTION THIS PAPER WE WILL SEND YOU A GOLD-TIPPED GLASS AND CORKSCREW **FREE**

Trial Orders for Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington or Wyoming must be **1 QUART for $1.25 by EXPRESS PREPAID.** Subsequent orders on the basis of **4 QUARTS for $4.00 by EXPRESS PREPAID, or 20 QUARTS for $16.00 by FREIGHT PREPAID.**

ESTABLISHED 1866 **THE HAYNER DISTILLING COMPANY** DISTILLERY TROY, O.

They Learned the Difference

We encountered.....and overcame.....some very difficult problems in devising and installing a complete system in the Racine Knitting Company. This concern has 3 different factories in 3 different cities and sells by mail and direct both to consumer and the trade.

You can imagine what a complicated system of records such an organization would naturally have. When we suggested that our experience could be applied to this organization with profitable results, they doubted. They made the common mistake.

They Thought We Had a Ready-Made System

They could not see how we could tell them anything about their business. But we convinced them that it was worth trying. We applied common-sense and recognized principles, taking sufficient time for study and investigation. We made the changes a few at a time. It took months to completely systemize their organization. But now that we have finished their Manager can lay his finger on any item of record immediately, and tell at all times every detail about stock on hand and locate every bit of statistical information regarding the business.

Are you so sure of perfection of your organization that you court inquiry?

Wee Macgreegor

By J. J. BELL

Mr. Bell has admirably told the humorous and realistic story of a little Scottish boy, Wee Macgreegor, of his father, who slyly pets and spoils him, and of his mother, who adores and disciplines him—three unforgetable people who live actually before us in the author's exquisite and sincere work.

It is a unique contribution to modern literature, and comes as a real surprise to the Scotch, English, and American public. The book has taken England by storm, in spite of its Scotch dialect, and has made the fortune of the heretofore unknown author.

COMMENT

WE have discussed elsewhere the latest revised edition of the President's views of the Monroe Doctrine, the trusts, and the tariff, as these were expressed in the interesting speeches delivered at Chicago, Milwaukee, and Minneapolis. What we would here consider for a moment is the probable effect of the tour which Mr. Roosevelt is making on his political prospects. Ostensibly, of course, his journey has no political purpose, but it is obviously impossible that some influence upon his chances of nomination and election in 1904 should not be exerted by his forceful personality, and by the utterance of his opinions concerning questions of vital moment to the American people. As we have repeatedly said, we have no doubt that if the Republican national convention were held next month Mr. Roosevelt would receive the nomination, and we have as little doubt that were the election to take place next November he would be chosen President. Many things may happen, however, in a twelvemonth, and one of the things, which is already in the course of happening, is the present tour, by which the attitude of party leaders, as well as that of the voters at large, toward the President may be affected. Our opinion is that what he has thus far said in regard to the tariff and the trusts will tend to conciliate party leaders in the East and in the Middle West, where alone a formidable opposition to him might possibly have been organized.

That most of the delegates from the Northern States west of the Mississippi will zealously support him seems as certain now as it seemed a month ago. That most of the delegates from those Southern States wherein the party organization is controlled by Lily White Republicans would oppose him if they saw a likelihood of success, still continues to be probable. In view, however, of his latest and relatively conservative declarations about matters of capital importance to industrial, commercial, and financial interests, the party leaders in New York, Pennsylvania, Ohio, Indiana, and Illinois no longer have such plausible reasons for opposition to his candidacy as they might have adduced five months ago. Meanwhile, Mr. Roosevelt is unquestionably stronger with the rank and file of the voters than he was before he effected a settlement of the coal strike. His hold upon their confidence and sympathy is attested by the enthusiasm with which he has been received everywhere during his tour. That such popularity may prove an irresistible factor in a national convention was shown in 1896, when, it is no secret, some of the most powerful party leaders preferred another candidate. On the whole, recent events confirm the conclusion which we had previously reached, that Mr. Roosevelt cannot be beaten for the Republican nomination, and that his defeat must come, if it come at all, through the triumph of the Democratic candidate at the ballot-box.

Mr. Roosevelt and Mr. McKinley differ in this respect, that the former goes on his travels with his opinions ready made, whereas the latter used the opportunity of meeting representative men in various sections of the country to ascertain the prevailing drift of public sentiment. Mr. McKinley also strove to allay factional quarrels, and a subsidence of such dissensions was generally observed after his visit to a particular State. Whether Mr. Roosevelt will also essay the rôle of peacemaker is as yet unknown, but undoubtedly there is ample room for the exercise of the conciliatory function. Of the States that he has visited, or means to visit, no fewer than eight have party troubles of their own. In Wisconsin, for example, the followers of Governor La Follette believe him to be quite as worthy as Senator Spooner of consideration at the hands of Republican voters and of the Federal Executive. In Michigan there are Alger and anti-Alger factions. Among the Iowa Republicans there is a sharp line of cleavage between the tariff-revisers headed by Governor Cummins and the anti-revisers, of whom Secretary-of-the-Treasury Shaw and Representative Hull are spokesmen. The two Senators from Minnesota are rivals for Federal patronage, and the State, having an important beet-sugar industry, is still to a certain extent divided with reference to the Cuban reciprocity treaty. In Missouri the partisans of Kerens and those of Hitchcock are still far from being reconciled, and there is a contest in Nebraska between the Rosewater and the Mercer factions. When he gets to Oregon and California, the President will find plenty of work for a pacificator, if he has any inclination for the rôle. No doubt he will try to be impartial, but impartiality is not always satisfactory when the stock of Federal patronage is small. Few Presidents have had Mr. McKinley's knack of making a little patronage go a long way. In any event, there is no doubt that the duties of hospitality will enforce a lull in factional controversies during Mr. Roosevelt's visit.

Mr. Cleveland, Mr. Olney, Mr. Gorman, and Judge Parker are not the only men who have been mentioned as possible recipients of the Democratic nomination for the Presidency in 1904. Five other names have lately been suggested, to wit, those of David R. Francis, of St. Louis; of Melville E. Ingalls, of Cincinnati; of Carter H. Harrison, of Chicago; Tom Johnson, of Cleveland; and W. R. Hearst, of New York city. Only the three last-named would be acceptable to Mr. Bryan. As Mr. Hearst could not possibly secure the delegation from the State of New York, his pretensions to the nomination can scarcely be regarded as serious at this time. As Mr. Johnson and Mr. Ingalls are citizens of the same State, their ambitions are hardly reconcilable. Each might have strength enough to prevent the other from getting an undivided delegation from Ohio. As between these two Mr. Johnson is ahead, for he has been elected Mayor of Cleveland, whereas Mr. Ingalls has failed to be elected Mayor of Cincinnati. But Mr. John R. McLean must always be reckoned with in an Ohio State convention. Though Mr. Carter H. Harrison has been re-elected Mayor of Chicago, he will have no chance of being nominated for President, but if the nominee of the Democratic convention were an Eastern man, Mr. Harrison might possibly be named for the Vice-Presidency, in the hope of carrying Illinois. Of the five new candidates whom we have mentioned, Mr. Francis has by far the most distinguished record in

public life. He has been Mayor of St. Louis, Governor of Missouri, Secretary of the Interior in a Cleveland cabinet, and is now president of the Louisiana Purchase Exposition. We take for granted, however, that, as he was a Gold Democrat in 1896, he would be opposed by Mr. Bryan in the Democratic national convention, if not afterwards as well. From the Bryanite point of view Mr. Ingalls is open to criticism on the same ground, but, unlike many representatives of capital, he would probably be able to accept the platforms framed at Chicago and Kansas City if they were freed from the demand for the free coinage of silver at the ratio of sixteen to one. He is opposed to the coercion of labor, he is a believer in the taxation of franchises, and he has expressed regret that the United States Supreme Court pronounced the income tax unconstitutional. Mr. Bryan must by this time perceive that the insertion of his silver plank is an impossibility, and, therefore, he might be expected to recognize in Mr. Ingalls an almost ideal candidate. We apprehend, however, that Mr. Ingalls's failure to support Mr. Bryan in 1896 would be deemed an unpardonable sin. On the whole, we adhere to the opinion that Judge Parker, if he can secure the delegation from his own State, has at present much the best chance of securing the Democratic nomination.

The latest news from the anthracite-coal region is that so many of the miners are dissatisfied with the practical results of the commission's award that another general strike must be regarded as at least conceivable. It seems, to be sure, incredible that the union mine-workers should fail to recognize the tremendous advantage gained by them through the appointment and outcome of the Coal-Strike Commission. It will be remembered that the operators originally denied that there was anything to arbitrate, and refused to recognize in any way, direct or indirect, the miners' union. Through the President's interposition, the operators not only consented to refer all the questions that were or might be at issue between them and their employees to arbitrators, but, inasmuch as Mr. Roosevelt had called into consultation Mr. Mitchell as the representative of the labor element, they were virtually constrained to recognize the miners' union as a party to the controversy. Thus they practically acquiesced in the establishment of a principle for which theretofore the union-labor leaders had vainly contended. That principle will be hopelessly discredited if the union workers now decline to abide by the award which they promised in advance to regard as obligatory for three years. It is true that employers and employed may differ as to the meaning of certain terms of the award. Such a divergence of interpretation was foreseen, however, by the commission, and a safeguard was provided in the form of conciliation committees. If Mr. Mitchell deserves the reputation for sagacity and foresight which he has acquired, he will insist that the miners, instead of recurring to a strike and thus committing industrial suicide, shall request the appointment of conciliation committees, and abide by their decision. Instead of waiting for such a decision, the employees of the Philadelphia and Reading Coal and Iron Company, and also of several individual collieries, have taken the law into their own hands, and refused to work after half past two on Saturday afternoon. It appears that, before the award of the commission became operative, the employees of the anthracite companies were accustomed to work only eight hours a day on Saturday, and to stop at half past two, although they were allowed pay for ten hours' work on that day. The commission reduced the number of working-hours from ten to nine, but said nothing about Saturday. The operators, whose expenses have been materially increased by the findings of the commission, insist that their employees shall work nine hours on Saturday, as on every other day. Whether this was the intention of the commission is just one of those things which conciliation committees were expected to find out. We take for granted that Mr. Mitchell will not permit the principle of arbitration to be made a laughing-stock thus early in its application, before the mine-workers have even received their arrears of back pay.

An unanticipated quarter for the promulgation of socialistic or semisocialistic doctrine is the Committee on Federal Relations of the Massachusetts Legislature. The usual function of this committee is academic, as to it go many of the debating-society questions which find their way into the Legislature, and generally it is expected to do no more than to report a series of fluent and more or less hazy resolutions, to afford chance for an afternoon of tall talk on the part of the orators of the general court. This is not precisely what it has done in the matter of the national control of the anthracite-coal mines, a subject on which some sort of action was made necessary by the appearance of an immense number of petitions looking to that end. The surprise is found in the fact that the committee, composed of eight Republicans and three Democrats, have unanimously reported a resolve asking Congress "to take such measures as will place the anthracite-mining industry under government control or supervision; and if this prove ineffective, then to take such measures as will lead to ownership of the said mines by the national government." All the members of the committee, except one, come from the cities and larger towns, where the stress of the coal famine of last winter was most severe, and they probably reflect to a great extent a certain vociferous sentiment rather than any carefully decided conviction. Some indication to the same conclusion is seen in the action of another committee, which has been investigating the retail coal business in the State, but which went out of its way to make a special report in support of the Committee on Federal Relations. Two committees of the Massachusetts Legislature, including in all about twenty fairly astute politicians, standing sponsors for such a revolutionary and far-reaching proposition as governmental ownership of coal-mines constitutes a spectacle which is in many respects a wonder among the political curiosities of the hour. Either the current is actually running pretty strong, or these gentlemen have made themselves believe that it is.

An incident which, it is to be hoped, will have far-reaching consequences, was the conviction on Saturday, April 4, in Philadelphia, of three school directors accused of conspiring to extort money from persons seeking to be employed as school-teachers, and also of having accepted bribes for the promotion of teachers. The verdict carries with it a maximum penalty of $500 fine and an imprisonment of two years. It is well known to those who are conversant with municipal affairs in our larger cities that the position of school director, although usually unsalaried, is eagerly sought by politicians of questionable reputation. It is not customary for men of that type to perform public services gratuitously, out of single-hearted devotion to the good of the community. The motive which has been currently imputed to them is the desire to levy blackmail, not only on the actual or prospective teachers who desire appointment or promotion, but also on the business firms which wish to furnish text-books and other things needed in public schools. The extortion of money under such circumstances is a crime, but, for obvious reasons, it is a crime very difficult to prove. The exposure of an attempt to blackmail would ordinarily prove fatal to the hope of procuring an appointment or a promotion, or of obtaining orders for text-books or school supplies. The only possible mode of purging and rehabilitating school boards in our larger municipalities is by making the position of school director undesirable to rascals through the discovery that it can be turned to pecuniary account only at the imminent risk of a sentence to the penitentiary. From this point of view, the fate of the Philadelphia school directors should prove of signal benefit to more than one municipality. What went on in the school department of the New York city government under the Tammany régime should be subjected to rigorous scrutiny, and we have no doubt that the state of things in Chicago and St. Louis would also repay investigation. The conviction of the Philadelphia scoundrels reflects the highest credit on District-Attorney Weaver, and it is a happy augury for the city of which he is Mayor-elect.

It is fortunate that the date for the meeting of the Colombian Congress has not been as yet fixed by executive decree, for it is known that many of the members-elect are opposed to a ratification of the Panama Canal treaty, and it is desirable to ascertain the grounds of their opposition. It is barely possible that, although elections in Colombia have long been a farce, the Bogota or provincial authorities may have carelessly permitted the return of some intractable persons. It is even conceivable that such a thing as disinterested patriots may exist in Colombia, and that such men might be

foolish enough to suppose that their country's interests would be seriously impaired if the canal treaty were ratified. We call such an hypothesis foolish, because all intelligent Colombians must know that their own country could never complete the canal; that the United States would never allow any European power to do it, and that we ourselves will not undertake the work, except upon the equitable conditions that we have prescribed. The treaty sanctioned by the Senate is the very best that Colombia can get. She must, therefore, take it or leave it. In the event of the treaty's rejection, we should, of course, proceed to negotiate with Nicaragua. We do not apprehend, however, that the needy officials of Bogota will miss the chance of fingering ten million dollars in gold. They are probably not much surprised at the ostensible opposition to the treaty, and impute it, doubtless, to a natural desire to secure a share of the spoils. Experience has rendered them familiar with several ways of disarming opposition. One way is intimidation: when the late President, San Clemente, proved inconvenient, he was consigned to prison. Another way would be to promise a modest fraction of the purchase money receivable from the United States. There is a report that by promises of this kind some of the leaders of the recent revolution in the State of Panama were persuaded to lay down their arms. A third way would be to offer a member-elect who proclaims his intention to vote against the treaty a lucrative federal office, the acceptance of which would render his seat in Congress vacant. It is said that this mode of silencing opponents has been successfully employed in several instances during the last two weeks. One thing is certain, namely, that ten million dollars in gold represents the maximum amount of cash that the Colombian Confederation will ever get a chance of dividing, and, as by this date the fact must have been driven home to them, we entertain no doubt that the treaty will in due time be ratified.

No reasonable man will question the soundness of the position taken by Mr. Bowen, the representative of Venezuela, with regard to the provision which the three blockading powers desired at the last moment to insert in the protocol defining the issue which is to be presented to the Hague tribunal. The original agreement was—the agreement accepted by all of the non-blockading powers which have entered into negotiations with Mr. Bowen, as well as by Great Britain, Germany, and Italy—that the International Court of Arbitration at The Hague should simply be invited to determine whether in the distribution of the thirty per cent. of the customs revenue of La Guayra and Puerto Cabello, which is to be set aside for the payment of foreign creditors, the blockading powers should have preference over those other creditor powers that have refrained from an attempt to enforce their claims by acts of war. Now Great Britain, Germany, and Italy, possibly foreseeing an unfavorable decision at The Hague, propose that, if the international tribunal should deny preference to the blockaders, it should then be requested to answer the two additional questions, first, whether Venezuela ought to make good to the allies the cost of blockading her own ports, and, if so, what sum of money should be paid for such purpose, and under what conditions. It is obvious that, if the Hague court should establish a precedent by condemning Venezuela to pay the cost of the blockade, two things would almost certainly follow. In the first place, the European creditors of a Latin-American republic would be even more eager than they are now to extort the payment of claims by acts of war; and, in the second place, having once started a blockade, they would be tempted to prolong it. That is to say, a result precisely opposite to that desired by our government would be attained, for it is the manifest wish of the United States to discourage the creditors of American commonwealths from resorting to blockades and bombardments which might bring about unpleasant complications.

Another amendment proposed by the allies, but rejected by Mr. Bowen, was to the effect that, in deciding the question of preferential or separate treatment for the blockading powers, the tribunal should take into consideration the resources of Venezuela other than the thirty per cent. of the customs revenue to be set aside, which outside resources might be available for the claims of other powers. Mr. Bowen declined to acquiesce in either of these proposals, on the ground that they constitute entirely new demands or claims, and that the blockading powers are bound not to add anything to the protocols into which they respectively entered on February 13, 1903, and in pursuance of which the blockade was suspended, and the Venezuela controversy was presumed to have been adjusted. As to the request that the Hague tribunal shall determine whether Venezuela ought to pay the cost of the blockade out of the thirty per cent. of the customs revenue to be set aside, Mr. Bowen points out that this is irreconcilable with the original protocols, which provided that the thirty per cent. should be applied to the payment of the claims therein designated, and to be alienated for no other purposes. There is not the slightest doubt that the United States and all the other non-blockading powers will sustain Mr. Bowen's position, so that Great Britain, Germany, and Italy will either have to withdraw their additional demands or try to enforce them by a renewal of the blockade. They are not in the least likely to recur to the latter alternative.

According to the latest news from Shanghai, the stability of the Peking government is threatened not only by sporadic uprisings among the native Chinese in the southern provinces, and by the widespread discontent caused by the increased taxes which the mandarins levy on the pretext of providing for the indemnity due to foreign powers, but also by a split among the Manchus, who constitute the bulwark of the dynasty. It will be remembered that among the high Manchu dignitaries who were implicated in the Boxer outrages, and the condign punishment of whom was exacted by the allied powers after the capture of Peking, were General Tung Fu-Hsiang and Prince Tuan, whose son, Pu Chun, had been declared heir of the throne by the nominal Emperor, Kwang-Hsu, acting under the orders of the Empress Dowager. The demand was nominally granted, but the sentence could not be executed, the designated victims having fled to the western provinces. Here the banished prince and fugitive general have collected a large force, which, although mainly composed of Manchus, they have managed to organize and discipline and to equip with modern rifles and cannon, in the use of which the soldiers have been trained by European renegades. As was expected, it has proved impossible, owing to the difficulty of watching the vast maritime and land frontiers of China, to enforce the treaty stipulation by which the importation of European firearms and artillery was prohibited. There are no soldiers at the disposal of the Peking authorities who could possibly cope with the formidable body of rebels collected in Kansu, except the foreign-armed and foreign-drilled army which has been created by Jung Liu and Yuan Shih-Kai in the metropolitan province of Chih-li. Jung Liu, however, is in very poor health, and it remains to be seen whether he will march against the rebels or content himself with the protection of Peking.

He will quickly have to decide, if there is truth in the twice-repeated report that Prince Tuan and General Tung Fu-Hsiang have sent an ultimatum to the Dowager Empress insisting on the deposition of the Emperor Kwang-Hsu and the immediate enthronement of Pu Chun, still nominally heir apparent. Should the Empress refuse, they announce that they will transform the provinces of Shensi and Kwangsu into a separate kingdom, which will have Sian-fu for a capital. Students of Chinese history will remember that for centuries an independent kingdom existed in the northwestern provinces of China, and that its capital city was Sian-fu. It will be observed that the contemplated movement differs essentially from the Tai-ping rebellion, which was a revolt of native Chinese against their Manchu rulers. Now, on the other hand, we find Manchus arrayed against each other, and there is but little doubt that the reactionary element throughout the empire would side with the faction headed by Prince Tuan. If the rebels should succeed in placing Pu Chun upon the throne, it is hard to see how the allied powers could refuse to recognize him, inasmuch as, at the suggestion of our State Department, they forbore, when the treaty of peace was signed, to insist upon the deposition of the heir apparent. There is not the least doubt, however, that the regeneration of China would be signally promoted if the rebellion under Prince Tuan could be extinguished, and if Jung Liu and Yuan Shih-Kai could carry out their plan of placing in the line of succession as heir apparent Tsai

Fong, Prince of Chun, the brother of the present Emperor, who evinced, it may be recalled, remarkable discretion in his conduct of the expiatory embassy to Berlin.

Although it seems to be absolutely certain that for fiscal and industrial reasons brought forward by Mr. De Witte, the Minister of Finance, the Czar Nicholas II. earnestly desires to defer for at least a year any armed interposition in the affairs of the Balkan peninsula, it looks as if his hand might be forced, as was that of his grandfather in 1877. By the Russian-Austrian agreement, by the resultant ultimatum with which the Sultan has ostensibly complied, and by the peremptory orders addressed to Sofia, which Prince Ferdinand of Bulgaria is afraid to disobey, diplomacy must be admitted to have done its utmost to avert the necessity of sending a Russian army across the Danube. The Sultan, however, by announcing an intention of applying the reforms demanded for Macedonia to Albania also, has provoked the Arnauts to rebellion, has caused the death of a Russian consul, has set the whole western half of the Balkan peninsula in an uproar, and has compelled the Montenegrins and Servians, who are neighbors of the Albanians, to arm in self-defence. Whether these results were premeditated it is not easy to say, for, although they manifestly afford a pretext for bringing across the Bosphorus scores of thousands of Kurds and other loyal troops from Asia Minor, they expose his person, on the other hand, to grave danger at the hands of his Albanian bodyguards, who are said to be exasperated by the knowledge that the insurrection has already cost the lives of 600 of their compatriots.

It seems, upon the whole, most probable that the Sultan will use his Anatolian levies, not to punish the Albanians, beyond some perfunctory demonstrations, but to exterminate the Macedonian rebels. The wholesale massacres that would inevitably result from such a policy will compel the present Czar, however reluctant, to intervene, just as the atrocities perpetrated in Bulgaria and Servia in 1876 so inflamed Russian public sentiment that Alexander II., much against his will, consented to give the order to advance. For Russia's hesitation at the former epoch there were international reasons which do not now exist. At present neither England nor Austria would lift a finger to avert the entrance of the Czar into Constantinople. Never again will the British people permit their government to commit the crime of which Beaconsfield was guilty at the Congress of Berlin, when he condemned the Christians of Armenia and Macedonia to remain for a quarter of a century longer under the heel of Abdul the Damned. As to Austria, there is no doubt that, by the agreement recently concluded with Russia, the part of the Balkan peninsula which will pass into Hapsburg hands in the event of a partition has been exactly defined. Austria's share will probably include Bosnia and the Herzegovina, which hitherto have been only provisionally occupied, but also a part of Albania, the district of Novi Bazar, and a strip of territory stretching thence to the Aegean, and including Salonica. So far as the heart and conscience of Christian onlookers is concerned, the sooner the partition takes place the better.

On the other hand an element which makes for peace in Turkey is the fact that Germany has at last decided to come forward and support the reform policy of Russia and Austria. The attitude of Germany has all along given cause for uneasiness, in view of the friendship—the alliance, it might almost be called—between the Kaiser and the Sultan. This friendship was manifested in the visit of the Kaiser to the Sultan's dominions, in his sending the Crown Prince and his brother to renew that visit just at this time, and in the part Germany has taken in developing and arming the Turkish army. It is well known that Germany is pecuniarily interested in Turkey to an enormous extent, and seeks to be interested there still further, especially in the railways in Asia Minor. Further, Germany is instinctively hostile to everything Slav, whether within her own borders in Prussian Poland, within the bounds of her neighbor and ally Austria, in the Balkan peninsula, or across her eastern frontier. These causes all combine to incline Germany to thwart the policy of Russia and Austria in Macedonia; and it is, therefore, a matter for international congratulation that better counsels have prevailed in the Berlin Foreign Office, and that Germany will throw in her great weight on the side of peace, reform, and liberty for the Macedonian Christians. One thing more is needed to make the Russo-Austria policy wholly successful; and that is that the revolutionary leaders and their followers should come to understand that the object they have in view is more likely to be reached through the policy of peaceful pressure exerted by the great powers, now practically unanimous, than by armed revolutionary outbreaks, which of themselves are quite hopeless and helpless against the organized army of Turkey, and the real purpose of which is to provoke armed intervention by the powers. Once the revolutionists become convinced that this is so, they will see that their true good lies in co-operation with the powers, for the pacific amelioration of conditions.

A new element, and a very picturesque one, is introduced into the Balkan situation by the appearance of a claimant for the throne of Albania, in the person of Prince Don Juan Kastrioti, who is apparently directing his revolution from a safe distance, being at present in Paris. Prince Kastrioti is an elderly man, who was born in Spain, and has held posts in the Spanish diplomatic service. His grandmother was a Princess Kastrioti, a descendant of George Kastrioti Scanderbeg, famous in Albanian revolutionary history. The Albanian claimant has for several years made his home in Paris, where he has engaged in railway enterprises in the peninsula, and has amassed a considerable fortune, which he wishes to spend in setting Albania free and raising her to the position of an independent monarchy, with himself as monarch. It must be said that we do not very clearly see what material and political forces this good gentleman can look to to help him to a throne; his hopes seem to us rather chimerical. Yet we are impressed with the fact that recent years have seen the resurrection of several thrones in the Balkans, and it is certain that the Albanians are a vigorous and robust, if somewhat turbulent, little people. It is said that they are the descendants of the original Pelasgians, whom the Hellenes found in Greece and in part dispossessed; if this be true, then they may claim to be the oldest of European nations, and rivals with China for the honor of being the oldest nation in the world.

The close shave of the Balfour cabinet in a recent division in the House of Commons, where the day was saved no longer by the passive neutrality of the Irish Nationalists, but by their active intervention, has already caused rumors of a dissolution of Parliament at the end of the session, with a general election to follow. The prophets who claim to reveal the future aver that the Conservatives will make local government for Ireland one of the main planks in their platform, in case of a new general election, perhaps dropping the very unpopular Education bill, or at least modifying some of its more extreme features. One thing they will find it impossible to drop, however, and that is the burden of taxation arising from the South-African war. This, more than anything else, will make votes for the Liberals, and, if the Conservatives win at all, they will win by a very narrow majority. Then they will once more be dependent on Irish support, which will make the outlook for local autonomy very good indeed. Mr. Wyndham said a good thing at Manchester the other day, when he declared that Ireland should be a bridge between England and Canada, and not a chasm; and he said an even better thing when he added that this was even more true of the United States. Nothing would have greater influence for good on the relations between this country and the British Empire than a settlement of the Irish question in a manner satisfactory to Ireland, and this is what the Conservative government is evidently seeking to bring about. It is noteworthy that the Parliament of the Dominion has recently declared in favor of home rule for Ireland, by an overwhelming majority, and this emphasizes the influence of Canada on the policy of the empire—an influence which was most beneficially used when the extreme Chauvinists in South Africa sought to annul the Constitution of Cape Colony, and were prevented largely through the wiser counsels of Canada and Australia.

At the very hour when a distinguished Yale student, himself of African race, was triumphantly sustaining the contention that the black republic of San Domingo was incapable

of self-government, and should be brought under the tutelage of the United States, the inhabitants of the island-republic were doing their best to strengthen his position and justify his views. It is always a delicate question to decide whether the malcontent party in a Latin republic should be called revolutionists or rebels; but, at any rate, the malcontents in San Domingo seem to have decidedly the worst of it. In a contest fought on the last day of March between the insurgents and the government troops at San Antonio de Guerra, some twenty miles from Santo Domingo city, the former lost nearly a hundred and fifty in killed and wounded. Another force, under Miguel Febles, which was marching to Macoris, lost twenty-five men in an encounter with the government troops. Apparently the world of international politics has had a narrow escape, for which we must all be devoutly grateful; we read that a shell fired by the Dominican cruiser *Presidente,* which is fighting for President Vasquez, fell on the German consulate. Fortunately, it did not burst. If it had, the reverberation would have been heard all the way to Kia-chau. Incidentally, our own *Atlanta* put fifty bluejackets ashore, to keep watch over the American consulate. San Domingo is in a fair way to get that supervision which the distinguished Yale student pleaded for so eloquently.

The quarterly report of the United States Steel Corporation shows net earnings for the month of March of about $9,500,000. The annual report shows the amount of cash on hand to be about $50,000,000, to say nothing of the proceeds of $250,000,000 worth of second-mortgage bonds, which are now authorized and will soon be issued. To appreciate the magnitude of such resources, we must compare them with those of the Federal government itself. It has been asserted, and not contradicted, that the amount of cash in the Federal Treasury now available for immediate payments does not much exceed $70,000,000. Then, again, the gross earnings of the United States Steel Corporation for 1902 have been computed at some $500,000,000. Now the average trade balance in favor of the United States during recent years has not much exceeded the aggregate just named. There is thus far no other combination of capital in the United States which can figure in the same rank, although the Northern Securities Company and the Pennsylvania Railroad are not far behind. It is a fact less generally recognized that the total assets of three life-insurance companies, namely, the Mutual, the Equitable, and the New York Life, represent about a billion dollars. Nothing approaching such aggregations of private capital exists in Europe, or has ever been witnessed in the history of mankind. The largest accumulations of money in Europe are to be found in the Russian Treasury, where gold has been for years collected, and in the vaults of the Bank of France and of the Bank of England. There may seem at first sight no limit to the influence that might be exercised on the market for iron and steel products by a combination equipped with pecuniary resources so unprecedented as are those of the United States Steel Corporation. As a matter of fact, however, Mr. Carnegie has expressed the belief that aggregate capital can always be beaten by an individual capitalist, provided, of course, the latter has means enough at his disposal to withstand competition for a considerable period. That the United States Steel Corporation recognizes that its power has limits is evident from the prudence with which it has refrained from increasing the prices of its commodities, even when the demand for them largely exceeded the supply. So long as such excess continues, no industrial crisis in the iron and steel industry need be feared. It is only by overproduction and by the resultant glut of the market that an industrial, as distinguished from a merely financial, crisis is caused.

We heartily welcome the announcement that in 1906 the American Philosophical Society of Philadelphia will celebrate the two-hundredth anniversary of the birth of Benjamin Franklin. The association which he founded has done well to start a movement in which the whole American community will cordially co-operate. If we were asked to designate the eighteenth-century Americans who are held in highest honor by their countrymen, we should name them in the following order: Washington, Franklin, Jefferson, and Hamilton. Franklin differs from Jefferson and Hamilton in that, during the period of political discord which followed his death, he was respected, admired, and liked by Federalists and Anti-Federalists alike. In this particular, indeed, he was even luckier than Washington. Not even Jefferson was a man of so wide and various acquirements, or had it in his power to render so many and so diverse services to his State and country. Franklin, of course, was no soldier, but there is no doubt that as a patriot he stood only second to Washington in the eyes of his countrymen when the Federal convention met at Philadelphia in 1787. He had many other titles to distinction. He was recognized on both sides of the Atlantic as a civil administrator, an educator, a moralist, a man of letters, a scientist, a diplomatist, a political thinker and statesman. More than any other man he should be credited with the repeal of the Stamp Act. He had been Postmaster-General of the colonies, and for years before the Revolutionary war he had been the agent of Pennsylvania, Massachusetts, New Jersey, and Georgia in London. The maxims to which Franklin gave currency in his *Poor Richard's Almanac* have long since been incorporated with our proverbial wisdom. His contribution to electrical science gained for him admission to almost every learned society in Europe, and his general intellectual eminence was cordially acknowledged by Voltaire. It is probable that no other man could have overcome the natural reluctance of Louis XVI. to enter into an alliance with England's rebellious colonies, an alliance which, we may now admit, was indispensable to our success. As for Franklin's memorable achievements in the field of political thought and statecraft, they stand embodied in the organic laws of Pennsylvania and of the Union. It was his unique privilege to sign all four of the most fateful documents in the history of the United States, to wit, the Declaration of Independence, the Treaty of Alliance with France, the Treaty of Peace with Great Britain, and the Federal Constitution. These four signatures should suffice to make the man immortal. Curiously enough, though Franklin left no legitimate son, he has through his one daughter numerous descendants. Had he died, however, like Washington, without any heirs of his body, he would have found in his country and his State grateful inheritors of his renown. It is impossible for any visitor in Philadelphia to gaze at Independence Hall without recalling Benjamin Franklin. *Si monumentum quæris, circumspice.*

In the English 'varsity contests, Cambridge is carrying everything before it this year, and greatly exalting and glorifying the light blue above the dark. In the athletic contests of a few days ago Cambridge came forth victorious in no less than eight events out of ten, and to this fine achievement has now been added the supreme honor of the boat-race, the original and model of all boat-races the world over. This makes the fourth victory for Cambridge in the last five years, while the nine years before that were a series of unbroken triumphs for Oxford. These Oxford and Cambridge boat-races have been rowed, with a few short intervals, for seventy-four years, Oxford winning thirty-three times, as against twenty-six, including the present year, for Cambridge. The time this year, nineteen minutes thirty-two and a half seconds, was good, but by no means a record.

Some writer who lately preached the gospel of adornment to cities argued that it paid cities to be beautiful and interesting, because it made them attractive to visitors. He suggested that for Boston (the piece must have been in a Boston newspaper) there would be "good money" in a splendid memorial to Emerson,—a kind of memorial temple, which all sight-seers in Boston would wish to visit, and which would come to be a Mecca for the admirers of the Yankee sage. The suggestion is still unimproved by Boston, but Harvard College has got so far as to propose to have an Emerson Hall, to be devoted to the study of philosophy. The proposal is far on towards realization. Some one has subscribed $50,000; some one else $10,000, and the Visiting Committee on Philosophy had raised, some weeks ago, as much as $65,000. The minimum amount needed is $150,000, and that is likely to be in hand before May 24, which is the hundredth anniversary of Emerson's birth. It is desired, however, to raise as much money as possible—$200,000 perhaps—to make the memorial the more significant and adequate. The treasurer of Harvard College will be glad to hear from all Emersonians who want to contribute. It would

seem as if a statue of Emerson might well be placed near this new building. He never got rich, nor ever distinguished himself as a gainer of yards against Yale. He was not physically strenuous, nor meteoric even in his intellectual feats. But he took time to think. That was very creditable to him, and should be imputed to him as righteousness just as faith was to Abraham. And having taken time, he thought to remarkable purpose. That was all he ever did; just thought about things—things in general—and wrote his thoughts down and spoke them from pulpits and lecture platforms and in conversation. It is a good time to put up a statue to a thoughtful man. We are all for *doing*, just now—for hustling, and getting there; for rushing the ramparts of fame and fortune and immortality in automobiles; for cashing in our speculations before they are fully ripe, and selling experience short. Emerson, the serene, would look very proper in Harvard's new quadrangle, and his influence would be good there. For, after all, the highest product of civilization is not war-ships, nor devil-wagons, nor wealth, nor any material thing whatever, but wisdom. It begins, just as it always did, in the fear of the Lord, and it ends, doubtless, as it always did, in love.

The discovery made by the *Sun* and the *Evening Post* of the criminal record of Edgar S. Bellairs, author of *As it is in the Philippines*, has deprived that adventurer's opinions of any weight. He had reviewed in his book the course of Governor Taft in the Philippines, and had been unable to recognize in Judge Taft the qualities which his important office demands. If Bellairs's credit had remained unimpaired, his representations would at least have received attention, for he is the same Bellairs who was the chief representative of the Associated Press in Cuba after the Spanish war, who was transferred from there to Manila, who went with General Chaffee on the China expedition, and who, on leaving Manila last July, was the guest of forty-three distinguished Americans at a farewell dinner. His services to the Associated Press seem to have been highly satisfactory until in some way its manager discovered his record and discharged him. His record is interesting. He is, it seems, not only Bellairs, but Ballentine, Cheriton, Elaine, and Cameron; a clever man, undoubtedly, but a swindler and confidence-man, who within ten years had served a term in a Florida prison for forgery. Both the *Sun* and the *Post* have pointed out in detail the close relations of this person with General Wood in Cuba, and have recorded with something like glee his boast that he "made Wood" by his newspaper dispatches. That he did back Wood faithfully and effectively is true enough, and that his attack on Taft was a step towards securing further preferment for Wood seems probable. But it is not fair to blame or disparage General Wood on account of Bellairs. Wood was deceived by him, but so was Colonel Melville Stone, of the Associated Press; so was General Chaffee, General Humphrey, and pretty much every one with whom Bellairs came into contact at the Philippines. He is an adroit rogue, and diligent in business, and it will take some watchfulness even now to make sure that he does not continue to mould public opinion.

Dr. Isaac K. Funk has received an impression that he has seen the spirit of the late Henry Ward Beecher, and has been exhorted by that respected shade to return to the heirs of Professor West of Brooklyn a "widow's mite" which he borrowed some years since of Professor West to use in his business. The mite is a rare coin and valuable. Dr. Funk supposed he had returned Professor West's mite years ago, but being told by Dr. Beecher's spook to look in his safe for it, he looked, and found it, and sent it back. Now he wonders whether it was really Dr. Beecher's ghost that communicated with him, and if not, who did. He is taking deep thought in the matter, and consulting such psychological experts as Dr. Richard Hodgson and Professor Hyslop. Dr. Funk has in the past been subject to delusions about spirits, but not of this sort. Ardent spirits have been the subjects of his errors heretofore, and he has devoted much time and energy to the hopeless work of abolishing the use of them by prohibitory legislation. Ardent spirits are hard enough to deal with, but they are easy compared with the Brooklyn spirits that Dr. Funk has tackled now. Here's wishing him a clear head and much patience. The only modern who seems to have had real comfort with spirits was Swedenborg. He got much information from them which was satisfactory to himself, and has been more or less edifying to thousands of his readers. No more recent seer seems to have got anything more out of them than confusion of mind.

We are spending a good deal of money on our navy. It is well worth the close attention of citizens who care to know what our government is doing, and it needs such attention. That it may get it, and that citizens may readily get the information about the navy that they ought to want, the Navy League of the United States has been organized. Its headquarters in New York are at 52 Broadway. Its officers include Mr. Benjamin F. Tracy (former Secretary of the Navy), president; Mr. William McAdoo, vice-president, and Mr. George B. Satterlee, secretary. Its purpose, as set forth, in its constitution, is "to acquire and spread before the citizens of the United States, through branch organizations and otherwise, information as to the condition of the naval forces and equipment of the United States, and to awaken public interest and co-operation in all matters tending to aid, improve, and develop their efficiency." The League has three classes of members; life members who pay twenty-five dollars, and are exempt from annual dues; members who pay one dollar a year, and junior members who, being minors, may join in groups of ten, each group paying one dollar a year. Membership is open to any citizen who is not in the active service of the navy, or a member of Congress. Applications to join should be made to the Secretary of The Navy League at 52 Broadway.

It seems that Pennell, of the Buffalo Burdick case, added to his other crimes the embezzlement of trust funds. The uncovering of his character which has proceeded so gradually is very interesting, and if the processes of his degeneration could be traced in detail by a competent hand they would probably make a remarkable book. His reputation in Yale College seems to have been excellent. He made warm friends there, who testified immediately after his death to the nobility of his character. There is no doubt that they utterly misconceived their man, but the signs indicate that Pennell was a decent man at first, and that somehow he lost all his holds on virtue and "went miscellaneously to hell." His embezzlement of trust funds began, apparently, ten years ago, and was marked by notable changes in his habits of life. He seems from that time to have deliberately planned to end a career of pleasure by suicide, and having robbed his clients, to reimburse them finally by the proceeds of life-insurance. Speaking of the embezzlements, Pennell's lawyer, Wallace Thayer, has been quoted as saying: "While others condemn him I see something which removes much blame in his carefully planned-out system of striving to right his wrong after death. He misappropriated a vast sum of money; used it for his own pleasures for a short time, and paid for it with his life, for that is the reason that he carried a quarter of a million life-insurance. It was to repay after death those whom he had wronged in life." Mr. Thayer's own moral sense seems to have become somewhat warped by his close consideration of his client's malfeasances. The life-insurance companies will hardly admit that it is any less blameworthy to rob them than to rob others. Pennell did not pay for anything with his life. His death was merely another form of theft to which he added murder. There was a good deal of George Eliot's Tito Melema in Pennell. One could almost wish he had left an autobiography—the record of the descent of a damned soul.

Henry L. Stoddard, editor since 1899 of the *Mail and Express*, is of the fourth generation of newspaper men in his family. Born in New York in 1861, he was educated in the public schools and the College of the City of New York. His newspaper work began in his grandfather's office at Hudson, New York, from which he came to the New York *Tribune*. Beginning in 1882 he took service with the Philadelphia *Press*. Later for two years he was editor of the New York *Graphic*, which he left to join the staff of the *Mail and Express* under Colonel Elliott F. Shepard. In 1897 he joined Messrs. R. C. Alexander and R. E. A. Dorr in buying the paper from Colonel Shepard's estate. He was war correspondent in Cuba for his paper in 1898. In 1899 he succeeded Mr. Alexander (who died) as editor, and when Mr. Dorr died, in the following year, he became the controlling owner of the company. He is forty-one years old.

The President and the Tariff

THERE is manifested a certain hard-hearted inclination to hold the President responsible for his utterances on the subject of tariff revision. Undoubtedly the subject of tariff taxation is important; it is also difficult in its technical features, and very few of our public men understand it, or, indeed, have given it a perfect examination. The President's critics are unjust to him because he is not really talking or trying to talk economics, but politics pure and simple. No one would have dreamed of consulting Mr. Roosevelt about the tariff before he made his laugh-compelling Minneapolis speech. That speech did not change this fact, unless it be that men who would not then have thought of consulting him, a negative state of mind, now know precisely why they would not discuss the subject with him, which is a positive state of mind.

Mr. Roosevelt is a young man still, but when he was much younger than he is now he was a free-trader of such vigorous hue that, on one occasion, he announced that he would "die for free trade." Practically, he has since learned nothing concerning the tariff, but he has accepted the *post hoc propter hoc* sort of philosophy to which protectionists have resorted in these days of the degeneracy of their doctrine, and he is, therefore, ready to say, with home-market clubs and other like disinterested authorities, that because we are now prosperous we are so because of the tariff law. This is utter folly, of course, but the President does not know it, because since the days when he was a crusading knight of free trade he has learned that the doctrine of extreme protection is essential to the life of his party. Mr. Roosevelt, besides being very young, younger perhaps than David Copperfield seemed to be to Steerforth's valet, is an ardent party politician. He has, indeed, the disposition to "reform within the party," but this disposition does not carry him very far, once it has brought him in conflict with the party leaders who write the platforms and make the nominations. So, after trying for a time to be that impossible thing, a free-trade Republican, he has gradually settled down into a protectionist of the most advanced type. He is of the school which says, "stand pat"; "no revision at all"; "revision only by its friends," which, being interpreted, means revision only by those who insist upon maintaining the existing exorbitant rates of duty which are so enormously increasing the cost of living in this country, and which are, also, incidentally giving to some of the trusts, those which are most flagrant from the President's own point of view, that monopoly of the home market that substantially kills the competition which the President believes to be the life of healthful trade. This school of protection recognizes the breakdown of the system as logically defensible. The arguments which once moaned over infant industries are out of place, now that the infants have become, even in Mr. Roosevelt's imagination, brooding giants breeding evils. The protectionists, therefore, consciously sustain their cause by clamor. This clamor is not made for economic, but for party, reasons, and there is a species of injustice in the attempt to transform a patent party howl and to make it appear to be a serious argument. It is true that Mr. Roosevelt, in imitating this howl, may think it an argument, for he undoubtedly lacks information on the subject, but there is no doubt that even with him the purpose of tariff speeches is purely political.

And yet it is a pity that his own and his party's exigencies should have led him into what, if we were speaking of a better-informed man, we would be obliged to call misrepresentations. For example, Mr. Roosevelt said at Minneapolis that our tariff system is "based upon ample recognition of the difference between the cost of production—that is, the cost of labor—here and abroad." In the first place, we all know,—we who want more protection, we who want to "stand pat," we who want lower duties, and we who want free trade,—that our protective system has no such basis; that, on the contrary, it is based on the world-old theory of taking as much from the patient public as that public will "give up." It is not true, as every well-informed person knows, that those American industries alone are protected whose cost of production is greater than that of their possible foreign competitors. We make many articles, which are protected by rates of duty ranging from 50 to more than 100 per cent., which actually cost their manufacturers less than the cost of producing like articles to their foreign makers. Glass, iron and steel, cotton goods, some woollens, and other articles are in this class. We know, for example, that steel rails made in Pittsburg could be landed in New York for less than Scotch rails if the duty on rails were wholly removed. We know that the same is true of structural forms and of armor plate, and of a score or more of other forms of iron and steel. We know that the protection on glass is not only pure robbery of the American consumer, but that it tells distinctly to the disadvantage of the glass industry in this country: that we do not make such good glass as we might, because the exclusion of good foreign glass by our tariff enables our manufacturers to sell an inferior article for an exorbitant price. Every expert on glass knows that we might stand at the head in the production of plate and cut glass, but the tariff makes it unnecessary for our manufacturers to strive for this preeminence. A similar story may be told as to our manufactures of woollens. Some mills have demonstrated our ability to manufacture good woollen cloths, but our tariff gives to shoddy the opportunity to keep out sound foreign cloth of the cheaper grades, so that those who must wear low-priced goods are compelled to buy the imitation instead of the real. Illustrations of the President's error might be multiplied indefinitely. As we have already said, however, the President is probably quite unconscious of his error. Indeed, any one who can gravely assert that the cost of production is the cost of labor cannot be held morally accountable for any economic blunder. The President also asserts, or at least suggests, that we must have protection in order to pay higher wages to our "better-educated, better-fed, and better-clothed workmen, of a higher type than are to be found in any foreign country." Now it is one of the settled economic facts that the labor cost of articles produced by the kind of workmen whom the President describes as ours is less than the labor cost of articles produced by uneducated, ill-fed, and insufficiently clothed workmen.

It would be idle to follow the President for the purpose of making further exposures of his blunders. Moreover, we should thereby lay ourselves open to the charge of taking his oratorical economics seriously. Consciously or unconsciously, he is but repeating the lessons which have been taught the Republican party and the country by the leading apostles of the protective principle. The difference between these apostles and the President is, very likely, that while they know that their talk is for the deception of the people and for the profit of the beneficiaries of the present tariff, he may think that he is uttering economic truths. Whether he does think so or not, he knows that he is talking for personal and political effect, for his own renomination, and for his party's triumph in 1904. If he is as ignorant as he seems he is to be pitied, and his youth is to be deplored. If he is not, if he knows the truth, and says what is false, or what is only half true, for the welfare of his party, its leaders, its beneficiaries, and himself, he ought to be heartily ashamed of his task and of his performance.

The President's Latest Definition of the Monroe Doctrine

IN his speech at Chicago Mr. Roosevelt dealt exclusively with the Monroe Doctrine, which he pronounced a cardinal principle of our foreign policy. He undertook to define the principle as he understands it, and as he wishes to see it accepted on both sides of the Atlantic. We cordially concur in that definition so far as it goes, and we can easily comprehend why one general statement, to which we shall presently refer, was not made more explicit by specification. It ought to be obvious, although, from the neglect of the navy by some Federal administrations, the contrary conclusion might be drawn, that, if the American people really intend to make the doctrine a cardinal principle of their foreign policy, they must be at all times prepared to uphold it by force, should it be challenged. That, of course, should be recognized as an imperative and urgent duty, unless we desire to stand forth before the world as braggarts and simpletons. What Mr. Roosevelt had to say upon this point could not have been driven home to the common sense of the nation with more distinctness or more energy. Foreign powers will respect the doctrine just so long as our naval force, by which alone it can be defended, shall seem to them respectable. Nor is it enough, as he reminded us, to build war-ships which in respect of number, size, and weight of armament, shall constitute a fleet that shall rank at least third among the navies of the world. It is equally indispensable to provide each war-ship with an adequate complement of officers and men. Neither does this exhaust the list of our indisputable obligations. The officers must have seen an amount of service at sea commensurate with all possible contingencies, and the engineers, seamen, and gunners must have been thoroughly trained. During the recent manœuvres in the Caribbean, our marksmanship was observed to be deficient, decidedly inferior to that exhibited in Manila Bay and off Santiago. That is a shortcoming which justly exposes us to foreign criticism, and might prove disastrous in the hour of trial. As Mr. Roosevelt said at Chicago, to lay up a battle-ship in a navy-yard and only send it afloat at the outset of actual war, with a raw crew and untried officers, would be not merely a folly, but a crime; and, what is also not to be lost sight of, if we only prepare sufficiently, no war will ever come. It is perfectly true, as the President avers, that, if we need and must have a powerful and efficient navy, it is not for the purposes of war, but as the surest guaranty of peace.

So much for our duty to ourselves, if we honestly intend to stand by our assertion of the Monroe Doctrine. But what about our duty to our sister commonwealths in Latin America? Has Mr. Roosevelt's conception of that duty undergone any modification since he wrote his second annual message? Then he seemed to say that European governments might go to any lengths in the enforcement of "just obligations" upon a Latin-American republic, provided they stopped short of a permanent occupation of

the latter's territory. As we have formerly pointed out, the phrase "just obligations" was broader and more ambiguous than the word "misconduct," which Mr. Roosevelt used in his first annual message, in which he said that we should not interfere to shield from punishment an American republic should it misconduct itself, except for the purpose of averting a permanent occupation of its territory. By his choice of the word "misconduct" Mr. Roosevelt appeared to concur with all his predecessors in the office of Chief Magistrate, who, in their exposition of the Monroe Doctrine, had been careful to say that they should not oppose the coercion of an American republic by acts of war, provided the coercion were intended to obtain redress for grievances or reparation for wrongs, and provided, of course, it were not extended to a permanent occupation of territory. It is now evident that European powers understood the new term "just obligations" to cover not only the redress of grievances and reparation for *torts*, but also ordinary debts incurred under absolute freedom of contract, as to which, according to Latin-American statesmen and jurists, the maxim *caveat emptor* should apply to foreign creditors. The three blockading powers, Great Britain, Germany, and Italy, acted upon this understanding. By blockade and bombardment they extorted from Venezuela an agreement to pay, not only certain insignificant sums for the redress of alleged grievances, but also ordinary debts arising out of contract, and amounting to many millions of dollars, for which thirty per cent. of the customs revenue of Venezuela's two principal custom-houses is to be set aside. Against this dangerous precedent for the confiscation of a large fraction, or even the whole, of the customs revenue on which Latin-American governments largely depend for their support, Argentina has virtually protested through her minister at Washington. Would Mr. Roosevelt make any allusion to that protest? Would he qualify the wide and elastic phrase "just obligations," which, as he said in his second annual message, European powers were at liberty to enforce upon American republics? Would he announce that there were other acts, besides the permanent occupation of territory, which, if committed against sister commonwealths, the people of the United States could not view with equanimity? These were questions that thoughtful Americans, foreseeing the perils of the Venezuela precedent, could not but ask themselves when they learned that Mr. Roosevelt purposed to discuss the Monroe Doctrine in the course of his Western tour. We are happy to say that at Chicago the President did materially qualify the purport of the definition which he had put forth in his second annual message. He declared in so many words that the policy associated with the name of Monroe "not only forbids us to acquiesce in territorial acquisitions on the American continent by European powers, but also causes us to object to the acquirement of a control which, in its effect, would be equal to territorial aggrandizement." Such is the general principle now propounded by the President, and we would point out that it is in almost perfect harmony with the original declaration made by Monroe, who said, it will be remembered, in his annual message of December 2, 1823, that "we could not view any interposition for the purpose of *oppressing* them [Latin-American republics], or *controlling in any other manner their destiny*, by any European power, in any other light than as the manifestation of an unfriendly disposition towards the United States." At Chicago the President named only one specification or application of this principle. He said, what is unquestionably true, that, had the interoceanic canal across the American isthmus been built by a European power, one or more Latin-American republics would inevitably have been subjected to a large measure of control at the hands of the power which should construct and operate the waterway. That was one of the cogent reasons that impelled us to construct the canal ourselves. Mr. Roosevelt did not go on to specify other instances in which his principle would be applicable. Without repudiating the action of his own State Department, which has acquiesced in the outcome of the Venezuela blockade, he could not at this time declare that Argentina's protest is well founded, and that the destiny of an American republic might be vitally controlled if the whole, or even a large part, of its customs revenue could be confiscated to the profit of foreign creditors for an indefinite period. It is perfectly obvious, however, that such a deduction follows logically and unavoidably from his new declaration.

Mr. Roosevelt's Advisers on the Tariff and the Trusts

DURING the week ending April 4, not only President Roosevelt, but two members of his cabinet, Secretary Root and Secretary Shaw, discussed the suggested revision of the tariff and the recent anti-trust legislation. The Secretary of the Treasury, speaking at Peoria, Illinois, on March 31, undertook to refute the Democratic assertion that customs duties ought to be removed from commodities the producers of which in the United States possess under the existing tariff a monopoly, or are making a close approach thereto. Mr. Shaw demanded that the Democratic advocates of this remedy for monopolies or monopolistic tendencies should explain whether they would remove protection temporarily or permanently from monopoly-produced goods. If the removal of protection is to be temporary, who is to say, he inquired, when it shall be restored? We answer, Congress, which brought about the temporary removal. Mr. Shaw spoke more to the point when he queried whether, if the iron and steel industry, the glass, the paper, or any other industry, has been monopolized, as is claimed, and if no Americans now dare build factories in competition with these monopolists, American courage would be reinvigorated by the removal of the tariff, which would inevitably cause an inflow of competitive products from abroad. It seemed to him that American enterprise would be quite as likely to build a factory and compete in the American market under protection as under free trade. What Mr. Shaw overlooks is the fact that under a free-trade régime individual Americans would compete against individual foreigners, whereas under the protectionist régime they have to compete against the colossal aggregations of capital which the tariff has fostered.

Mr. Root, speaking at Boston on April 2, admitted that some good and true men, by which, apparently, he meant certain members of the Republican party who have adopted the Iowa idea, recommended a substantial revision of the tariff. He thought that their desire should not be gratified at the present time, for several reasons. In the first place, he said, a revision of the tariff is a great and difficult task. That is true, but if it be a task beyond the ability of Congress to perform, our system of Federal government needs mending. In the second place, he suggested a doubt whether the evils existing under the present tariff are as great as the evils that would be experienced from the long and difficult process of revision. This, again, is equivalent to saying that our Congress is so incompetent, or so slow, that, having got a bad thing, we had better cling to it lest we get a worse. In the third place, Mr. Root bade his audience remember that out of no possible revision would any one man be likely to get precisely the kind of tariff law that he wants. Of course not. Every tariff law is the outcome of multifarious compromises. The question is not whether we can attain an impossibility—that is to say, a tariff perfectly satisfactory to everybody—but whether we can get a tariff which would be an improvement on the existing one from the view-point of the community considered as a whole.

Now let us see what the two secretaries said about the trusts. Mr. Shaw certainly has the courage of his opinions, for at Peoria he did not hesitate to avow the paradoxical belief that the present prohibitory law against trusts has generally been found adequate whenever the evidence attainable has been found sufficient to establish the alleged fact. He asserted that the trust-busting legislation of the Fifty-seventh Congress did not provide new remedies so much as new methods of discovering facts and expediting judicial investigation. The Sherman law, he said, contains quite drastic provisions, applicable to both persons and corporations, when these are once proven to have combined, or to have conspired to combine, for the purpose of monopolizing a business or a trade privilege. It is undeniable that the anti-trust acts passed by the last Congress amount to nothing, and were intended to amount to nothing, beyond ostensibly providing the means for applying the search-light of publicity to the private affairs of railway and industrial corporations engaged in inter-State commerce. Two things remain to be seen: first, whether the vaunted publicity will, in fact, be secured, and, secondly, what use will be made of it by the Bureau of Corporations and by the Attorney-General's office. We add that Mr. Shaw forestalled his executive chief in directing attention to the truism that combined capital, while not by any means an unmixed evil, is capable of evil. Unquestionably we have reached a stage in our civilization where the things that we feel called upon to undertake require associated capital. It is, therefore, as Mr. Shaw says, the province of a statesman so to legislate as to encourage the aggregation of capital, while, at the same time, guarding against the abuses of which such aggregation may be susceptible. The Secretary of the Treasury put the facts neatly when he reminded us that it requires no remarkable skill to kill a vicious colt, but it does require skill, and patience, and wisdom, to get superlative speed out of a strong animal possessed of many evil propensities. We quite agree with the Secretary in thinking that it is wiser to put kicking-straps on a horse than to hamstring the animal.

Mr. Root at Boston was firm in the belief that you cannot get rid of trusts by revising the tariff, unless you are ready to reduce the duties in the classes of manufacture in which the so-called trusts are engaged—that is to say, in all the principal kinds of manufacture—to such an extent as to put an end to all American manufactures. That is just one of the assertions that the Democrats want to test by experiment. They want to find out whether the duties may not be so lowered as to make it impossible for a heavily watered trust to pay dividends, and yet leave it perfectly possible for an individual manufacturer, working with unwatered capital, to reap reasonable profits. There is no doubt about Mr. Carnegie's opinion on the subject. He would back the individual manufacturer with unwatered capital against the watered trust every time.

Municipalism in England

By Sydney Brooks

LONDON, *April 4, 1903.*

"As regards municipal ownership, we are a hundred years behind Great Britain."—HARPER'S WEEKLY, March 14, 1903.

I SHOWED that sentence to an English member of Parliament who has been twice mayor and for over ten years a councillor or alderman of one of the largest cities in the kingdom. His comment was startling. "Happy America!" he exclaimed. "Long may she remain so." He went on to make a vigorous attack on the excesses of modern "municipal enterprise." The old form of it, the form known as "gas and water socialism," he approved. Experience had convinced him that there were certain undertakings which, being monopolistic in their nature and vitally bearing on the health or safety or necessary comforts of the people, could be more efficiently and more economically controlled by a municipality than by a private company. He could not, and no more, he declared, could any one else, lay down hard and fast lines as to the sphere in which municipal enterprise might legitimately move. Local conditions, as it seemed to him, could alone determine that. But he thought it unquestionable that when a municipality branched out into all sorts of minor trades of a speculative and even experimental character, incurred immense liabilities in prosecuting them, and raised local taxation to an almost unbearable height, a point was reached where it became a matter of principle and common sense to call a halt. That point, in his opinion, England had not only reached, but passed. "Our local governing authorities," he said, "have gone crazy over municipal trading. England, without realizing it, is settling rapidly down on a Collectivist basis. The municipalities are the socialism of the future in embryo, and the men who compose them, whether they know it or not, are playing the game of the Socialists to perfection. Of course socialism has lost a good many of its terrors. 'We are all Socialists now,' as Harcourt said. But there is one thing that has not lost its terrors, and that is bankruptcy. If municipal speculation goes on at its present rate, it is my opinion we must either end in a sort of local bankruptcy or else in such a widespread atrophy of private initiative as will work our commercial ruin. That is why, as a lifelong friend and admirer of America, I am glad to hear she is a hundred years behind us in the matter of municipal ownership. That is why I say 'Long may she remain so.'"

One hears opinions like this expressed on all sides nowadays. I do not think it would be too much to say that the intelligent public spirit of this country is preparing for a revolt from the extremes of the "new municipalism." Ratepayers' defence clubs, property-owners' associations, citizens' unions, industrial protective societies, and so on, are multiplying all over the kingdom, and endeavoring to arouse the average respectable citizen, whose apathy is at the root of the mischief, into some active sense of the dangers that lie inevitably ahead. An invaluable series of articles contributed to the *Times* during the summer and fall of last year has given an immense impetus to the movement. It is not an impossible undertaking, but it is an exceedingly arduous one—how much so may be gathered from studying the example of Glasgow. Glasgow prides itself on being the model municipality of Great Britain. It is, at any rate, the most active. The Corporation—that is to say, the City Council—supply the people of Glasgow with water, gas, electric light, cable and electric cars, and telephones; they control eleven public parks and galleries, thirteen baths and washhouses, a fruit and vegetable market, a dead-meat market, a home cattle-market, two foreign cattle-markets, a cheese-market, a bird and dog market, and an old-clothes market, four slaughter-houses and offices, four hospitals, and one burying-ground; they are the owners of 2488 municipal houses, seventy-eight lodging-houses, of which they manage seven themselves; a family home, which they also direct; 372 shops, forty-nine stores, forty-three warehouses, forty-three workshops, twelve halls, two churches, two hotels, one theatre, one studio, one pawn-office, one nursing-home, one powder-mill, one laundry, one bakehouse, one golf-course, and one gospel-tent; they farm over 1000 acres of land, where large crops are grown, including all the hay used in the stables of the cleansing department, as well as crops of oats, wheat, turnips, etc.; they convert the city sewage into solid matter, and sell it to farmers for manure; they carry on business as market-gardeners; they possess stone-quarries and 900 railway wagons; they build street cars, reclaim bogs, conduct a civic granary, raise $5000 a year on the clinker from the refuse-cremating furnaces, collect and sell waste-paper, and are not above melting and disposing of the solder from the old tin cans they find in the dust heaps. The contributor to the *Times* adds that this catalogue makes no pretence of being exhaustive. Such as it is, however, it will probably suffice to startle even those light-hearted New York statesmen who proposed the nationalization of the Pennsylvania coal-mines "by the right of eminent domain."

Glasgow, moreover, is only one of many,—an extreme, but by no means unique, example of what is going on all over the kingdom. The *Times* correspondent found and collected instances of the same sort of "enterprise" wherever he looked. There are about ten or a dozen towns in England where municipal sterilized milk for babes is supplied. The local governing authorities not only furnish the milk, but feeding-bottles with it—the purchaser being required to bring the teats at specified intervals to the municipal milk-store that their cleanliness may be tested. From this to the municipalization of the entire milk-supply is only a moderate step. It has not yet been taken, but sooner or later it inevitably will be. Several local governing authorities run saloons. Several others have set up homes for inebriates. General hospitals are still, for the most part, left to the support of private charity, but sanatoria for consumptives, smallpox, and scarlet-fever hospitals are common objects of municipal benevolence. In one town tubes of serum are prepared out of the public funds for cases of diphtheria and puerperal fever, and sold at a nominal price to all who apply for them. Cemeteries and crematoria under municipal ownership and management literally abound. The control of local markets has always, and quite properly, been vested in the local authority, but municipal markets are now swiftly leading to municipal slaughter-houses, municipal cold-storage houses, municipal ice factories. Cardiff has a municipal fish-market; Torquay breeds rabbits on a large tract of land where water is collected for the municipal water-works, and the profits from the sale of them goes to reducing the rates,—the experiment having answered so well that the City Council has now gone in for sheep-farming; Tunbridge Wells grows hops, and Liverpool beet-roots, on their sewage farms; at Colchester there are municipal oysters, which those who have never tasted an American oyster may conceivably relish; Brighton and several other towns own race-courses; a few have built theatres; West Ham not only manufactures its own paving-stones, but sells its surplus to contractors; many local authorities drive a good business in the residual products of gas—Manchester, for instance, trading in soap, oil, tallow, and mortar; most of the corporations that supply gas are prepared also to furnish stoves and all the necessary fittings; Sheffield undertakes plumbing work as a side issue to supplying water; Liverpool has a municipal tailoring establishment, where the uniforms of the town officials and employees are made; Battersea cuts all the timber required for municipal buildings and street paving in its own sawmill; Cardiff does the same; Manchester manufactures for itself all the wagons, brooms, and brushes needed by the local street-cleaning department; the Westminster City Council at the time of the coronation set up as seat-speculators, and got most handsomely "left"; a good many local authorities provide bands in the parks, organ recitals, and free municipal concerts; Nottingham runs both a university college and an aviary; the London County Council makes a free distribution of plants at the end of each summer season; Glasgow, Liverpool, and Leicester provide window-boxes filled with flowers for cottages in the poor and crowded districts; Blackpool, a seaside resort, spends thousands of pounds a year on advertising its charms and subscribes considerable sums to the local "attractions"; Harrowgate goes one better by offering visitors municipal displays of fireworks; at least a score of local authorities own golf-links and cycle-tracks, and, on a somewhat higher plane, schemes are constantly being put forward for municipal insurance offices, municipal banking, and municipal ownership of coal-mines and canals.

Side by side, and intimately connected with all this, are to be noted a prodigious expansion of municipal indebtedness—it now stands at well over $1,500,000,000—and an increase in local rates almost as great. The way in which local authorities plunder manufacturers, industrial companies, well-to-do traders, and property-owners, that some fresh municipal enterprise may be undertaken, is almost incredible. The question of local rates is becoming as formidable to British industry as the question of trade-unionism. Moreover, it is a fact that the "new municipalism" is the direct outcome of the concerted movement which English trade-unionists, Socialists, and labor-men have organized for the capture of the local authorities. They have pushed forward this movement with an electioneering skill worthy of an American campaign-manager. One result of their irruption into city councils is that the best type of men are ceasing to interest themselves in local affairs; another is that while the range of municipal activity is constantly widening, its efficiency is as steadily deteriorating. At the same time a bureaucracy of municipal office-holders is being solidly formed, and even the municipal employees are now a sort of trade-union on their own account. Add to this the unfairness of a local authority competing with and finally crushing private traders and professional men, add the paralyzing effect on invention and initiative, add further the recklessness with which wild-cat schemes are plunged into and the extravagant inefficiency with which they are usually prosecuted, add finally the suspicion that a municipal balance-sheet needs as close a scrutiny as a prospectus from Mr. Whitaker Wright's pen, and you will understand why Englishmen envy America her hundred years' backwardness.

The Effect of the Kaiser's Speeches

By Wolf von Schierbrand

If I were asked the question, What effect, on the whole, have had the Kaiser's speeches? my deliberate answer would be, On the whole, a good one. And in making such answer I am well aware that it runs counter to the preconceived opinion, both of this country and of England. But it is, I honestly believe, nevertheless, the true and fair one.

For one thing, then, it must be borne in mind that the Kaiser, in most cases, is talking to his people, the Germans. And with all their high mental culture, their many sterling qualities, the Germans are, in political education, at least a whole century behind either England or the United States. The frank and well-instructed minds of Germany, those who have travelled or resided abroad long enough to form an intelligent opinion, admit this, irrespective of party ties. Now, in speaking to a people like that—a people in their overwhelming majority composed of monarchists by conviction and tradition, steeped in the faith that good can come to them, if at all, only through and by their rulers, it must be manifest to every unprejudiced person that modes of speech and methods of style must be adopted to produce a given effect different from those that would produce a similar effect on a nation politically more advanced.

That the Kaiser himself knows this full well is proven by the fact that when speaking to representatives of other nations—to Americans, Englishmen, even Frenchmen—he never makes use of the flamboyant, dictatorial, oracular mode of delivering himself which he, as a rule, employs in his public utterances to his own people. Witness in striking proof of this his speech, on July 10, 1891, at the Lord Mayor's banquet, Guildhall, London. It might be objected that representatives of these nations, above all, Americans and English, wouldn't "stand" such speeches. Very well, admit that—they wouldn't; and the Kaiser knows it, and does not talk to them, or of them, in that *objectionable manner*, which simply proves our contention. He usually gauges his audience quite keenly and accurately, and he tells them that which he knows will be good for them. That he, with all that, is quite honest in his "ruler-by-divine-right" belief, admits scarcely of doubt, and does not alter the above fact. To the vast majority of the Germans of to-day neither the subject-matter of his innumerable speeches nor their peculiar flavor is at all distasteful. Many of them touched chords in the German soul which would not have vibrated otherwise; not only touched them, but stirred them so electrically as to produce action and lasting effect on the phases of national life.

Turning now to the peculiar conditions in which the German Empire is placed, it will readily be seen that they account for much that seems strange to us in his talk. For the young empire is all the while contending against a sea of troubles, both within and without. As to the troubles within, they are, just to mention the chief ones, three: The absolute necessity of a firmer consolidation; the splitting up of political life into a score of factions, none of which is alone able to accomplish anything; and the Socialist danger. And as regards the foreign situation, we see Germany surrounded, east and west and north, by powerful foes, forever on the watch, quick and willing to seize a really favorable opportunity for the dismemberment of the empire. We see her, besides, in the stress of a fierce and never-abating competition, political and commercial, with all the rest of the world. And yet the empire's soil is inferior in fertility and resources to that of her neighbors and most of her rivals.

Now let us see what purposes the Kaiser has chiefly had in view when speaking publicly. In the main these purposes have been the following: To preserve the peace of the world, enabling Germany to develop internally, and to calmly reap the fruits of her efforts in industry, commerce, science, invention; to strengthen the bonds of cohesion which hold the empire together; to foster and direct the expansion of Germany in political and commercial fields. A recent German compilation of the Kaiser's speeches, shortly to be published in English by Harper & Brothers, furnishes authentic and exhaustive material on which to base these claims. No one reading these speeches in their totality can help the deduction that his main programme as a ruler is bounded by the limits defined above. But it will repay the trouble to go a little more into details here.

As to his efforts to preserve the peace of the world, his visits, at the outset of his reign and since, to Russia, England, Austria, Italy, and elsewhere, and his toasts and speeches, telegrams and letters, give abundant proof that he was both sincere, untiring, and successful in these labors. In the light supplied by them there remains scarcely a doubt that it was principally owing to him that no war broke out between Russia and France on the one hand, and Germany, Austria, and Italy on the other, any time from 1888 to the death of Czar Alexander III., in the autumn of 1894. He made skilful use of the only effective means at hand to prevent this war—he convinced his adversaries that Germany wanted no war, and would do everything she honorably could to avoid it, and he convinced them equally of the fact that Germany would fight hard, and go into the fray prepared for a life-and-death struggle if forced into it. The latter conviction he contrived to convey by repeated and enormous enlargement of the German army during that period, and by knitting tighter the Triple Alliance. The evidence is as irresistible in regard to the other two tasks he had set *himself*. No close observer of German internal affairs will deny that the Kaiser has succeeded to an unprecedented degree in strengthening and multiplying the cohesive forces that bind the young empire together. He has wiped out the strife between the Catholic Church and the Protestant state in Germany, known under the name of *Culturkampf*, and which he took over as an inheritance from Bismarck. He has made loyal disaffected Alsace-Lorraine. He has made the relations between Emperor and the co-ordinated German sovereigns much more intimate and pleasant. He has vastly improved and doubled the size of the army. He has created the formidable German navy.

As to Germany's expansion, political and commercial, the Kaiser is practically responsible for it. That the world admits. And the same remark applies to Germany's internal advance in all material things—industry, trade, shipping, applied science, general prosperity. It is no mere coincidence that the last decade of the Kaiser's reign has seen Germany bound forward on the path of expansion at a marvellous rate. It is largely due to his unbending energies in that direction.

Thus, then, the Kaiser's hundreds of speeches subserving these chief purposes of his, have unquestionably produced vast good, not to his country and people alone, but to the world at large, inasmuch as they have served to render war impossible, and in that manner have contributed immensely to the welfare of mankind as a whole.

But there is an entire category of his speeches which have achieved not good, but evil. In it belong his many public utterances against political Liberalism, for whose dwindling away in Germany he is mainly responsible; his amazingly violent diatribes and insults hurled against the Socialists of Germany, comprising, it must be remembered, one-fourth or more of the entire population; those against the freedom of the press and against the new literature and art of Germany; and also those many wild and irrational sayings and orders to his officers, soldiers, and recruits. Of the latter, no doubt, some at least were momentary ebullitions, not to be taken seriously. One may arrive at that conclusion because they have been excluded, at the implied behest of the Kaiser himself, from recent compilation. But enough of them remain to make the calm observer stand aghast.

The other day, August Bebel, the Socialist leader, delivered one of his characteristic speeches in the Reichstag. It was a scathing and almost brutally frank reply to the Kaiser's innumerable attacks on his party. Anybody who has been on the inside of German affairs knows that, in sober truth, the Socialists there—who must not be confounded in their teachings with Socialists elsewhere—have been and are the most powerful check on the growth of anarchism, and have benefited the laboring classes in the empire as all other factors together have not. The Kaiser's dread of them is unreasoning.

And while the Kaiser's speeches have had a most unwholesome effect on German literature and art, they have been still more baneful as to press conditions in the empire. It is an undeniable fact that the Kaiser has throttled freedom of opinion and its expression there, and this to a degree without a parallel. The press in Germany is muzzled and powerless. The writer himself (if he may be pardoned for mentioning the fact) illustrates this, for he was expelled from Berlin for writing, as an American correspondent, the truth about the Emperor, expelled, broken in health, ruined financially. I suppose it would be but "human" in Bebel's sense if I, when opportunity offered, should confound my private wrongs with the public ones wrought by the Kaiser's illiberal policy toward the press. But that would not be fair to the reader nor to the Kaiser. It is, however, strictly within the truth to say that his practically absolute power has given the Kaiser a notion that he is infallible, and that to hold, or, above all, express, opinions at variance with his own is tantamount to high treason, tantamount to injuring the empire's interests. That again is quite "human." I do not doubt for a moment the sincerity of his convictions and notions. In fact, his most inveterate foes within the empire, the Socialists, admit that much themselves. But that does not alter the fact that Bebel's charge is true—the Kaiser goes in his speeches and in his whole public activity away beyond constitutional limits, limits which he solemnly pledged himself to adhere to on ascending the throne. However, the point at issue in this article scarcely concerns itself with that question, interesting as it is.

Striking a general balance, after carefully weighing the evidence on either side, I am constrained to say that I hold the influence of the Kaiser's speeches, *on the whole*, to be a good one. Or perhaps it would convey my meaning more clearly to say that the good effects outweigh the evil ones.

The Kaiser fills, no doubt, an anomalous position in the world's eye. He is a bundle of contradictions. His double lineage—Hohenzollern and Guelph—accounts for that. His complex nature is nowhere mirrored more dazzlingly and yet impartially than in his very speeches. But much of what is anomalous in his speeches is due *not* so much to him as to the anomalous circumstances surrounding *him* as a ruler.

Personal Impressions of Monte Carlo

By Maurice Maeterlinck

I

I SACRIFICED—for it is a sacrifice to give up the incomparable play of the stars and moon on the divine Mediterranean—I sacrificed a few evenings of my stay in the land of the sun to the consulting of the most mystic god of this world of ours, in the busiest, the most gorgeous, and the most individual of his temples.

This temple stands down there, at Monte Carlo, on a rock bathed in the dazzling light of the sea and sky. Enchanted gardens, where blossom in January all the flowers of spring, summer, and autumn, sweet-scented thickets that borrow nothing from the hostile seasons but their perfume and their smiles, lie before its porch. The orange, most lovable of all trees, the palm, the lemon-tree, the mimosa wreathe it with gayety. The crowds approach it by royal stairways. But, mark you, the building is not worthy of the admirable site which it commands, of the delicious hills, the azure and emerald gulf, the happy meadows that surround it. Nor is it worthy either of the god whom it shelters, or of the idea which it represents. It is insipidly emphatic and hideously blatant. It suggests the low insolence, the overweening conceits of the flunkey who has grown rich but remains obsequious. Examination shows it to be solidly built and very large: nevertheless, it wears the mean and sadly pretentious air of the ephemeral palaces of our great exhibitions. The august father of Destiny has been housed in a sort of meringue covered with preserved fruits and sugar castles. Perhaps the residence was purposely made ridiculous. The builders may have feared lest they should warn or alarm the crowd. They probably wished to make it believe that the kindliest, the most frivolous, the most harmlessly capricious, the least serious of the gods awaited his worshippers on a throne of cakes inside this confectioner's masterpiece. Ah, no: a mysterious and grave divinity reigns here, a wise and sovereign force, harmonious and sure. He should have been throned in a bare marble palace, severe, simple, and colossal, high and vast, cold and spiritual, rectangular and rigid, positive and overwhelming.

II

The interior corresponds with the exterior. The rooms are spacious, but decorated with commonplace magnificence. The acolytes of Chance, the bored, indifferent, monotonous croupiers, look like shop-assistants in their Sunday clothes. They are not the high priests, but the office clerks of Hasard. The rites and implements of the cult are vulgar and commonplace: a few tables, some chairs; here, a sort of bowl or cylinder that turns in the centre, of each table, with a tiny ivory ball that rolls in the opposite direction; there, a few packs of cards, and that is all. It needs no more to evoke the immeasurable power that holds the stars in suspense.

III

Around the tables crowd the faithful. Each of them carries within himself hopes, belief, different and invisible tragedies and comedies. This, I think, is the spot in which more nervous force and more human passions are accumulated and sheerly squandered than in any other in the world. This is the ill-omened spot where the peerless and, perhaps, divine substance of substances, which, in every other place works pregnant miracles, prodigies of strength, of beauty and of love, this is the fatal spot where the flower of the soul, the most precious fluid on the plant, leaks away into nothingness!. . . No more criminal waste can be conceived. This unprofitable force, which knows neither whither to go nor what work to do, which finds no door nor window, no direct object nor manner of transmission, hovers over the table like a mortal shadow, falls back upon itself, and creates a particular atmosphere, a sort of sweating silence which somehow expresses the fever of true silence. In this unwholesome stillness, the voice of Fate's little quill-driver snuffles out the sacred formula: *Faites vos jeux, messieurs, faites vos jeux!* That is to say, make to the hidden god the sacrifice that he demands before he shows himself. Then, somewhere from the crowd, a hand bright with certainty places imperiously the fruit of a year's work on numbers that cannot fail. Other adorers, more cunning, more circumspect, less confident, compound with luck, distribute their chances, compute illusive probabilities, and, having studied the mood and peculiarities of the genius of the table, lay complex and knowing traps for it. Others, again, hand over a considerable portion of their happiness or their life, at random, to the caprice of numbers.

But now the second formula resounds: *Rien ne va plus!* That is to say, the god is about to speak! At this moment an eye that could pierce the easy veil of appearances would distinctly see scattered on the plain green cloth (if not actually, then at least potentially, for a single stake is rare, and he who plays of his superfluity to-day will risk his all to-morrow) a cornfield ripening in the sun a thousand miles away, or again, in other squares, a meadow, a wood, a moonlit country house, a shop in some little market town, a staff of bookkeepers and accountants bending over ledgers in their gloomy offices, peasants laboring in the rain, hundreds of work-girls slaving from morn to night in deadly factories, miners in the mines, sailors on their ship; the jewels of debauchery, love, or glory; a prison, a dock-yard; joy, misery, injustice, cruelty, avarice; crimes, privations, tears.

All this lies there, very peacefully, in those little heaps of smiling gold, in those flimsy scraps of paper which ordain disasters that even a lifetime would be powerless ever to efface. The slightest timid and hesitating movements of these yellow counters and blue notes will rebound and swell out in the distance, in the real world, in the streets, in the plains, in the trees, in men's blood and in their hearts. They will demolish the house that saw the parents die, carry off the old man's chair, give a new squire to the astonished village, close a workshop, take away the bread from the children of a hamlet, divert the course of a river, stay or break a life; and through an infinity of time and space burst the links of an uninterrupted chain of cause and effect. But none of those resounding truths utters an indiscreet whisper here. There are here more sleeping Furies than on the purple steps of the palace of the Atridæ: but their cries of waking and of pain lie hidden at the bottom of men's hearts. Nothing betrays, nothing foretells that there are definite ills hovering over those present and choosing their victims. Only, the eyes stare a little, while hands shiftily finger a pencil, a bit of paper. Not an unaccustomed word or gesture. Clammy expectation sits motionless. For this is the place of voiceless pantomime, of stifled fighting, of unblinking despair, of tragedy masked in silence, of dumb destiny sinking in an atmosphere of lies that blots out every sound.

IV

Meanwhile, the little ball spins on the cylinder, and I reflect upon all that is destroyed by the formidable power conferred on it through a monstrous compact. Each time that it thus starts in search of the mysterious answer, it annihilates all around it the last essential remnants of our social morality: I mean, the value of money. To abolish the value of money and substitute for it a higher ideal would be an admirable achievement; but to abolish it and leave in its place simply nothing is, I conceive, one of the gravest crimes that can be committed against our scheme of evolution. If we look at it from a certain point of view, and purify it of its incidental vices, money is essentially a very worthy symbol: it represents human effort and labor; it is, for the most part, the fruit of laudable sacrifice and noble toil. Whereas here, this symbol, one of the last that was left to us, is daily subjected to public mockery. Suddenly, at the caprice of a little thing as insignificant as a child's toy, ten years of striving, of conscientious thought, of tasks patiently endured, lose all importance. If this hideous phenomenon were not isolated on this one rock, no social organization but would have fallen victim to the injury spreading from it. Even now, in its leprous isolation, this devastating influence makes itself felt at a distance which never could have been estimated. We feel that this influence, so inevitable, so malevolent and so profound, is such that, when we leave this cursed palace where gold clinks incessantly against the human conscience, we wonder how it is that the everyday life goes on, that patient gardeners consent to keep up the flower-beds in front of the fatal building, that wretched guardians can be found to watch over its precincts for a contemptible wage; and that a poor little old woman, at the bottom of its marble stairs, amid the coming and going of lucky or ruined gamblers, for years persists in earning a laborious livelihood by selling pennyworths of oranges, almonds, nuts, and matches to the passers-by.

V

While we are making these reflections, the ivory ball slackens its course and begins to hop like a noisy insect over the thirty-seven compartments that allure it. This is the irrevocable judgment. O strange infirmity of our eyes, our ears, and that brain of which we are so proud! O strange secrets of the most elementary laws of this world! From the second at which the ball was set in motion to the second at which it falls into the fateful hole, on the battle-field three yards long, in this childish and mocking form, the mystery of the Universe inflicts a symbolical, incessant, and disheartening defeat upon human power and reason.

Collect around this table all the wise men, all the divines, all the seers, all the sages, all the prophets, all the saints, all the wonder-workers, all the mathematicians, all the geniuses of every time and every country; ask them to search their reason, their soul, their knowledge, their heaven for the number so close at hand. The number already almost part of the present at which the little ball will end its race; beg them, so that they may foretell that number to us, to invoke their gods that know all, their thoughts that govern the nations and that

aspire to penetrate the worlds: all their efforts will break against this brief puzzle which a child could take in its hand and which no longer fills the smallest moment's space. No one has been able to do it, no one will ever do it. And all the strength, all the certainty of the "bank," which is the impassive, stubborn, determined, and ever-victorious ally of the rhythmical and absolute wisdom of chance, lies solely in the establishment of man's powerlessness to foresee, were it but for the third of a second, that which is about to happen before his eyes.

If, in the span of nearly fifty years during which these formidable experiments have been made on this flower-clad rock, one single being had been found who, in the course of an afternoon, had torn the veil of mystery that covers, at each throw, the tiny future of the tiny ball, the bank would have been broken, the undertaking wrecked. But that abnormal being has not appeared; and the bank well knows that he will never come to sit at one of its tables. We see, therefore, how, in spite of all his pride and all his hopes, man knows that he can know nothing.

VI

In truth, Chance, in the sense in which the gamblers understand it, is a god without existence. They worship only a lie, which each of them pictures to himself in a different shape. Each of them ascribes it to laws, habits, preferences which are utterly contradictory as a whole and purely imaginary. According to some, it favors certain numbers. According to others, it obeys certain rhythms that are easily grasped. According to others again, it contains within itself a sort of justice which ends by giving an equal value to each group of chances. According to others, lastly, it cannot possibly favor indefinitely any particular series of simple chances for the benefit of the bank. We should never come to an end if we tried to review the whole illusory *corpus juris* of roulette. It is true that, in practice, the indefinite repetition of the same limited accidents necessarily forms groups of coincidences in which the gambler's deluded eye seems to discern some phantom laws. But it is no less true that, upon trial, at the moment when you rely upon the assistance of the surest phantom, it vanishes abruptly and leaves you face to face with the unknown which it was masking.

For the rest, most gamblers bring to the green cloth many other illusions, conscious or instinctive, and infinitely less justifiable. Almost all persuade themselves that Chance reserves for them special and premeditated favors or misfortunes. Almost all imagine some undefined but plausible connection to exist between the little ivory sphere and their presence, their passions, their desires, their vices, their virtues, their merits, their intellectual or moral power, their beauty, their genius, the enigma of their being, their future, their happiness, and their life. Is it necessary to say that there is no such connection; that there could be none? That little sphere whose judgment they implore, upon which they hope to exercise an occult influence, that incorruptible little ball has something else to do than to occupy itself with their joys and sorrows. It has but thirty or forty seconds of movement and of life; and during those thirty or forty seconds it has to obey more eternal rules, to resolve more infinite problems, to accomplish more essential duties than would even find place in man's consciousness or comprehension. It has, among other enormous and difficult things, to reconcile in its brief course those two incomprehensible and immeasurable powers which are probably the biform soul of the Universe: centrifugal force and centripetal force. It has to reckon with all the laws of gravitation, friction, the resistance of the air, all the phenomena of matter. It has to pay attention to the smallest incidents of the earth or sky; for a gambler who leaves his seat and imperceptibly disturbs the floor of the room, or a star that rises in the firmament, compels it to modify and begin anew the whole of its mathematical operations. It has no time to play the part of a goddess either well or ill disposed towards mortals; it is forbidden to neglect a single one of the numberless formalities which infinity demands of all that moves within it.

And when at last it attains its goal, it has performed the same incalculable work as the moon or the other cold and indifferent planets which, outside, above, in the transparent azure, rise majestically over the sapphire and silver waters of the Mediterranean. This long work we call Chance, having no other name to give to that which we do not as yet understand.

"Wee Macgregor"

A Few Remarks about James Joy Bell, the coming Man in Scottish Literature, by Robert Barr

THE literary tide which, taken at the flood, led three or four people on to fortune in Scotland, began to ebb sometime since. It was a strong tide while it lasted, and the question now arises, in what shape will it return? Fashion changes in literature as it does in ladies' hats, and as rapidly. The "Hoots Mon!" novel has had a very good innings, and now it is time for another team to come to the bat. Of course I am mixing my similes, but that is a fashion set by the "Kailyard" School, so if the reader is particular in the matter of similes, I withdraw the man from the bat, and say it is now time for another wave to roll up the sandy shore of literature.

J. J. Bell
Author of "Wee Macgreegor"

The Scottish novel of the past ten years presented characters of the poor but honest brand. The people who moved about more or less slowly in its pages, were rough and uncouth, so far as exterior was concerned, but they were always pure gold within. They were capable of amazing and unexpected self-sacrifice, which usually came upon the reader unaware, for until he got well acquainted with them, he thought they were merely uncultured boors, narrow, selfish, and in chronic ill-humor. But it invariably turned out that the heart was in the right place, and that, after all, was the main thing from the Scottish novelist's point of view. Many of the discussions turned upon the matter of a somewhat narrow and harsh religion, which frequently brought about a crisis toward the final chapters. But this crisis was always soothed down or mitigated by the natural good-heartedness of all concerned. There was also a glimmer of fun of a sort in the books, very sparingly indulged in, and yet some of these novelists actually acquired the reputation of humorists.

But the great asset of recent Scotch novels has been salt water. A while since an educational primer for children was produced in America, entitled *Reading Without Tears*, which was intended to teach the infant how to tread the thorny path of knowledge without getting its bare feet scratched by the brambles. *Reading Without Tears* would have proved a most inadequate introduction to the works of the "Kailyard" cult, for the water-works idea proved so successful that the later efforts of the school began to indicate a lack of adequate plumbing. One of the most popular of the coterie rapidly degenerated into slush, until it seemed as if we would have to wear waterproof and rubbers whenever we tackled him.

One would have thought that the revulsion against this submerged state of things would have been inaugurated by either Americans or Englishmen, but the anti-slush movement was led by Scotchmen. For some time an uneasy feeling had been prevalent among the Caledonians that they were not really the white-winged angels depicted by this group of writers. I think it was the poet W. E. Henley who pinned to the coat tails of the group the placard labelled "Kailyard," or if it was not Henley, it was some writer for the magazine which the poet at that time edited. However, the great example of the swing of the pendulum was the issuing of the late George Douglas Brown's biting book, *The House with the Green Shutters*. This was a work of genius, which many of the books of the Kailyarders were not, but it was nevertheless as untrue to life in the one direction as Ian Maclaren's goody-goody contributions were on the other. *The House with the Green Shutters* could not have founded a school, as did the *Window in Thrums*, for it could not be imitated, and the author of the former told me himself that he did not intend to write such another. I heard an alleged Scottish humorist say the other day that the *Green Shutters* had closed on the *Window in Thrums*, but I think the *Window in Thrums* is the one book issued by the "Kailyard" combination that will live, and I doubt if that can be said for *The House with the Green Shutters*.

A story must be founded on eternal truth if it is to taste eternity. It must be without false note, exaggeration, or melodrama; such a work, for instance, as *Rab and His Friends*. The average Scotsman knew very well that he inhabited neither the house with the green shutters nor a cottage in Drumtochty. The coming man in Scottish literature, then, is likely to take a middle course between the bitter hardness of the one and the sentimental gush of the other.

Is this man in sight?

I think so. Towards the end of last year a friend in Edinburgh called my attention to some domestic sketches that were appearing in a Glasgow paper. I read a few of them, and found for the first time, set down in print, the kind of Lowland Scotch which I talked when I left Glasgow at the age of four years, and which was a constant source of merriment to young Americans when I imported the lingo.. Dialect, except

for the native, is a drawback rather than a recommendation in a story. In English-speaking countries a book succeeds in spite of its dialect, rather than because of it, and it requires sterling qualities in the matter to overcome the disadvantages of the dialect. These unsigned sketches seemed to me to contain the necessary sterling qualities. There was exhibited a fine, delicate humor, and a touch of pathos now and then equally fine and delicate. Through them all ran a sweet domesticity, the touching flavor of a humble home.

There was an utter absence of straining for effect, and real life was depicted exactly as it exists in that lowly sphere which the author had chosen. Later I met Mr. J. J. Bell, the writer of these contributions to the Glasgow paper. He is a very young man, and is modest as most of them are at the beginning. It did not occur to him that these sketches were of any value; in fact, when he sent the first of them to the editor he wrote him a letter apologizing for the contribution. Mr. Bell at that time was on the staff of the Glasgow *Evening Times*, and it was his duty to furnish a column to that paper every now and then as occasion required. This column was generally on some topical subject, but one day nothing particular happened to write about, and he sent to the editor a sketch which lay by him in which his hero "Wee Macgregor" first appears. He told the editor frankly in his note that if this falling away from duty was excused, he would not offend again, and suggested that the sketch be not used unless it was absolutely necessary to fill in the space. The editor, however, was taken with it and published it. Its local success in Glasgow was instantaneous, and so many letters poured in upon the manager of the paper that he asked Mr. Bell to carry his small hero a few steps farther. Even when "Wee Macgregor" had been appearing for some time, Bell had no notion of the value of his contributions, and it was that sterling novelist Neil Munro who first suggested that they should be got together in a book. Here, however, the usual difficulty met the young and unknown author. He offered the book to two publishers, asking a modest $50 for its sale outright. Luckily both refused, and as Neil Munro and other friends urged its publication, the young man offered the book for nothing, and that being also declined, he published it at his own expense. Even then he did not venture to put his name on the cover, but contented himself with the initials that had appeared in the newspaper. It was brought out in a form which publishers recognize as little liable to produce a profit, namely, in paper covers at the price of one shilling. As was the case with Hugh Conway's *Called Back*, the printing-presses had to run night and day to supply the demand, and up to the time of writing, the profits have mounted to more than $15,000, and England is just beginning to wake up to the fact that such a book is in existence. It was only the other week that it began to appear in the bookstalls of London.

John Joy Bell was born in 1871. After the usual school life of a Scottish boy, he entered Glasgow University, where he studied chemistry. I believe it was his intention in the first place to learn the blending of tobacco, for his father is one of the chief tobacco manufacturers of Scotland. But when he left the university he was attracted toward the literary life, and took the first steps leading thereto by becoming a newspaper man. His book is soon to be got out in more expensive form, illustrated by Mr. A. S. Boyd, a fellow-townsman, but for many years a resident of London. Mr. Boyd belongs to the *Punch* staff and to the staff of the *Daily Graphic*. The artist has been almost the life-long friend of Bret Harte, and it was Bret Harte who persuaded him to leave Glasgow for London, and who was his introducer in the metropolis.

Shakespeare and the Theatre

SHAKESPEARE'S plays were written for the theatre and survive for the library. This is the truth, so far as England and America are concerned. It is not true in Germany and Austria, in Berlin and in Vienna, and in a score of smaller cities, where the tragedies and comedies of the greatest of poets are still acceptably upon the boards, still presented by actors whose minds have been dignified and whose sentiments have been elevated by familiar associations with high thoughts, by deep and moving passions, and by noble verse. In England and in this country Shakespeare has become hardly possible; his plays, apparently, are not for our stage; his lines do not fit the mouths of our actors. If we, whose poet he is, want Shakespeare, we must take him in the corner of our libraries. It is true that an actor or an actor-manager, now and then, stung into a worthy ambition by the sneer of the critic, or by the jeer of the old playgoer who goes no longer, or by the ghost of an uneasy recollection, or by no matter what—it is true that sometimes such an actor or actor-manager may "have the honor to present," to quote the lackey phrase of to-day, some one of those plays of William Shakespeare which permit of clothes and scenery. And to these scenic productions go conscientious mothers of dimly lighted virgin minds, with the purpose of the improvement thereof. Schoolmasters, fathers, the seekers after culture, go to these "revivals" of the great master as they go to church, or to the Lowell lectures, or as they read aloud, and approvingly, of the work of university settlements, or of the achievements of the tenement-house commission. These fill the seats of the theatre with restless boys and girls for the sake of the influence upon their minds and manners. They want the children to have a certain familiarity with the greatest poet of the race, and so they take them to see a stage-manager's production, and to listen to actors who cannot reproduce the living scene or repeat the lines with proper emphasis.

The truth is that we no longer have English-speaking Shakespearian actors. Time was when this was not true. Edwin Booth probably engaged the last company of old-fashioned actors who were bred in the traditions of Shakespeare. These lived on Shakespeare's imagery. They ordered their breakfasts in blank verse, and betrayed the touchy dignity of the kings and knights and villains of the Elizabethan drama, but, also, their minds were dignified, and the fibre of their intellect was toughened by the great thoughts and the great passions with which they dwelt. There are none such now, or not so many that a real Shakespearian star could find a sufficient number to fill the minor parts in "Hamlet" or "Lear" or "Macbeth" or "Julius Cæsar" or "Romeo and Juliet," to say nothing of the comedies which require, on the part of the actor, a nice interpretation—that is, a nice discrimination, a consummate art, a keen appreciation of the literary values of the lines, and a quick responsiveness to the spirit of the poet.

The reason for this lack of actors capable of Shakespeare is clear to all who know the modern stage. Actors are no longer trained to the expression of the grand passions, to the understanding of the cosmic philosophy of Shakespeare. The old race of actors who could fill the stage with the heroes, the villains, and the clowns of England, whom Shakespeare portrayed, is dead. A new race has succeeded, and the men and women of this race have not been bred on celestial food. It is impossible to train an actor for high thoughts or for the appropriate repetition of noble sentiments by way of modern farce-comedy. The actor of to-day spends his life either in displaying to society its own follies, or in amusing it by preaching to it, or in bringing a laugh to modest cheeks that ought to be blushing, or in beguiling the weary with extravaganzas. A mind devoted to mere pastime is not likely to be hospitable to Shakespeare. A hard course in Bowery slang does not open the intelligence to the mellow humor of the "Merry Wives," or to the owlish wisdom of the grave-diggers in "Hamlet," nor does it lead to an appreciation of the satire of *Dogberry*, or of the keen wit of the two who stung themselves into mutual love. The quips and jest of the modern curbstone not only lack the distinction of ancient English tavern raillery, but they demoralize the mind that devotes itself to them.

The mind of the modern actor—we speak, of course, of the many, not of all—lies in his dancing legs, his side-splitting grimaces, his "business," his exaggerations of peculiar lives of to-day. The mind thus devoted to the lighter tasks of jocularity, skipping also from one author's jokes to those of another, on a moment's notice, as its possessor skips from town to town and from stage to stage, is not a mind that can suddenly turn to the contemplation and the study of Shakespeare with any hope that the lines of the poet will get the better of the encounter. The actor who is to play Shakespeare acceptably must not frivol away his intellectual dignity. One cannot sing "Mary had a Little Lamb," with all the enthusiam of his soul, for three hundred nights, and hope to be equal to the Magnificat or a Te Deum, or *Siegfried's* Rhine journey, on the three-hundred-and-first night. The tasks to which the modern English and American manager puts the English and American actor have destroyed the old school of Shakespeare actors. Now we are not saying that this is not for the best; that in the processes of the evolution of the arts the theatre has not naturally become what it is. Still, in writing this phrase, which must be accepted as nothing in the world but politeness, we inevitably think of the stage of Paris, of Berlin, of Vienna, and of Rome, and wonder how it is that the dramatic art continues to flourish in these Continental cities, while farce-comedy is about as near as we can get to it. At any rate, this we know, that the English or American actor is incapable of giving us Shakespeare; that he reads the immortal lines with the uncouthness of one who comes to a strange task, the only quality of which, to his mind, is its inscrutable bigness; that he is out of tune with the master poet of his race—and the only reason that we can assign is that he has passed his life in unbending his mind to the expression of trivialities and commonplaces, and therefore it has lost its dignity. We know, too, that the almost total disappearance of Shakespeare from the English-speaking stage is not due to lack of intellectual interest in Shakespeare himself. He continues to charm German audiences, and when he is announced in New York the cultivated and their small charges throng the theatre, only to be disappointed. While our theatre has no place for Shakespeare, our libraries have, and the Englishman or the American who is sensible reads his poet's plays instead of going to the theatre to see them slaughtered. But it will not be always so, for Shakespeare wrote, as we have said, for the stage, and on the stage he will some day again be played by actors yet unborn, in England and in America, as he is played to-day in Berlin and Vienna.

Books and Bookmen

THE Sentimentalist, the Romancer, the Humorist—these we know in American fiction, but where are the Philosopher and the Comic Muse? "Comedy," says George Meredith, "was never one of the most honored of the Muses. . . . It has subsided altogether as a power in the profession of morality; but it is an error to suppose it extinct." Again, he desiderates: "A society of cultivated men and women is required, wherein ideas are current and the perceptions quick, that he may be supplied with matter and an audience. . . . Moreover, to touch and kindle the mind through laughter demands more than sprightliness, a most subtle delicacy. He must be subtle to penetrate." Yet again: "The Philosopher and the Comic Poet are of a cousinship in the eye they cast on life." Wherefore we may deduce that the Philosopher and the Comic Muse come last in the progress of any civilization, and that the presence of both or either connotes the existence of a marked degree of intellectual activity and ripeness. The mind of the nation has been passing through a period of semi-barbarism and giddy pride in the lustiness of adolescent being, of a feverish commotion and emotional excitability. To all this the novel of sentiment, the romance of history, the rattle of wit, the mélange of humor and pathos, of which we have had a surfeit, have been the natural mental pabulum as they have been naturally its product. But the river runs to the sea, and a hazy atmosphere gives place in clearing to an ideal one. That we are at present in a state of intellectual transition is clear to the observing student; that it will lead to a higher and saner intellectual plane is devoutly to be hoped. Meanwhile, we are grateful for any sign that we may descry, in the exodus from intellectual apathy, of that divinity which shapes the ends of national movements in literature and art.

Such a sign we think we see in Mr. William Farquhar Payson's new novel, *The Triumph of Life*. It cuts a distinct line of cleavage, and separates itself bravely from the fiction we have been accustomed to for some years. It addresses itself to the cultivated, to the alert of mind and the quick of sight; it is that hazardous thing for the author—a perilous venture on the popular intelligence, a bold attempt to face the study of the actual world from the coign of vantage of the Philosopher and the Comic Muse. George Meredith did it in *The Egoist*. Will the American public be as slow to recognize Mr. Payson's effort at shaking and rousing our intellectual apathy as the English public was with Meredith's masterpiece? We are inclined to think not, for the American mind is more capable of quick response, of agile perceptiveness, and of a readiness to welcome new ideas and new forms. Moreover, there is an amused tolerance, a sense of comedy, that lays it open to endure the calm, curious eye of the Comic spirit and be probed for what you are. The figures that live and writhe under the sportive leading-strings of Mr. Payson's Comic spirit are essentially modern, peculiar to our tense and thorough-going civilization, types of an exalted variety thrust into public gaze by the complex currents that huddle together the noble and ignoble elements in human nature. The girl Céleste, for instance, a daringly original character, thrillingly alive, realized with a wonderful sense of vitality and diablerie, how typical of her kind, how real, how present, she is with us! There has been nothing in fiction for a long time like the visualizing process in the opening chapters by which she is revealed to us. Take this passage:

> Who else could so coquet with the proprieties, yet never actually offend? Thus are the farces of the Variétés veiled for the Madison Square. Subtly she appreciated virtue. Was it not an expedient always to be guarded as the most valuable asset of ambition? In the old dark days of the quais and alleys, come who might to the Quarter, this one possession she had hoarded, so to speak, by an unusual freak of shrewdness. Though in language and thought and knowledge of things no better than the rest, she had never forfeited, as they had, the first advantage. They had called her "La P'tite qui Refuse." Yet it had all been a question of expediency. None had considered her harmless. "Beware!" once had counselled a priest of Notre Dame; "she is dangerous. Even her virtue is evil."

When we are introduced to her she is located on lower Lexington Avenue. "What irony in her present position! Yes, but what congruity as well! Behind her, the great East Side, the under-world; before her, the highways of fashion. She was poised, one might say, between hell and heaven. Only a couple of blocks away, and there lay Madison Avenue—her dream!" And the reader guesses well that, whoever has to go down before her to bridge the chasm, she will arrive at the goal of her ambition. Two men are used by her to hoist her to the height, though in the end she is hoist by her own petard to a cruel fate, relentless as Tragedy on the heels of Comedy. Matthew Steele is one of these men, "versed only in the outright, the direct, the *big* plain, forceful methods of his beginnings in the West," where he peddled cheap novels, whereas now he publishes them and conducts a popular magazine for the *million*. Steele is as aggressively real and alive as his opposite, Stephen Lee, the publisher, of quaint eccentric habits and high ideals, seems shadowy and pathetically unreal in a day of bustle and *laissez-faire*. The other man used by Céleste as an instrument of her ambition is Enoch Lloyd, the central character of the book. His is a most interesting personality. In him Mr. Payson has conceived a character with which to play the double part of a literary Jekyll and Hyde. And here again he is modern of the moderns, while striking at the roots of moral integrity and expediency that erect or ruin a man's mind and character, and handling in an original way a problem of common conduct focused upon an individual type. To illustrate: only the other day we read in the London *Daily Chronicle* that certain novelists who used to appeal to the suffrages of the best class of readers were courting more and more the notice of editors of popular periodicals and the syndicates which supply fiction wholesale, and to regard these as their main providers of income. "Many writers of this class nowadays," to quote a significant sentence, "either because they mistrust themselves or because they still imagine that it is a derogation of dignity to cater for the readers of penny weekly journals, *try to achieve two separate reputations*. They go to the fiction editor of a great serial-publishing firm, or to the manager of some syndicate, and offer him work *under a pseudonym*." The italics are ours, and point the illustration in mind. Enoch Lloyd has published one book true to his ideals. It fails. Temptation comes his way through Matthew Steele, and he yields, using as a pseudonym the anagram on his name, of "Dolly Cohen." The time comes when Céleste, partly from motives of revenge, partly from ambition, claims the title to the authorship, and threatens Enoch with exposure if he ceases writing or attempts to rob her of the usurped title. The Comic spirit has its wildest fling here. It is Céleste's supreme hour. She is Queen of Bohemia, and her fascination plays like lightning about the young author. But—

> A good man in the direful grasp of ill,
> His consciousness of right retaineth still,

and Enoch is also drawn by the sweeter influences of the woman he really loves. The damning evidence of his literary charlatanry begins to show without and within. There lies the real tragedy—the moral disintegration, the intellectual decadence, the spiritual death. He tries to write a successor to his first novel, to rise to his pristine ideals. The truth is forced upon him. "I don't know the difference between good and evil! . . . I have gone so far that I can't distinguish between them. I'm no longer Jekyll and Hyde," he laughed, hoarsely. "I am only Hyde."

We cannot begin to give even the merest hint of the story itself here, in its intricacies of plot, its various characters, its dramatic unfolding and climaxes. The scenes are laid partly in Bristol, Rhode Island, and mainly in New York, in the vicinity of Madison and Washington squares. There are pictures and scenes that flash and glow with vivid light and color, passages that burn into the memory, characterization that penetrates and strikes home with probing intensity. And Nemesis waits for all, dogging their footsteps to the murky end, or the ultimate victory which is the Triumph of Life. There is deep feeling in the book, passionate earnestness, warm sympathy, profound knowledge of life, an unerring insight into the souls of men and women which in an author so young makes his work a remarkable and startling performance, and raises our hopes for the future of fiction in this country. And, as we said in the beginning, over and through it all there are the aloofness and sportiveness of the Comic spirit which finds its vindication in the triumph of a candid realism, the inevitableness of life which pursues and overtakes those who deviate from the moral compass that points the way of sound sense, rightness, and justice. *The Triumph of Life*, be it said, is not a book for an idle hour; but few books have appeared in recent American fiction that possess such powers of intellectual stimulation and exaltation, and which contribute to the highest and most satisfying pleasures of the imagination.

The recent death of Edna Lyall recalled for a moment the widespread interest which at one time was taken in her fiction. For years before her death she had become little more than a memory to many readers who used to swear in their youth by the author of *Donovan* and *Knight-Errant*. To such, the following letter from a correspondent, who shared this early enthusiasm, may be of passing interest: "In my school-days at Eastbourne," this lady writes, "we used to see a good deal of Edna Lyall. She was one of our heroines, and we were always delighted to catch a glimpse of her either in the street or at church. One of her favorite walks was on the sea-front—not on the central parade, before the big hotels, but on the quieter, less frequented promenade from the Wish Tower to the foot of Beauty Head. Here on windy days, when the white, spongy foam was blowing in large flakes over the shore, she used to wander up and down, wrapped cozily in a long red cloak. She was generally alone, but was always interested in all that went on around her. A bright smile would pass over her face if she became conscious of recognition by any of the numerous schoolgirls of the town. We passed very frequently the house in College Road where she lived with her sister and brother-in-law, Mr. and Mrs. Jameson. It was there, in the red-roofed home, looking over the downs, that much of her writing was done."

Correspondence

THE COMMERCIAL PROSPECTS OF THE UNITED STATES IN THE ARGENTINE.

RICHMOND, INDIANA.

To the Editor of Harper's Weekly:

SIR,—In a recent issue of your paper you quote what purports to be extracts from a letter addressed to President Roosevelt by Mr. Emory C. White. Whilst entertaining the highest respect for the conclusions this gentleman has come to, I consider it my duty as an Argentine citizen to contradict his statements, and dispel the ideas imbued into your readers as to the supremacy of the German in the Argentine Republic.

Whilst Germany is undoubtedly having a good time in that country, Americans have nothing to fear as, so far without effort, they have exceeded their trade, until the beginning of 1900, when the wave of prosperity in this country started, and made Americans rather independent in view of there being more inter-State trade than they could conveniently handle. At this date I have visited manufacturers, who have informed me that while running at their fullest capacity, they are eighteen months behind with their orders (these conditions are notably prevalent in the machinery line).

I admit that the German figures show higher than those of the United States at present, but will proceed to explain the cause of this.

In the first place, the time required by the Americans, under prevailing conditions, is so long that a prospective client would have to wait so long for his goods that they would possibly be useless to him on arrival; he therefore turns to the German, who is hungry for trade, and gives him the order to be executed in a minimum of time.

Secondly, the American manufacturer does not care to make the slight modifications demanded of him to make merchandise suitable to market conditions in those countries, whereas the German will go to any expense to secure an insignificant order, and does not give a brass button for profit on the first few transactions. He has learned the old proverb, "All comes to him that waits."

Thirdly, the German manufacturer gets out a fine Spanish catalogue, with weights and measures according to the metric system, which at once appeals to the Argentine, as he is all but ignorant on the subject of pints, pounds, and ounces. The American sends him his English catalogue, or, if he sends them a Spanish one, it is in one of the vile idioms of that beautiful language, or an essay by a correspondence-school graduate that has never come nearer a live Spaniard than through a phonograph.

It is really painful to note the indifference of the American manufacturer to export trade, whilst he allows the fair-haired Teuton to have the floor to himself. The following are a few of the excuses, given me personally, by American manufacturers:

"To much bother to pack things special."

"We can't give our time to work out things' weights in 'kilogrammes.'"

"I want my money before the goods leave the premises."

"Oh! Don't worry me about it—the export agents look after it for me."

Another mistake made by American manufacturers is that generally, instead of sending a live representative to South America, they, as a rule, "tie up" with an English house that is in all probability handling the same category of goods for an English manufacturer, and the fact must not be overlooked that an Englishman would sooner sell English goods on a twenty-per-cent. profit than American at forty per cent.

A few statistical figures as to exports from England, United States, and Germany may not come amiss to your readers, and it will show that German trade is not gaining in any abnormal way when we consider the reasons I have set forth.

	1894	1897	1900
United Kingdom	39,624,270	36,392,057	38,682,753
United States	6,686,999	10,101,714	13,438,529
Germany	11,162,549	11,114,102	16,635,613

It must also be taken into consideration that owing to the difficulties of transportation between this country and the Argentine, many shipments are made from branches in England of American houses (such as the Westinghouse Electric and Manufacturing Company), and would therefore appear as exports from the United Kingdom.

As to the competition from the English, nothing is to be feared unless they "Americanize," which is highly improbable on account of their very conservative ideas. American goods are in favor, and when Uncle Sam wants the trade and really goes for it, he will find that there is not so much competition actually existing, other than the demand of foreign goods due to his neglect of the market.

Patent medicines are, of course, barred, as the Argentines are a tolerably healthy race.

I am, sir,

ALEXANDER E. HOCH.

"LADY ROSE'S DAUGHTER."

BOSTON, MASS., *March 25, 1903.*

To the Editor of Harper's Weekly:

SIR,—I have read with much interest your correspondent A. R.'s letter concerning Mrs. Humphry Ward and her latest heroine. I think he (or she) has succeeded admirably in summing up Mrs. Ward's splendid qualities as a novelist. A practised professional critic could hardly have done better. But I wonder how your correspondent would reply to a piece of severe criticism of *Lady Rose's Daughter* which, in a single sentence, a young woman threw at me across a dinner table the other evening when I ventured to express the delight the book had given me. "Julie Le Breton," said the fair critic, "is an utterly selfish young woman." My first impulse was to deny the fact and quote chapter and verse in support of my view. But as I mentally ran over the scenes of the book I grew perplexed, and I am still at a loss for an answer. Is Julie really mean and selfish?

I am, sir,

PERPLEXED.

HARPER'S WEEKLY for next week (out April 22) will have, among other features, The President's Western Trip, with photographs from our own representative on the President's train; Putting Traffic Underground in Chicago—a far-reaching plan now under way to solve Chicago's transportation problem; Radium, the wizard metal—a scientific paper, showing results of experiments and new discoveries; The new Cup Defender, with pictures of the launching of the "Reliance," and a critical estimate by an expert yachtsman on our chances for winning the Cup; New Automobile Head-dresses and Costumes worn by the American Auto Girl; The beginning of the Fishing Season—a double-page drawing by Clarence F. Underwood—etc., etc.

Finance

WHILE "sentiment" is perhaps not so pessimistic in the speculative community at this writing as it was a fortnight ago, the security markets are still under the influence of professional operators. It is not very long ago that every one professed to be appalled by the potential dangers of the situation, created chiefly by the huge mass of "undigested" securities and by the insufficiency of money with which to carry on the enormous business of the country at large, and at the same time permit the financial and underwriting syndicates to "carry" their heavy loads of unsold goods. But whereas at the beginning of the downward movement the bears found ample ammunition and encouragement in the liquidation by timid or weak holders, the later operations for the fall disclosed the cessation of other selling than that of the bears themselves. The market, to all appearances, was sold to a standstill, as the Wall Street phrase goes. The talk of the syndicates staggering perilously under their huge unmarketed loads, and of permanently higher rates of money, lost its potency temporarily, and professional Wall Street remembered the old admonition to "never sell stocks while the sap is running up." This is not a propitious season for a bear market, according to long and honored precedents. The last bank statement was bad; it was, indeed, much worse than the Street had looked for. But so many people endeavored to take advantage of the fancied opportunity to reduce commitments on the short side of the account, that prices, instead of falling, actually rose. It showed clearly what technical conditions were. On the following Monday, however, the overhanging menace of the Southern Pacific-Union Pacific contest disappeared by the refusal of Judge Lurton to make permanent the injunction, asked for by the representatives of the Keene pool, restraining the Union Pacific from voting its holdings of Southern Pacific at the annual meeting of the latter company. On general principles, Wall Street is always frightened by what it calls fights among "big interests," and the prospect of a campaign of annihilation by James R. Keene on the one side, and Mr. Harriman and his associates on the other side, was altogether too much for its nerves.

It is but fair to add, however, that Mr. Keene—or his representatives—raised questions of far greater importance than the declaration of dividends on a stock, which might or might not have helped the marketing of the Keene pool's holdings. If the court had decided that the Union Pacific could not vote its Southern Pacific holdings because it had no legal right to hold such stock at all, it requires no financial expert to realize the disastrous consequences of such a decision to the principal railroad systems of the United States, notably the Pennsylvania and the New York Central. However, the Union Pacific won the first round, for the language of the early bulletins sent to Wall Street was terse and "sporty," to wit, "Harriman wins!" The market rose a trifle, but lost ground when the news came that the annual election of the Southern Pacific Company had been indefinitely postponed, to allow the plaintiff's lawyers to appeal to the Federal Court of Appeals.

The money outlook is growing less gloomy. It looks as if the return movement of currency to this centre had begun, and there should be easier rates until the usual autumnal stringency. But even when the time comes for the crops to be moved it will be found that Secretary Shaw has profited by last fall's mistakes. Notwithstanding this, at this writing the stock-market continues depressed.

HARPERS BOOK NEWS

IN THE GARDEN OF CHARITY

Since the publication of his new novel, "In the Garden of Charity," Basil King has been likened to George Eliot by more than one critic, and a well-known writer has started his review by calling Mr. King "a little brother to Thomas Hardy." The story deals almost wholly with two women of contrasting types, and one man, a handsome, care-free soldier, who brings a tragedy into their lives. The quality of humor in the story, says one reviewer, "is of the kind that is almost suggestive of the Shakespearean type."

SIX TREES

It is a curious fact about "Six Trees," Mary E. Wilkins' latest book, that although its scenes are laid in New England, the characters are brought from all over the country. There are two Southerners, a Westerner, some people from the Middle West, a sailor, as well as people from the North and East. But they all fit equally well in the environment in which Miss Wilkins has placed them.

THE PRIDE OF TELLFAIR

The popularity of Elmore Elliott Peake's new novel, "The Pride of Tellfair," is evinced by the great number of requests his publishers have received for his portrait. The author of "The Darlingtons" seems to be known and liked the country over. His recent novel tells a thoroughly human story of life in Tellfair, a small town in the Middle West. Mr. Peake lives in a small Western town himself, and he knows the people of whom he writes. Perhaps that is the reason why he has been able to make his story so vivid and real.

HARPER & BROTHERS

How to Paint a House Cheap

And Have it Guaranteed to Look Better, Wear Longer and Cost Less Than the Best White Lead Paints.

Never Fades, Cracks, Chalks, Peels or Blisters and is Not Affected by Gases. Fifty Sample Colors and Illustrated Booklet Prepaid to Any Address Absolutely Free.

The cost of painting the house and barn, outbuildings and fences is a heavy burden. Cheap paints soon fade, peel or scrape off and white lead and oil costs so much and has to be replaced so often that it is a constant expense to keep the bright, clean appearance so desirable in the cozy cottage home or the elegant mansion. The following are a few of the large users of Carrara Paint:

Pennsylvania R. R. Co.; Pullman Palace Car Co.; Chicago Telephone Co.; Central Union Telephone Co.; Field Museum, Chicago; Kenwood Club, Chicago; Cincinnati Southern; C. & E. I. R. R. Co.; Denver & Rio Grande R. R.; Wellington Hotel, Chicago.

Carrara is used because it lasts longer, never fades, never cracks, never blisters, never peels, covers more surface than the highest priced paints and costs less than the cheap mixed paints that injure instead of protect. There is but one Carrara. It is made by the Carrara Paint Agency, General Offices, 896 Carrara Bldg., Cincinnati, Ohio, and anyone having a house to paint should send for 50 free sample colors and our handsome booklet, showing many buildings reproduced in all the colors just as they are painted from this great paint that has stood the most rigid tests for 25 years and, bear in mind, that it is the only paint ever manufactured that is backed by a positive guarantee in every case. Distributing depots in all principal cities. Write to-day and save half your paint bills in the future.

The Waldorf-Astoria, New York, One of the Most Magnificent Hotels in the World, Has Used Tons and Tons of the World-Famous Carrara Paint.

The Blazed Trail

BY LEE S. OVITT

NO need for the investor of to-day, who is seeking a Gold Mine Investment, to go astray.

There are plenty of good stocks offered.

I hear stories of misplaced confidence in this form of investment daily. So do you.

But the man who goes in blindly and invests in stocks without thoroughly investigating them has himself to thank if the promises made for them by the promoters fail to be made good.

The road to good stocks is a blazed trail and none need miss it.

I have been one of those who persistently cautioned my public to look before they leaped.

And the result has been that to-day I have the confidence of thousands who have invested with me, because of the preliminary work of investigation which they did at my instigation.

The stock that I am at present offering is that of the Cracker Jack Consolidated Gold Mines Co., whose claims adjoin those of the far-famed Cracker-Oregon (in the Cracker Creek District, Eastern Oregon—"LAND OF GOLD"), being, in fact, a continuation of this mine.

About a year ago I offered the Cracker-Oregon stock to the public. I told in my advertisements and letters to those who asked for information that in the opinion of those competent to express an expert opinion we had a great property.

I knew we were in close proximity to some great producers (North Pole, Eureka and Excelsior, Golconda, Columbia, and others), and we expected to equal some of them.

I was not prepared, however, for the strike, six months from that time, of $50,000.00 ore!

Cracker-Oregon stock at once jumped to par, and some of it sold at $1.50 a share.

IT IS A GOOD STOCK TO HANG ON TO.

Now, then, in the face of the returns, in spite of the remarkable showing by the Cracker-Oregon, I am predicting that its blood relation, "Cracker Jack," will prove a richer gold producer.

I could go into details here and tell you the why and wherefore, but my space is limited. The prospectus does it better, and to that matter-of-fact book I shall leave the telling of the story of the Cracker Jack.

This much I know. If I have as good a proposition as I contend, YOU WANT SOME STOCK. I have never sold ANY stock that sold so easily, but that is only natural, perhaps, as the Cracker-Oregon has acted as a blazed trail that pointed the way. Those who failed to buy that good stock when it was cheap are not letting a second opportunity go by.

Are you interested?

It will cost you the price of a stamp to find out about this property.

Will you write in for the prospectus?

You will find in dealing with me that I sell Mining Stock on different lines from most brokers.

I have a record of successes behind me of which I am proud and jealous, and I shall not urge you to buy a share of my stock unless first of all you have satisfied yourself that what I offer has every appearance of being not merely a fairly good thing, BUT A REMARKABLY GOOD ONE—I DEAL IN SUCH.

Investigation is the blazed trail to success when industrial stocks are under consideration.

Let your bank help you.

Harper's Magazine

For MAY

Photographing the Nebulae

G. W. RITCHEY

Instructor in Practical Astronomy at the Yerkes Observatory

Tells of remarkable new methods of photographing the stars, and shows the important discoveries made. His article is illustrated from many stellar photographs of the greatest interest and never before reproduced.

Sociology

A striking study of the American working woman, written by a woman of culture and refinement, who, in order to study this class, worked among them.

Literature

Hamilton W. Mabie contributes a brilliant essay on Ralph Waldo Emerson in 1903, and Joseph Knight writes on Shakespeare's "King John"; his text is accompanied by Mr. Abbey's pictures.

Nature

Sadakichi Hartmann contributes a charming nature study, "Along the Salt Meadows." His article is artistically illustrated from photographs reproduced in tint.

Short Stories

The eight short stories in the May number are a most striking collection. Among them are stories by **Margaret Deland, Roy Rolfe Gilson, Anne O'Hagan, James Branch Cabell, Arthur Colton,** and **Octave Thanet.**

Travel

Waldemar Bogoras, of the American Museum of Natural History, writes of a strange Northern people, where the old are put to death at their own wish, and where a man is allowed to kill himself when tired of life.

Arthur Symons gives a vivid, poetic picture of life in Constantinople.

Science

Carl Snyder, in an interesting psychological article, tells how the brain thinks, showing the entire material processes of mental operations.

Mr. Abbey's Pictures

There are three exquisite drawings by Edwin A. Abbey, R.A., in the May Magazine. They illustrate scenes in Shakespeare's "King John," and are reproduced in tint.

Illustrations in Color

The pictures in color in the May number, in addition to Mr. Abbey's drawings, include three full-pages by E. M. Ashe, in full color, a number of dainty drawings accompanying Mr. Symons' paper on Constantinople, and some strikingly artistic photographs.

Lady Rose's Daughter

By Mrs. Humphry Ward

The Washington Post says:

"Mrs. Ward has eclipsed all her previous successes. She has given us a flesh and blood heroine—her charm is wonderful and bewildering."

The Brooklyn Eagle says:

"Neither religious problems, nor politics, nor social contests occupy Julie Le Breton's mind. She is wrapped in an o'ermastering passion of love."

The Milwaukee Free Press says:

"Julie Le Breton has the mysterious gift of the emotions, her stormy, impulsive nature sets the nerves of others vibrating."

The Boston Transcript says:

"The story is the combat between two powers of a brilliant woman's nature. Sometimes you are sure the lawless, the vagabond, the intriguing side will win. But it doesn't."

HARPER & BROTHERS, PUBLISHERS, NEW YORK

HARPERS BOOK NEWS

THE TRIUMPH OF LIFE

In "The Triumph of Life" William Farquhar Payson works out an absorbing problem of modern life. It is the story of a young writer, who, upon the failure of his first story—a worthy effort—finds himself tempted to write only for money. There are two influences at work, two women—one good and one bad—who seek to pull him in opposite directions. The scenes are laid in New York and Bristol.

WEE MACGREEGOR

Harper & Brothers have just brought out the American edition of a book that is creating a furor in Great Britain. This is J. J. Bell's "Wee Macgreegor"—a humorously sympathetic study of a wee Scottish laddie, of his father, who is his boon companion and can deny him nothing, and of his mother, who adores and disciplines him. Their most amusing experiences are told from the diverting and wholly unexpected point of view of "Macgreegor" and his "paw" and "maw." The humor is new and true.

THE BISHOP

Cyrus Townsend Brady's latest book, "The Bishop," just published, deals with a lovable, militant bishop, who spends his years among Western camps and army posts. The book carries us into scenes of the rough West, peopled by the full-blooded, vigorous men and women that have built up its wildernesses. The Bishop is a wonderfully human character. A clean, vigorous book, and a readable one.

MARJORIE

(Imprint of R. H. RUSSELL.)

Following the success of Justin Huntly McCarthy's romance "If I Were King," and the popular stage presentation of that book, the advent of "Marjorie"—a new novel by Mr. McCarthy—is most opportune. This story is romantic in nature and deals with the daring adventures of a piratically inclined expedition which started to establish a colony in the West Indies. Life, vitality, action, and splendid color enliven the pages and make stormy the course of a dainty love story.

The Launching of the "Reliance," which is to defend the Cup against Sir Thomas Lipton's "Shamrock III."

Are We Going to Keep the Cup?

THE *Columbia*, *Reliance*, and *Shamrock III.* afford an instructive comparison. The two new boats practically conform to the type of the *Columbia*, which has proven herself thus far the fastest yacht afloat. There are minor differences, but in essentials both of the new boats are copies of the older boat. The main feature is the form of the under body. Both of the new boats have the convex or outward curve of the *Columbia*, on the forefoot, from the fin to the cutwater. *Shamrock II.* and the *Constitution* differed alike from the *Columbia* in having a flatter line along the forefoot. As a consequence both proved inferior to the champion in windward work. It is noteworthy that *Shamrock II.* differed more in this respect than the *Constitution*, and was less weatherly. As yachtsmen say, she had less "to hold on by."

The essential differences between the *Reliance* and the *Columbia* are in the greater over-all length and beam, and shallower upper body, of the former. The Herreshoff boats, from the *Gloriana* to this latest creation, are developments of the "sneak-box" type. That is, a boat with a broad, flat, spoon-shaped upper body and a lean under body. The "sneak-box" proper has a spoon-shaped upper body, but, in the sense here employed, no under body at all. Mr. Herreshoff's improvement consisted in creating an under body and adding a fin. Thereby he produced a type of boat faster than anything that had previously set sail. All other designers, both at home and abroad, have been forced to conform to it.

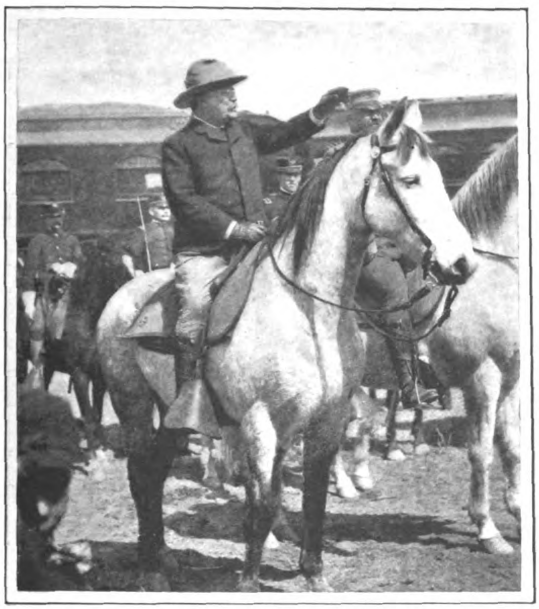
From the photographs at hand it appears that in the *Reliance* the designer has come closer to the sneak-box upper body than ever before in a cup yacht. In other words, the upper body of the *Reliance* is flatter and broader, more spoon-shaped, than that of the *Columbia*. As to the under body, besides being leaner, there is less curve to the fin both 'fore and aft. It is interesting to note in this connection that, while the *Shamrock III.* does not show the forward part of the fin, the after part presents an even sharper angle than that of the *Reliance*.

It would seem that Mr. Herreshoff has preserved in the *Reliance* the convex forefoot of the *Columbia*, to insure ability in windward work, and given her a flatter hull for increased sail-carrying power, and much greater over-all length, to excel, if possible, the reaching qualities of the older boat. Her over-all length is variously estimated at from 142 to 146 feet, which is from 10 to 14 feet greater than that of the *Columbia*, and her water-line length is put at 88 feet, which is 1 ft. 7¼ in. less. Her beam is given at 25 ft. 10 in., which is 1 ft. 8 in. greater than the *Columbia's*, and only 2 inches less than that of the *Vigilant*, the beamiest of cup-defenders. In the absence, however, of official measurements these figures must be accepted with reserve.

It is likely that the sail area of the *Reliance* will approximate 16,000 square feet, considerably more spread than is carried by any other yacht. The limits of this article will not permit of a detailed description of her construction. It must suffice to say that the structural devices for combining lightness with strength, first introduced in the *Constitution*, have been re-employed. To reduce weight above the water-line an aluminum deck is used,—a step in advance of the latter. With the same object in view, Tobin bronze is used in the plating of the under body, while that of the upper body is nickel-steel—a lighter material. The new boat also has several inches less freeboard than her predecessors, to bring the hull surface to the resistance of the wind down to the minimum.

Although, if the water-line length given be approximately correct, due attention has been paid to economizing time allowance, it is probable the *Reliance* will have to allow the *Columbia* something more than a minute over a thirty-knot course.

Concerning the challenger, the indications from the trials so far had are, clearly, that she is the fastest yacht yet sent in quest of the cup, and that she is better, comparatively speaking, in light than in heavy weather. She has already shown excellent form, and that will, no doubt, be improved by tuning up. In the first leeward and windward trial, over a measured course of thirty knots, at Weymouth, on April 9, she beat *Shamrock I.* by 17 min. 26 sec.



The second trial, over a three-legged course, tested better the relative merits of the yachts. The course was seventeen knots, and the yachts went twice around. At the finish the challenger had a lead of 6 min. 31 sec., but, as she allowed 10 min., the old boat won by 3 min. 29 sec.

It may be inferred from this performance that *Shamrock III.*, when tuned up to her proper form, will be from seven to ten minutes faster than *Shamrock I.* over a thirty-knot course. The *Columbia* beat *Shamrock I.* more than ten minutes under much the same weather conditions. But the *Columbia*, as her meetings with the *Vigilant* showed, was a much faster boat in 1901 than in 1899. *Shamrock II.* beat her elder sister uniformly, though not as decisively as the latest of the name, and yet, with conditions suiting her as if made to order, failed to get a single race from the *Columbia*. Leaving the *Reliance* altogether out of consideration, therefore, the cup may be regarded as reasonably safe.

A Map of the United States, showing the Products of each State, to be laid out as a Garden at the World's Fair

A Living Map at the St. Louis World's Fair

TO reproduce the entire United States in ten acres of ground is the project undertaken by the Agricultural Department for its outdoor exhibit at the St. Louis Fair. Seven of the most renowned scientists connected with the department have been assigned to plan and complete this work. In the small space allowed for each State and Territory, its natural soil and product, as well as its relative altitude, will be reproduced in miniature. For instance, miniature fields of rice will be growing in Louisiana, Texas, and the Carolinas, with the other products of those States; Mississippi, Florida, Alabama and Georgia, the Carolinas and Texas, will have fields of cotton, wheat, and corn, and so on. A bird's-eye view of the crops grown in every State will be shown.

Through the States of Wyoming, Utah, California, New Mexico, Arizona, and a portion of Texas, the vast public ranges, and even the sheep country, will be copied. The work done by the department in reclaiming and improving these lands will be shown. There will be oil-wells in Texas; ore-mines in Alabama and Tennessee; granite and marble quarries in the States noted for those exports. The entire exhibit will be assembled with a view to illustrating the resources and industries of the Union.

The more important rivers of the country will be reproduced in miniature. Lakes will be little ponds geographically correct in outlines. The climate of St. Louis will be aided by every artificial means known to scientific agriculture to make possible the growth of the crops as in the different States.

The exhibit will be placed on a gentle slope facing the south near the Agricultural Building. The various States will be separated by cinder paths. Around the margin of the map of the United States will be a five-foot gravel walk, with a border of Kentucky blue-grass. Surrounding the map proper there will be eight separate exhibits, namely, pathology, plant-breeding, school-garden, grass-garden, seed-production, fibre plants, medicinal and poisonous plants, and cereals. Preparations are already in progress for this part of the exhibit. Many of the plants, particularly the perennials, have already been put in place. The section of land surrounding the map from Maine to the western line of Florida will show in detail a grass-garden in which will be grown every grass indigenous or naturalized in the United States.

The irregular plot at the extreme north end will be occupied by an artificial sand-dune. The object of this particular exhibit is to show that drifting sand may be controlled by growing vegetation, and to give some idea of the nature of the vegetation which may be grown in such locations successfully.

In the plant-garden eatable and poisonous plants will be grown side by side. The prime object is to show by actual contrast what plants, causing the loss of thousands of dollars' worth of stock each year, should be eliminated from the Western grazing-lands.

In the plot devoted to pathology, the valuable discoveries made by the Agricultural Department scientist in the work of arresting or preventing plant diseases will be shown. In this section plants will be shown in the process of being treated to prevent disease, while others will show the ravages of maladies in plant life due to neglect. Such things as peaches, French pear seedlings, and Delaware grapes, etc., will be among the plants exhibited.

The plant-breeding exhibit will show probably the most scientific work yet accomplished by the department. Here will be illustrated the results of crossing fruits, grains, cotton, and such other plants. The increase in vigor caused by hybridization and its progress in all the different stages will be illustrated. Altogether this "living-map" exhibition promises to be one of the most novel and interesting of any at the Fair.

The Official Opening of the Fair

APRIL 30, 1903, will be the hundredth anniversary of the sale of the Louisiana Territory to the United States. It was the original intention to open the Louisiana Purchase Fair at St. Louis on that day, but for many good reasons the Fair was put off for one year, and the anniversary will be celebrated not by its opening but by its dedication. That will be an interesting and imposing ceremony, at which President Roosevelt, ex-President Cleveland, and many other distinguished persons will be present. A procession will march and the President will review it, and there will be a succession of ceremonies, inspections, orations, and banquets that will last three days.

The Fair Grounds comprise the western half of Forest Park, six miles west from the Mississippi River. The land is hilly, and about half of it is covered with forest trees, which will add to the beauty of the Fair and the comfort of visitors. Work was begun on the grounds in August, 1901, and building construction began four months later. The general plan provides for fourteen great exhibition buildings, to wit: United States Government, Education, Art, Liberal Arts, Manufactures, Varied Industries, Textiles, Machinery, Electricity, Transportation, Agriculture, Horticulture, Forestry and Fisheries, and Ordnance. The cost of these buildings ranges from $1,000,000 to $200,000, the total cost being about seven million dollars. Some of them are finished. Nearly all are well along towards completion.

Besides these main buildings there will be a great number of others: the State buildings, the buildings of foreign nations, the great Festival Hall which will cover two acres, a cityful of "concessions" buildings, and all the multitude of supplementary show-buildings which every one will recall who has ever been to a great fair. And the landscape architecture will be especially interesting on this hilly site, and the sculpture, the electrical displays, and all the embellishments will be on such a scale, and of such a quality, as our experiences at Chicago and Buffalo give us warrant to expect.

Drawn for Harper's Weekly by Sydney Adamson

THE MILITARY TOURNAMENT AT MADISON SQUARE GARDEN

One of the interesting features of the annual Military Tournament, which begins next week in New York, will be the exhibition of skilful driving by the Artillery Corps. Tent-pegs are driven in the ground at just a sufficient distance apart to allow a gun-carriage to pass between. The horses are driven between the posts first at a walk, then at a trot, and finally, as shown in the drawing, at full gallop. It rarely happens that the wheels graze the posts even with the horses at full speed

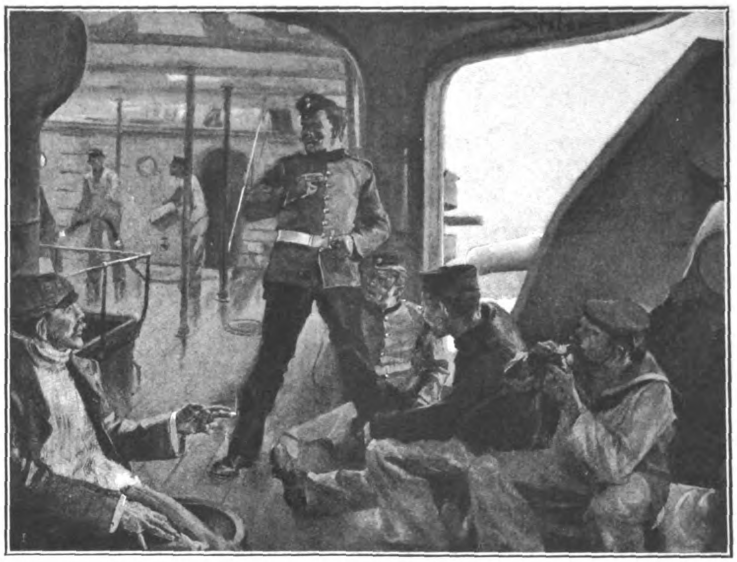
Captain Little's V.C.

A Complete Short Story by W. E. Cairnes



"WHAT I've promised to relate this arternoon," said Private Lester, "is the percise circumstances under which a certain captain, R.N., was given the Victoria Cross through his not being what one might call a 'orseman. Now these 'ere facts 'ave never been made, so to speak, public afore now, though in course every one is well aware that this captain has got the cross, and got it through a smart bit of fightin' in the Sudan, a bloomin' square bein' broken by Fuzzy Wuzzy, and him bein', so to say, on the spot in time to knock the beggars endways as tried to force their way in.

"There ain't many of you 'ere who know much about Suakim, which is a saloobrious spot on the west coast of the Red Sea, but soon arter we began to take a 'and in bossin' Egypt, Suakim became a place which was fairly well known to a good many blues and marines. At the beginnin' of '84, a chap called Osman Digma, who set up to be a bloomin' prophet, though I never 'eard rightly what 'e prophesied, or what 'is pertickler line of business was, began to be a bit of a noosance in the neighbor'ood of Suakim, so a soldier general, Sir Gerald Graham, a fine upstandin' figure of a man 'e was too, was sent there with a lot of soldiers, 'ighlanders, rifles, and fusiliers, not to mention other troops, and some 'ussars, to knock the stuffin' out of the bloomin' prophet, Osman Digma, and to relieve the Gippy garrison which was supposed to be shut up by the Arabs in Tokar. Now this is all bloomin' 'istory as I'm tellin' you so far, and as all 'istory shows, when they wants a job done to rights, you must 'ave a backbone of marines and British bluejackets just to give a finish to the business. So it was in this case.

"Besides the soldiers they sent a battalion of marines from 'ome, and a considerable crowd of bluejackets 'ad been landed from the fleet, chiefly to look arter some Gardner guns, and to bear a 'and generally wherever they was wanted. In command of this lot was the 'ero of my tale, Captain Josephus Little, whom I don't expects as any of you jokers knows *any*thin' about. That's so, ain't it? Ah, 'e's left the service many days now, but 'e were a proper little bantam in 'is way were Little. 'E was in command of the *Pluto*, and volunteered for this 'ere shore-goin' job; why, no one exackly could make out, and though Jo, as we used to call 'im, was nuts on fightin', and loved nothin' better nor a scrap, yet 'e was a regular blue-water sailor, so 'e was, and never seemed fair 'appy till 'e was out of soundin's, so you may imagine people was a bit took aback when Jo 'e volunteers for a real shore-goin' billet. But what surprised 'em more was that 'e was selected for the billet.

"I don't suppose as Jo 'ad ever been acrost a 'orse in the 'ole course of his life, but now that the time 'ad come, 'e was determined to do things proper, and the first thing necessary was a proper rig for ridin' in. The navigator, who was by all accounts a sort of naval Archer or Tod Sloan, 'e lent the skipper a pair of brown jack boots, and all the necessary fittin's. 'E were a sight. Well, next mornin' I was warned to go ashore with the owner's valley and his gear at two bells, arter my dinner, so Sergeant Piper 'e parades me in marchin' order and reports me present and correct, and I and the valley, Perkins by name, soon found ourselves ashore. A petty officer met us at the landin'-stage, and took us up to the camp where our men were. When we got to the camp the owner was a-standin' outside 'is tent, lookin' quite smart in his boots and breeches with a pair of the most enormous spurs which the navigator 'ad lent 'im buckled on 'is feet, upside down.

"Soon as 'e saw me, 'e sung out to me to go to the back of 'is tent, where I would find his 'orse. It was a rather good-lookin' sort of Arab 'orse, with a very mild and placid eye. So I give the 'orse a good doin' over with a rubber, for Jo 'ad brought a proper cleanin' kit ashore, where ever 'e 'ad raised it, 'avin' first made 'im, the 'orse, fast to a picketing-peg. When I 'ad finished my job, I reported myself to the skipper and asked for orders, and was told to bring 'im the 'orse for early parade at six next mornin'. Well, at six sharp next mornin' I was ready with the 'orse, and Jo, 'e came out of 'is tent lookin' very smart in his ridin' kit and 'is sword a-danglin' at 'is side. Nothin' was wrong but the spurs, and them I soon shifted for 'im, and 'e walked 'is 'orse acrost to where 'is battalion of bluejackets was a-waitin' for 'im to drill them. Oh Lord! that battalion! I don't know, sir, as whether you've ever seen the British blue at drill. If you 'aven't, don't; that's my advice. It's a cruel and a 'eart-breakin' sight. You won't 'urt their feelin's by tellin' 'em so, which is the worst sign of all, to my thinkin', for 'ow can you look for improvement where there ain't no sense of error to start with? Jo, 'e knew the drill well, much to my surprise, but there, 'e 'adn't been a-studyin' of the red book for two days and nights for nothin', and 'e made no mistakes in goin' in for complicated movements. 'E just kept them in column and quarter-columns, with a couple of deployments and one change of front, and 'e gave out the cautions in style, 'is words of commands were a treat and surprise to me. But 'is battalion didn't give 'im no fair show. The guides, who was mostly subs, and young lootenants, never led right except by accident, the company commanders never gave the right words of command, and the supernumerary ranks were a-chatterin' all the while like a lot of bloomin' monkeys. Well, I loafed about watchin' the skipper a-drillin' 'is awkward squad, and a-wonderin' 'owever it was as 'e kept 'is temper, which mine would 'ave gone long ago, when all of a suddent 'e did get a bit riled by somethin' or other, what it was I did not rightly notice, and 'e just jabbed 'is old 'orse with the spurs to start 'im towards the line, the old beast 'avin' stood as quiet as you please up to now; gone to sleep, I thought.

'Now this is all bloomin' 'istory as I'm tellin' you so far"

"'Owever, the spurs woke 'im, and 'e just gave one 'oist, and away went Jo, a-somersaultin' through the air. 'E landed fair on 'is nut, the old 'orse a-lookin' at 'im reproachful like, and a sort of titter went through the battalion. Titter! I'd 'ave given 'em somethin' to titter for! I ran forwards and picked the fallen 'ero up, and said as I 'oped 'e wasn't hurt. 'Urt be damned,' said 'e, as bold as brass, 'what the 'ell should 'urt me? 'Ere, 'elp me up again,' and 'e climbed up again on 'is 'orse and went on with the drill just as if nothin' 'ad 'appened. Oh, 'e was a well-plucked one, was Jo. Well, that evenin' 'e sent for me, and told me to come into 'is tent and pull the curtain, quite mysterious like, and I wondered what the blazes the little man was onto. 'E was a-settin' in a long chair a-smokin' a little clay pipe, which I really believe 'e loved as if it 'ad been a child, and 'e motioned to me to take a seat too on a bully beef-box. As you may imagine, I was a bit laid aback by this, but I sat down on the edge of the empty beef-box, and waited developments, as the poet says. Jo, 'e sucked 'ard at 'is pipe for a minute or two, then 'e said, quite fiercelike, 'Lester, this mustn't 'appen again.' 'Very good, sir,' I said, not knowin' what on earth 'e was a-drivin' at. 'Very good, very good! But 'ow do you propose to stop it?' and 'e shouted at me as if 'e were 'ailin' the fore yard in 'alf a gale. 'Beg pardon, sir, but I don't rightly follow you,' I said. 'Then what's the bloomin' use of sayin' "very good," you jackass, before you know what I'm talkin' about. Now, what I mean is that that there rampageous 'orse of mine must be cured of slingin' the commandin' officer over 'is misbegotten 'ead like a sack of potatoes on 'is own parade-ground. It's undignified'—and 'e got up and began a-stridin' up and down the tent—. . . . 'and it will 'ave to be stopped.'

"With that 'e pulled 'isself up and stopped short a-glarin' at me, as if it were me as 'ad bucked 'im orf that mornin'. I set still and said nothin'. After a minute, 'e said: 'Now, Private Lester, I 'ave a plan, but you must keep this to yourself. I 'ave to trust you in this 'ere matter, let me see that my confidence is not misplaced.' In course I told 'im I would do my very best, and wouldn't give the show away to no one, so 'e went on: 'Well, it's this way. As you may know, I've never perfessed to be a 'orseman, but I've taken the job on now, and I don't intend to be beaten by it. Now this 'orse isn't a-goin' to buck me orf again, and I'm *not* a-goin'

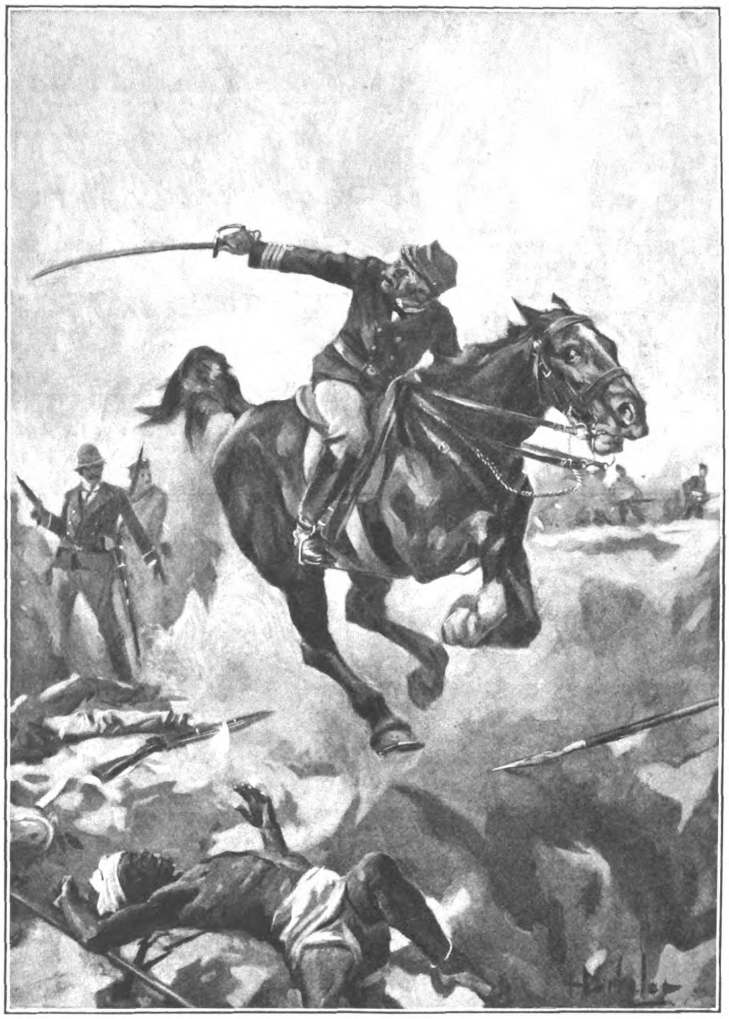
to give up spurs. Spurs is part of a mounted officer's kit, and spurs I intend to wear. This is my plan, and this is what you must do: Go over to the 'ussar lines and get a stout black, or dark-colored strap, about 'arf an inch wide and a fathom and a 'arf long. This strap you must make fast to my starboard stirrup-iron, then take a turn through the iron on the port side, back through the first iron, and then 'and me the slack end when I mounts. Then, you see, when I 'auls it taut and belays it to a ring on the fore-end of the saddle, it will draw my feet together under the 'orse's belly, and I'll lay odds the beggar won't shift me then. But get a dark-colored strap, so as it won't be noticeable. Do you quite understand?' In course I understood well enough, but I made so bold as to tell 'im that I thought it were a very dangerous game to play, as if the bloomin' 'orse came down, why, 'e wouldn't be able to get free, and might get a very nasty roll; but 'e wouldn't listen to no reason. 'Danger be 'anged,' said he, the little bantam; 'I don't mind a roll a 'ang. Many a good 'orseman may get a roll through 'is 'orse a-fallin'. There ain't no disgrace attached to that. But I do call it disgraceful for a commanding officer to be unshipped before his bloomin' parade, and that don't 'appen again to me.



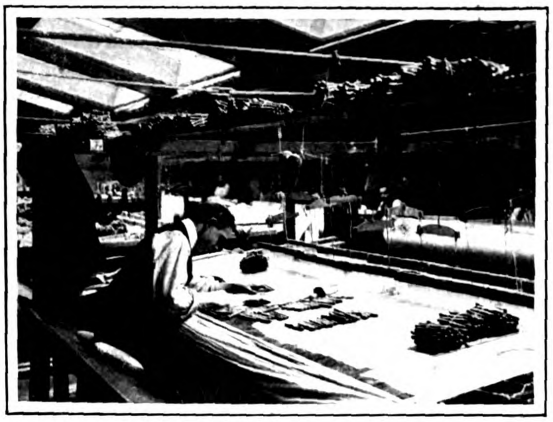
"So there were nothin' more to be said, and I went orf to the 'orse lines of the 'ussars, and soon came across just the bit of tackle as I wanted, and when the skipper came to mount for next mornin's parade I 'ad the tackle rigged accordin' to 'is directions, and 'anded 'im the slack end accordin' to 'is orders. None of the men on parade spotted 'is little 'oldin' tackle, and Jo 'e got a repitation for bein' a most wonderful sticky rider, for the 'orse played up a bit, I can tell you, in 'is first efforts to unship 'im.

"Well, by the end of February, Jo 'ad 'is command very shipshape, and it must 'ave been about the last day of that month that we was all concentrated at Fort Baker previous to marchin' on Tokar. Well, we went to Tokar, and did no good when we got there, the Arabs 'avin' all cleared out, so we was marched back to Trinkitat, and from there we went back to our old lines at Suakim, where we stuck till the 11th of March, yes, it must 'ave been the 11th, because we fought Tamai on the 13th, and that were two marches.

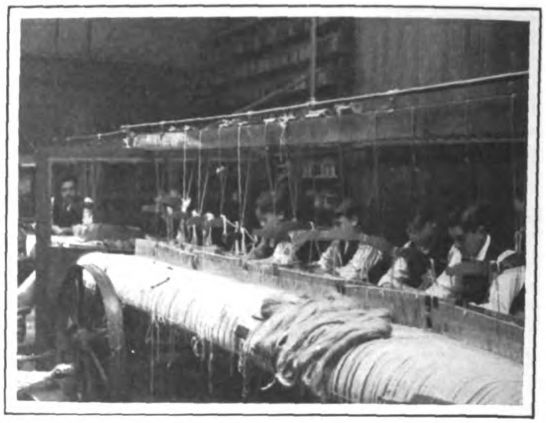
"On the 11th we started off again. As we got nearer and nearer the 'ills the enemy seemed to get thicker, so the general concluded to 'alt for the night, and to prevent the camp from bein' rushed we made a zareba round it of thorn bushes and such like, arter which rations of bully beef were served out, and we lay down, as the night afore, to sleep the best way we could. The night passed somehow, and next mornin' about eight o'clock we was all formed up in two brigades, and advanced towards the enemy, who was 'idin' in a lot of broken ground in front. We'd not gone very far before the Arabs came for us like a 'undred thousand wild cats. Our chaps opened fire pretty sharp, and 'undreds of 'em went down, but the others came on just the same, and things began to look a bit too warm for some of us. Just as the square got real busy, a staff officer came up to Jo, who was a-settin' on 'is old 'orse a-spending a real 'appy day, and said as 'ow the general 'ad give permission for mounted officers to dismount. Now Jo 'e couldn't very well dismount without givin' 'is patent 'olding tackle away, so 'e just took 'is chances and stayed where 'e was, and I stayed quiet under 'is lee, ready to take the 'orse if 'e should change 'is mind. The old 'orse took no notice of the firing, and stood as quiet as if 'e was in 'is own stable. Suddenly the square began to give ground a bit, the pressure on the front face bein' more than our men could stand. But they rallied quick, and made a move forward again, and, the side face not closin' up quick enough, a gap was opened at one corner, for which a gang of Arabs raced like a shot, and in another minute they would 'ave been a-slashin' around inside the square if it 'adn't a-been for Jo.

"Just a second or two afore the gap were opened the old 'orse was struck fair and square on the quarter by a spent bullet. 'Eavens, 'e lept the 'eight of 'isself, a lep which would 'ave unshipped the skipper but for 'is patent tackle, and bolted acrost the square. 'E jumped clean over a baggage camel as was a-lyin' down, knocked over a couple of mules, and went fair for the spot where the Fuzzy Wuzzies was just a-goin' to break in. Jo 'ad quite given up stoppin' 'im by that time. 'E 'ad picked up 'is sword, which was danglin' by the knot from 'is wrist, and as the old 'orse charged the leadin' Arab and sent 'im flyin', Jo gave a wild war whoop, and fair split the next chap's 'ead open with 'is old sword. In course the sword, not bein' used to that sort of treatment, went in two in 'is 'and, but Jo jabbed about with the short end to some purpose, though 'e would undoubtedly 'ave been speared in the end, if some of our soldiers 'adn't come up in time to fill up the gap, and to pull Jo and the 'orse back again into the square. The skipper 'ad filled the gap, and the situation was saved.

"Well, 'e might never 'ave 'eard no more about it if the general 'adn't 'appened to 'ave cast 'is eye in that direction just as Jo gave 'is war whoop and bowled over the first nigger. 'S'help me!' says the general, ''e gets the Cross for that! What bloomin' pluck! What 'orsemanship!' or words to that effect. And, sure enough, Jo was recommended for the Cross, and, what's more, 'e got it.



"As the old 'orse charged . . Jo gave a wild war whoop"



"And the horse?

"Oh, the 'orse. Oh, 'e 'ad fought 'is last fight, 'e 'ad. Jo brought 'im back, Jo smilin', and as 'appy as a girl at 'er first ball, but the poor old crock was a-bleedin' like a pig from a spear wound in the chest. Jo 'ad never noticed nothin'. When I told 'im, 'e dismounted very quick, and looked at the poor old 'orse, a-shakin' 's 'ead, quite put out I could see. Yet 'e made me laugh all the same. 'Ah,' 'e said, 'bad job, bad job. 'Ell of a collision. Fore compartment filled. 'Ere, put a collision mat over 'is bows, and tow 'im starn first. That's the only chance.' But no collision mat could do 'im no good. The poor old blighter 'e fell dead, and Jo had to walk back to Suakim. But 'e didn't care. 'E had been recommended for the V.C., and you might 'ave thought as the little man was a-walking on air, instead of Sudan sand and rocks."

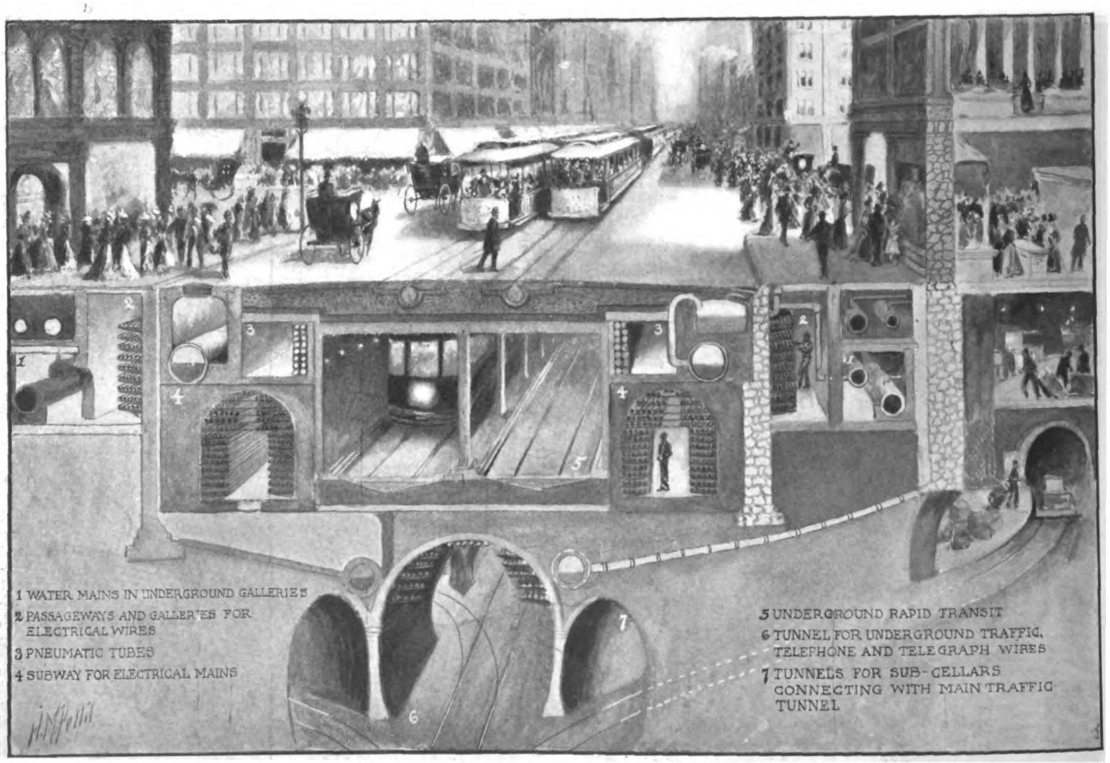
An Expert Weaver at Work on a Tapestry Design



Apprentices and Overseer at the Bronx Tapestry Works

Progress in an Old Art

GOBELIN tapestry is being woven at Williamsbridge, New York. Ten years ago Mr. William Baumgarten, who is now at the head of the Williamsbridge industry, introduced the art to America. He brought with him from Europe a number of skilled tapestry workers. His foreman, Mr. John Foussadier, was master workman of the Royal Windsor Tapestry Works in England, and has long been known as an expert of unusual ability. The work is carried on in an unpretentious building beside the Bronx. Mr. Baumgarten has equipped his plant with the most modern and approved appliances, and is enabled to secure results which equal in artistic effect the best work that is being accomplished to-day in the art of weaving. The industry is similar in effect to that carried on in France, in the fifteenth century, by the Gobelins. The restoration of old tapestries is a considerable part of the venture, aside from the more important work of creating original designs. In size and the capacity for adequately handling large subjects the Williamsbridge plant has so far developed that it now exceeds the government works at Paris. The establishment of such an enterprise in this country marks a distinct advance in the development of American art.

The occasion for the introduction into our public buildings of Gobelin tapestries of American manufacture occurred when Mr. Charles McKim, the architect, assigned a conspicuous place for their exposition at the head of the grand stairway of the Rhode Island State Capitol.

Putting Traffic Underground in Chicago

By a new plan now being carried out in Chicago, all the telephone wires and heavy street traffic will be put underground. The laying of telephone wires, cables, etc., will be done in tunnels, and not, as now, from the street. It is planned to have the basements of the large stores connected with the tunnel, through which freight will be sent to all parts of the city. The plan is told about in detail on page 679

What do you mean by "vulgarity"? You will find it a fruitful subject of thought: but, briefly, the essence of all vulgarity lies in want of sensation. Simple and innocent vulgarity is merely an untrained and undeveloped bluntness of body and mind; but in true inbred vulgarity there is a deathful callousness, which, in extremity, becomes capable of every sort of bestial habit and crime, without fear, without pleasure, without horror, and without pity.

Ruskin.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE INFANT takes first to human milk; that failing, the mother turns at once to cow's milk as the best substitute. BORDEN'S EAGLE BRAND CONDENSED MILK is a cow's milk scientifically adapted to the human infant. Stood first for forty-five years.—[*Adv.*]

TELEPHONE Service saves time. Time is the stuff of life. Have telephone service at your home as well as at your office and save time at both ends of the line. Rates in Manhattan from $48 a year. N. Y. Telephone Co.—[*Adv.*]

IN this age, when so many adulterated goods are offered, you want COOK'S IMPERIAL EXTRA DRY CHAMPAGNE. It is pure.—[*Adv.*]

MANY mothers administer PISO'S CURE when their children have Spasmodic Croup. It is effectual.—[*Adv.*]

A HEALTH giver and a health preserver—ABBOTT'S, the Original Angostura Bitters. At druggists.—[*Adv.*]

PENNSYLVANIA RAILROAD will sell account the National Conference of Charities and Correction, Atlanta, Ga., May 6th to 12th, excursion tickets to Atlanta at reduced rates, good going May 3d and 4th, and good returning to reach original starting-point by May 16th.—[*Adv.*]

Americans Invade the East

An American Engineering Feat that gives a new Route between India and China

THE spanning of the Gokteik Gorge in Burmah is considered one of the greatest engineering feats ever accomplished by Americans outside of their own country. The Burmah Railroad Company officials let the contract to an American company only after the bridge-builders of Great Britain and the Continent had declined to take it, saying the bridge could not be completed in the time specified. An American company asserted that it could be completed, and offered to put up a forfeit if their word was not made good. As a result they were given the contract, and a little band of thirty-five Yankee workmen went to the other side of the world to execute it. In ten months from the time the first girders were put in place, two locomotives met in the centre of the structure.

The towers supporting the centre of the railroad track are about three hundred and twenty feet in height, and in some places the sides of the gorge are so steep that a plumb line may be dropped one hundred and fifty feet without grazing the rock.

Five thousand tons of steel were riveted and bolted into place before the work was completed. In constructing the towers a temporary bridge about one hundred feet high was built in the deepest part of the gorge. This was used for a tram-road, on which car-loads of material were carried and elevated to the top of the viaduct.

View of the Gokteik Gorge and the American-built Bridge, which opens a new Route from India to China

The viaduct carried a gigantic arm which did the work of a thousand men. It contained a machine-shop with tools and forges; an office for the engineer in charge; a telephone exchange, where the men on it could talk to those at either end of the gorge; and a station where signals could be made to the valley below.

A comparison with what has already been done in bridge-building gives an idea of the undertaking. The Kinzua viaduct on the Erie Railway in Pennsylvania is two thousand and fifty-three feet long and three hundred and one feet high, and contains three thousand three hundred and fifty tons of steel. The Pecos viaduct in Texas is two thousand one hundred and eighty feet long and three hundred and twenty-one feet high, and contains one thousand eight hundred and twenty tons. The Loa bridge in the Andes Mountains, South America, is three hundred and thirty-six feet high, but only eight hundred feet long, and weighs one thousand one hundred and fifteen tons. The Gokteik is two thousand two hundred and sixty feet long. It is heavier than all of its rivals, and longer and higher than all but one.

An Elizabethan Play by College Students

AN interesting phase of contemporary drama is the attempt to reproduce old plays with sufficient attention to historical setting to carry the spectators back, in some measure, to the stage conditions of the period when the play was first produced. In England these revivals of early plays have been given notably under the auspices of the Elizabethan Stage Society, and during the past winter Americans have seen with no little enthusiasm some of the work of that society in the reproduction of the old Morality play, "Everyman." For the most part, however, such reproductions in this country have been undertaken by the students of the universities—a revival of the old custom of rendering the classic drama on the college stage. At Stanford University the interest in this sort of dramatic study has already won some distinction. A year ago the students of the Greek department presented Sophocles's "Antigone" at their own college and at the University of California; and this year the members of the English Club—a voluntary students' organization—have presented Beaumont and Fletcher's "Knight of the Burning Pestle" at the two universities. The representation was planned to conform, in all practicable details, to the traditions of the Elizabethan stage of 1610. The stage structure was modelled after the sketch of the Swan Theatre made by the Dutch scholar De Witt, about 1596, and reproduced as closely as possible the London playhouses of Shakespeare's day.

The opening of the play was announced, after the historic fashion, by three trumpet-calls from the upper windows of the stage structure. There was no curtain-raising, and the entire stage was throughout in full view of the audience.

A Character from the Play

A Scene from the old Elizabethan Play, Beaumont and Fletcher's "The Knight of the Burning Pestle," produced by Students at Leland Stanford University

Radium—the Wizard Metal

No discovery since the Röntgen rays has aroused keener interest or more sensational speculation than that of radium, by Professor and Madame Curie. To be sure, it was already known that certain substances, notably the rare metal uranium and its salts, had the power of giving off radiations closely similar to the X-rays, but the phenomena were rather weak and inconspicuous. But when the Curies extracted from uranium ore a new and mysterious substance pouring out radiations a thousand times more powerful than those from uranium, derived from no apparent source of energy, able to penetrate wood and even metals, rousing apparently inert substances into kindred activity, and inflicting savage X-ray burns on the unwary experimenter, there was good cause for popular interest. Consequently, radium has been crowned with a sort of halo of excited hypothesis which will be very slow in disappearing.

The established facts are marvellous enough without any aid from the imagination, and while they are still far from complete, enough have come to light to justify marshalling them in order, and looking them over with something like judicial calmness. Radium chloride, the usual salt for experiments, is a whitish heavy powder, worth in an impure state nearly $150 per ounce. Thoroughly purified it would cost nearly $1000 per ounce, but an order for that amount would certainly stagger the world's market. The metal itself has never been prepared from lack of material to imperil in the attempt, but enough has been found out about it to give a fair idea of its properties. It would probably be one of the heaviest metals known, whitish, rather soft, and easily tarnished. It is a very near relation of the rare metal barium, and, like it, would be very troublesome to prepare in a pure state. The chloride glows in the dark with a faint greenish-white light, and starts a similar glow in substances—a tuft of cotton, for instance—placed near it. This phosphorescent light, however, represents only a trivial part of the total radiation given off by the radium salt. It pours out, beside, radiations very closely akin to X-rays in considerable variety. A photographic plate shielded from the light rays by black paper is affected in a few seconds when placed close to the salt. Shadow pictures of metallic objects are quickly obtained in this manner, but the rays pass almost unobstructed through cardboard and thin wood, and less easily through glass and even aluminium foil. As in the case of an X-ray tube, part of the radiation consists of streams of material particles, accompanied by a true radiation somewhat akin to light. The latter is a far less important part of the whole in the radium than in the X-ray tube. A good many substances give off a similar composite radiation after having been exposed to strong light, but very faintly and with rapid loss of power. But the radium keeps steadily at work, and imparts its radio-activity, like its light, to substances near it in a very extraordinary degree. Uranium salts have a similar power, but to enormously less extent. Even when kept in the dark for years they still give off these penetrative rays almost, or quite, as powerfully as after exposure to sunlight.

The mystery of the matter lies in the occult source of the energy thus radiated, and in the relation of the material streams to the wave radiation which accompanies them. Whether they are composed of molecules, atoms, or shattered fragments of atoms, is not yet definitely known. The weight of the present evidence tends to the last-named conclusion, but it depends on a chain of assumptions in which some links are of rather uncertain strength. As to the relation between the light, the penetrating rays, like X-rays, and the material streams, practically nothing is known. But this much is certain, that such mixed radiation is a far commoner property of matter than one would think. Radium seems now to be only a tremendously exaggerated case of a not very uncommon condition. Its immense radio-activity enables experiments on the subject to be carried on very easily, and it serves as a basis of operations in studying the more general problem. Two other

(Continued from page 677.)

allied radio-active materials have turned up, called polonium and actinium by the discoverers, but their identity is rather uncertain as yet.

Data on radio-activity are so far rather meagre and ill assorted, but it looks at present very much like the general case of which phosphorescence is a special instance. It is perfectly easy to excite strong phosphorescent light by ordinary radiant energy totally invisible to the eye and to the photographic plate. The mixed radiations common to radio-active substances can be similarly excited, and their presence in a material which has been kept in the dark for a year—or a thousand years, for that matter—is interesting, but not particularly surprising. There is no darkness to generalized radiation. We say that a room is dark because we have cut off merely that almost infinitesimal fraction of the whole range of radiant energy which the eye perceives, but we are not in the least surprised that a wireless telegraph message can be received in it. And considering the fact that there is an enormous extent of unknown radiations intermediate between light and Marconi's electrical waves, it involves no stretch of imagination to conclude that radium is picking up invisible energy and transforming it into something within the range of our senses. Zinc-blende has for years been known to perform just this feat, but it chances to get its energy supply from a region which, although invisible, can still be explored by existing instruments. The theory just outlined is Madame Curie's explanation of the source of radium radiations, and it certainly agrees with very well-known facts. As for induced radio-activity, it is the same sort of thing that happens in a hot stove—the radiation from the original source does not as such penetrate the iron, but it heats it, and sends off similar radiations from the exterior. And these persist for a while after the fire dies out. Professor Curie's latest result is that radium salts actually keep at a temperature a couple of degrees above their surroundings, a discovery which involves a more curious transformation of energy than any which has gone before. If confirmed it is safe to say that it will be followed by the discovery of the same property in other materials.

Putting Traffic Underground in Chicago

See page 670

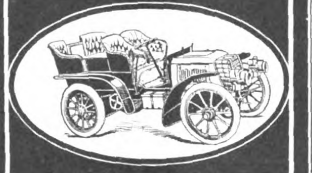
CHICAGO is planning a new system of subways, by means of which the greater part of its street-car traction, traffic, and telegraph and telephone wires are to be placed underground. Already eighteen miles of one of these subways, built in connection with the plan to give Chicago an automatic telephone system, is finished, and plans for the completion of the system are now maturing. It is proposed to construct tunnels which will furnish an improved system of rapid transit; a separate tunnel connecting with the basements of stores and warehouses along the route, through which freight will be sent to all parts of the city, and which will also carry telephone wires, cables, etc., together with additional smaller galleries and conduits for the carrying of pneumatic tubes and electric and water mains. It is also proposed to provide within the subway region a modern and improved system of high and low level sewers.

A novel and useful feature will be the provision of facilities for the laying of electric wires and cables from within the tunnels, and not, as now, from the street. The cables, on rollers, are placed on cars and lowered to the tunnel through shafts on private property, and are then carried through the conduits and laid upon racks. This method will remove any necessity for interfering with public traffic on the street levels. The whole plan, as outlined, means that in the near future the streets of Chicago will be used only for pleasure-driving, without the interference of heavy trucking and of the obstructions now necessary in repairing underground wires and mains. A part of the street railway system will, however, be kept on the street level.

Oldsmobile

"Nothing to watch but the road."

The Standard Runabout does the work of six horses at an average cost for gasoline of $35.00 a year (10,000 miles). Board alone for one horse costs $180.00 a year, so the economy is very evident.



PRICE, $650.00

Our practical experience in motor building and the perfect mechanical construction of the Oldsmobile make it possible to obtain more power for its weight than any other machine. Any desired speed is obtained by the simple yet very efficient foot control.

There are Oldsmobile agencies in all the larger cities. Call on your nearest agent or write for illustrated book to Dept. 48.

The Americanizing of Russia

By Charles Johnston, B.C.S. (Retired)

THE Tsar's edict—the influence of which was recently noted in the WEEKLY—has rightly been hailed as a great stride forward in Russia's national life; the greatest, without doubt, since the emancipation of the serfs by Alexander the Liberator, the father of the present Tsar, in 1861. The period immediately following the Crimean war, the beginning of Alexander the Second's reign, was one of the great epochs of Liberalism in Russia; and so far was the tendency to advance carried, that it brought a severe reaction in the years that followed. This reaction had nearly run its course, and a new advance was in preparation, when the assassination of Alexander the Second by the Russian Anarchists brought his splendid work to a tragic close. It was known to a few at the time, and it became known to all the world at the time, that the murder of the Tsar had also slain the hopes of Russian Constitutionalism: for the Emperor had had a constitution drafted by Loris-Melikoff, and was to have signed it within a few days of his untimely death. Alexander the Third took the view that matters in Russia had been going too fast: that doctrines good for Western Europe might be out of place in Russia, and that what was needed was rather an advance along more national lines. He therefore inaugurated the era of protection, encouraging Russian manufactures by a tariff wall against foreign goods, just as Mr. McKinley did in this country by the measure associated with his name. The second great element of Russia's policy was the alliance with France, to curb the overweening power of Germany and the tendencies of domination and tyrannical control initiated by Prince Bismarck, and in part inherited by Kaiser Wilhelm II.

Both these steps were in the last degree successful, and many of us can remember point by point the disappearance of the old Bismarckian tyranny, the tranquillization of European politics, the new hopes of France, and the general amelioration of political conditions all over Europe, as the tyranny of Germany was gradually overcome. This clearing of the European sky was followed by a gradual growth of better conditions within the bounds of Russia herself; and, as the result of these better conditions, we may cite the last budget statement of Minister de Witté, the later Tsar's chosen instrument, that Russia has a surplus for the first time in many years, while commercial conditions all over Russia are better than ever before.

In view of this, it has seemed to the Tsar that the time has come when the humane policy of his grandfather may once more be resumed, and the work of liberalization within the borders of Russia carried one step farther forward. Hence we have the present edict, published on the birthday of Alexander the Third, as a touching tribute of love and reverence from his son and successor.

We have, first, an affirmation of the principle of religious liberty. Much misconception exists on this point, and certain writers here evidently believe that liberty of worship is an innovation, a revolution in Russian life. This is, of course, the very opposite of the truth, for Russia has for ages allowed all the Christian churches to worship in their own way, at their own shrines, and not only Christians, but Jews, Mohammedans, and Buddhists have enjoyed the same religious freedom.

With regard to certain dissenting sects there was a difference, but even here the action of Russia was rather political than religious. For it was found that many of the so-called evangelical sects, and notably those springing from Lutheran propaganda, were rather advance-guards of German

52nd and Media Sts., Philadelphia

thought and influence than genuinely religious bodies. There were certain strict regulations against proselytizing from the Russian Church; against mixed marriages, or rather against the alienation of children of mixed marriages, and against leaving the State Church to join any other religious community; and in all these cases the civil law could be and was called in, and severe penalties were inflicted. The terms of the present edict will probably give greater liberty to the dissenters to hold conventicles according to their own ideals, many of which, by the way, are somewhat grotesque and extreme, like those of the Shakers, or the Russian Doukhobors, whose doings in Canada aroused so much interest a year ago.

The edict establishes certain principles which will be of the greatest value and assistance to the peasant class, and help to raise their almost countless millions to a higher degree of comfort and prosperity. After the emancipation, the Russian peasants tended to fall more and more into the hands of a class of usurers, many of whom were Jews, and whose impositions were much more tyrannous than those of the old nobility. These usurers exacted forced labor in payment of the interest on their debts, thus practically creating a form of slavery which was more onerous than the former serfdom. Further, the usurers obtained mortgages on the communal land, and thus cut at the roots of the peasants' well-being and livelihood. Both these abuses are removed by the present edict, which abolishes forced labor, and makes the communal land inalienable. A like measure was the assumption of the control of the production and distribution of liquor by the Russian government a short time ago, which removed from the Jewish liquor-sellers the power to drive the easily tempted peasantry deeper and deeper into debt.

Finally, more influence and responsibility are given to the local and provincial boards —a first measure of home rule and of local constitutional government. The home-rule principle has always existed in germ in Russia, in the village communities, which elected their own members, and were authoritative within their own domain.

It is clear that the work of constitutional government in Russia is beginning, as it began in America, with the local self-governing units, whether we call them communes or townships; that it will extend thence by degrees to the larger subdivisions, until we come to the governments of provinces, corresponding to our States, and, finally, to the sum of these provinces, making up the empire.

The great principle now introduced is the increase of individual responsibility, both religious and civil; the heightening of the value of the individual life and the individual mind. And this tendency, with all it implies for the future, justifies us in speaking of the present reforms as a step in the Americanizing of Russia — a symptom of great hope for the new century, and one to be accompanied and complemented by a like Russianizing of America, in the direction of moral depth and seriousness, and of a larger and more humane realization of each other's spirits and lives.

Whenever money is the principal object of life with either man or nation, it is both got ill and spent ill; and does harm both in the getting and spending; but when it is not the principal object, it and all other things will be well got, and well spent.

Ruskin.

Great Western Champagne

—the Standard of American Wines.

Pure and perfect, every way the equal of the imported, yet but one-half the price.

Gold Medal at Paris, 1900.

Ideal for banquets and for the home.
